It also seems from the decision that the National Labor Relations Board and the Department of Labor are working at cross purposes because of the fact that the renewal was entered into after weeks of collective bargaining with the assistance of the Bureau of Conciliation of the United States Department of Labor. The Board, by its decision, has apparently found that the Bureau of Conciliation of the Department of Labor aided, abetted, and assisted in what the Board has inferentially found to be unfair labor practices.

In rendering its present decision, the National Labor Relations Board has condoned and adopted the illegal and improper conduct of the National Labor Relations Board examiner, and the National Labor Relations Board trial counsel, who conspired together to create a record wholly adverse and prejudicial. The trial examiner was the William Seagle, whose conduct has been so flagrantly bad that the Board was compelled to "shelve" him. He has not been permitted to sit in any case for months. His background is a matter of common knowledge. In this case, as in every other case in which he has sat, he was most overbearing, abusive, and insulting. He discredited his office by engaging in counsel baiting, and called all of the attorneys representing the respondents liars. In spite of this he testified falsely before the Smith congressional committee that he had only called attorneys liars in the Stromberg-Carlson case.

Counsel for the Board was Will Maslow, whose background is the same as Seagle's. During the course of the hearings he physically assaulted William Beedie, the A. F. of L. organizer involved in the case. He had the temerity to introduce one of the complaining witnesses as his assistant, and had this wholly irresponsible person make an exhaustive examination of the records of the New Jersey Bell Telephone Co. under that subterfuge. Confidential records of the Board, and of the respondents were entrusted by him to other unsavory individuals, and one of them, an official organizer for the Communist Party, was arrested with N. L. R. B. records in his possession. Maslow contemptuously violated the tenets and ethics of the legal profession throughout the hearing, and invariably repudiated every stipulation and agreement which he made with counsel for the respondents.

We cannot believe that the members of the Board who concurred in the decision and order ever read the record itself, or have the slightest knowledge of its contents, other than what they were permitted to see in the analysis and review prepared for them by members of the review division. Certainly, a casual reading of the record itself and of the exhibits would have convinced the members of the Board who signed this decision that the evidence was against the findings in the decision.

Worst of all is the badly explained 3-year delay in this case. The complaint was served in January 1937, based upon alleged illegal practices in December 1936. The hearings started in February, 1937, and continued for a week. They were stayed by an injunction which was dissolved in March 1937. No further steps were taken by the Board until August 1937. Hearings were resumed in September of that year and concluded at the end of October 1937. The proposed decision was not served until December 1939, a period of some 3 years after the alleged illegal practices and more than 2 years after the termination of the hearing. Any number of cases which were started long after this one have been terminated many months ago, and we can only surmise that it took a long time for even the most biased partisan to find enough in the record which would warrant writing any sort of decision against us.

The question of free speech also plays an important part in this case. The Board's theory apparently is that the employer must make no comment, no matter how innocuous, with reference to his business, since such a comment must invariably be interpreted by the employees as a threat. In this case, statements made to the employees, expressing the necessity for their cooperation in order to assure success in a highly competitive industry, were distorted by the Board into antiunion statements. Apparently, an employer or his representative speaks only at his peril, in the Board's opinion, and the safest thing for him to do under any circumstance is to keep quiet, no matter what the exigencies of the situation are.

It is most significant that William A. Leiserson did not join in the decision and order, although he sat during the last argument. It is obvious that Messrs. J. Warren Madden and Smith, despite the obvious warning from Congress, are determined to continue their headstrong and headlong course to self-destruction and oblivion.

We have already been advised by the American Federation of Labor that if we comply with the Board's order and cancel their contract, they will use their economic right to strike.

So, here we are, a company that has not had 1 minute's interruption of commerce, faced with a strike if we comply with the National Labor Relations Board, and if we don't comply we are faced with an expensive appeal costing probably another $10,000, after already spending $25,000, and back-pay orders running to over $25,000.

It is true that the Board has ordered an election but states that in view of the desirability of affording employees an opportunity freely to consider and determine their choice the election shall be held at such time in the future as they shall direct. We can only assume that such an election will be held after commerce has been interrupted and the C. I. O. and the Communists have had ample opportunity to disturb industrial peace to their own satisfaction.

This telegram is sent to you for the sole purpose of placing before you the practical result of the functioning of the Wagner Labor Act and the impractical type of remedies prescribed by the Board in attempting to effectuate what definitely could never have been the intent of Congress. This concern has no labor problem. It has only had an expensive Labor Board problem.

CORNELL DUBILIER ELECTRIC CORPORATION,
OCTAVE BLAKE, *President.*

Rehabilitation Program of Farm Security Administration

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 12, 1940

REPORT BY THE FARM SECURITY ADMINISTRATION

Mr. BROOKS. Mr. Speaker, I have received recently a very informative and detailed report on the work of the Farm Security Administration for the Fourth Congressional District of Louisiana. Since it is evident that this report has been prepared very laboriously and with especial refer-

ence to the benefits of this work in Louisiana, I believe that it should constitute a matter of general interest to the entire Nation. Especially should this report be of interest to those who believe that the Agriculture Department should try, by means of loans and supervision, to rehabilitate those farmers who through misfortunes and in some cases bad judgment have become incapable temporarily of maintaining themselves and who threaten to become general charges upon the Government. Because of these facts, Mr. Speaker, I ask leave to have this report reproduced in full in the course of this statement. The report follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FARM SECURITY ADMINISTRATION,
Washington, March 15, 1940.

HON. OVERTON BROOKS,
House of Representatives.

DEAR MR. BROOKS: We have just completed a Nation-wide survey of the progress being made by Farm Security Administration borrowers, and I felt that you might be interested in the figures for the fourth district in Louisiana.

We are proud to report that F. S. A. borrowers not only have increased their net worth and annual income but also are making satisfactory progress in the repayment of their loans.

The survey showed that the 1,422 standard rehabilitation borrowers in your district had an average net income last year of $464.27 per family, as compared with $248.29 in the year before they came to F. S. A. for help. This represents an increase of 87 percent.

Moreover, these families increased their average net worth—over and above all debts—from $439.16 before they came into the F. S. A. program to $636.35 at the end of the 1939 crop year—a gain of 45 percent.

In other words, these families not only have added $280,404 to the wealth of their communities but they also have increased their annual incomes by a total of $307,125. This expanding purchasing power has, of course, been a considerable benefit to the merchants and other businessmen of the district.

At the same time the survey showed that the borrowers in your district already have repaid $433,212 into the Federal Treasury as installments on loans totaling $812,716. The typical rehibilitation family in your district has borrowed $571.53 and already has repaid $304.65. Since much of the money loaned does not fall due for 4 or 5 years, there is every reason to expect that the great bulk of it will be repaid.

We feel that this collection record is particularly significant because, according to normal business standards, our borrowers would certainly not be considered good credit risks. Rehabilitation loans are made only to families which cannot get adequate credit anywhere else, and nearly all of them either had been on relief or were approaching the relief level.

Although the rehabilitation program is intended to meet long-range problems, which have been growing steadily worse for more than a generation, it is financed out of relief appropriations; and it takes the place of direct relief in rural areas. It is designed to help needy farm families to become permanently self-supporting, instead of remaining indefinitely dependent on relief.

It has succeeded largely because every loan is accompanied by advice and guidance in sound farming methods, to make sure that the money is put to the best possible use. There is ample evidence that this guidance and technical training is the most important part of the rehabilitation program. Without it, few of the families would have been able to make much progress or to repay their loans.

In a limited number of cases, in order to get the family off to a sound start, small grants have been made to supplement the loan. Usually these grants were just large enough to tide the family over until it could make its first crop. They have averaged $17.84 per family, or a total of $25,368, over a 4-year period.

Often it has been necessary to work out an adjustment of the family's old debts, before rehabilitation could be successful. Local farm debt adjustment committees have been set up for this purpose. They have no legal authority to compel adjustments, but by bringing the farmer and his creditors together for a friendly discussion, they usually are able to arrange a scale-down of the obligations, reduced interest rates, or extension of the payment period. Such adjustments frequently save the farmer from foreclosure, and at the same time enable the creditors to get substantial payments on what might otherwise have been bad debts.

This service is available to all farmers, whether or not they are rehabilitation borrowers. Altogether, debt reductions totaling $54,587 have been negotiated for the farmers in your district. This represents a scale-down of 9.7 percent. As a direct result of these adjustments, $10,505 in back taxes has been paid to local governmental agencies.

In helping rehabilitation borrowers to plan their farm operations we always urge them to get away from one-crop farming and to raise as much as possible of their food and feed supplies. The progress they are making is indicated by the fact that the borrowers in your district produced $369,094 worth of goods for home consumption last year, as compared with only $168,024 worth before they came into the F. S. A. program.

These families canned 373,858 quarts of fruits and vegetables last year, or an average of 263 quarts per family for home consumption. They also produced 540,360 gallons of milk, an average of 380 gallons; and 1,337 tons of forage, an average of ninety-four one-hundredths ton. This kind of diversified farming has meant a higher standard of living, a better diet, and usually a marked improvement in health.

One of the most common reasons for past failure among the families which come to F. S. A. for help was that they had not farmed enough acreage to make a living. In helping our borrowers to get a new start, we have made every effort to assist them in getting adequate-size farms. Consequently, the borrowers in your district are now operating an average of 53.36 acres, or an increase of 16½ acres since they came on the program. This increased acreage has not added materially to the production of commercial crops, however, since virtually everything raised on it is consumed on the farm. It simply means a better diet and a better standard of living for these families.

Another main objective of F. S. A. is to help tenants and sharecroppers get more secure land-tenure arrangements, so they can plan ahead for crop rotations, soil conservation, and other sound farming practices. The survey indicated that 1,021 tenants in your district have obtained written leases in place of verbal agreements. Furthermore, 274 families have advanced from sharecropper to tenant status as a result of F. S. A. help.

In making the survey our field workers found that there are 1,325 families in your district which are eligible and in need of rehabilitation loans, but have been unable to get them because of our limited funds.

Aside from the rehabilitation program, the Farm Security Administration's most important job is to make loans under the Bankhead-Jones Farm Tenant Act to tenants, sharecroppers, and farm laborers to enable them to purchase family-size farms of their own.

While it has been necessary to confine loans to certain counties because of the limited funds available, we had made 44 such loans in your district, totaling $219,845, up to the end of the last fiscal year. This year we are expecting to make about 35 Bankhead-Jones loans in your district, totaling approximately $170,000.

This has been a rather detailed report, but I felt that the information might be useful to you. If you would like to have any further details about our program, I hope you will let me know.

Sincerely,

C. B. BALDWIN,
Acting Administrator.

A Norwegian Angle

EXTENSION OF REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1940

Mr. THORKELSON. Mr. Speaker, responsibility for the invasion of Norway and Denmark rests upon Great Britain alone. Her strategy is to involve neutrals, hoping in such procedure to swing sentiment in the United States favorably to our participation in the war on the side of England and France. England does not care as long as the United States is willing to pay for the war and to fight for the British Empire to the last American.

England has always been a meddler and a thorn in the side of neutral nations in time of war. She has also been a bully and bulldozer of all nations in time of peace. The State Department records show that Great Britain violated our neutrality during the World War, and that we were at one time on the verge of severing diplomatic relations because of her overbearing and unneutral attitude.

The same thing is happening today, for Great Britain is now violating our neutrality and our State Department is helping her to do so with the blessings of the Executive. Even recently the *Queen Elizabeth* arrived in the port of New York with full crew for the *Queen Mary* and *Mauretania*, and both ships left New York a few days after her arrival. I am sure when both ships left New York that they were not loaded with boxing gloves for the New Zealand kangaroos, and I am equally sure that they were not armed with powder puffs and cosmetics for the mermaids, yet they sailed out of New York with the same freedom as our own ships.

England had tried to draw the United States into the European war on her side, even before she declared war on Germany. It was to obtain the sympathy of the United States that Great Britain invaded the neutral waters of Scandinavia. This is particularly true in the invasion of Norway. England admits that she laid mines in the neutral waters of

Norway, and, from my familiarity with the coast line, I am sure these mine fields were laid in the inland waters. That in itself is a most unwarrantable breach of neutrality. This would be the same as if a foreign power laid mines in the Delaware River or Chesapeake Bay, and it is in reality an act of war.

It is also reported that five English ships, anchored in the harbor of Bergen with pretended Red Cross supplies for Finland, were loaded instead with cannons, arms, ammunition, and airplanes. According to reports, there were 50 Curtiss pursuit planes in the holds of the British ships, and this report may be accepted as true, for American sources report that 50 Curtiss pursuit airplanes were shipped to Norway in the last few weeks. It is therefore quite evident that England intended to invade Norway to establish a base for land operation against Germany. It is only natural that such attempt on the part of Great Britain would lead to German invasion of Denmark and Norway, and that is precisely what happened. English guilt is recognized by those who understand the Scandinavian situation, and it is to show this sentiment that I include in these remarks two letters that are self-explanatory:

HARVARD STREET LUTHERAN CHURCH OF THE NORWEGIAN SYNOD (SYNODICAL CONFERENCE),
Cambridge, Mass., April 10, 1940.

The Honorable J. THORKELSON,
Washington, D. C.

MY DEAR MR. THORKELSON: As a Norwegian, your voice should be heard with respect on the situation that has arisen in neutral Norway, even if you may not be on the committees most directly concerned. The enclosed copy of a letter to the Boston Globe explains itself. I am sending it to our own Senators and Congressmen, asking that something be done to neutralize the war-mongering activities of our President and his agents, and that our influence be used toward peace, instead of toward a continuation of the war, which would undoubtedly mean much suffering for our Norwegian people, as well as the Danes and other neutrals. Although you do not represent our State, I am addressing this to you also, as you are, I understand, a fellow Norwegian Lutheran.

With best greetings, I remain,
Sincerely yours,

GEO. O. LILLEGARD.

CAMBRIDGE, MASS., *April 10, 1940.*

THE EDITOR OF THE BOSTON GLOBE:

As an American citizen of Norwegian descent, we believe we have the right to express our resentment over the way in which helpless neutral countries are being dragged into this war as a direct result of our own unneutral failure to maintain the rights of neutral nations against British tyranny when we so easily could do so.

News reporters and commentators have not neglected to point out that it was British strategy to involve Norway, so that Germany might be drawn out from the shelter of her Siegfried line and the neighboring neutral nations. The Allies must accordingly bear the chief responsibility for exposing Denmark and Norway to the overwhelming armies of Nazi Germany. And our country is also responsible, because it has taken every attack on our rights by the British "lying down," and thus made it impossible for weaker neutral nations to oppose any effective resistance to the British strategy of forcing them to take sides in this conflict, no matter how anxious they were to keep strictly neutral.

Now, we shall, no doubt, be subjected to a high-pressure propaganda to come to the rescue of poor little England and the other "democracies" which she is so anxious to "save" with the aid of American blood and treasure. But we believe the time has come for us to insist that our Government cease to provide the Allies with war planes and other military supplies which will be used in the first instance to bombard Norway and Denmark and turn these unprepared countries into bloody battlefields. It is our plain duty to join the oppressed peoples of France and England who are crying for peace and the neutral nations who want peace in their demand for the cessation of this senseless conflict. If we do not do everything humanly possible to prevent this war from continuing and spreading—and many authorities agree it could continue only with our aid—we shall be guilty before God and man of the blood that will be spilled and the new hatreds that will be engendered.

Copies of this letter are being sent to our Congressmen with the request that they initiate some move toward peace.

GEO. O. LILLEGARD,
Pastor of Boston Norwegian Lutheran Church.

These letters are interesting because they express a thought contrary to what might be expected from a person closely in sympathy with Norway and other Scandinavian countries. It requires considerable courage for anyone to express himself as the Reverend Lillegard did in his letters, and this is particularly true in view of press reports. His opinion is much more valuable than that expressed in the press, for he speaks in sympathy with the Scandinavian people, while the controlled press is in sympathy with those who want to involve the United States in the war.

The Reverend Lillegard does not seem to be alarmed although he is concerned about the future of Norway, but he puts the blame where it rightfully belongs, namely, upon meddling Englishmen. His thought is, if possible, to avoid unnecessary bloodshed and destruction of property. This, of course, is bound to happen should England now attempt to invade Norway. He evidently fears naval operations and armed occupation by England which, of course, is bound to terminate in devastation of coastal cities. He evidently believes that England has blundered enough and should, for the sake of decency, blunder herself back home. One thing is certain: English attempt to land in Norway will bring about Russian invasion and the involvement of Sweden in the present war.

The Scandinavian countries would still be at peace had England left them alone. The English war lords should be satisfied, for they have succeeded in paving the way for German occupation of Poland and Scandinavia and for Russian occupation of Finland. All this adds a finishing touch to stupid British diplomacy in Europe and the United States.

MORE STUPIDITY

When did England declare war on Germany? England declared war on Germany after Poland's defeat, and she remained perfectly indifferent and quiet while Russia invaded Finland. After the defeat of both countries, Poland and Finland, and after the peace treaties had been signed and tranquility returned, England again, in the now disclosed attempt to invade Norway, involves the Scandinavian countries in the war.

If England and France did not want to fight, why did England send expeditionary forces to France, and why did both of them declare war? Both of these powers and Germany have, instead of fighting, played dance music for each other from the Maginot and Siegfried lines. The three powers started with music, and they should now at least be allowed to dance to their own tune. No one should forget the impelling forces in the present war, for they are the same old war mongers: The international bankers, and munition manufacturers, directed by the internationalist, the old enemy to peace.

The question that rises in my mind is in regard to the appropriation we made for Finland. Is it possible that this appropriation is used to buy airplanes for England? Airplanes which were to be used in the English invasion of Norway? It is a matter upon which Congress should check, for it is quite possible that this credit has been directed from charitable purposes to purposes of aggression.

BLOCKADE

Yesterday, I inserted remarks in the RECORD which describe a large organization in the United States, whose fight for human rights is boycott of all who disagree with it. It is these same tactics that England employs in the present war, and the purpose is to starve her selected enemies into submission. This attempt on the part of England is childishly stupid, for no power with the slightest self-respect will sit and wait for death by starvation. Such blockade on the part of England will unite the people who are so threatened into a compact and solid offensive unit, for it is less painful to die on the field of battle than it is to sit idly by and wait for famine and starvation to destroy millions of people. England's air-tight blockade will bring about a closer understanding among smaller neutrals and Germany, because all are bound to suffer by the same blockade.

It is, however, well to bear in mind that nothing unusual would have happened had England held its blockade in the proper zones, but that is not the way of England. She is willing to starve the world in order to protect her own empire. It was the English blockade that forced Germany to aline herself with Russia, and it is the English blockade, as I have already said, that has brought about the recent German invasion and occupation of Norway. Why did Germany risk such unpopular attack? She was forced to

occupy Norway as a measure of self-preservation, for she was evidently informed that England had ships in Norwegian harbors loaded with war material to be used in occupation of Norway, so it now should be clear to all that Great Britain is responsible for the whole thing.

We have had our troubles with the English neutrality patrol, for many of our ships have been escorted to British ports by the English Navy. Little or nothing has been said about this by our own State Department, and nothing will be said until the Executive looks at the war from an American neutral viewpoint. Nothing more disgraceful could have happened than British seizure and examination of our own mail. The protest made by the State Department against this British affront and insult to the United States is indeed feeble, and, as a matter of fact, it appears that the State Department acquiesced in such seizure.

This pro-British attitude would lead us into war could the proponents have their way. It is the neutral attitude of Congress and of the people which has kept us out of war, and it is only by active public expression that we will remain out of war. I hope, therefore, that smaller newspapers, or let me say, the papers which are not controlled, lend their pages to American neutrality.

We have nothing at all at stake in Europe, and our trade in war supplies will cease at the end of the war, when we will be ignored in exactly the same manner as we were after the World War. It is, therefore, to our interest to watch the war in Europe and prepare ourselves to consolidate and protect the American Continent and all adjacent possessions of the belligerent powers, as a step toward preserving and protecting ourselves. While they are fighting in Europe, we should get rid of the Communists and restore America to the American people. We should remove all the "reds" in schools and colleges, and particularly "red" judges and "red" courts. If we fail in that, we fail to protect ourselves and our Nation.

Surgeon General Parran Endorses House Version of Antipollution With Mundt Amendment

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 12, 1940

Mr. MUNDT. Mr. Speaker, now that Chairman MANSFIELD of the House Rivers and Harbors Committee has happily recovered from his recent illness, it is expected that the conferees will soon meet to consider Senate bill 685, the navigable waters antipollution bill which passed the House March 1 in a liberally amended and vastly improved form from that in which it passed the Senate. It is the hope of sincere conservationists everywhere that the House version of the bill will be accepted in conference so that unrestricted and uncontrollable pollution of the people's waters may be terminated in America insofar as presently clean streams are concerned and insofar as new types and sources of destructive pollution are concerned.

GENERAL PARRAN ENDORSES BILL WITH MUNDT AMENDMENT

Due to the fact that some of the less conscionable commercial polluters who formerly supported S. 685 in the pollution-encouraging form in which it passed the Senate—notably the so-called clean-streams committee of the Cincinnati Chamber of Commerce—have now disclaimed their offspring and are practicing legislative infanticide, it is well to call attention to the fact that opposition to the House version of S. 685 is now practically restricted only to those who openly support the continuance of pollution. Honest industries, civic-minded organizations, and public-health officials, who were counted upon by the "polluters' lobby" to accept the libel for fact that "Congress would never pass a bill to regulate pollution," are now rallying to the House version of S. 685 because they recognize it to be a reasonable approach to a long-perplexing problem. They realize the futility of condemning existing pollution with strong adjectives and expensive surveys unless some steps are taken to control and regulate new sources of pollution. They realize, too, that this control of new sources of pollution must be considerate of both the public interest and the economic factors, so they welcome the Mundt amendment to Senate bill 685, which simply gives the pollution-control board the right to grant or refuse permits for new sources of pollution, as a happy compromise between those who would be "too drastic" and those who would simply serve as disciples of the polluters.

Prominent among those now supporting the House amended antipollution bill with the Mundt amendment and typical of the manner in which sincere health officials are endorsing this fair and effective approach to pollution control is Surg. Gen. Thomas Parran, of the United States Public Health Service. In order to disprove statements by prominent polluters to the effect that "Dr. Parran does not favor legislation to restrict pollution," Mr. Kenneth A. Reid, of Chicago, general manager of the Izaak Walton League of America, wrote him a letter on March 16 asking General Parran to express his opinion on S. 685 in the form in which it is now in conference. On April 5 Surgeon General Parran replied to Mr. Reid's letter and stated definitely and positively that he was in favor of S. 685 in its present form including amendments by the House Committee on Rivers and Harbors and the Mundt amendment. The two letters are printed herewith in toto so that all Members may know exactly the attitude of Surgeon General Parran on this important legislation. The polluters may place easy dollars above human health and stream sanitation, but heaven be praised the health officials of the United States join with the conservationists of America in putting first things first.

NATIONAL HEADQUARTERS,
IZAAK WALTON LEAGUE OF AMERICA,
DEFENDERS OF WOODS, WATERS, AND WILDLIFE,
Chicago, Ill., March 16, 1940.

DR. THOMAS PARRAN,
Surgeon General, United States Public Health Service, Washington, D. C.

DEAR DR. PARRAN: In view of the House action on March 1 in accepting certain amendments to S. 685 and passing that bill with the amendments, it would now seem that all opposing groups could get solidly behind this amended bill so that we could end this long struggle and show some slight accomplishment toward the objectives.

As you know, we and other conservation organizations which have long advocated the need for actual Federal control have shown our willingness to cooperate toward the desired end by dropping our own bill and supporting S. 685 in return for one amendment which in no way would interfere with existing polluters, but, while those problems were being studied in accordance with the terms of the original Barkley bill, would in effect draw a line between existing pollution and future or potential new sources and prevent the spread of pollution across that line.

Since the principle of quarantine to stop the spread of a disease is accepted by the medical profession as an essential preliminary in the treatment of disease, we feel sure that the United States Public Health Service not only can have no objection but will heartily approve of this amendment.

We trust that all agencies interested in the abatement of pollution can now wholeheartedly join forces in support of S. 685 as amended and passed by the House, and we would appreciate hearing from you advising the present position of the United States Public Health Service regarding this legislation.

Sincerely yours,

KENNETH A. REID,
General Manager.

To this letter, on April 5, Dr. Parran sent the very definite and perfectly lucid reply:

FEDERAL SECURITY AGENCY,
UNITED STATES PUBLIC HEALTH SERVICE,
Washington, April 5, 1940.

MR. KENNETH A. REID,
General Manager, Izaak Walton League of America, Merchandise Mart, Chicago, Ill.

DEAR MR. REID: Absence from the city has prevented an earlier acknowledgment of your letter of March 16 relative to the stream-pollution bill now before a conference committee of the House and Senate.

In my opinion, the bill as passed by the House represents a constructive approach to this important and constantly increasing problem. It affords the opportunity for all agencies and organizations which are interested in cleaning up our streams to work together in accomplishing the purpose of the proposed legislation, and I earnestly hope the legislation will be enacted.

Sincerely yours,

THOMAS PARRAN,
Surgeon General.

The above exchange of letters between Mr. Reid and Dr. Parran brands as a malicious falsehood the statement that the United States Public Health Service is opposed to the Mundt amendment or to any constructive attempt to begin the solution of America's very serious pollution problem. In recent publicity releases, the Cincinnati Chamber of Commerce has dropped its mask of favoring antipollution legislation and is now openly advocating the defeat of Senate bill 685 on the basis that, in its present form, it actually takes steps to curb the evil of pollution. That is to be expected. It is only logical that polluters would want to ply their practices as long as public indifference or congressional lethargy permitted. It is really a wholesome sign that the polluters of America, instead of continuing their Trojan-horse policy of sending lobbyists to Washington to favor inane and silly legislation criticizing pollution and then condoning it, are now forced to unmask their true intentions and to fight in the open for legislation "of the polluters, by the polluters, and for the polluters." Few, if any, Congressmen will now, since the choice is evident and the decision clear-cut, vote to sacrifice the rights of the people to the predatory interests of pollution.

Senate bill 685 as it passed the House is a reasonable and righteous bill. The House conferees are prepared to battle for its acceptance as is. It is hoped all Congressmen and Senators interested in a better, cleaner, happier, and more healthful America will resist the propaganda now pouring in upon them from the pollution interests and enact S. 685 into final law with its amendment labeling pollution as contrary to the public policy of the United States, plus its rational provisions to set up reasonable barriers against new sources of pollution and against the contamination of the all too few clean streams still existing in America the beautiful.

NO WHITE FLAG TO THE BLACK BARONS!

A vote for Senate bill 685, with the Mundt amendment, is a vote for fair play and for giving the people's rights at least equal consideration with the polluters' predacity. A vote to accept Senate bill 685 without the amendment to regulate new sources of pollution would be a vote of surrender to the barons of pollution and a weak confession that America is reconciled to have her rivers and streams of today become the sewers and filth trenches of tomorrow. It is inconceivable that this Congress would ever run up the white flag to the black piracy of pollution.

Thomas C. Corcoran—Securities and Exchange Commission

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, April 12 (legislative day of Monday, April 8), 1940

ARTICLE FROM THE UNITED STATES NEWS AND EDITORIAL FROM THE CLEVELAND PLAIN DEALER

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles, one from the United States News of April 12, 1940, entitled "Tom Corcoran's Success—The Story of the Administration's 'Power Behind the Throne,'" and an editorial from the Cleveland Plain Dealer of March 23, 1940, entitled "Investigate the S. E. C."

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the United States News of April 12, 1940]

TOM CORCORAN'S SUCCESS—THE STORY OF THE ADMINISTRATION'S "POWER BEHIND THE THRONE"—HIS ABSENCE FROM WASHINGTON FOR A BRIEF INTERVAL IS FELT IN OFFICIAL CIRCLES

Thomas C. Corcoran finds his work piling up. He got married and left Washington on his honeymoon. Immediately things began to happen that demanded his attention. A vitally important opening developed on the Securities and Exchange Commission. Relief policy came up for decision. Trouble developed over television. President Roosevelt, recovering from a cold, had a dozen jobs that needed doing.

Without Corcoran on the job high officials complained that the "spark plug" was gone. They remarked that he would have to hurry back. They raised questions about appointments overdue. They wondered—and their wonder was reported by his close friends, Joseph Alsop and Robert Kintner, newspaper columnists—how Tom Corcoran would find an answer to the S. E. C. problem; to pick a Republican who would vote like a new dealer.

AN AMAZING SUCCESS STORY

All of this called attention to the most amazing success story in recent Washington history—a story that never really has been told.

It is the story of a young man who, in a few brief years, has picked 4 out of 9 Supreme Court Justices, who has named judges and district attorneys, and officials of major departments, who has a strong voice in the operation of 4 of the 10 executive departments of the Government and a score of agencies. Nobody quite remembers when there has been another Government official like Tom Corcoran, wielding immense influence, yet operating constantly in the background.

WIDESPREAD ACTIVITY REVEALED

Tom's operations only now can be reported with a measure of completeness. From Corcoran's associates and appointees comes the information that follows, revealing for the first time how widespread is his activity.

Tom Corcoran takes special pride in the change he has wrought in the personnel of the Nation's courts. Four appointments to the Supreme Court, in which he had a hand, altered the viewpoint of the Court and lowered appreciably its age level.

It was Corcoran who successfully urged the Supreme Court appointment of Stanley Reed, his nominal boss at the R. F. C. Corcoran influence dominated in the selection of William O. Douglas to fill a second Court vacancy. When Justice Brandeis resigned from the Supreme Court, Tom had an opportunity to repay an old debt by pulling successfully for the selection of Justice Frankfurter. The Justice, then a Harvard professor, had been responsible for Corcoran's entrance into Government service when, back in 1931, he recommended the young Wall Street attorney to Eugene Meyer for a job with R. F. C.

In his latest maneuver affecting the Supreme Court, Tom Corcoran sold the idea of elevating Frank Murphy from the Attorney Generalship to the Court and raising his close friend, Robert H. Jackson, from the Solicitor Generalship to the Attorney Generalship.

These are revealed by the facts to be typical moves, although in the higher realm of appointments. They show why it is that Corcoran is so respected and so carefully watched. Tom's interest in courts, however, is not confined to the Supreme Court. Recent appointments of appeals court judges in which he was much interested are those of Calvert Magruder, of Cambridge, Mass.; Charles E. Clark, of New Haven; and William Clark and Herbert Goodrich, both of Philadelphia.

Tom also takes pride in pointing out to friends that his efforts have resulted in reduction of the over-all age of United States district attorneys by more than 100 years. Two of his favorite choices are District Attorneys John T. Cahill, at New York City, and William J. Campbell, at Chicago. Right now Corcoran is particularly proud of the work of John Rogge, Assistant Attorney General in charge of the Criminal Division, who was selected on his urging.

But Tom Corcoran's interests extend far more widely than in the narrow field of the judiciary.

A WALL STREET GRADUATE

Corcoran has taken a special interest in regulation of Wall Street and of the public utilities. Together with his friend Ben Cohen, he was graduated into Government service from Wall Street. Tom managed to retain a modest fortune that he made in the period from 1926 to 1931. He has retained, too, a desire to bring private finance and the private power industry to heel. In practical terms, Corcoran has selected a majority of the members of the S. E. C., charged with regulation of both the security issuance and trading industry and the utility holding-company industry.

Chairman Jerome Frank, of S. E. C., was taken under Tom's wing when Chester Davis purged him from the A. A. A. Frank, after serving for a time with R. F. C., moved to a place on S. E. C. When two other vacancies occurred, Corcoran picked Leon Henderson to fill one and Representative Edward C. Eicher to fill the other. Henderson had supplied the New Deal with economic ideas and Eicher had helped with the attempted 1938 purge of conservative Democrats.

REFLECTORS OF A VIEWPOINT

In the field of electric power, Corcoran went further. He picked Leland C. Olds to be chairman of the Federal Power Commission, Harry Slattery to administer the Rural Electrification Administration, and Ben Cohen to serve as general counsel of the National Power Policy Committee. Seven out of nine members of this policy committee reflect the Corcoran viewpoint.

Tom Corcoran, of course, had a hand in the selection of his very good friend, Harry Hopkins, to be Secretary of Commerce, and he

saw to it that David Niles, another friend, was chosen to handle Commerce Department patronage, including the census. Tom picked A. J. Wirtz as Under Secretary of the Interior.

But some of Corcoran's most interesting and striking successes have occurred in the Treasury Department, where conservative Henry Morgenthau rules.

During the early New Deal years, Corcoran's interests were represented by the late Herman Oliphant, who served as general counsel and exercised great influence on tax and fiscal policy. After Mr. Oliphant's death, Corcoran introduced as his successor Edward Foley, who had been one of his young friends in the R. F. C., and whose viewpoint closely paralleled that of Oliphant. When Mr. Morgenthau brought in conservative John W. Hanes as Treasury Under Secretary in charge of taxes, Tom Corcoran was greatly disturbed, but Hanes did not stay long when he found that his tax ideas were stymied in ways that he couldn't understand. Today John L. Sullivan serves, on Corcoran's recommendation, as Assistant Treasury Secretary in charge of taxes. Businessmen who have wondered what became of the plan for removing tax irritants and depressants no longer need be in doubt.

A HAND IN MONEY POLICY

Harry White, who directs money policy at the Treasury, represents the Corcoran viewpoint, and so—in a measure—does Lauchlin Currie, economic adviser to the President, although Currie is not a member of the Corcoran group.

This same story of success runs through department after department and agency after agency.

It was Tom Corcoran who selected and recommended James L. Fly to head the Federal Communications Commission. Corcoran approved Theodore Kreps as successor to Leon Henderson in directing the work of the monopoly committee. Corcoran recommended Francis Biddle as Solicitor General. He promoted Abe Fortas to the job of General Counsel of P. W. A., and has Fortas as one of his candidates for the S. E. C. job vacated by George Mathews, if the P. W. A. counsel can prove that he is a Republican. Corcoran had a hand in selecting Charles Fahy to be General Counsel of the National Labor Relations Board. All of the Assistant Attorneys General under Frank Murphy had been selected by Corcoran. Gerald Reilly, solicitor of the Department of Labor, is a Corcoran choice.

And so it goes.

There are some departments, however, in which Tom Corcoran has not been able to exercise much influence, and some others in which he has not been interested. He concluded early that the Army and Navy were special fields not directly involved in questions of domestic policy. For that reason those two service departments have not shared in the attention devoted to other departments.

Tom met a stone wall when his interest in personnel clashed with those of James Farley, Postmaster General, and the Post Office Department has been far outside of his realm. Corcoran, likewise, has not had much success with Henry Wallace at the Department of Agriculture. Mr. Wallace, consequently, is very definitely excluded from calculations of the New Deal group, although he runs the largest New Deal experiment. In the same way, Cordell Hull, at the State Department, has refrained from going along.

Corcoran has been so busy with his widespread activities in the broad field of administrative policy and personnel that he has not, this year, had time to devote to Congress. There was a period when calls from Tom Corcoran caused administration leaders in both Houses to jump.

The fact, however, that Corcoran does not have personal representatives in a department or in Congress is not a sign that he is out of touch with situations in those places. Tom has found it very important to have young lawyers placed in all parts of the Government. Those lawyers sit in on conferences and are aware at all times of what is going on. The result is that Corcoran is better informed on the inside workings of this Government than any other person, with the possible exception of President Roosevelt.

Corcoran, through experience, has learned to be a great believer in young men in key positions because young men are less inclined to be swayed by sentiment or by business and financial ties.

The amazing story of rising success and power for a man barely 40 years of age started back in the early days of the New Deal when Joe Kennedy, now Ambassador to Great Britain, was giving a small party at which President Roosevelt was present. Tom Corcoran entertained at that party with his accordion and with his piano playing, both accompanied by a baritone voice that carries an endless repertoire of ballads. Mr. Roosevelt was entranced both by the entertaining ability of Corcoran and by his personality. He was invited to the White House, and today stands as the man who wields more power than any individual in the Government other than the President himself. New dealers speak of Tommy Corcoran as the "power behind the throne."

EXERCISING EFFORT AND VIGILANCE

Tom earned that reputation by dealing in personalities and in issues. He has expressed to friends his conviction that only by untiring effort and constant vigilance can the liberal ideas which he holds be transformed into action. Corcoran himself is a striking example of both effort and vigilance. He is so active, has so many irons in the fire, faces such demands upon his time that he maintains three bases of operations

One is his official office on the eleventh floor of the R. F. C. building. It is as special counsel of R. F. C. that Corcoran draws his $10,000 a year, and Jesse Jones, R. F. C. chairman, would not say that this is overpayment for the few hours each month that Tom can devote to the Corporation. The second office is at the Department of the Interior, where Corcoran's good friend, Harold Ickes, runs the show and where his other good friend, Ben Cohen, operates. Then there is a third base at the Department of Justice, where one more good friend, Robert H. Jackson, presides.

With Tom Corcoran gone, Washington was quiet.

[From the Cleveland Plain Dealer of March 23, 1940]

INVESTIGATE THE S. E. C.

After completing an investigation of the British banking system, the House of Lords reported, in 1848, that "the best banking system may be defeated by imperfect management, and on the other hand, the evils of an imperfect banking system may be greatly mitigated, if not overcome, by prudence, caution, and resolution."

This observation of the House of Lords is in order in connection with the Securities and Exchange Act and its administration by the Securities and Exchange Commission. High-handed administration by the Commission has created a situation which makes it virtually impossible for the investment banking machinery to operate effectively and serve the functions for which it was set up.

The Securities and Exchange Act was passed, and the Commission created, for the purpose of subjecting the underwriting of and trading in securities to proper regulation. Abuses in connection with both came to light in the decade of the 1920's which demonstrated beyond a doubt the need for regulation of a branch of commerce which is affected with a broad public interest and in which an uninformed and gullible public had dropped billions in the decade following the Great War.

Quickly drawn as it was and based on incomplete information with respect to the functioning of the stock exchanges and the business of security underwriting, the act was obviously imperfect. In some respects it was faulty in a high degree, but in the hands of a commission having prudence, caution, and resolution, the act could have been made to provide the intended protection to investors without damming up completely the flow of new capital into productive enterprise.

In the hands of a commission which has been captious and unsympathetic, the Securities and Exchange Act has created a situation which has lately become impossible to the investment fraternity. As a consequence, the Investment Bankers' Association is involved currently in a controversy with the S. E. C. which probably will not be quieted until the operations of that Commission are subjected to a congressional investigation similar to that made recently of the N. L. R. B.

The immediate issue in the controversy is the arm's length bargaining provision of the Public Utility Holding Company Act, administration of which is also vested in the S. E. C. Involved here is the broad question of whether it is preferable for industry entering the market for new capital to deal with an investment banker of its own choice or whether all securities coming on the market should in effect be put up at public auction in the open investment market.

In the fuss that has been precipitated between the S. E. C. and the I. B. A. the original subject of controversy has become subordinate. The Government agency charges the investment bankers with having no interest in investment, in security buyers or even in the capital markets, but in regaining by any subterfuge, their "outlawed privilege of operating their financial markets without responsibility to anybody but its own little group."

This newspaper will hardly be charged in this instance with being prejudiced in favor of the bankers. Back in the 1920's when they were pursuing a course which could not fail to involve the public in heavy losses, if not to precipitate a financial collapse, we called attention repeatedly to the dangers of the situation. Again in the early days of the New Deal when the Securities and Exchange Act was under consideration we consistently and persistently urged the enactment of a measure with real teeth in it, one that would protect the investor and put the investment business into the place in our financial organization it is designed to occupy.

We still feel the act is passably good, but its administration by the S. E. C. has been putrid. There is evidence in abundance to support the thesis that the Commission, in the exercise of its broad and largely undefined administrative powers, has gone much further than it was necessary to go to secure information for the public's protection. There is unfortunately not a little evidence pointing to a desire on the part of this agency to impede and to deter private financing to the end that the field for Government financing be extended and expanded, so that the alleged failure of private capital to seek productive employment could be used as excuse for unbalanced budgets, for pump-priming expenditures, for the encroachment of the Federal Government on private enterprise, as in the public-utility field, and as argument for the substitution, which already had gone too far, of a Government-managed economy for one of private enterprise.

We would hesitate to say with Congressman Cox, of Georgia, that the S. E. C. is "rapidly falling to the low level of the N. L. R. B." We hope its offenses are less grievous and its objectives more nearly consistent with the aims of the legislation under which it was created. But we agree with Cox and with Senator VANDENBERG that "a thoroughgoing, constructive, fact-finding investigation would be a wholesome thing for the country and the S. E. C. itself."

Such an investigation pretty clearly must be a forerunner to the restoration of confidence in the capital market and to the re-establishment of conditions under which the flow of investment funds into permanent plant and equipment will be resumed. Without that, the history of the last decade indicates, we may reasonably expect no full employment of our productive energies and accordingly nothing better in a business way than the subnormal operations of the 1930's.

Recent National Conservation Conventions Endorse House Version of Antipollution Bill With Mundt Amendment

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 12, 1940

Mr. MUNDT. Mr. Speaker, since March 1, when this House passed Senate bill 685 containing committee amendments and the so-called Mundt amendment to provide means of discouraging indiscriminate pollution of clean waters and discharge of new sources of pollution where they would have deleterious effects upon streams still biologically valuable, several great conservation organizations have held their national conventions. It is of more than passing significance that each of these conventions, which include America's greatest conservation groups, enthusiastically passed resolutions praising the House action in regulating new sources of pollution and in giving sense and substance to the version of S. 685, which came to us in such an incongruous form from the Senate.

AMERICAN WILDLIFE CONFERENCE ENDORSES MUNDT AMENDMENT

The North American Wildlife Conference, holding its fifth annual meeting in Washington on March 18, broke a long-standing tradition against passing resolutions on legislative matters and passed the following resolution in cognizance of the tremendous importance of sensible clean-streams legislation if wildlife is to be kept from extinction in America:

Resolved, That the Fifth North American Wildlife Conference recommend to the joint conference committee of the Senate and the House of Representatives that the antipollution bill, S. 658, be favorably reported in the form and with the amendments as it passed the House of Representatives on March 1 of this year; be it further

Resolved, That if this bill is not so favorably reported, that it is the sense of this conference that the bill should be defeated.

AMERICAN FISHERIES SOCIETY PASSES SIMILAR ENDORSEMENT

In a letter to Senator BARKLEY, of Kentucky, under date of March 22, the American Fisheries Society recorded its resolution in favor of the amendment to protect presently clean streams from pollution and to set up a "needs test" before new sources of pollution are permitted on navigable streams in the following language:

AMERICAN FISHERIES SOCIETY,
Washington, D. C., March 22, 1940.

Hon. ALBEN W. BARKLEY,
United States Senate, Washington, D. C.

DEAR SENATOR BARKLEY: I am requested to advise you that the American Fisheries Society is in favor of the passage of the Barkley bill, S. 685, as amended by Congressman KARL MUNDT, and trusts that you and your Senate and House conferees will pass it with this amendment. Without this amendment the society prefers to see the measure killed.

Respectfully submitted.

TALBOTT DENMEAD,
Secretary, Committee on Pollution.

IZAAK WALTON LEAGUE CONVENTION ENDORSES MUNDT AMENDMENT

Meeting in Chicago, the national convention of the Izaak Walton League of America made the subject of pollution its first order of business, and in resolution No. 1 emphatically urged Congress to pass S. 685 in the form in which it passed the House and with the Mundt amendment included. This resolution also asked all Congressmen and Senators to vote against S. 685 as a hollow subterfuge and a backward step antagonistic to honest clean-streams legislation if the conferees should by any chance yield to the pressure of polluters and delete the Mundt amendment from the bill as reported by the conference committee.

THIRTY-THIRD ANNUAL CONVENTION OF GAME AND FISH COMMISSIONERS PASS CONVENTION RESOLUTION FAVORABLE TO MUNDT AMENDMENT

Meeting in June of 1939, before action was taken by the House on the subject of pollution but after the Senate had passed the original version of S. 685, which later analysis showed to be more destined to encourage rather than diminish pollution, the International Association of Game, Fish, and Conservation Commissioners, meeting in San Francisco on June 29 and 30, passed the following resolution, which is found on page 121 of their convention report:

Whereas the pollution in the waters of the United States is detrimental to our valuable fish and other wildlife; and

Whereas there are several bills pending in Congress to regulate pollution in navigable waters:

Resolved, That the International Association of Game, Fish, and Conservation Commissioners, assembled in San Francisco, Calif., these 29th and 30th days of June 1939, after carefully considering the various measures, does hereby recommend to Congress the passage of the bill introduced by Congressman KARL MUNDT, known as H. R. 6723, and that the secretary be authorized to transmit copies of this resolution to Congressman MUNDT, the press, and others he may feel should be advised of the action of this association.

Mr. Speaker, it should be remembered that my bill, H. R. 6723, would have gone much further in the regulation and control of pollution than the so-called Mundt amendment. H. R. 6723 was designed to take steps to curb present practices of injurious pollution as well as to decrease indiscriminate pollution of the future. The Mundt amendment lifted from H. R. 6723 its pollution-discouraging features insofar as they pertain to new sources of pollution, but it sets up no regulations to penalize or prevent existing sources of pollution. Public-spirited industrialists should welcome such a fair and considerate compromise and most of them do; however, a few stubborn and ultraselfish pollution profiteers want to persist in their practice of indiscriminately poisoning and polluting existing clean streams and ruining to the point of biological sterility streams which still serve the public interests. It is these let-the-public-be-damned polluters who are now urging Congress to delete the Mundt amendment and to pass S. 685 in such an adulterated version that it will actually do more to promote pollution than to prevent it.

Fortunately for this country, it is my sincere conviction that most Senators and Representatives are more interested in preserving America than they are in protecting its polluters, and so I am highly hopeful that the conferees and the Congress will adopt S. 685 in its present language with the amendment included, which for the first time in American history sets up some reasonable barriers against unreasonable forms of future pollution.

SENATOR BARKLEY'S HOME STATE NEWSPAPER ADDS ITS ENDORSEMENT

Indicating that those having an opportunity to learn the facts almost universally endorse and sponsor the House action in adding pollution-preventing clauses to S. 685, the potent Louisville Times, of Louisville, Ky., ran the following editorial after the House action on March 1:

[From the Louisville Times of March 11, 1940]

WHY SHOULDN'T STATE'S SENATORS ACCEPT HOUSE AMENDMENT OF WATER-POLLUTION BILL?

Conservation forces procured in the House an amendment to the Barkley-Spence water-pollution bill which we believe will make it much more effective than it would have been as the Senate passed it.

They express the hope that Senator BARKLEY will accept the amendment.

Is there any reason why Senator BARKLEY and Senator CHANDLER should not approve the bill as amended?

The Barkley-Spence bill received wide endorsement before it was up for passage in the Senate, and after it passed the Senate and was sent to the House for consideration. Enlightened discussion attended action by the House, and an amendment which water polluters and their lobby opposed passed the House by a substantial majority.

Those who procured its adoption declare, and apparently are prepared to prove, that the polluter's lobby, which endorsed the Barkley-Spence bill in its original form, is fighting the amendment.

EVEN AMERICAN ASSOCIATION FOR ADVANCEMENT OF SCIENCE ENDORSES MUNDT POSITION ON POLLUTION CONTROL

Occasionally some careless and overzealous prince of pollution condemns those who favor "doing something about" pollution regulation as "starry eyed idealists" or "impractical purists" or some such phrase intended to be derogatory and destructive. Such spokesmen for polluters forget the fact 20,000,000 adults in this country are either hunters or fishermen and that their numbers are amply abetted by millions of other outdoor enthusiasts who never pull a trigger or wet a line, but who value the importance of a clean stream, to say nothing of the great army of John Citizens who are getting tired of drinking water distilled from open sewers and industrial drain pipes. Those who recklessly rise to defend pollution against all comers and refer to those of us who are willing to fight back for clean streams as a "highly vocal minority" forget or do not realize that recreation today—primarily associated with some phase of clean streams and unpolluted waters—is one of America's $1,000,000,000 industries, distributing employment more widely and rewarding employees more generously than the sum total of stubborn, self-centered polluters who mournfully wail when the people set out to prevent them from extending the "right of pollution"—a right they never had in the first instance—to our few remaining virgin streams.

It must come as a shock to these apologists for pollution, therefore, to read the following resolution passed at the annual conference of the American Association for the Advancement of Science at its December meeting in 1939, just shortly prior to the House action on pollution and again after the ill-advised and ineffective Senate version of Senate bill 685 had passed the Senate. On December 30 this conference unanimously adopted the following resolution:

The menace of stream pollution has already been given careful consideration and the American Association for the Advancement of Science has expressed its views that any legislation should include provisions for reasonable control by constituted authority. At present the Mundt bill as amended is the only measure yet proposed which conforms to that consideration.

A SCIENTIST IS HARD TO FOOL WITH A PRETTY ADJECTIVE

Mr. Speaker, it takes a brave baron of pollution to refer to the American Association for the Advancement of Science as "starry eyed idealists." These are hard-headed, level-thinking, analytical scientific men used to conversing with slide rules and mathematical formulas. They are hard to fool. They are logical and cautious. A naughty adjective does not stop them from following through a sentence to the verb to see what the author proposes to do about the subject he so vigorously assailed.

Unfortunately for the sly polluters, who now admit they had their finger in the drafting of the original version of Senate bill 685, these men of science looked for the verbs in that bill and found them as scarce as pollutionists at a fishermen's camp. Senate bill 685 criticized pollution with all the fighting adjectives in a lexicographer's handbook, but it concluded by caressing its continuance with all the endearing terms of a love lyric. Such trickery did not add up right to scientific men, so they endorsed the Mundt bill, because they realize the national destructiveness of unrestrained, unregulated, uncontrolled, and unconscionable pollution.

YOUR VOTE WILL POLLUTE OR PROTECT AMERICA FOR YOUR CHILDREN

In a few days or a few weeks now, Senators and Representatives, you and I will be privileged to cast our individual votes for or against a polluted America. It is hoped the conference committee now studying Senate bill 685 will bring back a report accepting the House amendments, including the Mundt amendment to discourage new sources of pollution. If it does, you and I can proudly vote for legislation to protect America from wholesale pollution of streams yet unspoiled or by sources yet unused. If the conference committee fails us, and brings back a version of Senate bill 685 dictated by the polluters' point of view that rivers are intended to be nature's sewers, you and I have the high privilege of rejecting this legislation forthwith for the subterfuge which it would be and of voting against the entire legislation.

We have a happy opportunity to help pollute or protect America by our votes on this legislation. By retaining the amendment to retard the expansion of new types of pollution we shall be taking a great forward step to a more healthful America and a more wholesome out-of-doors. If this amendment is deleted by the direction of the polluters, we can still serve the cause of conservation by voting against the hollow shell which would then remain and thus giving hope to America that, lacking the courage to outlaw pollution of the present or future we at least possess convictions too high to permit us to support legislation to give solace to the polluters. Thus, by refusing to sign our names to legislation which surrenders to the polluters, we encourage America to believe that a future Congress of more sturdy Members will prepare and pass legislation to protect the people against the practices of those who heedlessly pollute the public waters.

THE MUNDT AMENDMENT—WHAT IT DOES AND DOES NOT DO

The extensive polluters' lobby now encamped in Washington has resorted to crying "Wolf, wolf," when there is no wolf in S. 685 as it passed the House. They set up straw men and imaginary ghosts to try to frighten Members into voting against the so-called Mundt amendment. They tell you in personal conference, by inspired letters, by publicity releases, and printed tracts that this amendment to discourage new sources of pollution "will stop cities from adding new apartment houses or residential areas to their city sewers; that no new industry can hook up with the city disposal system; that farmers will be prevented from pasturing stock near banks of streams; that no new industry can be established on any river in America"; and the polluters set up numerous other impossible and equally silly contentions with which to fool mature-minded men and women in the House and Senate into casting a polluter-protecting vote.

What do the facts in the situation reveal? In the first place the Mundt amendment—now identified as subdivision D of section 2 of the March 6 print of S. 685, found on page 17 of the bill—limits its restrictive language to "sewage or industrial waste." Automatically that eliminates the army of straw men represented by the scared cries that it will work a hardship on farmers and stockraisers. What next? The amendment limits its restrictive language to "new sources of pollution." Another apartment house, another residential section added to a city, another industry emptying its discharge through an existing sewer system could not possibly be interpreted as a "new source of pollution." It is an expansion of a prevailing nuisance; it is an extension of existing sources of pollution; it may be unhealthful to people and injurious to fish and animal life, but it is not "new pollution."

Finally, how is this restrictive language implemented? The amendment says, "no new sources of pollution, either by sewage or industrial waste, shall be permitted to be discharged into the navigable waters of the United States and streams tributary thereto until and unless approved by the division." Note that this "division" is the "division of water pollution control" set up by the original authors of S. 685—including the Cincinnati Chamber of Commerce by self-admission—and this division can permit the discharge of any sources of pollution, old or new, which it does not consider deleterious to the public interests.

WHAT MORE COULD POLLUTERS REASONABLY ASK?

Have the polluters any right to ask for more license than that? By what strange pagan creed do they reason that they should be permitted to disregard public interests and set up new sources of pollution antagonistic to public health and common decency? The division which they themselves set up is empowered to establish standards of purity to judge the effects of new discharges of pollution, and to grant or refuse permission to permit these discharges on the basis of their effect upon the public interests as represented in the navigable watersheds of America. In all fairness, could conservationists ask for less and keep faith with the public welfare in America? Should polluters ask for more and expect to retain the respect of the fair-minded people of America? Boiled down to what it does and not what the polluters describe it as

doing, this amendment carefully and cautiously sets up barriers against deleterious new sources of pollution which cannot be justified before the division of water pollution control as being economically essential in face of their effects upon the public interests. No hard and fast barriers are established. The division is comprised of fair-minded and reasonable public officials.

They will establish standards of purity based upon public needs and campatible with economic necessity. They will treat the polluters and the public with equal justice and fairness. They will neither harass industry needlessly nor ignore the public interests. They represent, under the authority of this amendment, the most moderate approach to the eventual solution of America's pollution problem that can be devised without a complete capitulation to the polluters and a public confession that nothing is to be done to disturb their expansion of pollution to the point that not a fish can swim in our streams and where our rivers will become creeping cesspools, indicating to a sorry world that America is the land of the free and the home of pollution.

THIS CONGRESS FACES A GREAT CHALLENGE

This Congress faces a great challenge in conservation. It is my conviction that it will meet the challenge courageously and enact Senate bill 685 in the form in which it passed the House, thus treating with equal justice the people who own our streams and the polluters who heretofore have unhappily monopolized so many of them for private profit. By so doing we can make a lasting contribution to the conservation of American natural resources and the protection of the peoples' rights. We can help give substance to the song, America the Beautiful.

International Union of American Republics

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

ADDRESS BY THE PRESIDENT

Mr. BARKLEY. Mr. President, I ask unanimous consent that there be printed in the RECORD a very interesting and timely address delivered today by the President of the United States before the Governing Board of the Pan American Union.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

In the year 1890, on April 14, and without fanfare of trumpets, an Inter-American conference unanimously adopted a resolution providing that "there shall be formed by the countries represented in this conference an association under the title of the International Union of American Republics."

The tasks of the new organization were simple. They were to collect and distribute commercial information, to publish a bulletin, to provide trade information and to carry forward the work of promoting sound business relations.

But behind these prosaic words there was the driving force of a great American conception which had been gathering headway for 60 years.

The ideal originated in the mind of Simon Bolivar; and a kindly history has preserved for us the draft he had written in 1825, sketching his purpose and objective.

His aim was peace for the Americas. His hope was that the American example might eventually give peace to the entire world. His plan was stated in a single, brilliant sentence: "The New World takes shape in the form of independent nations, all joined by a common law which would control their foreign relations and would offer them the stabilizing force of a general and permanent congress." The result, as you know, was the calling of the Conference of Panama in 1826.

At that time, it took bold minds even to dream of universal peace. And yet the Congress of Panama gave clear expression to precisely that aspiration. Before that time, there had been but two systems of peace known to the world. One of them had been the peace of universal conquest, which Rome had achieved and lost, and which Napoleon had vainly endeavored to imitate. The other was the dangerous and temporary peace of balance of power—which even in 1826 was plainly no permanent solution.

At the Congress of Panama, the American nations proclaimed the ideal of a cooperative peace; the peace of free equals, freely agreeing to settle whatever differences might arise among them by none but pacific means—determined to cooperate with each other for the greater good of all.

Never before had any group of nations been asked to renounce the splendors of indefinite conquest, and to achieve their true grandeur by peaceful cooperation. Yet that was precisely what the Americas were considering.

The dream of Bolivar was not realized at the Congress of Panama. But it did remain a hope, an inspiration. To the writers, the poets, the dreamers, who kept the ideal of cooperative peace alive through the imperialist nineteenth century we owe an everlasting debt of gratitude.

In spite of several attempts to bring to a realization the ideal of inter-American unity, more than six decades went by before the seed began to grow. I am proud of the fact that on that occasion the initiative came from the United States. In 1888 President Cleveland approved an act of Congress authorizing him to call a conference of the American countries in order that there might be worked out a peaceful plan for the settling of disagreements and disputes, and a means of encouraging such reciprocal relations as would benefit all.

It was that inter-American conference, 50 years ago, that set up the International Union of the American Republics, the anniversary of which we are observing today. In opening the conference, James G. Blaine expressed its high purpose in the following words: "We believe that a spirit of justice, of common and equal interest between the American states, will leave no room for an artificial balance of power like unto that which has led to wars abroad and drenched Europe in blood."

Fifty years of unremitting effort has brought our republics far along the road that leads to this goal. Today as never before our nations have reason to appreciate the fruits of that progress. For today we are again face to face with the old problem.

Universal and stable peace remains a dream. War, more horrible and destructive than ever, has laid its blighting hand on many parts of the earth. Peace among our American nations remains secure because of the instruments we have succeeded in creating. They embody, in great measure at least, the principles upon which, I believe, enduring peace must be based throughout the world.

Peace reigns today in the Western Hemisphere because our nations have liberated themselves from fear. No nation is truly at peace if it lives under the shadow of coercion or invasion. By the simple process of agreeing that each nation shall respect the integrity and independence of the others, the New World has freed itself of the greatest and simplest cause of war. Self-restraint and the acceptance of the equal rights of our neighbors as an act of effective will has given us the peace we have had, and will preserve that peace so long as we abide by this ultimate moral law.

Peace reigns among us today because we have agreed, as neighbors should, to mind our own business. We have renounced, each and all of us, any right to intervene in each other's domestic affairs, recognizing that free and independent nations must shape their own destinies and find their own ways of life.

Peace reigns among us today because we have resolved to settle any dispute that should arise among us by friendly negotiation in accordance with justice and equity, rather than by force. We have created effective machinery for this purpose and we have demonstrated our willingness to have full recourse to that method.

Peace reigns among us because we have recognized the principle that only through vigorous and mutually beneficial international economic relations can each of us have adequate access to materials and opportunities necessary to a rising level of economic well-being for our peoples. In every practicable way we are seeking to bring this vital principle to its realization.

We of this hemisphere have no need to seek a new international order; we have already found it. This was not won by hysterical outcries, or violent movements of troops. We did not stamp out nations, capture governments, or uproot innocent people from the homes they had built. We did not invent absurd doctrines of race supremacy, or claim dictatorship through universal revolution.

The inter-American order was not built by hatred and terror. It has been paved by the endless and effective work of men of good will. We have built a foundation for the lives of hundreds of millions. We have unified these lives by a common devotion to a moral order.

The cooperative peace in the Western Hemisphere was not created by wishing; and it will require more than words to maintain it. In this association of nations, whoever touches any one of us touches all of us. We have only asked that the world go with us in the path of peace. But we shall be able to keep that way open only if we are prepared to meet force with force if challenge is ever made.

Today we can have no illusions. Old dreams of universal empire are again rampant. We hear of races which claim the right of mastery. We learn of groups which insist they have the right to impose their way of life on other nations. We encounter economic compulsions shrewdly devised to force great areas into political spheres of influence.

All of this is not of mere academic interest. We know that what happens in the Old World directly and powerfully affects the peace and well being of the New. It was for this very reason that we have adopted procedures that enable us to meet any eventuality. At Buenos Aires we agreed that we would consult,

should our peace be threatened. At Lima we agreed to stand together to defend and maintain the absolute integrity of every American nation from any attack, direct or indirect, from beyond the seas. At Panama we worked out ways and means for keeping war away from this hemisphere. I pray God that we shall not have to do more than that; but should it be necessary, I am convinced that we should be wholly successful. The inner strength of a group of free people is irresistible when they are prepared to act.

In my conception, the whole world now is struggling to find the basis of its life in coming centuries.

I affirm that that life must be based on positive values.

The value of love will always be stronger than the value of hate; since any nation or group of nations which employs hatred eventually is torn to pieces by hatred within itself.

The value of a belief in humanity and justice is always stronger than the value of belief in force; because force at last turns inward and if that occurs each man or group of men is finally compelled to measure his strength against his own brother.

The value of truth and sincerity is always stronger than the value of lies and cynicism. No process has yet been invented which can permanently separate men from their hearts and consciences or can prevent them from seeing the results of their ideas as time rolls by. You cannot make men believe that a way of life is good when it spreads poverty, misery, disease, and death. Men cannot be everlastingly loyal unless they are free.

We acclaim today the symbol of 50 years of the American way. We are determined to continue on that way in friendship. We are determined that our mutual relations be built upon honor and good faith. We are determined to live in peace and to make that peace secure. We are determined to follow the path of free peoples to a civilization worthy of freemen.

Farm Legislation at the Present Session

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

RADIO ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me on Saturday, April 13, during the course of the National Farm and Home Hour over the N. B. C. network on the subject of farm legislation at the present session of Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to have this opportunity to speak to the farm people of America and to the city people as well who may be listening to this farm-and-home-hour broadcast of the American Farm Bureau Federation. First of all, let me say that I come from an agricultural State. We have nearly a million farm people in New York. We produce a wide variety of farm products and we lead the Nation in the production of four or five important crops.

New York State ranks first in the value of dairy products, fourth in commercial truck crops, ninth in value of farm animals, first in the production of buckwheat, second in the production of grapes, third in cherry production, second in commercial apple production, fourth in pear production.

New York is not only a great producing area; it is also a vast consuming area. The New York City market is the greatest consuming center in the United States, one of the largest in the world; 13,000,000 consumers, about one-tenth of our country's entire population, reside in my State.

Therefore, I am interested in farm problems from the standpoint of both the farmer and the consumer. Since I first came to Congress I have had an interest in the welfare of agriculture, both in my State and in the Nation.

During the last 7 years we have been able to develop a workable farm program. The American Farm Bureau Federation has played a very important part in molding public opinion and helping to bring about the present national farm program, which has saved American agriculture from bankruptcy and the Nation from ruin.

Our present farm program is not perfect; we will never have a perfect program. It will always be necessary to modify and improve the program from time to time in the light of practical experience and to meet changing conditions. Nevertheless, I feel that we are making definite progress in our effort to improve agricultural conditions.

Coming as I do from the greatest consuming center in the Nation, and at the same time from a leading agricultural State, I realize the close interdependence of agriculture, industry, and labor. I appreciate the mutuality of interests of farm people and city people. I am convinced that we will never fully solve the unemployment problem until we solve the farm problem. It is equally true that we cannot fully solve the farm problem until we solve the unemployment problem.

Unless farmers are restored to a parity position with industry, we cannot have an adequate market for the goods of industry.

That is why I supported the present farm program; that is why I supported the farm appropriations when they were recently considered by the Senate.

I know of few activities by which the problems of the city and the country are dealt with more effectively than the program carried on by the Federal Surplus Commodities Corporation. It provides a realistic and effective solution of the paradox of starvation in the midst of bulging granaries and storehouses which afflicted us during the depression of a decade ago. By removing these price-depressing surpluses from market channels where they would otherwise ruin the farmers' prices, we increase the income of farmers, and at the same time we safeguard the health and well-being of millions of city families through distribution of the necessities of life to the destitute, to the low-income groups who otherwise could not obtain them. This program has had a wholesome and stabilizing effect upon our agricultural economy and has done much to relieve suffering in the cities. This program merits the continued support of both urban and rural people.

It was my pleasure last year, and again this year, to assist the officials of the American Farm Bureau Federation, headed by Mr. O'Neil, and its national fruit and vegetable committee headed by Mr. Herbert P. King, president of the New York State Farm Bureau Federation, in obtaining additional funds for the Department of Agriculture to study some of the problems confronting the producers of fruits and vegetables, particularly marketing problems.

But let me say a word about farm credit. One of the most important agricultural problems which has come before Congress for attention this session is that of rural credit. During the past 25 years we have built up a well-rounded system of rural credit—12 Federal land banks which extend farm-mortgage loans to farmers, 12 Federal intermediate credit banks which extend production credit through farmer-owned cooperative production credit associations—a system of banks for cooperatives to extend credit for farmers' cooperative purchasing and marketing associations. Notable progress in the extension and improvement in this system has been made during recent years.

As a result of long study of this problem of rural credit and years of practical experience in meeting the credit need of farmers, the major national farm organizations have come to the conclusion that this system should be administered and supervised by an independent bipartisan board.

A bill is now pending in Congress which removes the Farm Credit Administration from the Department of Agriculture, to which it was transferred some months ago by Executive order. It reestablishes it as an independent agency under the administration of a board of five members.

This legislation is strongly supported by representatives of the American Farm Bureau Federation, the National Grange, the National Council of Farmer Cooperatives, and other farm groups. It merits very careful attention and consideration.

One of the great problems confronting farmers and the Nation is the excessive cost of distribution, which penalizes both farmers and consumers. In an effort to improve the distribution of agricultural commodities, farmers developed cooperative marketing associations. Notable progress has been made in the farmers' cooperative movement. Farmers found by practical experience, however, that they alone could not solve the distribution problem. In order to supplement and assist farmers' cooperatives in grappling with the problem of distribution of farm commodities, the marketing-agreements program was developed as a part of the national farm program of 1933. Since that time it has been modified and improved. It has been used with notable success to aid the producers of dairy products and certain fruits and vegetables.

In my State, for example, it has been a lifesaver to the dairy farmers. The inauguration of a milk-agreement order for the New York City milkshed in August 1938 raised the price to farmers immediately from $1.35 per 100 pounds to $1.87 and protected their market until February 1939, when the order was suspended. Chaos ensued and the market became demoralized. The price dropped from $1.88 in January to $1.38 in March and then to $1.04 in May. When the order was reinstated in July 1939 there was an immediate advance in milk prices from $1.14 in June to $1.50 in July to $1.89 in August and $2.28 in November. In his attempt to secure fair and just prices for his milk the farmer has the support of the consumer, while at times both have felt that the cost of distribution and of processing was excessive.

One of the most important measures acted on this session of Congress is the resolution extending the Hull Reciprocal Trade Agreement Act. I supported the trade-agreement program because I want to promote the fullest practical development of our markets, both foreign and domestic, and because I believe it will help to create a solid foundation for a stable peace and for satisfactory world economic progress after the present European war is over.

It is a forward-looking, practical program, under which, as a Nation, we are making tremendous progress under conditions of safety and neighborliness. Secretary Hull has cautiously safeguarded the interests of our farm and industrial interests and at the same time has gained hundreds of concessions from foreign nations for our agricultural and industrial exports.

Before I conclude let me draw your attention to some other important farm bills now before Congress. The House recently

passed a bill extending the current 3½-percent interest rate on Federal land-bank bonds for another 5-year period beginning July 1, 1940. This bill is now in the hands of the Senate Banking and Currency Committee. If it becomes a law, its benefits will save our farmers millions of dollars during the next few years.

The House Committee on Agriculture has approved the Lee-Jones Farm Tenant Act, designed to enable the Secretary of Agriculture to assist a greatly increased number of farm tenants up the ladder to farm ownership. It will likewise assist present owners to refinance their existing mortgages.

In short, the Lee-Jones bill provides for a system of Government insurance of farm mortgages similar to the mortgage-insurance provisions of the National Housing Act, under which the Federal Housing Administration has insured over $3,000,000,000 in mortgages for urban home owners.

I believe that this bill affords a real opportunity for Congress to do something about our farm-tenancy problem. About 42 percent of all our farmers were tenants in 1935. The Bankhead-Jones Act authorizes an annual appropriation of $50,000,000 for tenant purchase loans, but this amount is entirely inadequate to meet the needs of this type of financing. The Government cannot provide all of the needed funds, but it can tap a tremendous reservoir of private capital by setting up this proposed insurance system for tenant purchase loans.

I want to appeal for unity of action in the solution of our great social and economic problems—unity among farmers and unity between the great economic groups in our Nation—industry, agriculture, and labor—to cooperate together in the solution of these vital national problems.

In these days of uncertainty and unrest, as the last great bulwark of democracy left in the world, we need all of the strength and aid which unified, cooperative, and unselfish endeavor can supply. These are not days when we can afford to dry up the springs of progress by unsound, illogical, or unwarranted attacks on the mechanics of representative government. The most pressing requirement of this day and hour is patriotic cooperation in the advancement of methods designed to assist all of us—labor, industrialist, and farmer—in the economic plight common to us all. With unity and united endeavor we will, through democratic processes, hold the gains which we have made and pave the way for a brighter, happier, and more peaceful America in the tomorrows to come.

And in this splendid effort the American Farm Bureau Federation stands ready to make its fullest contribution.

Silver-Purchase Program

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

STATEMENT BY HON. JOHN G. TOWNSEND, JR., OF DELAWARE

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by the senior Senator from Delaware [Mr. TOWNSEND] on April 15, 1940, on the silver-purchase program.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

UNITED STATES SILVER BUYING HELPFUL TO JAPAN

(Statement by Senator JOHN G. TOWNSEND, April 15, 1940)

How the United States foreign-silver-buying program is helping Japan is disclosed in an article in the March 21 issue of the Trans-Pacific, an American-owned Tokyo weekly.

The article reports that the Japanese Government has established silver buying in schools and department stores. At these offices such silver articles as medals, cigarette cases, sport trophies, and the like are purchased. In view of the shortage of foreign exchange in Japan, the availability of the Silver Purchase Act of 1934 is undoubtedly of great assistance to the Japanese Government.

The full text of the article follows:

"SILVER PURCHASES BEGIN

"A move to buy up silver held by the public was begun March 15 by the wartime Materials Utilization Association, supported by the Finance, Commerce and Industry, and Home Ministries, as well as the Tokyo prefectural and municipal offices and the Central League for National Spiritual Mobilization, Domei reports.

"Buying offices were set up in the Joto Primary School, Nihonbashi Ward, the Tokiwa Primary-School Nursery, in the same ward, and the Mitisukoshi, Shirokiya, and Takashimaya department stores. Members of the association and silver experts were at each place to weigh the metal offered. Signs stating 'Let's have your silver' urged the public to sell.

"Cash was paid at the rate of 0.3 sen a grain for such articles as medals, cigarette cases, cups, sport trophies, and other silver ornaments. One person was reported to have offered 200 silver coins minted during the Meiji era. Another seller was Mr. Hachio Shiokawa, managing director of the Dai-Ichi Marine & Fire Insurance Co., who received 26.87 yen for disposing of a Daikokuten (god of wealth) and other ornaments.

"No time limit has been set for purchases."

The Townsend Pension Plan

EXTENSION OF REMARKS

OF

HON. SHERIDAN DOWNEY

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

LETTER TO HON. JOHN TABER, OF NEW YORK

Mr. DOWNEY. Mr. President, I ask unanimous consent to have printed in the RECORD a letter dated April 15, 1940, addressed by me to the Honorable JOHN TABER, Member of Congress, discussing the question of the yield under the 2-percent transactions tax provided for in the Townsend bill.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 15, 1940.

Hon. JOHN TABER,
Member of Congress, Washington, D. C.

DEAR CONGRESSMAN TABER: It has been called to my attention that on March 27, 1940, in the House of Representatives you stated that the 2 percent gross income tax, provided in the new Townsend bill, would yield only $12.25 a month for each of the 10,000,000 recipients who are expected to claim the pensions.

Your statement is plainly and grossly erroneous and in common decency should be retracted by you.

My own calculations show that, before exemptions are figured, there would be about three hundred and sixty-five billions of gross income subject to the 2-percent levy. This predicated upon a net national income of seventy-five billions.

Under the bill, wages up to $250 a month are exempt as is gross income of other kinds up to $3,000 annually. This provision would exempt about sixty-five billions, leaving three hundred billions subject to the tax of 2 percent. This would produce six billions which would provide $50 a month for 10,000,000 people.

If you wish to verify my figures of a gross national income of three hundred and sixty-five billions you can do so by referring to the hearings relative to the Social Security Act amendments of 1939, before the Committee on Ways and Means, House of Representatives, Seventy-sixth Congress, first session, volume 1, page 849, wherein representatives of the Department of Commerce testified to about the same amount. I might tell you that several of the governmental bureaus in Washington will report to you about this same approximate gross national income, which, of course, varies with our periods of prosperity and depression.

In your calculations you assume that 70 percent of the gross income would not be taxed under the provision exempting wages up to $250 a month and gross income up to $3,000 a year. Here you fall into sad and serious error. Doubtless you had in mind that about 70 percent of our income groups have incomes under $3,000 annually, but that doesn't mean that they have 70 percent of the gross national income. On the contrary, this 70 percent of our taxpayers receive only about 20 percent of the gross national income and not 70 percent as you figure.

You should be able readily to see why this must be true. And I calculate in rough figures to simplify your understanding.

45,000,000 workers, average wage exempt about $900 per year	$40,500,000,000
All other income groups—farmers, merchants, manufacturers, investors, etc., about twelve millions in number—average exemption $2,000 per year	24,000,000,000
	64,500,000,000

I might inform you that I have verified these figures of exemptions from several sources, including the Social Security Board. If you will address that Board I am sure what I have said will be corroborated.

I do not contend that my figures are entirely accurate. Precise yield of any gross income tax can be determined only by experience,

but certainly your estimates are widely in error, and you owe your colleagues and the people of this Nation a further and accurate statement which I hope may be soon forthcoming.

I remain,

Sincerely yours,

SHERIDAN DOWNEY.

Patent Sesquicentennial Dinner

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

ADDRESS BY HON. EDWARD J. NOBLE

Mr. BONE. Mr. President, I ask unanimous consent to have printed in the RECORD the interesting address delivered by Hon. Edward J. Noble, Under Secretary of Commerce, at the United States Patent Sesquicentennial Dinner, held at the Mayflower Hotel on Wednesday evening, April 10, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are gathered tonight to celebrate the close of the one hundred and fiftieth year of United States patent law and to acclaim the extraordinary progress of American invention under the protection thus afforded by the Congress. The heroes of the occasion are, of course, the inventors who through all these years have been constantly lightening the burden of our toil and enriching our lives with new materials. We are the heirs who have inherited the knowledge and skills these men and women have given the world; we will be the beneficiaries of their present and future labors.

There is nothing new or novel about the inventive spirit which has enabled these people to endow us with this wealth of goods and services. That spirit has a universal quality. It consists of an apt adjustment of the thirst for knowledge and the desire to build.

Those of you who have had the delight of reading Clarence Day's comments on This Simian World know the simple, monkeylike character we disguise under the phase "a thirst for knowledge." It is merely our everlasting curiosity, our human instinct for prying into things, our desire to know what makes the wheels go 'round.

This trait of curiosity causes man to pry into every corner of his world. We are a race of explorers, not so much because we want new lands as because we want to know what lies beyond the horizon. Even a man who has no expectations of ever going anywhere likes to look at a map. It shows him the relations between his part of the world and the mountains and lakes, the streams, and cities that lie beyond.

It is this same instinct of curiosity that animates all exploration in the fields of science. My learned friends differentiate between what they call pure science and what they know under the name of applied science. The former is curiosity in its most unmaterialistic form. When Sir Isaac Newton lay under the apple tree wondering why the fruit always falls downward instead of outward or upward he was engaging in scientific speculation of the pure variety. He was mentally exploring the forces called gravitation without thought of making any useful applications of such discoveries as he might make. He just wanted to ascertain the inward facts.

The "pure" scientists of today are still following that unmaterialistic bent. They are ranging through the universe exploring its every phase. With the accumulated knowledge of the ages at their disposal they are prying into every nook and cranny. Their field ranges from intimate exploration of the tiniest conceivable particles of matter out into the depths of astronomical space. They seek to learn just for the sake of knowing.

The men and women who have made the inventions we celebrate tonight have also been blessed with an abundant curiosity. In addition, however, they have been endowed with a strong desire to build, to construct, to produce something that is new and useful.

That combination of curiosity and the creative urge has existed to some degree in all ages and all climes. Somebody, sometime, discovered fire and the ways in which it could be made useful. Someone somewhere discovered the spear and the arrow, and thereby enriched the human race by making it easier to get meat. The old Greek, Archimedes, gave a huge lift to our thought about applying knowledge to useful purposes. In the centuries that have followed our workers in applied science have constantly gathered and applied more and more knowledge as to how to lighten the burden of human toil and how to produce newer and better things that are of use and value.

It is to these workers in applied science that we have been devoting our attention on this one hundred and fiftieth anniversary of the enactment of the first United States patent law. We are justly proud of the long and ever-growing list of Americans who have displayed this will to know about their world, and the desire to apply that knowledge in new and useful ways. Their genius has helped to make our lives richer and freer than anyone had reason to expect 150 years ago. During that interval their creative brothers in other lands have not been idle. We have profited by those foreign inventions, even as foreign peoples have profited by ours. We cannot fail, however, to take a just pride in the tremendous accomplishments the citizens of the United States have made in this field of invention during the last century and a half.

The first patent statute was enacted by the Congress of the United States and approved by President George Washington on April 10, 1790. That act and its successors through the intervening years have been designed for the sole purpose of stimulating and encouraging American inventive genius. They provide that anyone who invents a new and useful thing may receive a patent which will entitle him to the exclusive right to make, use, and sell that article for a specified number of years. After the lapse of that time the invention becomes public property. Thereafter everyone is free to use it without hindrance or charge.

The enactment of that statute so early in the career of the infant republic is but another evidence of the foresight and wisdom of the statesmen of that day. We would have had some new inventions without any Patent Act. The instinct to create cannot be wholly suppressed. There can be no doubt, however, that the fair and equitable protections established by our patent laws have achieved the purpose of stimulating and encouraging American invention. Without them we would not have secured the vast interest we have had in this exploratory field and our world of today would be lacking in very many of the important tools and products that make our civilization what it is.

Those of us who viewed the parade of inventions in the Commerce Department Building this afternoon must have come to the table tonight with a sharpened awareness of the relative poverty that existed in the world of 1790. We all know from our own experience the multitude of useful things we now have which were totally absent in our younger days. Some of us may not know much detail about the marvelous mechanisms that reduce the amount of human labor required to produce those goods. However, we know of their existence and see abundant evidence of them in the increasing sum of goods and services that are constantly becoming available in our daily lives.

This afternoon's parade of inventions could, of course, display only an infinitely small fraction of the tools and products that our American inventors have created since the first Patent Act was passed. It was an impressive sight. It served to renew our memories of the inventors of the past and present and our appreciation of their contributions to our civilization. As we reviewed their creations, thoughts must have passed through many minds of the toil and labors that went into the development of those inventions. The spiritual struggles, the repeated disappointments and finally, in those successful cases, the satisfactions of achievement.

To my mind, however, the most significant factor of all was another thing unseen. It was the fact that every one of those inventions, and the myriad of inventions which could not be displayed, were wholly absent from the lives of the men who lived in America in 1790.

It would be difficult to have portrayed more vividly the relative dearth of products that were available for consumption in the days of the founding fathers. Today's parade has also made it easier for me to visualize the enormous amount of labor and toil required to produce the handful of goods of indifferent quality that the average family of 1790 could have made for itself. The richness of the heritage we have gained from American invention is measured by the difference between the standards of living and hours of work that then prevailed and those we now enjoy in the America of 1940.

Around the dinner tables here in Washington tonight are many intrepid explorers of the unknown. I see distinguished representatives of the groups who exercise creative talent in many fields. Here are mechanical and hydraulic engineers who conceive and design great machines which contribute to lightening the labor in our industrial establishments, and little machines which we use directly to add to the comfort and efficiency of our daily lives. I see men who have won their distinctions in the field of chemical research where they are developing new and improved products and processes in a multitude of lines. I see scientists and engineers who devote their lives to finding new and improved applications of electricity and radio. I see leaders of industry whose function it is to manufacture the products of all invention and to put them into distribution so that they may become readily available to all. I see, also, distinguished members of the bench and bar, leaders from the Senate and the House, and officers from many branches of the administration. All are eager to proclaim their gratitude to American inventors.

On behalf of all who are present here tonight—on behalf of all the people of the United States and elsewhere who have profited by their labors—I express appreciation and gratitude to our American inventors of the present and the past, and our best wishes for those who shall follow in their footsteps.

I salute the inventive genius of America, and the patent laws which have done so much to foster, protect, and encourage it.

The Un-American Poll Tax

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

STATEMENT BY HENRY H. COLLINS, JR.

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I submit the testimony of Henry H. Collins, Jr., legislative representative of the Descendants of the American Revolution. These amazing revelations were made before a subcommittee of the House Judiciary Committee during the hearings on H. R. 7534, the Geyer anti-poll-tax bill.

The facts contained therein are so startling that one is constrained to remark, "Can this happen here?" Mr. Collins is to be commended for this carefully prepared testimony.

The matter referred to is as follows:

STATEMENT BY HENRY H. COLLINS, JR., NATIONAL LEGISLATIVE CHAIRMAN OF DESCENDANTS OF THE AMERICAN REVOLUTION, BEFORE A SUBCOMMITTEE OF THE HOUSE JUDICIARY COMMITTEE AT A HEARING ON THE GEYER ANTI-POLL-TAX BILL (H. R. 7534)

Mr. Chairman, members of the subcommittee, the Descendants of the American Revolution is a patriotic organization formed for the purpose of carrying out today those principles for which our forefathers fought in 1776. One of the chief of those was the concept that "taxation without representation is tyranny." In order to free themselves from the yoke of unrepresentative government, our forefathers battled for and won the independence of the United States. Their children's children would be unfaithful to their memory if they did not today attempt to carry to completion the unfinished work bequeathed them.

Taxation without representation exists today in the eight States of Alabama, Arkansas, Georgia, Mississippi, South Carolina, Tennessee, Texas, and Virginia, which require the payment of a poll tax as a prerequisite to voting. Federal taxes fall alike upon all States. Federal laws govern equally all parts of the country. The citizens of the poll-tax States pay these taxes and are governed by these laws. Yet on neither taxes nor Federal laws are the vast majority of the people of the poll-tax States consulted. Our modern slogan might well be "unrepresentative government is tyranny"; yet such government, Mr. Chairman, is what we have today in the poll-tax States.

According to the Constitution, the population of a State determines the number of Representatives it shall have in Congress. Today one Representative is allowed for approximately every 280,000 people, when the right of citizens over 21 to vote in Federal elections is not denied or abridged. But, contrary to the fourteenth amendment, Congress has suffered eight States to retain poll taxes, which greatly reduce the electorate without proportionately diminishing their representation in Congress.

There are 78 Congressmen from these States. Of these, 29 received not one opposition vote in the last election, including the entire delegations from Arkansas and Mississippi. Twenty-six more each had less than 100 opposition ballots. Only 8 of the 78 had to face an opponent who polled more than 2,000 votes. In 16 of these districts less than 6,000 votes were sufficient to elect a Congressman—6,000 out of a population of 280,000.

In my State, Pennsylvania, 43.2 percent of the population goes to the polls. In Georgia only 2.3 percent. In the last election in one district in Pennsylvania 50 percent of the entire population, black and white, adults and infants, native-born and foreign-born—50 percent, I say, of the people voted. In one district in Mississippi, on the other hand, one-half of 1 percent of the population cast a ballot. Whereas in that Pennsylvania district for every 2 people there is 1 voter, in the Mississippi district it would be necessary to round up 193 American citizens to find 1 who had cast a ballot. In that district only 2,172 votes were cast. Yet, due to failure to reapportion, that district is half again as large as the average and contains over 420,000 persons. In a district of similar size in Missouri, 151,000 persons went to the polls and cast 70 times as many votes as in this district in Mississippi. Indeed, more votes were cast in this one district in St. Louis than were cast in the three entire States of Mississippi, Georgia, and South Carolina, and 23 Congressmen owe their seats in the House to an electorate smaller than that which debated the election of this 1 Missourian.

In my district in Pennsylvania, 72,000 persons voted to send one Representative to Congress. Yet the combined popular vote for a group of 10 well-known Congressmen, consisting of 1 from Texas, 2 from Virginia, 3 from Mississippi, and 4 from Georgia, was less than that cast for my Representative, whose district is somewhat smaller than the average of these 10. My Representative has one vote. They have 10. Is that representative government?

An outstanding example of this national disgrace is shown by the case of little Rhode Island, the smallest State in the Union, with 687,000 people. Yet the people of its 1,300 square miles cast more votes in the last election for its 2 Representatives than were cast in a vast area of the United States stretching from the Atlantic Ocean to the Mississippi River and the Gulf of Mexico, embracing 4 districts in Virginia, plus the entire States of South Carolina, Georgia, Alabama, and Mississippi, with a total population of ten and three-fourths millions, with an area of well over 200,000 square miles, and with 36 Representatives in the House.

One of the most active chapters of the Descendants is in that cradle of liberty, Boston, Mass. In the latest senatorial elections Massachusetts, with a population of 4,249,614, cast 1,614,911 votes. This was more than were cast in the 6 poll-tax States of Alabama, Arkansas, Georgia, Mississippi, Texas, and Virginia, with their population of over 17,000,000—more than four times as great.

In the last election for Senator in California, 44.5 percent of the people voted; in Georgia, 2.4 percent. Democracy, as judged by the use of the ballot, is 18 times as widespread in California as it is in Georgia. In every district of New Jersey and Iowa and in 33 of the 34 in Pennsylvania over 43,000 votes were cast for each victor. This is 8,000 more votes than were cast for all 7 candidates from Mississippi. Three Kansas districts cast over 69,000 votes for each winner, more than were cast for all 10 Representatives from Georgia. The State of Nevada, with only 91,000 people and 1 Representative, came within 800 votes of the total number of ballots cast in South Carolina with one and three-quarter million people and 6 Congressmen.

Democracy in the poll-tax States has greatly declined in the last 60 years. In 1876, 37.4 percent of the male population of these States voted. In 1936, with women enfranchised, only 12.1 percent of the population voted. The percentage of possible population voting has thus declined by two-thirds during a period when these States have almost tripled in population and enjoy 20 more seats in the House. In the case of South Carolina and Mississippi, actually fewer votes were cast in 1936 than 60 years before, in South Carolina 37 percent fewer, yet during this time these States have more than doubled in population, women have been enfranchised, and each has an additional seat in the House.

This unrepresentative poll-tax government results in widespread disfranchisement, tends to corruption at the polls, and fastens the grip of machine politics securely on the citizenry of these districts. Where only one-sixth to one-tenth as many people vote as in the non-poll-tax States, patronage goes 6 to 10 times as far. The tenure of these Representatives is thus unduly lengthened and, due to seniority, they come to hold a disproportionate number of chairmanships in both Senate and House. Poll-tax Senators and Representatives occupy a third—twice their due proportion—of standing committee chairmanships in the Senate and more than one-third of all committee chairmanships in the House. Of the Members who have been in Congress more than 20 years, 38 percent are from the poll-tax States, again more than twice the normal expectation. Of the 10 most important House committees, 4 have poll-tax chairmen and 3 more have ranking members from poll-tax States.

Prior to the Civil War only three-fifths of the Negro population was used in figuring the basis for Representatives. The Negroes did not vote then; neither do they now. Yet today the entire Negro population is counted in determining the number of Representatives. Twenty-eight Representatives from the poll-tax States owe their seats to Negro population counted by the census taker but not by the registrar of elections, and this is 11 more than they would have been proportionately entitled to under slavery.

However, the poll tax not only disfranchises almost all Negroes but it disfranchises far more whites, since in all these States whites outnumber, and in some cases greatly outnumber, the Negroes. If we assume, for example, that all votes cast in the last election were white votes, we find that in the poll-tax States only 7.9 percent of the white population voted, a percentage that sinks to 3.7 percent in Georgia and 3.6 percent in Mississippi. Stated another way, throughout the poll-tax States over 92 percent of the whites do not vote. Yet in the State of Illinois 40.7 percent of the entire population cast a ballot, and the average for a non-poll-tax State is over 34 percent of all the people.

As a result of this, only 15,000 persons vote in an average poll-tax district election as against 100,000 in an average non-poll-tax district, and the winner in these latter States polls three to four times as many votes as in the former. Thus the poll tax not only disfranchises the vast majority of citizens in the States where it is in effect but it disfranchises more than 67 percent of the rest of the country, because one vote for a winner in a poll-tax State has greater value than three votes for a winner elsewhere. As an example of the working of these unrepresentative elections, last year the lend-spend bill was introduced by an administration that received over 18,000,000 Democratic votes. The lend-spend bill was defeated by the negative votes of 14 Congressmen from the poll-tax States. Yet these Representatives received a total vote of less than 135,000, which was not even three-fourths of 1 percent of the 18,000,000. This recital could be multiplied interminably. A digest of these facts is contained in the statistical tables appended hereto.

Stone guardians flanking the entrance to The National Archives of the United States proclaim "Eternal vigilance is the price of liberty" and "What is past is prologue." Revering the memory of our fathers who died that this country might be free, remembering the principles for which they fought, and seeing about us today remnants still existing of the evils which they strove to overcome, the Descendants of the American Revolution would be neither mindful of the lessons of our forefathers nor possessed of the vigilance they admonished did we not condemn the poll tax as thoroughly un-American. The Descendants heartily endorse and support the Geyer bill, which would make its collection in Federal elections illegal.

APRIL 3, 1940.

Bonneville and Grand Coulee Dams

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

ADDRESS BY UNDER SECRETARY ALVIN J. WIRTZ

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. Alvin J. Wirtz, Under Secretary of the Interior, on the question of trying to bring about harmony and cooperation between the citizens of the great Northwest and the Federal Government in the utilization of the power which will be produced at Grand Coulee Dam and the power which is already being produced at Bonneville Dam on the Columbia River.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

[From the Reclamation Era for March 1940]

UNDER SECRETARY WIRTZ ON POWER

During the course of an early spring inspection tour of Interior Department projects on the Pacific coast and in the Northwest, Under Secretary of the Interior Alvin J. Wirtz addressed chambers of commerce luncheons at Portland and at Spokane. In both places he dwelt upon the power policy of the Department with regard to power projects under its administration. Of particular interest to those interested in reclamation was the Secretary's statement at Spokane following his visit to the Grand Coulee Dam:

"It is logical that States and communities cooperate with the Federal Government in the development of large projects such as Bonneville and Grand Coulee. Such a partnership is founded on a recognition of interdependence and mutual trust. It presupposes an identity of interest and a common goal. We are securing the rights of our States and communities against the ravages of nature and absentee control.

"The Federal Government has shown the extent of its trust in the people of the Northwest in establishing the Columbia River projects as great national interests. The President did not lay down any conditions as a prerequisite to aiding in the development of these projects. He had confidence in the people of the Northwest and faith in their willingness to cooperate to make these national projects monuments of productive wealth of which both the Nation and the Northwest could be proud.

"The objectives of these projects were to control the waters of the Columbia so as to irrigate more than a million acres of land and provide opportunity for resettlement, and at the same time make available for the widest possible use electric energy at the lowest possible cost. Congress provided for the generation of power at these great dams by and at the risk of the Federal Government. It provided for the transmission of power from these dams to centers of distribution. These things the Federal Government is doing at cost, and it is up to you people to determine how and by whom this power shall be distributed.

"In connection with the Grand Coulee project the Congress with foresight provided an antispeculation law. No man may enrich himself by gambling in a resource whose value is enhanced by the Federal Government. The acres which are made fertile by the waters impounded by this great project may not be sold and resold at ever-mounting cost merely by taking advantage of the effort of the Federal Government.

"Although no antispeculation bill was passed with regard to electric power, nonetheless, the Congress in many ways has stated its policy directly, and certainly by implication in this particular case it is evident that the Congress does not propose that there shall be speculation in electric power. The people of the United States jointly are generating this power for the benefit of the people of the Northwest—for home use, for commerce, and for industry. The desire, then, is to distribute this electricity to the largest number of persons at the lowest possible cost so that its benefits may be spread and it may be a potent factor in helping raise and maintain the standard of living which we want to have.

"As I say, the manner of the distribution is for decision by the people in the area. But the people have a right to demand that the benefits from this power shall be theirs and not that of absentee managers. Furthermore, I think it is the duty of all Federal officials who are responsible for the construction and operation of these projects to let the people know that they have the right to have the water from their rivers utilized by their dams transmitted over their lines and brought to their homes, farms, stores, or factories, over their own distribution systems.

"It is your responsibility in this partnership with the Federal Government to see that the savings made possible by this project result in increased purchasing power in your region."

Wages and Hours of Labor

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

RADIO ADDRESS BY HON. JAMES E. MURRAY, OF MONTANA

Mr. PEPPER. Mr. President, on Sunday, April 14, the junior Senator from Montana [Mr. MURRAY] delivered a significant and forceful address before the American Forum of the Air, which was broadcast over the coast-to-coast network of the Mutual Broadcasting System. The address related to the proposed amendments to the wage-hour law. I commend it to the consideration of Senators and request that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMENDMENTS TO THE WAGE-HOUR LAW

Ladies and gentlemen of the radio audience, tonight you will learn some shocking news. The Federal statute that outlaws starvation wages and reduces long hours of work—the Fair Labor Standards Act—is threatened with destruction. Powerful and influential groups are attempting to deprive the most helpless and underpaid workers in America of the protection of this act. They opposed the act originally. They have been plotting its death ever since.

I refer to the powerful groups representing the canning, packing, sugar, lumber, tobacco, and wholesale interests of the country, now promoting the passage of legislation in the Congress which would condemn hundreds of thousands of industrial workers to a state of misery and suffering. The most dangerous of these bills is the measure sponsored by the able and aggressive Congressman from North Carolina, Mr. BARDEN. Under this bill the several groups just mentioned are making a mass attack to get what they could never secure individually. Some of these groups argue that the present law should be construed by the Administrator so as to exempt their workers; others profess they are only seeking changes in the interest of the farmer; while more callous groups shamelessly ask to amend the act so they may be free to pay as low a wage as 5 or 10 cents an hour.

All these devious reasons which have been advanced as excuses for destroying the Wage and Hour Act should not be allowed to confuse the real issue. The issue here is simple and clear-cut. The question is: Should any group of industrial workers in the United States be paid less than 30 cents an hour? Is a wage of 30 cents an hour too high for the woman worker who toils and sweats in the cannery? Is 30 cents an hour too high for the homeless itinerant laborer, who has a job only a few weeks a year in the fruit-packing shed? Are we to admit that 30 cents an hour is too much to pay a man who spends his life toiling in the cheese factory, or the ice-cream plant, or who must earn his livelihood shelling pecans? Is 30 cents an hour too high for the worker in the lumber mill?

Mr. BARDEN and those in Congress who support his program say this wage is too much. I wonder what they consider a fair and decent wage. Stripped of all legislative verbiage, Mr. BARDEN is simply proposing by this bill to permit thousands of human beings to work at a starvation wage of 5 or 10 cents an hour.

First, let us consider for a moment what a requirement of 30 cents an hour means in terms of a living wage for the average family of a father, mother, and two children. Thirty cents an hour for a week of 40 hours will produce $12. For a full month's work it adds up to only $52. Even assuming that such a laborer were to secure a full year's work, which is seldom the case, at 30 cents an hour, he would earn just $624. Imagine only $624 to pay the rent, the food, clothing, doctor bills, and all other living expenses for a worker and his family for a full year.

Every cost-of-living survey so far made by the Government has shown that just the bare necessities to sustain life require at least $840 a year per family. And remembering that does not begin to provide the so-called American standard of living. It is barely enough to keep a family above the starvation level. Now, $840 per year means 40 cents an hour. But we are here now talking

about a wage of only 30 cents an hour—a wage not even sufficient to feed, clothe, and shelter the worker and his family. Nevertheless, Congressman BARDEN says that 30 cents an hour is too much, and he asks that thousands of hopelessly indigent people be excluded from the benefits of the act so that they may be exploited and worked for a nickel or a dime an hour. Maybe you think no American employer would pay such a shamefully low wage. If you doubt it, just read the report of the survey made by the Women's Bureau of the United States Department of Labor, which reveals the appalling fact that thousands of workers employed in canning factories or in packing, processing, and handling food products were working at just such inhuman wages before the Federal wage and hour law became effective. The wage and hour law lifted them up a little, but now these proponents want to push them back again.

Why did the Congress pass the wage and hour law in the first place? It was simply the result of widespread indignation against starvation wages. Congress realized that millions of human beings in this country are so helpless and weak in bargaining power that they are unable to get a living wage in industry unless we help them. Legislation was regarded as absolutely essential to avoid a system of industrial peonage in this country similar to China and other countries. Furthermore, the act was also intended to help business by raising purchasing power. It was intended to give the workers more money so that they could buy more goods and thus help the business of the retailer, the manufacturer, the doctor, the butcher, the baker, and the farmer. The best customer of the farmer and manufacturer is the American worker. He is limited in spending, however, to the amount he receives in wages. When wages are reduced, sales of farm products and merchandise drop. The acknowledged cause of unemployment and depression in our country is the low purchasing power of the toiling masses. How, then, can any legislator justify the lowering of wages?

The Wage and Hour Act was designed also to protect the fair employer who pays decent wages from the unscrupulous competition of those who would beat down wages to secure an unfair advantage in the market. Employers in enlightened and progressive States, who pay fair wages, should not be forced into bankruptcy by legislation intended to aid those who chisel down wages and engage in unfair competition.

This law was passed also because many forward-looking States already had laws requiring the payment of wages equal to or even higher than this Federal statute requires. For example, California and several other States have established minimum-wage requirements for full-time workers in fruit and vegetable canning and packing industries. Do you agree with Mr. BARDEN and his associates that employers in those States should be penalized because some other States let their employers get away with starvation wages? I certainly cannot agree to that.

Why should we discriminate between industries? Wouldn't the textile manufacturers have a just complaint if they were forced to pay decent wages while other low-wage industries are given exemption? Some of the most miserably paid workers in the United States are engaged in the very operations Congressman BARDEN proposes to exempt. Is there any justice in denying them the same protection we have given to other factory workers? Is there any justice in denying fair employers, or employers in high-wage States, protection from the chiselers in other States? It seems to me that the advocates of these exemptions are trying to punish the fair employer and leave the progressive States which have passed minimum-wage laws out on a limb.

The canners, packers, sugar, tobacco, and lumber manufacturing people say they want these amendments because they want to help the farmer. That's their alibi. They know very well they cannot get Congress to destroy the law unless they can inveigle, bamboozle, or frighten the farmer into fighting their battle for them. So they say, "Mr. Farmer, if we are required to pay our workers 30 cents an hour, we will have to reduce the price we are paying you for your produce." I am sure no intelligent farmer is going to fall for this bluff. They are now paying the farmer the lowest price they can get away with. They are not working for the farmer's welfare. They are working for the packer, the canner, the tobacco, sugar, and lumber interests. If they want to be consistent in their theory, why don't they try to exempt the textile mill and shoe plant, and the manufacturer of wearing apparel? Don't all the materials for those things come from the farm, too? Not only that, but if they are consistent they will exempt industries manufacturing such things as automobiles, lumber, motor fuel, and farm machinery. For these are things the farmer has to buy, and increased wages can be used as an excuse for higher prices. The logic of this would mean that we couldn't have a wage and hour law at all, because, as contended, all wages should be reduced as an aid to the farmer who sells or buys.

No one in Congress recognizes the need for protecting agriculture more than I do. I come from a great agricultural State and have supported every proper farm bill of the administration; but I submit to your common sense and judgment that we cannot help the farmer by decreasing the wages of those who buy his products. Every economist knows this. What these proponents of the Barden amendments are actually doing is setting the stage for the farmer's ruin by reducing the wages of the town and city workers so that they will have no money to purchase what the farmer raises.

Furthermore, it should be remembered that thousands of farmers today work part time in nearby factories. An increasing number of them are doing this every year to supplement their farm income, and as a result are benefiting directly from higher wages secured through the wage and hour law.

Let me repeat, the issue tonight is whether any group of workers in the United States should be deprived of the protection of the law which requires the payment of a wage of only 30 cents an hour; and don't let anybody tell you otherwise.

In this I am taking the same view of the problem as Chief Justice Hughes, of the Supreme Court of the United States. The effects of sweated labor on the community and the cost of the social evils which flow from substandard living have been aptly summarized by him in the so-called Parrish case, wherein he said:

"* * * The exploitation of a class of workers who are in an unequal position with respect to bargaining power, and are thus relatively defenseless against the denial of a living wage, is not only detrimental to their health and well-being but casts a direct burden for their support upon the community. * * * The community is not bound to provide what is in effect a subsidy for unconscionable employers. The community may direct its lawmaking power to correct the abuse which springs from their selfish disregard of the public interest. * * *"

Now, my friends, let me say in conclusion: If we vote to exempt workers from the just minimum-wage provisions of the Fair Labor Standards Act, we will be legislating poverty. We will be adding to the relief burdens of communities everywhere. We will be legislating crime and destitution for millions of helpless citizens. Those who advocate such a course are fostering discontent, radicalism, and economic ruin for our country.

American Agriculture

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

RADIO ADDRESS BY EDWARD A. O'NEAL

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by Mr. Edward A. O'Neal, president of the American Farm Bureau Federation, over the National Broadcasting Co.'s National Farm and Home Hour, on April 13, 1940, in Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On behalf of the American Farm Bureau Federation, I want to express our deep appreciation for Senator MEAD'S splendid address. He is one of the young stalwart leaders in the United States Senate, and he has taken a deep interest in farm problems. He is a real friend of agriculture and of the American Farm Bureau Federation, and he has rendered valiant service in behalf of constructive farm legislation. He is one of the coauthors of our farm-credit bill of 1940 which restores the Farm Credit Administration to an independent status.

The fate of the appropriation for parity payments for farmers next year now rests with the House and Senate conferees who met on Thursday to consider the agricultural appropriations bill. The House, as you will remember, approved the bill without any appropriation for parity payments. The Senate voted to put in an item of $212,000,000 for this purpose, and $85,000,000 for surplus disposal. The American Farm Bureau Federation had asked for $607,000,000 for parity payments, the estimated amount needed to raise agriculture to full parity, and $100,000,000 for surplus disposal. Naturally, we were disappointed in not getting the full amount, because we firmly believe that normal business and normal employment depend upon restoring normal buying power to agriculture. However, part of a loaf is better than no bread, and we must center our efforts now on making certain that agriculture gets the $212,000,000 for parity payments and $85,000,000 for surplus disposal. We are thankful to the Senate for putting in the item for parity payments, and we are confident that the House will approve the Senate action. The responsibility rests with the House Members, and we trust they will not fail the farmer in the present extremity. It is a matter of vital concern, not only to agriculture but also to the entire Nation, because the future welfare of the country must rest on a sound and prosperous agriculture.

To survive, any economic system must distribute national income so widely as to insure broad purchasing power among all classes. When the masses of the people are buying, then men go

back to work, to earn money which still further expands purchasing power, and so the prosperity cycle goes on in constantly enlarging circles. That is not theory, but practical common sense. The national penalty for failure to achieve this condition will be, ultimately, a break-down of the system, regardless of sentimental or wishful thinking.

For 20 years farmers have not been getting that fair share of the national income which is necessary to permit agriculture to function on a sound and permanent basis.

Farmers constitute the largest group in America entirely devoted to the democratic ideals of private property, free enterprise, and free political institutions. But they cannot maintain the American family type farm, conserve the Nation's soil, maintain an American standard of living, educate their children, provide the Nation with abundance, and buy their normal share of the products of industry on the income they have received during the past 20 years.

Cash, rather than sympathy, is required to preserve a sound agriculture as the foundation of American civilization. The price America must pay for a healthy agriculture—and perhaps for the preservation of the entire American system—is a fair share of the national income to the farmers. The cash which the economic system is failing to supply for the farmer must come temporarily from supplementary sources.

Congress has repeatedly declared its policy to be the restoration and maintenance of parity prices and parity income for farmers, first in the original Agricultural Adjustment Act of 1933, then in the Soil Conservation and Domestic Allotment Act of 1936, and again in the A. A. A. of 1938. The Marketing Agreements Act of 1937 and section 32 of the A. A. A. are likewise directed toward the parity goal, particularly with respect to nonbasic commodities.

These acts constitute the most comprehensive and effective national farm program ever enacted for farmers by the Congress. The program is sound in principle, and if sufficient funds are appropriated to make it fully effective, parity can be achieved. Experience has proved that the program has been effective just to the extent that money has been appropriated to make it work.

For 7 years the farm program has functioned to make up a good part of agriculture's income deficiency. It is vitally important that the good work be continued, and that in the years to come additional money be supplied to bring the farmer to complete parity position.

There is a great need for a stable, continuing source of revenue. As Secretary Wallace has said: "Farmers need something that will work as noiselessly for them as does the tariff for industry."

Several plans for establishing such a source of revenue have been proposed to the Congress as alternatives to direct Treasury appropriations. Among these plans are the processing-tax plan and the certificate plan, both of which are now before Congress. In order that full consideration may be given to all possibilities, the American Farm Bureau Federation suggests another possible method of financing the farm program, namely, the manufacturers' sales tax.

Alternatives to these three plans are: Continued direct appropriations from the Treasury, price fixing, increased income taxes, or a tax on monopolies. The last-named alternative would require private monopolies enjoying special governmental privilege, which have for a long time affected adversely the buying power of farmers, to pay the cost of the farm program.

The necessity, as well as the fairness and desirability of a permanent source of revenue for this purpose, are obvious when we examine the facts, which reveal:

1. That disparity of income with other groups has drained money away from agriculture for many years.

2. That monopoly industry has injured the buying power of farmers, who have operated under a system of free competition.

3. That industrial tariffs have levied tremendous burdens on farmers and have been responsible for the loss of much of agriculture's foreign market.

4. That agriculture has paid and continues to pay its share of subsidies to other groups.

5. That the dammed-up purchasing power of farmers and rural people who depend on them, if released, will be sufficient to restore national prosperity.

The disparity between farm income and nonfarm income since 1929 has amounted to more than $2,000,000,000 a year. In other words, if farm prices had been in line with other prices, farmers would have received $20,000,000,000 additional income. Farmers during this period have received only $3,000,000,000 in farm-program payments. Putting it another way, for every dollar received in Government payments, farmers have contributed more than $6 to the general public. They have subsidized consumers to that extent.

Parity for farmers means simply the same share of the total per capita national income available for living that farmers received in the 1909–14 period, a period when farm and city income were in balance—when farm products flowed freely to the cities and city goods flowed freely to the farms.

The disparity between farm and city that has developed was well illustrated by Secretary Wallace in his recent statement to the Senate Appropriations Committee. Among other things, he said: "At January 15 prices in 1913 it took 4.7 pounds of cotton to buy a work shirt. The cost now is equivalent to 7.2 pounds of cotton, based on January 15 prices, or 53 percent more than in 1913. The cost of bib overalls has increased 39 percent in dollars and cents. In terms of cotton the cost has increased from 5.8 pounds to 9.6 pounds, or 66 percent * * * in 1913 it took 31 pounds of hogs to buy 100 pounds of eightpenny nails * * * in 1940 it took 70 pounds of hogs to buy 100 pounds of eightpenny nails, an increase of 126 percent."

Secretary Wallace went on to say that now it takes practically twice as much wheat to buy an ax, 80 percent more wheat to buy a spike-tooth harrow, twice as much corn to buy a corn planter, and so on.

The farm depression started in 1920 and culminated in national disaster in 1932, when farm income went down to 34.2 percent of parity. Since that time farmers have been recovering. Farm income is now about three-fourths of parity. To bridge the full distance to parity will require at least one and one-half billion dollars a year additional income yearly. Until agriculture reaches that goal there can be no national prosperity.

The gradual development of disparity between farmers and other groups is a long story. Increasingly since the Civil War, and alarmingly since the first World War, many shrewd businessmen broke the first commandment of the American system—keep competition free—by developing monopolies to maintain prices and increase profits. To regulate production, they strangled competition. To do this, they broke the second commandment in the American system—keep Government out of private enterprise—by securing from the Government certain privileges and subsidies without which monopolies could not have grown to their present stature.

Organized business learned the advantage of Government privilege early in American history. The corporation charter is an example. It is a privilege granted by Government which permits groups of individuals to function as a unit in business without personal liability. A similar privilege is the holding-company charter which permits big-scale monopoly. By means of it, single corporations and a few individuals have been able to pyramid control of many corporations. Court rulings favoring corporate practices have thrown the mantle of governmental protection around these institutions.

The tariff keeps foreign competitors from cutting in on a domestic monopoly. It acts as a wall around certain industrial prices and profits which would tumble if exposed to the free play of competition. It is a sales tax, a subsidy, and a monopoly privilege all rolled into one.

Among other privileges granted by Government to business are patents, copyrights, franchises, easements, and discriminatory freight rates.

Because of these privileges, more than half of our privately owned business is monopolized. Some 2,000 individuals in 200 corporations control half of all our industries. Two corporations sell about two-thirds of all farm machinery; 10 corporations make 89 percent of the sales.

Tight production and price control are fixed industrial policies. From 1929 to 1932, farmers maintained their production and found their prices slashed more than 50 percent. Industry cut its production in half, and its prices dropped less than 25 percent.

The industrial plow-up of the 1930–33 period set a world record. The value of the goods which could have been produced with existing facilities—goods which were actually needed by consumers—is estimated at $135,000,000,000. Inflexible industrial-price policies were largely responsible for this great loss.

According to the Brookings Institution, that amount represents a value equal to "4 times the value of the Nation's farms, nearly 6 times the value of the Nation's factories, 14 times the value of all mercantile establishments, and more than 25 times the value of the 26,500,000 automobiles registered in 1929."

While the appalling waste of this industrial sit-down strike continued, farmers kept right on producing, and they saw their prices cut in half.

With half of the Nation on a monopoly basis and the other half (farmers, small-business men, small manufacturers, professional workers) on a basis of free competition, terrific strains are put on the national economy. On agriculture the strain is measured by disparity of income. Unless this strain is relieved by getting all business on a freely competitive basis, the ruinous effects on agriculture must be alleviated by a well-financed farm program. The alternative is a crack-up of the whole economic system.

Tariffs are already costing the American people considerably more than the one and one-half billions needed to make the farm program fully effective. Whatever else it may be, the tariff is a sales tax on consumers. Allowing for the softening effect of trade agreements, it was a 39-percent tax in 1938.

If tariffs are fully effective, they added more than sixteen billions to the cost of manufactured goods in 1937; if they are 50 percent effective, they added eight billions.

If tariff rates are fully effective, they cost American farmers $681,000,000 in 1935, according to a United States Department of Agriculture estimate. That would be $108 for each farm family.

But that is not the whole story of the effects of the tariff on the farmers. Since this country has about two-thirds of the world's gold, it is hard for other nations to buy our farm commodities unless they can also sell manufactured goods here. The tariff keeps out foreign manufacturers, thus forcing other nations to buy

from nations which will buy goods from them. After the Fordney-McCumber tariff was adopted in 1922, there was a loss of farm exports equivalent to the production of 40,000,000 acres of land. The Smoot-Hawley tariff cost us exports equivalent to the production of another 20,000,000 acres. No wonder our surpluses have piled up.

However beneficial in some respects the tariff may be to certain segments of our national economy, to agriculture it means discriminatory taxation, curtailed markets, and unsalable surpluses, an aggravated land-adjustment problem, and reduced farm income.

Large-scale subsidies have existed in this country for more than 100 years. Since the Civil War, they have become so important that they may now be said to be a part of the American system. Until recently, agriculture has not shared substantially in the distribution of these benefits.

In 1939 air lines were subsidized to the extent of $63,629,179, ocean shipping to the extent of $21,191,472.35, waterways to the extent of $115,987,261.02, publishers (through low postal rates) to the extent of $87,460,317.14, and highways to the extent of $1,100,000,000.

There are few groups in the country who can say that they have not received substantial assistance from the Government in some form. In addition to the things I have mentioned, there have been land grants to railroads, insurance rate stabilization by Federal law, franchises to utilities, utility rate regulation on a guaranteed-return basis, railroad rate stabilization, oil proration laws, "fair-trade practice" laws, protection for labor under the Fair Labor Standards Act of 1938.

All of these things have contributed to the farm disparity. The tragedy of the situation is that when agriculture is down it holds the entire Nation down with it. The income of factory workers rises and falls as agriculture's income rises and falls. Parity income for farmers is the chief thing needed to restore national prosperity. Experience indicates that the one and one-half billions needed to bring farmers to parity position would add at least three or four billions to total national income. That amount would employ three to four million workers at an annual wage of $1,000. It would increase farm cash available for living, which farm families spend almost entirely for goods and services to the level reached in 1925 to 1929.

Farmers are the Nation's best spenders. The farm market for city goods could be doubled in size if farm income permitted. About 80 percent of increases in farm income are spent for city goods and services. It is estimated that there is actual need on farms now for a billion dollars in new housing, $2,000,000,000 worth of heating equipment, one and one-half billions' worth of wearing apparel, a quarter of a billion worth of automobiles, tremendous quantities of fencing, farm machinery, tools, and equipment.

If only the dammed purchasing power on farms can be released, it will bring national prosperity on a scale never dreamed of before. It is the key to the baffling problem and the unsolved puzzle of poverty in the midst of plenty in this country.

I am convinced that the same objective could be reached in either of two ways. If we could wipe out and throw on the scrap heap every artificial device we have, including administered prices, minimum wages, tariffs, monopoly privileges, and everything else of this nature, and restore completely free and open competition, the job could be done. But there is not even a remote prospect of this Nation going that road; then I maintain that the only other method open is to give agriculture a tariff equivalent to make it truly a part of the protected American system. That is the stand that the American farmer takes; that is the basis for his demand upon Congress for an appropriaion to make the farm program fully effective. The fairness and justice of his position cannot be questioned.

Merchants' Association and Townsend Silver Bill

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

ARTICLE FROM THE NEW YORK COMMERCIAL AND FINANCIAL CHRONICLE

Mr. TOWNSEND. Mr. President, I ask that there be printed in the RECORD an article which appeared in the Commercial and Financial Chronicle of New York, N. Y., on March 30, 1940, relating to the endorsement of my bill (S. 785) by the Merchants' Association of New York.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Commercial and Financial Chronicle of March 30, 1940]

TOWNSEND BILL TO END TREASURY PURCHASES OF FOREIGN SILVER FAVORED BY MERCHANTS' ASSOCIATION OF NEW YORK

The Merchants' Association of New York sent a letter on March 23 to Senator JAMES M. MEAD and the entire New York City delegation in Congress endorsing the action of the Senate Committee on Banking and Currency in reporting favorably the Townsend measure to terminate foreign silver purchases by the Federal Treasury. The New York Members were urged by the association to support the Townsend proposal both by their influence and by their vote. The letter read:

"The Merchants' Association of New York wishes to record with you its hearty approval of the Senate Banking and Currency Committee's vote to report favorably Senator TOWNSEND's proposal to terminate foreign silver purchases by the Federal Treasury.

"In our opinion the unsoundness of foreign silver purchases has been thoroughly demonstrated by experience. What is not generally appreciated, however, is that its very existence was one of the underlying threats to monetary stability which has retarded long-range investments and helped to slow up our economic machinery.

"The discontinuance of this policy would, therefore, be an important constructive step forward. We urge you with all the earnestness at our command to use your influence and cast your vote for the passage of the Townsend resolution."

The action of the Senate group was referred to in our issue of March 23, page 1858.

Commemoration of Approval of First Patent Law

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

ADDRESS BY HON. CONWAY P. COE

Mr. BONE. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered by Hon. Conway P. Coe, Commissioner of Patents, on Wednesday, April 10, 1940, at the celebration of the sesquicentennial of the signing of the first patent law.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

RADIO TALK BY HON. CONWAY P. COE, COMMISSIONER OF PATENTS, OVER THE NATIONAL BROADCASTING CO. BLUE NETWORK, WEDNESDAY, APRIL 10

I wish you who hear my voice in this broadcast had also the aid of television so that you might have a sight of this gathering of men important in the affairs of your Government and of the Nation's industry. I know you would be impressed and pleased by this worthy observance of a momentous event in our history.

We are commemorating President Washington's approval of our first patent law on April 10, 1790, just 150 years ago today. With that law began our patent system, which has done so much to further our economic advancement, to improve our social conditions, and to make ours a mighty democracy, able to preserve our freedom in a world threatened by tyranny.

Our patent system is one of the democratic heritages bequeathed to us by the very founders of our Government. Its need and its value were foreseen by the authors of our Constitution, one of whom was Benjamin Franklin, a successful inventor. They made provision for that system when, in the first article of the Constitution, they empowered Congress to promote the progress of science and useful arts by securing to inventors the exclusive rights to their discoveries.

President Washington urged the First Congress of the United States to enact legislation carrying that provision into effect. And then, by a most benign decree of fortune, Thomas Jefferson, writer of the Declaration of Independence and father of the Virginia statute for religious freedom, was chosen to administer the system during the first several years of its operation. He was then Secretary of State. Long before he was chosen for that office, Jefferson had at least two inventions to his credit.

In his address to the second session of the First Congress, President Washington counseled its Members to grant "effectual encouragement to the exertion of skill and genius at home." President Roosevelt, in the proclamation in which he set aside this 10th of April 1940 as Inventors and Patent Day and invited its general observance, recorded that our patent system, by affording protection and encouragement to inventors, has contributed greatly to foster inventive genius.

For the fine fruits of the patent system, then, we are indebted to the wisdom of the creators of our Government itself. They regarded it as a democratic means of assuring the country's future welfare. The present head of our Nation, Franklin D. Roosevelt, bears eloquent witness to the success of the system in achieving the aims of the framers of our Constitution and the Members of the First Congress.

This assemblage here in Washington, seat of the Federal Government, is manifesting its gratefulness for all that the patent system has done thus far and for what it promises for the future. Our American democracy gives opportunity for the humblest of our citizens to attain the highest office in our Government. Our patent system, equally democratic, gives the neediest of our people like opportunity to profit by his ingenuity. The protection and the recompense of patents are bestowed without regard to race or sex, creed, caste, or age. This safeguard and this reward are open to any man, woman, or child who earns them by enriching the world with a desirable invention.

Many thousands of Americans have helped by their inventions to increase the convenience, the comfort, and the safety of us all. They are still adding to our wonderment and to our well-being. So long as the patent system continues to prompt them, to protect them, and to requite them we may confidently count on further benefits.

The marvels of invention we now possess should remind us of the debt we owe their makers, but still more they should make us deeply grateful to the men who established this Government, including the patent system. It is to them that this gathering here this evening is paying thankful and reverent tribute.

Most of you listening, wherever you are and whatever your calling may be, are every hour of the day beneficiaries of inventions which the patent system has brought into use. They serve you at home, in your shop or office; when you are engaged in your work and when you turn to your amusements. Perhaps you take them for granted, as so many commonplaces. But if we were suddenly deprived of them we should be returned to the conditions in which our ancestors existed as recently as 125 years ago. We should find ourselves without railways, the telephone, the telegraph, motion pictures, automobiles, airplanes, radio and scores of other utilities we have come to regard as indispensable.

So, my friends, I invite you to join in spirit this evening's recognition of the American patent system—one of the best gifts of democracy.

The Pan American Union

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

ARTICLE BY ROLAND HALL SHARP

Mr. WILEY. Mr. President, I ask to have printed in the Appendix of the RECORD a very thought-provoking article by Roland Hall Sharp, entitled "Laboratory of Peaceful Living," printed in the magazine section of the Christian Science Monitor. In these days, when all we read about is war, this article provides an antidote to that line of thinking.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of April 13, 1940]

LABORATORY OF PEACEFUL LIVING

(By Roland Hall Sharp)

The Pan American Union at the turn of its first half century stands more than ever for a great vision partially realized and beckoning. This ample continent, this symbol of freedom, this America beloved of its residents and longed for by the war weary, still quickens the imagination of the refugee, the frustrated, the homeless—all seekers for a fresh start.

Many American frontiers are closed. No longer can the dissatisfied flock to these shores. Yet in spring of 1940 the Western Hemisphere offers one supreme frontier. It remains a laboratory of peaceful living among nations.

Upon the American people rests the responsibility of sound stewardship. Blessed by half a world comparatively free from armed frontiers and the pressure of old hatreds, the Americas owe to humanity at least an unselfish consolidation of American peace. Beyond that, they owe whatever impetus they can give toward a workable and just world peace.

Some marvel has preserved the Western Hemisphere hitherto as an almost unbroken sanctuary from the kind of agression now rampant in the world. The Americas have had their wars. A break-down of the present inter-American peace system might lead to other wars. Yet not only on the Canadian-United States frontier but on most of the other frontiers there are no pill boxes, no subterranean battleships, no barbed wire except to keep cattle in bounds.

At Panama last September the delegates of Bolivia and Paraguay stood up before representatives of other American nations and vowed to let bygones be bygones in the Chaco. Those two nations in the heart of South America had fought in the courts and at times on the battlefield for nearly a century. At length mediation and arbitration settled the dispute 2 years ago.

Foreign Minister Alberto Ostria Gutiérrez, of Bolivia, voiced the essence of the Pan-American movement when he said at Panama:

"Between our peoples there are no divergencies without solution, no errors without possibility of correction. Besides that, even if at times some obsession sweeps them into strife, on the day after the end of the hostilities there is no more thought of revenge, but, rather, are the first steps taken toward a fraternal reconciliation. And so the wars on our continent are never anything but civil wars in which—whatever extremes may be indulged in—there is never the element of lasting hatred."

And Foreign Minister Justo Pastor Prieto, of Paraguay, concurred.

However far the Americas may fall short of living up to their ideal, however many inroads of power diplomacy and aggression may be in store, the mere championship of such a sensible and friendly outlook is to the enduring credit of the Pan American Union.

Appropriately, this week's commemoration at Washington and throughout the Americas falls in a moment of profound transition. Certain it is that the past half century closes the books on a period already merging into new shapes. Some are foreseeable. Others are hidden in the mists of coming events.

At an earlier crisis in American affairs the British statesman, Canning, saw the New World in 1826 as "called * * * into existence to redress the balance of the Old." Today the New World again poises, wary, aloof, alert, and potentially decisive in Europe's war even by the negative weight of actions not taken.

Consider the realm surveyed by the Pan American Union. Except for friendly Canada and a few small European colonies, the Union comprises an entire hemisphere. Within this hemisphere lie the world's greatest reserves of unexploited resources. On its fields and plains, in its valleys and forests, dwell the comparatively small number of 250,000,000 people. A little over half of these live in the United States. Literally hundreds of millions more could be fed, clothed, and housed in this newest of the inhabited continents.

Young it is, and inexperienced, America retains somewhat the audacity of youth, the exuberance of frontier days not yet entirely sobered by crowding social problems. In memory lingers the struggle for political and economic independence from Europe. America is disillusioned with results of Europe's last war. Slowly a determination grows to build, if possible, one enduring structure of ordered peace in the Americas.

And the Pan American Union reflects it all—its aspirations, its disappointments, its yearnings, its shortcomings. The Union is what it is because the Americas are as they are. That is the Union's distinguishing characteristic—its natural evolution and steady growth. Whether by intuitive leadership or fortunate circumstances, the Pan American Union, after many ups and downs, emerges from its first 50 years on a plane of ascending usefulness. Other international organizations have had more imposing aims and methods. But they have crashed repeatedly. The Union pursues the even tenor of its way, stronger with every passing year.

Unobtrusive, reserved to the point of self-effacement, taking with good humor the criticism that it is timid, impotent, or do-nothing, the Union surprises those who discover its hidden strength.

The Pan American Union bears no resemblance to a superstate. More significant, in 50 years not one step has been taken toward conversion into a superstate. Every project for formation of an American League of Nations is politely pigeonholed. And the latest League project, submitted at the Lima Conference, would have had more teeth for use against aggressors than the Geneva League.

Yet the appearance of political impotence is belied by what actually can be done in the name of the Pan American Union. The governments can do through it whatever they wish. When they act by agreement, there is no appeal, no necessity for enforcement. Voluntary action has at least that element of strength.

In its latest development, the Union is resorting more frequently to practical and speedy means of action. The outbreak of war in Europe found them ready. At Buenos Aires in 1936, and at Lima in 1938, the procedure of consultation was prepared for action. Foreign ministers were empowered to meet in time of crisis. At Panama, within 3 weeks after Britain and France declared war on Germany, the American nations met to chart a course together.

In the fierce, uncertain flashings and gloom of that late September they consecrated a union of interests never equaled before on the continent, and not fully maintained since.

Out of Panama came an imposing new Inter-American Advisory Committee on commercial and financial problems. Yet, within a few months after Panama, the carefully prepared Argentine-United States trade negotiations had to be abandoned.

The next half century of the Pan American Union has its work cut out. That work extends far beyond the legal structure of peace, now admirably fitted and joined. The real challenge lies in economics.

Americans North and South too easily take for granted their bomb-free homes, their ample resources, their heritage of blessings in nature and in the freedom-bestowing deeds of spiritually minded men and women. There are heroic tasks yet to be performed before the Americas can measure up to their opportunities.

For the United States, no single field of foreign affairs offers a higher rate of return for small expenditures of effort than Latin America. A friendly southern continent simplifies even the basic problem of naval and air defense. To force the Latin American countries against their will would cost hundreds of millions of dollars. To fight any aggressive combination that had gained a foothold in South America the United States would have to arm beyond imagination. The Navy would have to be quadrupled, the air force even more so. In terms of Federal tax bills in Kansas, that prospect advises insuring South American goodwill now, even at costs such as buying a little Argentine meat.

Pan Americanism works both ways. Good neighborliness implies mutual understanding and practical cooperation on both sides of the back fence.

Geography and certain powerful common objectives work toward uniting the Americas. There are cleavages that can either be deepened to the splitting point or closed by intelligent statesmanship.

One dominant interest surpasses all others. It is written in the rock and seas of this continent. The national defense of every American country is bound up with that of all the others. Today the United States is safe with an Army only a little larger than that of Bulgaria. The southern countries are secure with embryonic defense forces.

Why? Only because this hemisphere remains relatively friendly within and remains uninvaded by any hostile power. The Monroe Doctrine and the United States Navy guarantee that. But the Pan American Union has a way of enforcing the intent of the doctrine that minimizes any necessity for resort to armed force even for defense.

That way has proved its value during 50 years. New tests of today and the future wait on Americans, North and South, girded, purposeful, and active within the broad avenues opened by the Pan American Union.

The Civil Aeronautics Authority

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

ARTICLES FROM THE WASHINGTON DAILY NEWS AND THE WASHINGTON TIMES-HERALD

Mr. McCARRAN. Mr. President, I ask unanimous consent to have printed in the record a very able article on the question of the proposed abolition of the Civil Aeronautics Authority by the recent Executive order. The article is by Gen. Hugh S. Johnson.

I also ask to have inserted an illuminating editorial expression in the Times-Herald on Saturday, April 13, on the same subject.

I likewise request that there be printed a fine article by Frank C. Waldrop in yesterday's Times-Herald dealing with the same matter.

The PRESIDING OFFICER. Is there objection? There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News]

ONE MAN'S OPINION

(By Hugh S. Johnson)

Up to 18 months ago, the chief beef of this column was the appalling series of commercial airplane accidents and the sloppy work and unsatisfactory reports of the Commerce Department bureau in charge. Under the former Secretary it was a political pothouse, and the influence of the big aviation interests was not conspicuous by its absence.

Then, after 4 years' effort, Senator McCARRAN got through his bill setting up the Civil Aeronautics Authority as an independent nonpartisan agency. It separated executive function from judicial and legislative ones, put the former in the hands of an Administrator, set up an independent safety board to plug up the ghastly gap in the departmental administration. The Authority was promptly manned with competent experts.

This column hasn't seen anything to kick about for more than a year, in which 815,000,000 passenger-miles were flown without a death—an unprecedented safety record. Civil Aeronautics Authority is not entitled to all the credit, but it rates its share. It is now proposed, under the Reorganization Act, to abolish the safety board and reduce the Authority to old status as a bureau of the Commerce Department—right back where we started from.

In defense of this it is said, according to the American Aviation Daily, that Secretary Hopkins is well informed in aeronautics and is not a politician. If Harry is an airman, how did he get that way? If the other reason had said, "not a good politician," it could pass. But, Harry is the author of the great backfiring 1938 purge of "Tax and tax and spend and spend and elect and elect," and of such a political use of W. P. A. billions that he had to be hastily kicked upstairs into the Cabinet in order to avoid a congressional investigation that would have cooked him and the administration, too.

Many in Congress, the commercial air pilots and informed air travelers are up in arms against this shocking proposal, but the big aviation interests are not saying a word. They prefer King Log to King Stork and King Sugar Papa most of all. The dope is that the change will go through if they do not oppose it. It is doubtful if they will, but the air-traveling public ought to join the air pilots in forceful opposition. These are the people whose hides are endangered.

There are only two apparent reasons for wrecking a unit that was working so well to go back to a system that wasn't. One is politics and the other is amateur professional piddling with an organization chart in the rarefied academic atmosphere of the Brownlow committee. Neither is good enough. Politics is what we don't want here. The best reorganization chart in the world is no good without the right men in the proper places with unhampered opportunity to do their stuff.

This move not only fails to let well enough alone by a step back to a tried and condemned failure, but it is highly probable that it will result in resignation of the three best men in the authority, including the administrator—spark plugs that made the system work.

The President says that these views are all spinach. That is a picturesque but sterile use of an epithet to answer an argument. If it is spinach, it is of the variety that makes Popeye click so well.

The best features of the McCarran Act were the President's own inventions—the independence and nonpartisan character of the organization and separation of the executive from the legislative and judicial functions of the Board—a highly important advance that should be extended to most of the miniature governments which so easily tend to become miniature tyrannies or more than miniature nonentities.

The President does a lot better when he rolls his own in planning organization than when he calls in the theoretical or professional pink fingers to do it for him.

[From the Washington Times-Herald of April 14, 1940]

BETTER HANG ONTO A GOOD THING—INDEPENDENT AIR SAFETY BOARD HAS PROVED ITS VALUE

(By Frank C. Waldrop)

The true value of anything is demonstrated not by showing how it fits so neatly into a blueprint of authority, but in the record of its works.

It is not the form, but the substance, that counts.

There used to be an agency of Government here known as the Bureau of Air Commerce. It had a nice location on the blueprint of authority under the command of the Secretary of Commerce. It had the assignment to make and enforce regulations for civil aviation.

It was a flop. A terrible, deadly flop.

You remember how it worked. It made regulations. It checked to see whether the airlines were living up to those regulations. And when the charred ruins of an airplane were scraped off a mountainside, as they so regularly were, it rushed its investigators to the scene to determine whether it was responsible for the horror.

The Bureau of Air Commerce was prosecutor, judge, and jury. And it was a terrible, deadly flop. Under its administration, the national confidence in civil aviation disintegrated. And civil aviation came near to doing the same. Only slathering governmental subsidy kept it out of bankruptcy.

Even so, it was on the very edge of collapse when, on August 22, 1938, there went into effect a law setting up the Civil Aeronautics Authority, an agency independent of all elements of government except the Congress which created it, and the President, who appointed its members.

A specific response to public demand was the establishment, within the Authority, of an Air Safety Board.

The members of this Board were appointed by the President and were wholly independent of the Civil Aeronautics Authority. They were not even joined to it for budgetary purposes, but got their funds directly and separately from Congress. Their personnel was of their own choice. Their function was to "investigate * * *

and report to the Authority the facts, conditions, and circumstances relating to each accident (involving aircraft) and the probable cause thereof."

This meant the Board was to act as the public's independent agent to see whether an accident involving aircraft was caused by error or negligence of a plane maker, an air line, a pilot, or the Civil Aeronautics Authority, or whoever might be the responsible party.

The public had demanded that independent agent because experience had proved, in sorrow and in full, that the same bureau which was making aviation regulations and enforcing them was unable to bring itself to self-condemnation when it was at fault. As it so often was.

Such inability to render impartial judgments was only human on the part of the Bureau of Air Commerce. But that was no excuse for the toll in life and property that piled up.

Well, how has the independent Civil Aeronautics Authority acquitted itself? It has brought American aviation to the highest level of efficiency and safety in world history. It made the airways secure against disaster for 12 full months and it did that without destroying technical progress.

The counterbalance of the Air Safety Board, free to criticize and to report facts impartially and fully, was a paramount factor in that success.

You have only to look at the facts. In the pre-Safety Board days there were crashes and scandals. Since the Board's establishment, the same companies, same pilots, and same type planes have given safe and greatly improved service.

In his latest order reorganizing the executive administration of Government, Mr. Roosevelt has destroyed the independence of the Civil Aeronautics Authority, abolished the Air Safety Board, and once more telescoped into a subordinate division of the Department of Commerce the functions of making aviation regulations, enforcing those regulations, and investigating the consequences.

When it was suggested that this move puts air safety back in jeopardy, the President retorted "pure spinach." He said something of the same sort back in 1933, when it was suggested that the Army Air Corps wasn't fit to fly the United States mail.

But the funerals and the bills for ruined equipment that followed at once weren't spinach.

This reorganization plan may be a pretty sight on paper, but a scattered fuselage and what goes with it are not.

When you have a good thing, the rule of common sense is to hang on to it and the independent Civil Aeronautics Authority, plus the independent Air Safety Board, are proved good.

Congress, which has the honor of having established this good thing, had better hang onto it.

For when the crashes come again, as they are sure to do if a subservient attachment of the Secretary of Commerce is revived as judge, jury, and prosecutor of civil aviation, the people will forget the President's blunder and do their shooting only at Congress.

[From the Washington Times-Herald of April 13, 1940]

SAFETY THROWN AWAY

In the present Civil Aeronautics Authority, the Air Safety Board is an independent agency deriving its money directly from Congress.

Its duty is to determine the responsibility for any failures of service or crashes of ships in civil aviation.

Under that system, a year of safe aviation has just been accomplished. Under the system proposed by Mr. Roosevelt in his latest scheme of bureaucratic reorganization, the independent Air Safety Board is abandoned and its duties handed over to a subservient subdivision of the administrative agency.

Mr. Roosevelt calls criticism of this change "spinach." That is no answer. The change is a danger to human life and safe aviation because it destroys the independence of those charged with criticism of administrative failure. In fact, it makes critic and administrator one. It must be prevented.

Attitude of Baltimore Association of Commerce on Silver Purchase Repeal Bill

---

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

LETTER FROM THE BALTIMORE ASSOCIATION OF COMMERCE

Mr. TOWNSEND. Mr. President, I ask consent that there be printed in the RECORD a letter from the Baltimore Association of Commerce dated April 11, and the report referred to therein.

There being no objection, the letter and report were ordered to be printed in the RECORD, as follows:

BALTIMORE ASSOCIATION OF COMMERCE,
Baltimore, Md., April 11, 1940.

Re: S. 785, relating to foreign silver purchases by the United States Government.

Hon. JOHN G. TOWNSEND, JR.,
United States Senate, Washington, D. C.

DEAR SENATOR TOWNSEND: For your information I am transmitting a copy of the report of the committee on national legislation of the Baltimore Association of Commerce, setting forth the committee's reasons for advocating the speedy passage of Senate bill 785, relating to foreign silver purchases by the United States Government.

This report has been approved by our association and a copy was sent by our president to each Member of the Maryland congressional delegation, urging prompt and favorable consideration of this pending measure.

Sincerely yours,

W. G. EWALD, *Secretary.*

REPORT OF THE COMMITTEE ON NATIONAL LEGISLATION OF THE BALTIMORE ASSOCIATION OF COMMERCE

Re: S. 785, relating to foreign silver purchases by the United States Government.

To the Board of Directors, Baltimore Association of Commerce:

GENTLEMEN: Your committee considered the status of pending legislation in Congress to repeal authority for the purchase of foreign silver. Besides the very general public opinion calling for such legislation as expressed by editorial comments from all sections of the country and action taken by such bodies as the United State Chamber of Commerce and the Chamber of Commerce of the State of New York, your committee had requests for action by the association from representative business and financial interests, including a strong appeal from the Baltimore silver manufacturing industry, severely affected by the silver-purchase policy of the United States Treasury.

The repeal bill had been referred to the Senate Committee on Banking and Currency, which, by a nonpartisan vote of 14 to 4, recently made a favorable report upon the enactment of legislation to end the purchase of foreign silver. For this purpose the committee submitted an amended bill and recommended its passage. As amended, the bill provides that all power and authority of the President and the Secretary of the Treasury, under the Silver Purchase Act of 1934 with respect to the acquisition of foreign silver, shall cease and terminate on the date of enactment, and all proclamations, orders, rules, regulations, and other action by the President or the Secretary of the Treasury with respect to foreign silver shall cease to be effective on and after such date, with provision to acquire and make payment for foreign silver purchased or contracted for prior to the date of enactment of this act, and for the repeal of the tax on transfers of any interest in silver bullion.

The first effect of the enactment of this legislation will be to reopen to industry a free market in foreign silver, with broader remedial effects as to the whole national economy.

Reviewing the data presented to the Senate committee considering this legislation, it is shown that the continued buying of foreign silver is unnecessary, even for the purposes originally contemplated; imperils the future domestic buying power of the dollar, swollen by the issuance of gold and silver certificates; wasteful of American resources by bestowing buying power on foreigners ultimately exchanging American goods and services for imported silver arbitrarily priced without regard to its true world commodity value; that such benefits are not linked to reciprocal considerations; that there is no prospect of fulfilling the terms of the Silver Purchase Act of 1934, which contemplated that silver must be purchased until the monetary value of the country's stock of silver (valued for the purpose at $1.29 plus per fine ounce) equals one-fourth of the total monetary value of the gold and silver (gold being valued at $35 per ounce) or the world price for silver had reached $1.29 per ounce. Despite the purchase of more than 2,200,000,000 ounces of silver at a cost of over $1,000,000,000, the inflow of gold has been so great that the Silver Purchase Act would now require further silver purchases greater in the aggregate than when it was passed in 1934. Illustrative of the futility of establishing a world price of $1.29 per ounce (or 16 to 1 of gold before the dollar devaluation) is that the Secretary of the Treasury has recently been buying foreign silver at 35 cents an ounce and foreign gold at $35 an ounce—a ratio of 100 to 1. Further, it is shown that no other government in the world maintains a market for the world's silver; that joining in the general demand for repeal are numerous economists, including the Economists' National Committee on Monetary Policy, of which Dr. Edwin Kemmerer, of Princeton University, is president; the Federal Advisory Council of the Federal Reserve System; the Northwest Mining Congress; and the Chairman of the Board of Governors of the Federal Reserve System.

With such an array of data and unanimity of authorities, your committee recommends that the Association of Commerce request each member of the Maryland delegation in Congress to actively

contribute his best efforts to the speedy passage of the bill for ending the purchase of foreign silver, as recommended by the Senate Committee on Banking and Currency.

Respectfully submitted.

COMMITTEE ON NATIONAL LEGISLATION,
By WILLIAM J. CASEY, *Chairman.*

Committee: Randolph Barton, Jr., Charles W. Brown, Albert D. Hutzler, C. P. McCormick, W. Frank Roberts, Allan Sauerwein, William J. Casey, chairman.

APRIL 10, 1940.

Bonneville Dam

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

RADIO ADDRESS BY STATE SENATOR HARRY KENIN, OF OREGON

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered on March 23, 1940, by Hon. Harry Kenin, a member of the Legislature of the State of Oregon, on the subject A Challenge to Every Thinking Citizen.

I have read this address, and I wish I could appeal to every citizen of the great city of Portland, Oreg., to read and to heed the wisdom and the logic of Senator Kenin's address, which I have asked to have printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PEPCO OR P. U. D.

A CHALLENGE TO EVERY THINKING CITIZEN

For years we have been waiting for the completion of Bonneville Dam. It was here in Portland in 1932 that the promise of its construction was made. Today, 8 years later, Bonneville Dam is complete. Its first generators are in operation. Its transmission lines are at the gates of our city.

Many of you have worked on the dam itself. All of us have followed its progress. We know that Bonneville Dam is only the beginning. The Columbia River is our greatest regional asset. With its tributaries it has more than 10,000,000 kilowatts of undeveloped power—power that is worth $200,000,000 a year to Oregon and her neighboring State. It is not too much to say that the Columbia River may be more valuable than the coal mines of Pennsylvania or the oil fields of Texas.

BONNEVILLE AND YOUR JOB

We must realize what Bonneville Dam can mean to us. We have looked forward to its completion. Thousands of us have thought that soon we could afford electric cooking, electric water heating, and yes, even heating our homes with electricity, as they are doing down in the Tennessee Valley. But Bonneville Dam can mean more than just a little cheap power in our homes. It is not too much to say that the future of Oregon is tied up with the development of the Columbia River. Today three out of four of us in industry are dependent upon a single resource—timber. And today our timber is being cut off much faster than it grows. What will we do when our forests are gone? How will we earn our living?

So I ask you to think of Bonneville Dam not only as something that can help you today but as something that can mean even more to your children. Let us think not only of the immediate comfort of cheap power in our homes, but of the more important question of power for earning a living. We have seen the beginning. The Aluminum Co. is erecting a factory just west of Vancouver. An iron industry also has gone to Vancouver and a chemical industry to Tacoma. Other factories which will convert our hidden minerals into useful goods must replace our sawmills as our forests are cut away.

P. U. D.—OUR CONSTITUTIONAL RIGHT

This power issue is not a new one. A decade ago our beloved Senator, George W. Joseph, debated this question from every angle. As a result of his heroic work the people of Oregon wrote into their constitution an amendment, preserving forever to the people title to their great water-power sites. And that was not all. We wrote into our constitution how this power should be sold. We assured to every county and every community the right to form people's utility districts, the right to distribute its power at cost.

Today Bonneville Dam is finished. We must decide how this power will be distributed. This issue concerns all of us, whether we are consumers of electricity, employees of the power company, or investors in utility stocks or bonds. Any solution must be fair to all and must assure to the people the full benefits of Columbia River power.

RETAIL DISTRIBUTION—PUBLIC OR PRIVATE?

On December 1, Bonneville power crossed the Columbia River into Oregon. As it did so it brought into focus the vital issue before us tonight—whether this power will be distributed publicly or privately, for profit or for service.

As a public official—a member of the senate from Multnomah, Columbia, and Clackamas Counties—I am deeply concerned with this issue. However, it is not a partisan question. Republicans and Democrats are found on either side. Primarily it is an economic issue: Which is cheaper, which is more efficient, public or private distribution? A Portland people's utility district or the two existing power companies?

Bonneville power is not an academic issue; it is a vital problem that concerns us all. You have been told that you have cheap power already. You have read it in newspaper advertisements, you have heard it on radio broadcasts, and now we see the same statements on billboards, streetcar posters, and even in the mail. We are told that Bonneville power is cheap now.

HOW CHEAP IS PEPCO POWER?

What are the facts? How cheap is Bonneville power in your home and mine? What price are you paying the power company? Can you afford to replace the old wood stove with a new electric range? How much cheaper can we get hot water? And what about heating our homes with Bonneville power?

Kilowatts are unfamiliar terms to most of us. The great majority of us cannot even read our electric meters out on the back porch. But we are interested definitely in using electric power—to bring jobs to the Northwest and comfort to our homes. So it is our duty to learn more about our greatest resource, hydroelectric power.

I think everyone will agree, whether he works for the private power companies or for the public, that there is one official to whom we can turn for accurate information on Bonneville power. That man is Paul J. Raver, Bonneville power administrator. He is a recognized authority on electricity—and was chosen by the congressional committee to make a complete investigation of the electric rates of the Tennessee Valley Authority—more commonly known as T. V. A. When Paul J. Raver took over the job as Bonneville administrator, here is what he said of the local electric companies, and I quote exactly:

"Frankly, I see little reason why power that costs $2.60 in Tacoma costs $5 in Portland. I hope that with the aid of Bonneville you and I can help close that gap."

Today, 5 months later, you are receiving Bonneville power through the Portland General Electric Co. What does it mean to you? Can you afford electric cooking now? How much cheaper is electric power in your home?

TACOMA $2.86—PORTLAND $5 (NEW RATES)

If Administrator Raver were before the microphone tonight, here is what he would have to say to you, "I cannot understand why electric power that costs $2.86 in Tacoma, costs $5 in Portland." Yes, that is the comparison between Tacoma's public power rates and the local private companies.

How much are you paying right now for electricity? Suppose you are an average family of four. Let us say you have ordinary lighting, a refrigerator, an electric stove, and a few small appliances. Today you are paying $4.75 a month, and probably a good part of the power you are using is coming straight from Bonneville Dam.

FIFTEEN DOLLARS MORE A YEAR

If you are served by the Canby or Forest Grove public systems, you pay only $3.50. Or, if you live in Portland or Salem, or any other of the cities served by the company, you pay $4.75, a difference of $1.25 a month, or $15 a year. To many people that is equal to a week's wages every year paid in excess electric charges. A week of needless labor performed for your inefficient electric company.

If you want to use more power in your store, the picture is even worse. Power that costs $10 from Tacoma's public system costs $22.65 at the so-called new low rates in Portland and Salem. These are official Federal Power Commission figures.

FOREST GROVE SHAMES PORTLAND

Nor is Tacoma an isolated example. Portland merchants are paying nearly twice as much as storekeepers in Forest Grove and Canby. Why must we pay so much more for Bonneville power than the public systems of Canby and Forest Grove are charging? The Portland General Electric Co. buys Bonneville power even cheaper than Forest Grove's public lighting system. They buy as low as one-fifth cent a kilowatt-hour. Even if you use twice as much power as the ordinary family, you pay 12 times that amount. That is the $4.75 figure I mentioned a minute ago.

Why do the private utilities companies charge so much more than these public systems? There are many reasons, and I hope that in the course of the next few months I will be able to go into these reasons specifically. Certainly the stockholders are not getting the advantage of this high electric rate, nor is the power-company employee being paid any more.

CHEAP POWER FOR ALL

Many of us agree with George W. Joseph that the power of the Columbia River is too important to us to use for speculative profits

for a few persons. Like our water system, like our roads, and like our public schools, we believe that Bonneville power should be used for the benefit of all; that we should use Bonneville power to stimulate industrial development by selling it at cost; that we should use Bonneville power to stimulate development of our mines; and that we should use Bonneville power in our homes and on our farms, thus promoting the sale of many new electrical appliances.

If we are to distribute Bonneville power at cost through our own public system, how shall it be done? A few months ago a group of business and professional men formed the Bonneville-for-Portland Committee. Thousands of citizens have signed petitions asking the Hydroelectric Commission of Oregon to make an investigation of public distribution of Bonneville power. That State commission, of which Mr. George W. Joseph, Jr., is chairman, set its engineers and experts to work. After 4 months they reported that a public power district for the city of Portland would be very profitable.

LARGE PROFIT FOR PEOPLE'S UTILITY DISTRICT

The hydroelectric commission found that a Portland people's utility district could pay the Portland General Electric Co. and the Northwestern Electric Co. a fair price for their properties and still have a surplus of two to three million dollars a year.

Further, the commission says a people's utility district can make a substantial reduction in rates and pay off the cost of the entire system in 30 years or less.

That is the report of the Hydroelectric Commission of Oregon, appointed by the Governor of our State. Copy of this report may be found in the Portland Public Library or at the offices of the commission in Salem or Portland. It is well worth reading, for it points out how the people of Portland can make a two to three million dollar surplus each year from the sale of electric power; how the people of Portland can own their own debt-free public system in a comparatively few years.

PORTLAND INDUSTRY NEEDS CHEAP POWER

I need not point out how very cheap electric power can be in our homes once our electric system is paid for, when there are no more interest or principal payments; how we can attract steady, job-producing industries with electric power rates among the lowest in the Nation. That is not an idle dream, but a practical achievement which State engineers agree can be realized.

What is a people's utility district? I have been asked time and again. It is not much different from the school board, whose members you elect. Just as the school board operates the schools on a non-profit basis, so the utility district would operate the power system. With one important exception—by financing with revenue bonds, the system will be paid for entirely out of electric profits and not out of taxes.

P. U. D. PAYS TAXES

What about taxes? The facts are that a public district by law is required to pay taxes on exactly the same basis as the present private power company. Instead of losing tax moneys, our cities, our counties, and our schools would in fact get much more. Utility districts pay taxes on their property just as private companies do and they would have more property to pay taxes on. Lower rates would permit the people to use more power. This would require the construction of more lines and the district would pay taxes on all of this new property.

What about wages? The law requires the public district to pay employees the same wages that prevail throughout the area so that utility employees can be assured of the same or higher pay. When the Wahkiakum public power district bought out the local electric company, all employees were retained and given a 15-percent increase in wages.

What about bonds? All bonds, even revenue bonds, must be voted by the people after the district is formed.

What about buying Bonneville power? Congress has stated that public districts must be given preference over private companies in the sale of Bonneville power. The only way we can be sure of getting Bonneville power on a long-term basis is through a public system and not a private company.

VOTE "YES" FOR P. U. D.

Today the Bonneville-for-Portland Committee is urging the people of this city to vote "yes" for formation of a Portland people's utility district, as provided in the constitution of the State of Oregon. We believe that such a public district is best qualified to bring to us the full benefits of Bonneville power; to sow these benefits broadcast to every family, to every merchant, to every property owner, to every man who holds a job or wants a job. The members of this committee feel that the interests of our entire community are more important than speculative profits for a few.

Already in the State of Washington 25 county-wide public districts have organized. Nearly half of the population of our neighboring State already is served by public power systems, such as Tacoma, Seattle, Centralia, and others. Already one public district near the damsite has bought out the local power company at a fair price and is distributing Bonneville power to the people of the area. On January 15, Grays Harbor District bought out the local company and is serving thousands of homes on a nonprofit basis. Bonneville power lines are being constructed now to serve this district. Pacific and Wahkiakum County public utility districts also have bought out the private company systems. But Portland just has sat by and waited.

Why are we urging the formation of a people's utility district to distribute Bonneville power in Portland?

P. U. D. MEANS POWER AT COST

First. Because it will be organized to market Bonneville power at cost—to assure industries, homes, and stores power at the lowest price.

Second. A Portland district will be directly responsible to the people. They will elect the directors and may remove them. Remember, you cannot do that with the officials of a power company over whom you have no control.

Third. A Portland district will be entitled to preference in the sale of Bonneville power. Already there is every indication that Bonneville will not be able to install generators rapidly enough to meet the growing demand for power. We must act now to get our share of Bonneville power.

MORE TAX DOLLARS, NOT LESS

Fourth. We urge the formation of a Portland district because it will pay the same or more taxes than a private power company. That is the law. This is especially important to our schools and city and county employees. As a member of the school board, I can appreciate the fact that a Portland power district will pay more taxes to the city and county, rather than less. We will also get cheap power so we can properly light our schools and protect our children's eyesight.

Fifth. A Portland public district will not be mixed up in city or county or State politics. It will not have high-powered lobbyists at Salem each session of the legislature. The district commissioners will deal solely with the question of electric power, and not with political issues. They will hire a competent manager to run the system.

P. U. D. BEST FOR INVESTORS

Sixth. A Portland district will buy out the properties of the local companies at a fair price. That is best for the investors and best for the public. They have had enough of mismanagement and holding-company depredations.

Seventh. A Portland district can finance the purchase of these properties by issuing revenue bonds—bonds that will be paid for solely from electrical earnings and not from taxes. These bonds can be issued at 3½ percent or less, as the city of Knoxville did a short time ago. Right now utility rates are based on interest charges nearly twice as high. Cut these interest rates in half, and we can have cheap power and pay skilled employees even better wages.

EMPLOYEES TREATED FAIRLY

Eighth. A Portland people's utility district is required by law to pay its employees the same or higher wages than those prevailing in the community. By cutting power rates our district will permit people to use more electricity, and thus more jobs are created for linemen, electricians, salesmen, etc. A Portland people's utility district is job insurance for every electrical worker.

Ninth. A Portland district will reduce power rates rapidly as it pays off its debt. It will pattern its rates after Tacoma's successful record. Today Tacoma charges $1.20 for lighting that costs $1.75 in Portland. Today Tacoma charges 35 cents for refrigeration that costs 88 cents in Portland. Today Tacoma charges $1.15 for electric cooking that costs $2.12 in Portland. More important yet, today Portland's industries are paying $1,145 for power that costs $597 from Tacoma's publicly owned system.

BONNEVILLE WILL HELP

Administrator Raver has promised that the entire Bonneville administration will be squarely behind our public district. Here are his exact words:

"A basic readjustment of retail rates is essential if Bonneville power is to have any economic significance at all.

"As to the newly formed public groups, they will be given every assistance in getting started. Our engineers, our rate experts, and our accountants will do everything possible to start them off right."

UP TO PORTLAND TO ACT

The Bonneville chief places the question of retailing Bonneville power right in our laps. He says:

"As to the issue of public versus private distribution of power, that question is in your hands rather than mine. Each community has the right—and the obligation—to choose the method which will insure the lowest electric rates and the best possible service. With the increasing importance of power in community growth, and particularly in industry, no city can afford to be handicapped by electric-power rates that are very much higher than its neighbor."

On the question of employees and investors, he says:

"Whatever your decision may be upon this question, I trust that the interests of all concerned—consumer, employee, investor—will be respected. If there is to be a transition from private to public operation in distribution of power, I am confident that a fair price, a price based on legitimate investment, will be paid. I am confident that the ultimate management will retain the technical and skilled employees so essential to reliable and efficient service."

The Bonneville-for-Portland Committee believes that every part of this important question of electric power should be placed before the people of this city and this State. Another civic group, the Bonneville Service Committee, of which Mr. C. A. Lucas is chairman, is also advocating a people's utility district for Portland. This committee is preparing factual information on the cost of electric power to stores, apartment houses, and industries. I hope that in the near future Senator William F. Woodward will have the privilege of speaking to you on this important question. All of these men are giving their time and services without compensation. They are

rendering a gratuitous public service in an effort to bring Bonneville power within the reach of all of us.

SEND IN YOUR BILL

Both the Bonneville Service Committee and the Bonneville-for-Portland Committee will be glad to answer questions any of you may have. If you wish to know how much Forest Grove and Canby residents are paying for Bonneville power—what your bill would be if you lived in these towns or Tacoma—send a copy of your bill to the committee at 409 Studio Building, Portland. We believe every citizen is entitled to this information. When Administrator Raver spoke before the Portland City Club, he said:

"I appreciate the fact that nothing I can say will deter the people of the Northwest from settling this issue in their own way. I trust that the decision of the people will be based on intelligent factual analysis of the problem, rather than on partisanship or propaganda."

BONNEVILLE POWER FOR ALL

I hope that the people of Portland will consider this question carefully. The future of Oregon is bound up with Bonneville power and the Columbia River. We must face the issue now of whether this power shall be sold for the benefit of all or the profit of a few. By voting "yes" on May 17 for the formation of the Portland People's Utility District, we will get Bonneville power for our homes and factories at the lowest rates—immediate savings on our home light bills of at least $15 a year. More important yet, we will have the assurance that power-using industries will be able to locate in Oregon and provide jobs for ourselves and our children.

No single issue is more significant to the people of Oregon; it affects the lives of every one of us. Let us have the vision to save the blessings of Bonneville power for ourselves and our posterity. The Columbia River is too sacred a heritage to lose on the eve of our city's greatest opportunity.

The Logan-Walter Bill

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES
Friday, April 12, 1940

ANALYSIS BY JOSEPH C. DUGGAN

Mr. PLUMLEY. Mr. Speaker, I have just finished reading a paper analyzing the Logan-Walter bill—an excellent analysis evidencing close study and careful research. It was written by Joseph C. Duggan, a member of the District of Columbia bar, who is presently a postgraduate student at the Law School in the Catholic University of America.

The subject matter of this paper being the bill shortly to come before the House for action, I commend this article for your attention.

Under permission granted me to extend my remarks in the RECORD, I insert the article to which reference is made:

THE PROPOSED ADMINISTRATIVE-LAW BILL

(By Joseph C. Duggan, A. B., LL. B., member of the District of Columbia Bar)

I. INTRODUCTION

The mushroom growth in the field of administrative law which has been attendant upon the establishment of the multiple boards, bureaus, agencies, and commissions [1] in the Federal Government has focused the attention of lawyer and legislator alike upon the need for the formulation of some systematic procedure to regularize and standardize the functional aspect of that law. The American Bar Association, through its Special Committee on Administrative Law [2] and, more recently, the Attorney General's Committee on Administrative Procedure,[3] have both done pioneer work in making a thorough survey and study of the entire field; and while the latter committee has not as yet made its recommendations and findings, there has been introduced into Congress, with the sanction of the former committee, the so-called Logan-Walter bill,[4] entitled "A bill to provide for the more expeditious settlement of disputes with the United States, and for other purposes." This bill passed the Senate on July 18, 1939, but was subsequently recalled for reconsideration, and it is currently on the Union Calendar [5] for the attention of the House of Representatives.[6]

In view of the widespread interest in, and the importance of, this pending legislation, it will be the purpose of this paper to impart some idea, by means of dissection and analysis, of what the administrative-law bill provides. Before delving into the nature of the suggested legislative expedient, however, it is believed that a brief statement of the problem sought to be solved thereby will be both pertinent and orientative.

II. A STATEMENT OF THE PROBLEM

The immediate issue which has been constantly magnified in this country for the past 50 years is one of governmental policy. Despite implied [7] and express [8] prohibitions in our Constitution forbidding the commingling of executive, legislative, and judicial powers, there has grown up within the framework of our democratic structure a department of Government, extraconstitutional in nature, which, for lack of a more completely descriptive name,[9] is known as the "administrative" department. To this department, consisting of the sprawling bureaucracy composed of agencies, administrations, boards, bureaus, commissions, and corporations, is committed a vast agglomeration of powers—police, regulatory, discretionary, and supervisory [10]—out of which has emerged the elusive subject termed "administrative" law.[11]

All of these agencies and commissions, operating under the statutes which give them existence and power, have made a direct impingement upon the industrial, social, and economic life of the Nation; and while there has been much outcrying against them, ranging from insistent clamoring for their abolition to suggestions for amendments to their organic statutes, the sober fact is that they have become an integral part of our governmental system, and obviously are here to stay. Abolition, then, is not the remedy for whatever abuse is claimed to have crept into their administration.

Conceding the necessity and the permanence of the administrative branch of our Government, then the next question that presents itself is, "How is the administrative department to be adapted to the traditional structure of constitutional government, so that it can legitimately take its place beside the executive, legislative, and judicial branches, subject to the limitations of the historical pattern of checks and balances?" The question is highly provocative, and since "checks and balances" is most closely associated with a concept of "judicial review," it resolves itself ultimately to a discussion of the focal point about which the stormiest argument in administrative law rages—judicial review of administrative action.

The proposed administrative-law bill is an attempt to settle the argument in favor of the proponents of judicial review. The contention is that the nature [12] of administrative bodies, permitting the exercise of diverse functions, prompts their inclusion in a hierarchical system wherein the possibility of judicial review [13] will serve as an effective brake upon arbitrary and capricious administrative action. Concurring in this sentiment, Professor Stason has expressed himself as follows:

"We have a confusion of methods, and all too frequently the selection of the incorrect method impairs the rights of a client. Has not the time arrived for the evolution of a properly conceived procedure for the judicial review of administrative decisions? Such decisions are no longer exceptional in our jurisprudence. They constitute a great bulk in current litigation. The need of simplification of methods of judicial review is fully as great as, if not greater than, the former need of simplification of common-law pleading. * * * As I have said, judicial review of administrative decisions is one of the essential checks and balances in

[12] "Administrative bodies are policy-determining and policy-effectuating bodies, while the courts merely construe and apply the laws." Pillsbury, Warren H., Administrative Tribunal, 36 Harvard Law Rev. 423.

[13] Vanderbilt, A. T., the Place of the Administrative Tribunal in Our Legal System, Am. Bar Assoc. Jour., April 1938, p. 273.

our governmental scheme. If we fail to evolve a smoothly working, capable, and effective method of preserving the proper balance between necessary governmental regulation by administrative officers on the one hand and protection of personal and property interests from arbitrary action on the other hand, we shall fail in a measureable degree to preserve the governmental scheme which we hope will continue to survive. The time has arrived for a careful and intelligent evolution of both proper theory and proper practice with respect to this particular balancing mechanism." [14]

The proponents of the proposed legislation contend that the proper theory and the proper practice suggested by Professor Stason are both contained in H. R. 6324 and S. 915. They argue that the theory is sound in that the judicial power as such is left in the courts, thus conforming to the traditional constitutional concept; and that the process of gradual assumption of that power by administrative bodies is halted at that point, now generally conceded to be permissible, beyond which the delegation of judicial power would be unconstitutional. The contention is clearly stated by one writer as follows:

"Admitting for purposes of argument that it should be unconstitutional in most instances to confer upon an administrative body the power of final and conclusive determination enforceable by that body's own executionary writ, this concession does not save the judicial function of the courts from serious infringement. The essence of the judicial duty is to decide. If as a practical matter that ultimate decision rests with the administrative tribunal, to that extent has the judicial power of the court been affected. If all the courts do is to furnish the enforcement process for the administrative determination, the essence of the judicatory function is with the latter and not with the former body. So also judicial review of only a limited portion of the commission's determination leaves the commission as the sole and final arbiter of that part of the controversy to which the judicial review does not extend. Anyone familiar with the workmen's compensation litigation, for example, knows full well that in 90 percent of the cases it is the commission's determination of the facts which is the conclusive and decisive factor. Even where full judicial review is afforded, the administrative decision may, for practical reasons, be the final word. In the case of the poor fisherman whose nets have been summarily destroyed by the game warden, it is little more than contemptuous irony to tell him that in theory of law the executive determination has not affected his rights, since he still possesses the liberty of spending time and money far beyond his ability to command in a possibly vain pursuit against the officer for damages. What is here said is offered not in argument against judicial powers of administrative tribunals but rather in emphasis of the belief that the current provisions for judicial execution and review do not, from the realistic viewpoint, prevent large measures of the judicial functions from being conferred on executive bodies." [15]

The "proper practice" is ostensibly supplied by the proposed bill itself in that it purports to bring order out of chaos by standardizing the procedure of administrative bodies and making the possibility of judicial review a matter of right.

Unfortunately, the resolution of the problem of judicial review for administrative agencies in this country has been complicated by the necessity of dovetailing the administrative process with the somewhat rigid pattern of tri-partite government implicit in the Constitution. On the Continent, the problem has been solved to a great extent by taking administrative controversies away from the civil courts altogether, and entrusting their solution to administrative courts.[16] An abortive attempt to foster this expedient in the United States has now been abandoned by its originator and chief proponents, the American Bar Association.[17]

The critics of the proposed legislation contend that the provisions for judicial review contained therein, if enacted into law, would nullify the administrative action altogether. They hold that the suggested method is too rigid [18]; that the problem attempted to be solved thereby cannot be legislated out of existence at one fell swoop [19]; that the bill would hamper, rather than expedite, the administrative process [20]; that the all-inclusive provisions for judicial review disregard the distinctly different nature of the administrative as compared with the judicial process [21]; and that the bill, if enacted into law, would seriously disturb the mechanism of government.[22]

A powerful argument in favor of the critics of the proposed bill is deduced from the fact that the committee on ministers' powers in England gave the administrative branch of the Government in that country a clean bill of health.[23] Whether our own administrative agencies will be cleared of charges of administrative absolutism by the Attorney General's Committee on Administrative Procedure remains to be seen.[24]

In the meantime the battle over the advisability or inadvisibility of judicial review goes on. Both the proponents and opponents of judicial review have telling arguments to bolster their respective positions. The problem is fundamental. Professor, now Mr. Justice Frankfurter, put it this way:

"And I should say the center of our difficulties is the failure, the perfectly natural failure, to adapt old formulas, our existing machinery, but above all, our traditional modes of thought, to the difficult problems presented by contemporary society to the whole framework of law, compared to the problems that were presented to the framework of law, say, even 50 years ago." [25]

In that criticism lies the germ of the readjustment which has to be made before the problem can be solved.

The proposed bill

The administrative law bill, as committed to the Committee of the Whole House on the state of the Union, is a relatively simple piece of legislation; yet its purpose is so reformative, its scope so broad, and its possible effect on the processes of government so profound that each section of the bill deserves special attention and analysis. The method of consideration, therefore, will be to take each of the several sections [26] of the bill in order, analyze its content, and then consider its purpose and effect.[27]

The proposed bill—Section 2. Implementing administrative rules

"SEC. 2. (a) Hereafter administrative rules and all amendments or modifications or supplements of existing rules implementing or filling in the details of any statute affecting the rights of persons or property shall be issued by the head of the agency and by each independent agency respectively charged with the administration of any statute only after publication of notice and public hearings. All such rules shall be published in the Federal Register within 10 days after the date of their approval by the head of the agency or the independent agency concerned, and shall not become effective until such publication, except when the President declares that a public emergency exists.

"(b) Administrative rules under all statutes hereafter enacted shall be issued as herein provided within 1 year after the date of the enactment of the statute subject to the adoption thereafter of further rules from time to time as provided in this act.

[26] Except sections 1, which merely defines terms used in the bill, and 7, which deals with certain exceptions and reservations. The exceptions exempt certain agencies from the scope of the act, e. g., courts martial, Federal Reserve Board, Office of the Comptroller of the Currency, Federal Deposit Insurance Corporation, all Federal lending agencies, the Department of Justice, the Department of State, etc.

[27] Since the bill is of such a controversial nature, its discussion herein will be purely objective, and confined to an analysis of its contents; and no attempts at recommendations of adoption or rejection will be made.

"(c) Any person substantially interested in the effects of an administrative rule in force on the date of the approval of this act may petition the head of the agency or the independent agency which administers any statute under which the rule was issued for a reconsideration of any such rule; and the head of such agency or the independent agency shall, after publication of notice and hearing, if requested within 10 days thereafter, determine whether such rule shall be continued in force, modified, or rescinded. All amendments of such rules shall be in accordance with the procedure provided in subsection (a) of this section and all action of the head of such agency or the independent agency on such petitions and all new or amended rules shall be published in the Federal Register as prescribed in said subsection (a) for the publication of rules.

"(d) No person shall be penalized or subjected to any forfeiture or prosecuted for any act done or omitted to be done in good faith in conformity with a rule which has been rescinded or declared invalid by any final judgment entered as hereinafter provided, unless the act was done or omitted to be done more than 30 days after the publication in the Federal Register of the rescission or final judicial determination of the invalidity of such rule." [28]

This section of the bill deals mainly with the process known in administrative law as "filling in the interstices" of a statute. Practically all administrative agencies, operating under a delegation of legislative power, have the authority to implement their organic statutes by rules and regulations.[29] Concerning the proper delegation of such power, there is general acquiescence in its necessity because of the function of the administrative agency in the complex governmental scheme; [30] concerning the methods (which are as variegated as the administrative tribunals themselves) of exercising the power, there is confusion and disparity.[31] The avowed general purpose of this section, therefore, is to remove the chaotic conditions which circumscribe the exercise of the rule-making power, and attempt to provide a uniformity of procedure applicable to all administrative agencies exercising such power.[32]

The section provides that any rule or regulation implementing [33] a statute and "affecting the rights of person or property" shall not be issued prior to publication of notice and public hearings.[34] The requirements of the section extends to rules dealing with both the adjective and substantive [35] phases of any statute they are intended to implement. Provision is made for review of rules already in effect prior to the passage of the bill by permitting any person "substantially interested" therein to petition for reconsideration; and protection is afforded to a citizen or other person acting in accordance with a rule for 30 days after the rule is rescinded or held invalid, and notice to that effect has been published in the Federal Register.[36]

It is to be noticed in passing that the section does not provide the detail of procedure to be followed,[37] an omission which would indicate that the matter is best left to the discretion [38] of the administrative agency concerned. This would seem to permit of a flexibility required by the peculiar nature of the exigencies which arise in the administration of such agencies. The uniformity,[39] therefore, attaches to the requirement of notice and hearing, and not to the method in which either or both is given.[40]

To summarize, then, section 2 of the proposed bill has for its purpose the establishment of a mandatory procedure governing the implementation of statutes under which agencies of the Federal Government exercise sublegislative power. The insistence is upon the factors of notice and hearing, and not upon the method thereof. The safeguards of the required procedure consist in—

1, requiring the issuance of rules defining both adjective and substantive details of Federal statutes administered by the particular agency;

2, authorizing and requiring public notice and public hearing, when hearing is requested, prior to the issuance of rules;

3, providing a method whereby businessmen and citizens may be advised in advance of administrative action determining particular cases as to the administrative interpretation of the statutes; and

4, protecting citizens acting in good faith in accordance with administrative rules for a reasonable period after the rule is rescinded or held invalid.[41]

IV. THE PROPOSED BILL, SECTION 3

"SEC. 3. In addition to the jurisdiction heretofore conferred upon the United States Court of Appeals for the District of Columbia, that court shall have jurisdiction, upon petition filed within 30 days from the date any administrative rule is published in the Federal Register, to hear and determine whether any such rule issued or continued in force in accordance with section 2 of this act is in conflict with the Constitution of the United States or the statute under which issued. No rule shall be held invalid except for violation of the Constitution or for conflict with a statute or for lack of authority conferred upon the agency issuing it by the statute or statutes pursuant to which it was issued or for failure to comply with section 2 of this act. A copy of the petition, and copies of all subsequent pleadings, shall be served upon the Attor-

---

[28] "(This section) of the attached bill requires the issuance and publication of rules and regulations implementing the statutes administered by governmental agencies. We feel, however, that the matter ought not to be allowed to rest here, but that the Association should continue to urge that administrative rule-making in what may well be called a quasi-legislative capacity * * * should, so far as possible, be done in advance of controversy and from time to time revised in the light of experience with reference to that experience in general and not exercised pro hac vice for particular cases so as in effect to make a rule for a case for the time being which is in substance no rule. Undoubtedly with the volume of detail which must be dealt with in administration today a very large rule-making power must be committted to administrative agencies. But where this power is in effect legislative, there should be so far as possible the same hearing of those interested or to be affected, the same action before particular controversies, and the same promulgation and provision for reasonable possibility of public access to the rules and regulations as are a matter of course in the case of ordinary legislative lawmaking." Report of the Special Committee on Administrative Law, 63 Am. Bar. Assc. Reports 334 (1938).

[29] E. g., see sec. 23 (a) of the Securities Exchange Act of 1934, Public, No. 291, 73d Congress, as amended by Public, No. 621, 74th Congress; approved May 27, 1936.

[30] "The only way out of the confusion * * * is to recognize the fact that the doctrine of separation of powers in its extreme form is not applicable to modern government. There are many cases in which a mingling or blending of the powers of two or more of the three departments is justifiable and proper and should be frankly permitted, rather than to force the courts to sustain the validity of such bodies upon artificial or strained reasoning. * * * Such mingling of powers should be frankly recognized and sanctioned." Pillsbury, W. H., 36 Harvard Law Rev. 425.

[31] "One practical problem, of great importance to everyone who has had to deal with administrative agencies exercising delegated legislative powers, is to learn what legislation they have promulgated. Statutes are readily accessible, but this subordinate legislation has often heretofore been quite inaccessible. * * * An added difficulty is that there is no approach to uniformity in nomenclature." Jaffe, L. A., Publication of Administrative Rules and Orders, Am. Bar. Assoc. Jour., May 1938, p. 393.

[32] "The establishment of special forms of procedure to be followed in the formulation of sublegislative enactments may include specific provision for: Notice that regulations on a given subject are to be drafted; hearings at which interested parties may appear and be heard; filing of objections against a particular regulation; participation of certain interested groups or associations in the drafting of rules and regulations; complaints against any feature of a sublegislative act before it goes into operation. In a significant sense, such procedure provides for some of the safeguards that ordinarily result from legislative action. Procedural requirements such as those just mentioned are particularly applicable when the rules and regulations to be made are far-reaching and important * * *" (Blachly, F. F., and Oatman, M. E., Administrative Legislation and Adjudication, the Brookings Institution, p. 86 (1934)).

[33] "A rapid calculation * * * indicates that there are 115 Federal agencies having delegated authority to issue documents implementing the statutes of Congress, that is, to promulgate administrative law, and that the legislative or other authority therefor is contained in 964 statutory provisions (including amendments) and 71 Executive orders or proclamations (as of May 11, 1936)" (Jaffe, L. A., Publication of Administrative Rules and Orders, American Bar Association Journal, May 1938, p. 396).

[34] This provision seems to be a fundamental postulate in any attempt to prescribe a uniform procedure in this respect, in view of the Supreme Court's decisions in the *Schechter* and *Panama Refining Co. cases* (295 U. S. 495, and 293 U. S. 388, respectively). In *Wichita R. and Light Co.* v. *P. U. C.* (260 U. S. 48) the Court said: "In creating such an administrative agency the legislature, to prevent it being a pure delegation of legislative power, must enjoin upon it a certain course of procedure and certain rules of decision in the performance of its function."

[35] By this requirement "we have the details of the statute filled in by the administrative officers who are familiar with administrative problems and processes, rather than by the courts, and we protect the courts from the warring social and economic forces—diverting their hostility to the political branches of the Government which are responsible for legislating in accordance with the terms of the Constitution" (report of the special committee on administrative law, American Bar Association, Jan. 9, 1939, p. 591).

[36] For an excellent article discussing the importance of the establishment of the Federal Register to the field of administrative law, see L. A. Jaffe, Publication of Administrative Rules and Orders (American Bar Association Journal, May 1938, p. 393).

[37] "Such details are best left to the discretion of the agency conconcerned * * *." (Report of the special committee on administrative law (American Bar Association Journal, Jan. 9, 1939, p. 592).

[38] For a case exemplifying judicial overruling of the exercise of administrative discretion, see *Lukens et al* v. *Perkins* (107 Fed. 2d).

[39] "All arguments that such uniformity is neither possible nor desirable are answered by the fact that uniformity has been found possible and desirable for all classes of both equity and law actions in the courts exercising the whole judicial power of the Federal Government." (Rept. No. 1149, to accompany H. R. 6324, 76th Cong., 1st sess., p. 3.)

[40] For an adverse criticism, see The Administrative Law Bill—Unsound and Unworkable, by Alfred Jaretzki, Jr., in Louisiana Law Review for January 1940, reprinted in full in CONGRESSIONAL RECORD for February 29, 1940, at pp. 3366-3373.

[41] Report of the special committee on administrative law (American Bar Association Journal, Jan. 9, 1939, p. 588).

ney General of the United States, who shall direct the defense of the rule. The court may refer such petition and any reply thereto for the taking of such evidence as shall be material and relevant thereto. The court shall give preference to such petitions and shall have no power in the proceedings except to render a declaratory judgment holding such rule legal or valid or holding it contrary to law and invalid. If the rule is held contrary to law and invalid, the rule thereafter shall not have any force or effect except to confer immunity as provided in section 2 of this act. Nothing contained in this section shall prevent the determination of the validity or invalidity of any rule which may be involved in any suit or review of an administrative decision or order in any court of the United States as now or hereafter authorized by law."

This section of the proposed bill is to be sharply distinguished from section 5 (post) in that the judicial review contemplated herein is applicable only to the rules and regulations promulgated under section 2 (supra), whereas the review referred to in section 5 is an appellate review applicable to the decisions and orders of administrative agencies. In other words, section 3 of the bill provides for review, by means of declaratory judgments, of the sublegislation issued by administrative agencies pursuant to the authority vested in them by their basic statutes. The validity or invalidity of this sublegislation in the form of rules and regulations is to be tested by the yardstick method, i. e., judicial comparison of the rule or regulation in question with the Constitution and the statute or statutes under which the rule or regulation is issued.

For this purpose there is conferred upon the United States Court of Appeals for the District of Columbia, the authority and jurisdiction to declare the rule or regulation valid or invalid according to its consonance or inconsonance with the Constitution and the statute or statutes under which it is issued. In view of this provision, the ostensible purposes of the bill, according to the intent of this particular section, are:

(1) To insure a higher degree of draftmanship of such rules prior to issuance, and thus effect an improvement in the administrative technique;[42]

(2) To provide a much-needed, expeditious, and inexpensive method of determining the validity of rules and regulations;[43]

(3) To provide an adequate procedural safeguard which will in turn provide the "control of law" deemed necessary to prevent the development of administrative absolutism.[44]

It is readily apparent, from an examination of its content, that this section of the bill establishes the Court of Appeals for the District of Columbia as an appellate tribunal in the administrative system.[45] While this function is not a new one for a court of general jurisdiction, it is somewhat novel in the connection under consideration because the court becomes, in effect, an integral part of the administrative scheme as such, with the limitation that its operation within the system shall be confined to the rendition of declaratory judgments upon questions of law. No authority is granted by this section for review of questions of fact, even if not supported by "substantial evidence." [46]

By limiting the proposed review to this court, it is hoped that the Court of Appeals for the District of Columbia will become familiar with [47] and expert in the determination of administrative questions [48] and at the same time the right to test the validity of any rule in a case on the merits in any circuit court of appeals is preserved.

Fundamentally, however, the mechanism of the declaratory judgment in the Court of Appeals for the District of Columbia is intended to furnish the "practicable safeguard around the rule-making power" suggested by the President's Committee on Administrative Management when it recommended that Congress should:

"Investigate the advisability of providing means of challenging the validity of regulations that affect the public by a simplified procedure, without delay, and at a nominal cost." [49]

On the other hand, there is a suggestion that the review provided by this section of the bill is altogether unnecessary.[50] It is contended that relief for any threatened injury in the legal sense may be had in any proper court by way of injunction, and it is further emphasized that, even if the District of Columbia Court of Appeals declares the rule valid and legal, such declaration is of no final effect and may be nullified by any other Federal court having jurisdiction over the administrative tribunal.

That the proposed relief by means of the declaratory judgment is open to the same criticism implied in the general charge of unwarranted judicial interference with administrative bodies is suggested by the following observation:

"It is feared that in many cases a court attempting to act under this section would either pass on the validity of the rule without the necessary factual background or would be led into burdensome and yet necessarily incomplete consideration of many possible factual variations. That the proposed procedure runs contrary to the long-established tradition of the common law is no adequate answer to a legitimate attempt at improvement. Testing the validity of statutes in actions for declaratory judgments is a procedure of growing acceptance in State courts, but even so it is doubtful whether there has been sufficient experience to warrant its application on so broad a scope as under the present act. Conditions under Federal laws are in many respects quite different and of much wider application than under State laws. It would certainly seem sounder to proceed cautiously with its application, in the first instance, with respect only to a relatively small number of agencies or types of rules chosen with respect to their particular adaptability to such procedure." [51]

And while this same criticism is voiced from another quarter in almost identical words, the conclusion is appended that—

"Where the existence of a rule constitutes a grave and imminent threat to the demonstrable interests of a particular person, it ought to be possible to test it in advance of its actual application, and we are inclined to believe that in such cases a speedy remedy, where not already available, should be provided. Except in such cases, however, it seems preferable as a general matter to test rules and regulations only as their effect is observed in practical operation." [52]

The real question, then, as to the advisability or inadvisability of section 3 seems to resolve into one of practicality, apart from desirability. Perhaps no effective answer to the question can be found until one is synthesized by the best method known to the administrative process—the method of experience.

The proposed bill, section 4, statutory approval and authority for administrative boards and prescribing their procedure

"SEC. 4. (a) Every head of an agency shall from time to time designate three employees of his agency for such intra-agency boards (including the field service of such agency) as may be necessary and desirable. Where there are intra-agency boards existing on the date of approval of this act, they shall be reestablished and function in accordance with this act. Wherever practicable, such boards shall be designated in various sections of the United States to hear any controversy which may have there arisen. At least one employee designated for each such board shall be a lawyer, who shall act as chairman of the board. When the members of any board are not engaged in the hearing of administrative appeals as hereinafter provided, such employees shall be assigned to other duties in the service of the agency concerned. No member of a board who has participated in a particular case or in the preparation, draft, or approval of any rule which may be involved shall sit in appeal of the case or application of the rule. [Each board shall be impartial, free, and independent in the hearing and determination of administrative appeals.] (Part in brackets to be omitted.)

"(b) When any person is aggrieved by a decision of any officer or employee of any agency, such person may notify the head of the agency in writing of objections thereto, specifically requesting that the controversy be referred to a board, constituted as hereinbefore provided, for hearing and determination. Such notice shall be given not more than 20 days after the date of receipt of a registered letter notifying him of the decision, act, or failure to act. Such written objections shall be referred promptly to an intra-agency board for the agency concerned. At the time and place to be designated and communicated to the aggrieved person he shall have an opportunity at an early day for a full and fair hearing before said board, at which time there shall be introduced into the record the testimony and any documents or objects relating to the appeal before said board. Any person having a substantial interest in the controversy shall have the right to intervene therein. A stenographer shall be assigned to the hearings before the board to take and transcribe the testimony. All testimony, other evidence, and all proceedings before the board shall be reduced to a written record and filed in the agency concerned and a copy thereof shall be furnished to the aggrieved person upon his written request therefor at a charge not exceeding the actual cost thereof. Within 30 days after the day the evidence and arguments are closed the board shall make written findings of facts and separate decision thereon, which shall be subject to the written approval, disapproval, or modification of the head of the agency concerned or of such person as he shall designate in writing to act for him. A copy of the findings of fact and decision, showing the action, if any, of the head of the agency concerned or his representative, shall be filed in the agency as a part of the written record in the case and a copy shall be mailed to the aggrieved person and to the intervenors, if any. The United

States shall take such action as may now or hereafter be provided by law to enforce the decision of the agency unless there be pending judicial review thereof as hereinafter provided.

"(c) The chairman of any board, upon request of any party to the proceedings, shall require by subpena the attendance and testimony of witnesses and the production of documents and all other objects before said board without other showing than required by the rules in United States district courts for the issuance of subpenas by such courts. Any witness subpenaed or whose deposition is taken shall receive the same fees and mileage as witnesses in courts of the United States, to be paid by the party at whose instance the witness appears or deposition is taken. In the event of disobedience of a subpena issued as herein provided, the chairman, or any party to the proceedings, may apply to any district court of the United States of the jurisdiction in which the witness may be found for an order requiring his attendance and testimony and the production of all documents and objects described in the subpena. The chairman of the board shall be authorized to administer oaths to witnesses and there shall be a right to examination and cross-examination of witnesses.

"(d) Where the matter in controversy is such that the delay incident to the hearing and decision of the case would create an emergency contrary to the public interest and there is administrative action or inaction, prior to or without such hearing and determination, resulting in the destruction of the property or damage to the aggrieved person involved in such controversy, the findings of fact and decision when made by the board shall state the amount of pecuniary damage suffered by the aggrieved person and upon approval thereof by the head of the agency concerned, the amount of the damages so approved, if acceptable to the aggrieved person, shall be certified to the Congress for an appropriation with which to pay the same.

"(e) Where any matter arises out of the activities of any independent agency, it may be provided by rule that such matter may be heard in the first instance by one of its trial examiners, who shall file with the independent agency the written record and his written findings of fact and separate decision, which shall be made in all instances, whether by the examiner or the independent agency, after reasonable public notice and a full and fair hearing as hereinbefore in this section provided. A copy or copies thereof shall be sent by registered mail to the aggrieved party. The independent agency shall enter at the expiration of 30 days such appropriate decision as may be proper unless within said 30 days the aggrieved party shall signify his written consent to the entry of the decision or shall file by registered mail with the independent agency his written objections to the findings of fact and decision of the examiner, in which event the independent agency shall not enter its decision without first according a public hearing upon reasonable notice to such party. Such hearing shall be before the members of the independent agency, if it has not less than three members, or before any three of such members. If the independent agency has less than three members, an intra-agency board shall be constituted in the manner provided in subsection (a) of this section, upon which the member or members of such agency may serve at his or their election.

"(f) No hearing shall be permitted before any agency or independent agency seeking affirmative relief against the United States concerning any controversy which arose more than 1 year prior to the date on which there was filed with such agency or independent agency a written request for such hearing as provided in this section."

Ostensibly based upon our Federal and State patterns of court systems providing for lower, intermediate, and high courts, this section of the proposed bill creates an intermediate appellate functionary designed to afford intradepartmental appeals in respect of any action taken by administration bodies. The intra-agency board created by this section, molded to perform a quasi-judicial function, are not intended to be a part of the judicial system; but rather, they are intended to serve as a formularizing agent in the administrative process itself.

The purposes of this section are divided by the sponsors of the bill into direct and indirect. As direct purposes they tabulate:

(1) The establishment of a uniform standard of procedure for hearing and determining controversies between administrative tribunals and private persons (a) in the single-headed Federal agencies, (b) in the independent boards and commissions.

(2) The providing of opportunity for a mandatory hearing to be accorded any aggrieved party so that there may be a full and complete record before the responsible administrative officers for action.

(3) The fixation of responsibility for administrative action.[53]

The indirect purposes are listed as—

(1) A higher degree of care in arriving at determination of controversies, resulting from written exposition of findings of fact reasoned from an analysis of the evidence.

(2) The improvement and betterment of the Federal administrative service by necessitating the appointment of expert and competent administrators attuned to the responsibilities of positions wherein the decision of controversies is an important part of the duties involved.[54]

In one of its earlier reports, the American Bar Association's Committee on Administrative Law commented upon this section of the proposed bill in a manner which revealed both the advantages and disadvantages of the procedure suggested. For its revealing analysis, that portion of the report is worthy of quotation in full:

"As to intradepartmental boards * * * of the proposed bill there is much to be said on both sides. The advantages are (1) that instead of attempting an immediate cure for all the evils in the present practice, it seeks a speedy, uniform, and inexpensive, and, on the whole, elastic review with a secured right of appeal. (2) That the organization of the reviewing process is flexible so that administrative officials could not complain of being unduly hampered by such a process as they do complain with respect to appeals to outside judicial tribunals. (3) That it regularizes within the departments what is now largely the actual present procedure. (4) That it tends to compel a clear record of what is done and on what basis and by whom, and gives to administrative superiors an opportunity of understanding exactly what was done and of fixing responsibility therefor. The objections which have been urged are (1) that it involves more appeals than are desirable, namely (a) to the interdepartmental board, (b) to a reviewing court, and (c) to some appellate tribunal reviewing the action of the latter. Multiple appeals are an unfortunate feature of the American procedure. They ought to be avoided. (2) That it tends toward final review by administrative officials of their own action. * * * The very nature of administrative organization calls for esprit de corps, for thorough subordination in a hierarchy of officials, and tends to preclude the kind of appeal which is imperative if the rights of individuals are to be secured. * * * (3) That in hearing an appeal and in taking evidence upon it, it is quite possible that members of the intradepartmental board will be passing on the action of their administrative superiors to whom they must look for promotion, if not for the very tenure of their positions. Above all things it is important to make administrative adjudication as free from influence as is judicial adjudication. But administrative appeal can hardly be expected to be free from the influence involved in any administrative hierarchy.

"The provisions of the proposed bill with respect to record and findings of fact are in accord with important principles that ought to be adhered to in any plan. While the plan of administrative review proposed by the bill is not a panacea and is not immune to objection, it meets obvious abuses now existing as well as any other plan which may be devised." [55]

Briefly summarized, the section directs the establishment from time to time of such intradepartmental boards, consisting of three members, as may be feasible and desirable for the appeal of controverted questions before administrative agencies. One member of such board, a lawyer by profession, shall act as chairman of the board. No member of the board who has previously been a participant in any case, or who assisted in the drafting or approval of any rule, shall sit in appeal of that case or application of that rule. Any person aggrieved by the decision of any official or employee of any independent agency may have the controversy referred for hearing and determination by the intraagency board so constituted.[56] The board is given the judicial powers of administering oaths, subpenaing witnesses, and directing the taking of depositions.

Prima facie, the section and the procedure that it establishes is a proposed legislative answer to the demands of the Supreme Court in the Morgan cases.[57] Both the litigous history of those cases, and the admonitory judicial insistence in each of them upon the right to a full hearing before administrative bodies, would be avoided by the adoption of the safeguards outlined in this section. In fact, one prominent jurist has intimated that the type of administrative review provided thereby may happily result in a better understanding of the administrative process and a lessening of the antagonism toward administrative tribunals in general.[58] In the main, therefore, there is no quarrel with the type of review provided—perhaps mainly because the particular review in question is left with the administrative. The dispute as to the practicality of the section hinges around its scope rather than its purpose.[59] agencies without a study of the effect of such legislation on each agency is another question." Jaretzki, A., Jr., The Administrative Law Bill—Unsound and Unworkable. Louisiana Law Review, January 1940, quoted in full in the Appendix of the CONGRESSIONAL RECORD, p. 1074.

[58] "Among English-speaking peoples the right of appeal is almost as sacred as the right of trial. Deprived of this right of appeal or of effective review, litigants denounce the whole system of administrative law, and it is conceivable at least that in time strong antagonism might be aroused against it. In my opinion, the review should be by an administrative agency rather than by a court, because the administrative agency has greater freedom and flexibility of action." Rosenberry, Hon. Marvin B., chief justice, Wisconsin Supreme Court, Power of the Courts to Set Aside Administrative Rules and Orders, American Bar Association Journal, April 1938, p. 333.

[59] "There can be no doubt as to the imperative need for the improvement of the judicial process within the administrative agencies themselves. Whether, however, the act goes too far in the extent to which review is provided and whether or not it is possible or desirable to legislate so broadly in respect of so many administrative

The gist of this criticism has been succinctly stated in the following well-developed paragraphs:

"The course of wisdom is to introduce appellate administrative tribunals into particular fields of administration as their presence is shown to be needed, taking care that they have the characteristics of both expertness and fairness, rather than attempt to legislate at one fell swoop for the entire executive branch of the Federal Government. At the same time, the effort should be made to restrict the review of their determinations by the regular courts as fully as the legal competence of their membership, the need of unity in the administrative system, and the state of constitutional doctrine will allow. Consolidation of tribunals, or the extension of their jurisdiction can then take place as expediency dictates, after the manner of the formation of the present Court of Customs and Patent Appeals.[60]

The conclusion obviously to be drawn is that the section is a concession to expediency inserted in the bill in its present draft mainly because of inability to find a more satisfactory solvent for a problem which is one of the most vexatious in the entire field of administrative law.[61]

That intradepartmental review as provided in the section would be salutary cannot be doubted. Whether it will dovetail with the administrative process in all agencies and tribunals can be determined only by testing it in the crucible of experience. One writer hopefully suggests that such review would probably constitute the final step in 95 percent of all the cases.[62] But the same writer insists that the review cannot stop with provision for intradepartmental appeal. The further review by the courts, it is contended, is fundamental to the preservation of the bulwark of individual rights. This further review is the subject matter of the next section.

The proposed bill: Section 5, judicial review of decisions or orders of administrative agencies

"SEC. 5. (a) Any party to a proceeding before any agency or independent agency, as provided in section 4 of this act, who may be aggrieved by the final decision or order of any agency or independent agency, as the case may be, within 30 days after the date of receipt of a copy thereof, may at his election file a written petition (1) with the clerk of the United States Court of Appeals for the District of Columbia; or (2) with the clerk of the circuit court of appeals within whose jurisdiction such aggrieved party resides or maintains his principal place of business or in which the controversy arose for review of the decision. Before filing a petition such party may within 10 days make a motion to the agency or independent agency concerned for a rehearing, tendering a statement of any further showing to be made thereon which shall constitute a part of the record, and the time for appeal shall run from the order on such motion if denied or the order made on such rehearing if a rehearing shall be had. The petition shall state the alleged errors in the decision of the agency or independent agency concerned. The Attorney General of the United States and the agency or independent agency shall each be served with a copy of the petition, and it shall be the duty of the Attorney General of the United States to cause appearance to be entered on behalf of the United States within 30 days after the date of receipt by him of a copy of the petition, and it shall be the duty of the agency or independent agency, as the case may be, within 30 days, or such longer time as the court may by order direct, after a receipt of a copy of the petition, to cause to be prepared and filed with the clerk of such court the original or a full and accurate transcript of the entire record in such proceeding before such agency or independent agency. The court may affirm or set aside the decision or may direct the agency or independent agency concerned to modify its decision. Any case may be remanded for such further evidence as in the discretion of the court may be required, but no objection not urged before the agency or independent agency, as the case may be, shall be considered by the court unless the failure or neglect to urge such objection shall be excused by the court for good cause shown. To facilitate the hearing of such appeals and avoid delay in the hearing of other matters before the court, such court may constitute special sessions thereof to consist of any three judges competent in law to sit as judges of a circuit court of appeals, which special sessions may be held concurrently with the regular sessions of said court. Any decision of any agency or independent agency shall be set aside if it is made to appear to the satisfaction of the court (1) that the findings of fact are clearly erroneous; or (2) that the findings of fact are not supported by substantial evidence; or (3) that the decision is not supported by the findings of fact; or (4) that the decision was issued without due notice and a reasonable opportunity having been afforded the aggrieved party for a full and fair hearing; or (5) that the decision is beyond the jurisdiction of the agency or independent agency, as the case may be; or (6) that the decision infringes the Constitution or statutes of the United States; or (7) that the decision is otherwise contrary to law.

"(b) The judgments of the circuit courts of appeals shall be final, except that they shall be subject to review by the Supreme Court of the United States upon writ of certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

"(c) Where the cause of action is otherwise within the jurisdiction of the United States Court of Claims as provided in section 136 to 187, inclusive, of the Judicial Code, as amended (U. S. C., title 28, secs. 241 to 293, inclusive), the petition provided in this section may be to the said Court of Claims at the election of the aggrieved party.

"(d) Where a circuit court of appeals or the Court of Claims finds itself in disagreement with a previously rendered decision of another court having jurisdiction under this section, it shall certify to the Supreme Court of the United States a distinct and definite statement of the question or proposition of law upon which such disagreement rests, with a statement of the nature of the cause and of the facts on which such question or proposition of law arises, together with a statement of the reasons in support of such disagreement. Such further proceedings shall be as provided in section 239 of the Judicial Code, as amended (U. S. C., title 28, sec. 346)."

In this section of the proposed bill the real intent to "govern the governors" and "regulate the regulators" is revealed by the sweeping proposal to bring the ultimate decision and determination of administrative controversies within the province of the judicial branch of the Government. While the ambit of judicial review of administrative action has already, in most cases, been extended to questions of law as decided by administrative agencies,[63] the power to remand for the further taking of evidence [64] and the scope of the review provided by subsection (a) of this section is illustrative of an intendment to make the courts triers of fact as well as reviewers of law.

Beyond a shadow of doubt, the question of judicial review of orders and decisions of administrative agencies is one of the most difficult of adjustment as well as most controversial in nature. Between the two extremist philosophies—that which advocates no review at all on the one hand and that which espouses a complete review on the other hand—there is, no doubt, a median at which the proper balance may be achieved. In the St. Joseph Stockyards case Mr. Justice Brandeis, a conceded liberal in the orthodox meaning of that abused adjective, stated that—

"The supremacy of the law demands that there shall be opportunity to have some court decide whether an erroneous rule of law was applied and whether the proceeding in which facts were adjudicated was conducted regularly." [65]

Since the decision in that case is peculiarly pertinent to the discussion of administrative adjudication, it would seem that section 5 of the administrative law bill is but a legislative echo of the cry of the eminent Justice. On the other hand, the proponents of what has been roundly denounced as "administrative absolutism" have found valiant champions to defend their position; and, at least as far as review of findings of fact is concerned, the dean of Harvard Law School, himself an experienced administrator, has plumped for administrative finality in that realm.[66] The dividing line between administrative finality and assumption of judicial review is, in the opinion of Dean Landis, to be drawn at that point where the expertness of these respective branches of the Government can best assert itself. Thus, in analyzing the meaning of the "supremacy of the law" postulated by Mr. Justice Brandeis, he asserts:

"I return to the issue of 'law' as being the dividing line of judicial review—as bounding the province of that 'supremacy of law' that is still our boast. Its content, insofar as it relates to judicial review of administrative action, seems to me to reach back to the issue of expertness. Our desire to have courts determine questions of law is related to a belief in their possession of expertness with regard to such questions. It is from that very desire that the nature of questions of law emerges. For, in the last analysis, they seem to be those questions that lawyers are equipped to decide." [67]

What, then, in the light of these observations, are the provisions of section 5 of the proposed bill?

[62] "Now, it probably is desirable * * * to provide for review of all administrative determinations, where review is desired, first, by intradepartmental boards, which, in addition to determining the appeal, could see to it that the record in the case was complete and perfect. Such review would probably end 95 percent of all such cases, especially if these departmental boards could give detached and disinterested consideration to such cases, because those sitting in review had not helped to work the cases up. But, even so, we cannot afford to have these determinations made absolutely final. Liberty is at stake and the courts are our last line of defenses." Masters, J. V., Making Administrative Action Safe, American Bar Association Journal, October 1938, p. 840.

[66] "The positive reason for declining judicial review over administrative findings of fact is the belief that the expertness of the administrative, safeguarded by adequate procedures, can be trusted to determine these issues as capably as judges." Landis, J. M., Administrative Policies and the Courts, 47 Yale Law Journal 530.

[67] Landis, J. M., Administrative Policies and the Courts, (47 Yale Law Journal 535–536).

In response to the admitted charge of nonuniformity in the matter of judicial review,[68] the proponents of the bill maintain that this section of the bill merely supplies a grave deficiency in the present system of administrative procedure. In supplying the deficient factor by making judicial review available, the following purposes are sought to be attained: (1) to provide a uniform procedure of judicial review for all decisions and orders of administrative boards, whether of intraagency boards or of independent agencies; (2) to insure, by judicial review, that administrative quasi-judicial decisions and orders shall remain within the limitations established for them by statutes conforming to the Constitution and to insure that within such limitations there shall be free exercise of administrative discretion, provided a full and fair hearing has been accorded the citizen and provided further that the decision, or order, shall be in accordance with the law and the facts established in the record; (3) to decentralize the judicial reviews of administrative decisions, or orders, into the circuit courts of appeal throughout the United States, rather than centralizing them in Washington; and (4) to provide an expeditious method of resolving any conflicts among the reviewing courts, so as to provide, by final decision of the Supreme Court of the United States, that degree of certainty so necessary in the administration of the law.[69]

These broad purposes are to be achieved through a plan of review in which the circuit courts of appeal—except in those cases which are further appealed to the Supreme Court—become, in effect, the apex of the American administrative system. This plan of review permits (a) the filing of a motion by the aggrieved party to the agency or independent agency, which motion, if denied, becomes a part of the record, and the adverse action thereon may be appealed to (b) the United States Court of Appeals for the District of Columbia, or any circuit court of appeals, which appellate court may (c) affirm, set aside, or modify the decision of the administrative agency, or remand the case for the taking of further evidence; and such court may set the order or decision aside on any one or more of the following grounds: (1) that the findings of fact are clearly erroneous; (2) that the findings of fact are not supported by substantial evidence; (3) that the decision is not supported by the findings of fact; (4) that the decision was issued without due notice and a reasonable opportunity having been afforded the aggrieved party for a full and fair hearing; (5) that the decision is beyond the jurisdiction of the agency or administrative tribunal rendering it; (6) that the decision infringes the Constitution or statutes of the United States; or (7) that the decision is otherwise contrary to law.[70]

In applicable cases, the Court of Claims is also open to any aggrieved party, and further review may be had in the Supreme Court by certiorari or certification by a court which finds itself in disagreement on a question of law with a sister court.

The main objection to the provisions for judicial review in the section are centered around the scope of the review proposed. It is contended that no leeway is permitted for the diversity of administrative processes, and that the section is too indiscriminate in its lack of specification of the acts from which appeal may be taken.[71] One outstanding judge, considered to be an authority on administrative law, would leave the review of administrative controversies in the hands of an administrative tribunal rather than the courts,[72] and comments further that

"It seems obvious that such a review (i. e., review by the courts on all questions) were provided, they might just as well abolish administrative tribunals, because the whole controversy would be left to the court, because it would be in the court where you get a final determination. Therefore, the proposition which looks to a review by the court of the whole matter, including questions of fact, it seems to me would bog the courts down, throw them into politics, or do away with these administrative statutes. Personally, I regard this development of administrative law as one which has grown out of necessity, and whether we like it or not, we have it here, we have it perpetually, and we must learn how to deal with it." [73]

Obviously, section 5 of the proposed bill does nothing more than add fuel to the fire raging about the question of judicial review of administrative action. A review of the literature and opinion on the matter forces the conclusion that the section is decidedly amicable to the legalistic and juristic concept of the place of judicial review in the administrative system; and postulating the passage of the bill, the problem would then become one of adjustment and conformity for the administrative branch of the Government, with the balances fully tilted in favor of "supremacy of law" in a judicial sense.

The proposed bill, section 6

"SEC. 6. The courts shall have jurisdiction and power to impose damages in any case where the decision of the agency or independent agency is affirmed and the court finds that there was no substantial basis for the petition for review. In all cases the costs on review shall be allowed the prevailing party after final judgment, to be collected according to law."

As a deterrent to frivolous and procrastinating appeals, this section of the bill adopts existing statutes [74] and vests in the reviewing courts the power to assess damages for any dilatory tactics in the use of the appellate procedure made available by the terms of the bill. According to the American Bar Association's annotation of the bill,[75] there is no record of such action ever having been taken by a court, but the conclusion is that it is a salutary provision and one that should be vested in the courts as an available expedient to discourage the employment of court machinery for purposes of administrative frustration.

While it would seem that such a provision would meet with the unqualified endorsement of administrators and governmental officials, yet there has been some criticism of the proposal as impractical. In a letter to the chairman of the Judiciary Committee, the Acting Secretary of the Treasury stated that—

"Two practical considerations militate against an assessment of damages: First, it is extremely difficult to prove that any petition for appeal is filed merely for delay; and, second, sufficient opportunity for delay exists under the provisions of the bill prior to appeal to the courts." [76]

As to costs, the logical rule that "loser should pay" is adopted as the standard. If the individual seeks judicial review of administrative action and is successful, the Government bears the cost of preparation of the record; while if the Government prevails, the individual pays such costs, including court costs.[77]

Apparently the section is ancillary to the bill as a whole, and it is doubted whether its inclusion or exclusion would materially affect the aims and purposes of legislation considered as a fundamental reform of the administrative structure.

[68] This admission is taken for granted in view of the fact that opponents of the bill contend that, due to the diverse character of the functions of administrative agencies, a uniform system of review is neither desirable nor practicable. See Blachly and Oatman, "Administrative Legislation and Adjudication," the Brookings Institution, pp. 196–201; Hearings on Administrative Law Bill, p. 153.

Purchase of Silver From Mexico

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Monday, April 15 (legislative day of Monday, April 8), 1940

EDITORIAL FROM THE NEW YORK TIMES

Mr. TOWNSEND. Mr. President, I ask consent that there be printed in the CONGRESSIONAL RECORD an editorial which appeared in the New York Times of April 11, 1940, entitled "The Note to Mexico," in which the statement is made that—

there was never any good reason in the first place why our Government should have * * * to load itself up with foreign silver for which it has not the slightest need.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times of April 11, 1940]

THE NOTE TO MEXICO

The note that Secretary Hull addressed to the Mexican Ambassador places the American case regarding the oil and land seizures on irrefutable ground. It fully grants the right of a sovereign state to expropriate property for public purposes. But it insists that no appropriation is legal unless it is accompanied by "adequate, effective, and prompt compensation." This requirement is not satisfied, the note continues, merely by an expressed intent on the part of Mexico to pay at some time in the future. In a severe historical summary the note points out that "during the last 25 years one American interest in Mexico after another has suffered at the hands of the Mexican Government," and that, though Mexico took over American-owned petroleum property to the value of many millions of dollars more than 2 years ago, "not 1 cent of compensation has been paid." Mr. Hull suggests that

the problem be solved by resort to "the appropriate, fair, and honorable procedure of arbitration."

It is difficult to see how the Mexican Government, if it wishes to adhere to principles of equity and to maintain friendly relations with our Government, can reject this eminently fair offer. If it does do so, our State Department will be faced with a very delicate question concerning what its next step ought to be. It is absurd, however, that our Government, during all the period that the seizure of American property has been going on, and during all the period that the Mexican Government has been putting off or evading the question of compensation, should have continued to lend substantial financial support to the latter by its very substantial purchases of Mexican-held silver at artificially high prices. These purchases should in any event be terminated at the earliest possible moment—not in retaliation for Mexico's policy in seizing the property of American citizens, but simply because there was never any good reason in the first place why our Government should have been forced by a fantastic domestic law to load itself up with foreign silver for which it has not the slightest need.

Neutrality

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

RADIO ADDRESS BY HON. JAMES A. SHANLEY OF CONNECTICUT

Mr. SHANLEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address delivered by me last Thursday evening, April 11, 1940:

Good evening, ladies and gentlemen, through the courtesy of station WOL in Washington and its radio affiliates in the Mutual Broadcasting System, I am permitted to express to you my creed on the duty of neutrality and its chances of keeping us out of this war.

Above all and rightly foremost we are a neutral by the determined choice of our people, by the endorsed will of Congress, and the solemn proclamation of the President of the United States acting from congressional authority. But what is neutrality and for what are we neutral?

In the first place neutrality means effective practical action to make both sets of belligerents honor our overpowering desire to stay out of this war. Written protests are not enough when prerogatives on the high seas are ignored and scorned. Belligerents must recognize our militant will to be neutral. We must implant in their minds a profound respect for our strict and impartial neutrality and that comes faster when we treat them all alike. We cannot support either nor can we pass judgment on the merits of their wars. Our neutrality is neither malevolent nor benevolent.

As Professor Borchard says, we must make all belligerents feel that they are dealing with a friend and not a disguised enemy. It means we must stand up to belligerents who tamper with our rights. It tells the British that unless they desist in their forced contraband control and mail violations we will shut out their armed merchantmen or take greater steps to indicate our sincerity. Germans, Russians, Japanese, or other offending nations must know that they cannot take advantage of our self-imposed restrictions on combat zones for their own use.

Brutally, realistically the President caught this significance in his neutrality proclamation of September 4, when he said that we are on "terms of friendship and amity with the contending powers," imposing the duty of "strict and impartial neutrality" during the existence of the contest. He did not officially pick out one side or the other. He added, "No person within the territory and jurisdiction of the United States shall take part directly or indirectly in the said war, but shall maintain a strict and impartial neutrality."

Thus the President spoke and by that utterance we should be guided.

Our second point reveals the real place for the United States in this chaotic world. That is the revival of Woodrow Wilson's dream for post-war help with the understood benefits of his mistake as our best hope.

Here it is: "My fondest dream for America is to so conduct herself that when the time comes for peace we can be ready to assist in a way that will permit the utmost use of our immense reservoir of natural advantages, prestige, and influence." That is our hope.

Our third point gets us back to earth. A constant, present, and vivid understanding of what our entrance into war would mean.

Here again Wilson spoke:

"Once lead this people into war and they will forget there was ever such a thing as tolerance. To right you must be brutal and ruthless and the spirit of ruthless brutality will enter into every fiber of our national life, infecting the Congress, the courts, the policemen on the beat, the man on the street. * * * Yes; it means that we will lose our heads along with the rest and stop weighing right and wrong. * * * It means an attempt to reconstruct a peacetime civilization with war standards, and at the end of war there will be no bystanders with sufficient power to influence the terms. There won't be any peace standards left to work with, there will only be war standards."

In the same vein Pope Pius XII recently pointed out in his famous encyclical the dangers of victory.

"The hour of victory is an hour of external triumph for the party to whom victory falls, but it is in equal measure the hour of temptation. In this hour the angel of justice strives with the demons of violence; the heart of the victor all too easily is hardened; moderation and far-seeing wisdom appear to him weakness; the excited passions of the people often inflamed by the sacrifices and sufferings they have borne obscure the vision even of responsible persons and make them inattentive to the warning voice of humanity."

There is danger lest settlements and decisions born in such conditions be nothing else than injustice under the cloak of justice.

Further we may well ask in paraphrase as Gladstone did:

"Is America so uplifted in strength above every other nation that she can with prudence advertise herself as ready to undertake the general redress of wrong? Is any power at this time of day warranted in assuming this comprehensive obligation * * * that she should not encourage the weak by giving expectations of aid to resist the strong, but should rather seek to deter the strong by firm but moderate language?"

Unless we adopt such a realistic viewpoint of the solemn duty of America to remain aloof from this war, we may fall into the error of advertising ourselves to the world as a nation that is ready to redress the world's wrongs. It is too late now to redirect the channels of thought that might have given this world of ours in post World War days some semblance of sanity. It is not too late, however, to repeat that this Nation did everything it could to help. All that, however, is water under the bridge. Now the die is cast. We must keep out of World War No. 2.

Our Army has been streamlined also and today we are planning to put a force into the field that will be a real help in case of a defensive emergency. We learned much from the maneuvers at Plattsburg.

Yes, we are on a respectable defensive posture, well bracketed between the dangers of dire unpreparedness and the evils of militarism.

The world knows that we follow Shakespeare's formula:

> "Rightly to be great
> Is not to stir without great argument,
> But greatly to find quarrel in a straw
> When honour's at the stake."

The fifth point. A perpetual and constant alertness against propaganda. Here once again Shakespeare speaks with authority in the best definition of this subtle poison—"The seeming truth which cunning times put on to entrap the wisest."

The sixth point. But there is another field in which we are superbly prepared; that is in our foreign service and diplomacy. After all, war only begins when diplomacy fails. But today American diplomacy is at its best. We have the finest set of career men in our history, and even our so-called political ambassadors are far and away superior to any similar group in recent times.

Contrast these men and our present set-up with 1914 and you will discover the tremendous preparation, protection, and power built by the administration in cushioning our reaction and repercussions to the onslaughts of the fierce, terrible, and costly effects of war. We have the fiscal, financial, economic controls ready and able to streamline our impingements with whatever happens in Europe. In 1914 the stock market was closed from August to early December because of the suddenness of the war's shocks; but today everything is moving along with efficiency built up and caused by administrative measures in advance.

Yes; we are ready, but we are really neutral. We give the lie to Shakespeare, who said, "Who can be wise, amazed, temperate and furious, loyal and neutral in a moment?" The answer is that we will, but only because we won't fly off the handle but will reflect and control our emotions.

It is truly amazing that one finds more worries about eventual participation in the war at home than here.

In the fourth place, vigilant but not boastful realization of our relatively impregnable defensive strength. Washington, in his farewell address, insisted that we keep our national defense on a "respectable defensive posture."

Let us look at our defenses. First, we have a first rank among the navies of the world. Even Great Britain acknowledged that at the London Naval Conference in 1930. This means that we possess the defensive naval power which can cope with any attacking

force three times our limit. Without chauvinism or undue gloating we are the equal of any navy of the world today. Rugged, honest Admiral Leahy virtually told our committee that it would take a coalition of powers with three times the present American Navy to defeat us in our own waters. Let us be more real. "If we superimpose," as has been said, "the map of Europe upon the map of America with Berlin placed upon Chicago, we will find that Leningrad (St. Petersburg) falls on Boston, that Constantinople falls on Miami, Rome on New Orleans, Paris on Wichita, Kans., and London on Omaha, Nebr."

More than one distinguished visitor to America has been given a chance by our War Department to travel by air over the key areas in our democracy. Every one has been most profoundly affected by the score of large cities presented to their view as they flew to the north, south, east, and west. There are so many retreats possible in our national set-up that the loss of many centers could be endured because of the presence of worthy substitutes.

If you sweep up the Atlantic by air you are impressed by the dozen or more great areas from Miami to Portland—all pretentious, large, and progressive cities. The same situation is existent for the Pacific. We are not a one- or two-city nation.

Another line of protection is our tremendous capacities in industrialization and resources, topping the world. We have accessible machine power, naturally and created, of unsurpassed potentialities. Our economic self-sufficiency is of the best. Here we have primacy in all of the great essentials—food, iron, machines, chemicals, coal, and iron ore. Here, too, we have adequate supplies of the so-called raw materials—copper, lead, sulfur, zinc, phosphate, and mica.

Even in the deficiency materials—rubber, tin, chromite-nickel, and antimony—we have stored inventories for the future and have made preparations to supply them in the event of need.

Don't sell America short, but don't forget that eternal vigilance is the price we must pay to keep strong. What we want is the ever-ready capacity to throw our immense peacetime economy into defensive high gear if necessary. This is especially true of plane production.

In defense we stand foursquare for the philosophy of the poet:

"Strike till the last armed foe expires,
Strike for your altars and your fires,
Strike for the green graves of your sires,
For God, and native land."

Finally, and to me the most important of all, beware of propaganda. On the top of West Rock, in my district, there is a cave in which the Regicides hid, and here is the inscription as I remember it:

"Here, May 15, 1661, and for some weeks thereafter, William Whalley and his brother-in-law, Edward Goffe, members of the Parliament General, officers in the Army of the Commonwealth, and signers of the death warrant of Charles First, found shelter and concealment from the officers of the Crown after the restoration.

"Opposition to tyrants is obedience to God."

The greatest tyrant we may have during the next year or later may be an emotional majority, a possible propagandized force sweeping reason and restraint before it and making real and starkly present the spector of the tyrant majority.

Here is its best description from the hand of a master, Mark Twain, in a posthumous writing:

"There has never been a just one, never an honorable one—on the part of the instigator of the war. I can see a million years ahead, and this rule will never change in so many as half a dozen instances. The loud little handful, as usual, will shout for war. The pulpit will warily and cautiously object at first. The great, big, dull bulk of the nation will rub its sleepy eyes and try to make out why there should be a war and say earnestly and indignantly, 'It is unjust and dishonorable and there is no necessity for it.' Then the handful will shout louder. A few fair men on the other side will argue and reason against the war with speech and pen and at first will have a hearing and be applauded, but it will not last long. Those others will outshout them, and presently the antiwar audiences will thin out and lose popularity. Before long you will see this curious thing: The speakers stoned from the platform and free speech strangled by hordes of furious men who, in their secret hearts, are still at one with the stoned speakers, as earlier, but dare not say so, and now the whole nation, pulpit and all, will take up the war cry and shout itself hoarse, and mob any honest man who ventures to open his mouth, and presently such mouths will cease to open. Next the politicians will invent cheap lies, putting the blame on the nation that is being attacked, and every man will be glad of those conscience-soothing falsities and will diligently study them, and will refuse to examine any refutations of them, and thus he will by and by convince himself that the war is just, and will thank God for the better sleep he enjoys after this process of grotesque self-deception." (Excerpt from The Mysterious Stranger, by Mark Twain.)

All nations ought to remember that we are a humane nation—that our people are profoundly affected by all events and are equally struck by any attack on the rights of minorities or smaller nations. We cannot close our eyes and ears to the happenings in the world; and while we have adopted a course of "strict and impartial neutrality," we cannot but think that all nations, belligerents and neutrals, ought to profit by our neutrality in that they should so act in the matter of man's decency to win our respect.

Investors, Banks Lose Faith in Government

EXTENSION OF REMARKS
OF
HON. FRED BRADLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1940

EDITORIAL FROM THE DETROIT TIMES

Mr. BRADLEY of Michigan. Mr. Speaker, we are constantly being besieged for greater appropriations for relief, for unemployment, for various forms of pensions, and for all manner of expenditures. We are still hearing the constant cry of spending our way back to prosperity.

For 7 long years we have been told that only by increased Government expenditure could we get this country back on a sound economic basis. We have continued to plunge this country further and further into debt without reducing unemployment, without satisfying the recipients of relief, without satisfying the recipients of pensions. Too few of our people will force themselves to recognize that a day of reckoning must come when we must pay the fiddler for all this Government extravagance.

Mr. Speaker, the following editorial, appearing in the Detroit Times this morning, is most timely. The handwriting is on the wall when investors, the banks, and the insurance companies of this Nation indeed lose faith in our Government. Let us hope that they have not lost all faith in our Government and in our American way of doing things through private initiative.

[From the Detroit Times of April 15, 1940]

INVESTORS, BANKS LOSE FAITH IN GOVERNMENT

The greatest danger that confronts the American people is the lack of confidence of the investing public and the banks in their own Government—that is, the present administration.

The quarterly statements of the 15 largest banks in New York's financial district, just issued, reveal that while deposits rose 5.9 percent in the quarter, loans and discounts declined.

Still more significant is this:

The amount of idle cash jumped 9.6 percent.

And, above all, this: 41.7 percent of all assets are idle in these banks.

A great part of this money should be employed in business enterprises.

But the shadow of the New Deal's verbal and actual threats to business rests over these billions of "frozen" dollars.

There are other formidable threats to our credit system and to our investing instinct.

The public debt is, in reality, now far above the legal $45,000,000,000 limit—counting Government loans and credits to New Deal enterprises.

The total cost of running the Government is $18,000,000,000 a year—in peacetime.

That is more than 25 percent of the total national income.

In other words, every wage earner is paying out, in one way or another, one-quarter of his salary to support New Deal bureaus, commissions, and what not.

The "New England letter" of the First National Bank of Boston tells us that if all expenses were currently met, the American people, on the average, would work 3 months out of each year for the Government.

That evidences how, gradually, we are imitating the Russian Soviet system, where the workers work 12 months a year for the government.

Four years more of New Deal lending-spending and we will be completely stalled, if not Stalinized, economically, and maybe politically.

The "letter" brings out other sinister facts. They explain why 41.7 percent of the assets in 15 New York banks are idle and why credits and discounts are declining.

In 1913 the Federal debt was 21 percent of the total debt of the country.

It is now 68 percent.

Interest charges alone on the Government's debt are today as large as the debt itself a generation ago.

Further, the public debt is today $2,000 for each American family.

The "letter" also explodes the fallacy that the "rich" are paying for this in these words:

"The data of the Internal Revenue Department show that where in 1929 Federal expenditures were about equivalent to the aggregate net income of all individuals receiving more than $150,000 a year, in 1937 they were almost identical with the aggregate taxable income of all individuals receiving more than $5,000 a year."

In fine:

The debt is going up, per capita taxation is increasing, billions of dollars lie "frozen" in our banks, and legitimate reemployment is at a standstill.

And nothing is being done about it at Washington, where, we are told, "politics boils"—and the investing public, the banks, and the whole people swelter and sweat.

Unfair to Our Unfortunates

EXTENSION OF REMARKS
OF
HON. JOHN G. ALEXANDER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1940

Mr. ALEXANDER. Mr. Speaker, Minnesota is known far and wide as a progressive and great Commonwealth usually out in the lead in social and legislative reform. In this regard we have many things to point to with pride. Not the least of these is our modern, up-to-date, humanitarian, well-operated State prison system.

In the unit at Stillwater there are approximately 1,400 men undergoing a real rehabilitation process under the guiding genius of Warden Utecht and his staff. A great farm-machinery-making factory has been established, and its products have been sold for years to farmers in the Northwest area. Fair and adequate wages are paid in accordance with the skill and ability of the inmate to produce. Besides the cash wages paid, this industry gives the prisoner a chance to learn a useful vocation, and what is most important, takes his mind off his troubles and thus relieves the mental strain under which most cases of that type suffer.

Now, certain selfish special interests are attempting to destroy this business and force Minnesota and other States having perfected a modern means of criminal rehabilitation to go back to the barbaric systems of the past when idleness, solitary confinement, dungeons, and other blight served to deny the truth which Christ demonstrated as one of His last acts as He hung on the cross and said to the criminal about to die at his side, "Today thou shalt be with Me in Paradise." From that incident it seems to me that our duty is plain and clear.

The means being employed to destroy the advance which we have made in prison reform is best illustrated by the following letter which I commend to the Members of the House for contemplation and consideration:

MINNESOTA STATE PRISON INDUSTRIES,
Stillwater, Minn., April 5, 1940.

Hon. JOHN G. ALEXANDER,
House of Representatives, Washington, D. C.

DEAR MR. ALEXANDER: We received information the other day that there was a bill introduced in the Senate, S. 3550, by Mr. ASHURST. This is a bill to make unlawful the transportation of convict-made goods in interstate and foreign commerce. We have now found that an additional bill has been introduced in the House by Representative SUMNERS of Texas. We do not have the number of the House bill but presume that it is the same as the Senate bill. We are very much opposed to such a bill being passed and would ask that you use your best efforts in killing it. We are also writing to the other Representatives of Congress from this State.

Such a bill is injurious to the industries of this institution and also detrimental to the welfare of the farmers of this and adjoining States. Inasmuch as the Hawes-Cooper bill has been passed and gives the individual States the right to pass such legislation as will prohibit the shipment of prison-made goods into their State and the adjoining States to Minnesota have not passed such legislation, although it has been up several times, it is proof that such States do not wish to prohibit the shipment of Minnesota prison-made products into their State; in fact, the farmers in the adjoining States have bitterly opposed such legislation, as they wish to receive the profits that are entailed by buying our products. Also, such a bill would even prohibit them from purchasing repairs for the many thousands of Minnesota machines which they now have.

We feel that the farmers' interest of this and other States would be best served by the killing of this particular legislation, and we ask that you oppose vigorously its passage.

Yours very truly,

MINNESOTA STATE PRISON,
M. C. MCMILLAN,
Superintendent of Industries.

I trust the Members will ponder long and carefully before lending their vote to the Ashurst or Sumner bill, H. R. 8853.

A Plea for Americanism

EXTENSION OF REMARKS
OF
HON. WILLIAM D. BYRON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1940

ADDRESS BY JAMES B. FITZGERALD

Mr. BYRON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by James B. Fitzgerald, department commander, the American Legion of Maryland, on Friday, March 29, 1940, at Kensington, Md., at a joint meeting of the Henderson-Smith-Edmonds Post, the Arnold Wilburn Post of the American Legion, and the Parent-Teachers Association:

My comrade, Judge Prescott, Congressman BYRON, distinguished guests, my fellow Americans, I appreciate very much the complimentary introductory remarks of my comrade Judge Prescott and trust that I shall always live up to them.

May I express my thanks to the Henderson-Smith-Edmonds Post, the Arnold Wilburn Post, of the American Legion, and the Parent-Teachers Association, for their kind invitation to address you. Two of the most important subjects of the American Legion program are to be discussed, two subjects very vital to the welfare of our country—national defense and Americanism. Congressman BYRON, who is a member of that important committee in the United States House of Representatives, namely, the Military Affairs Committee, will discuss national defense and tell you of his inspection of our military outposts, an inspection that took him and other members of the committee 16,000 miles.

I said that national defense and Americanism were very vital to the welfare of our country. Without national defense, Americanism is of little value; without Americanism we do not need national defense.

I do not believe that any of you will disagree with me when I say that a critical year in the history of our country confronts its people. Possibly more than any other organized group, the American Legion feels the grave responsibility of what the future may bring in the way of danger to our national existence and to our institutions as a free people. Once again the United States faces the test of whether "a nation so conceived and so dedicated may long endure." We may yet be faced with the proposition of whether "a government of the people, by the people, and for the people" shall or shall not perish from the earth. Legionnaires throughout the length and breadth of our country have not only been practicing but teaching Americanism for more than 20 years. I shall address you upon that subject, not that I have the idea that this audience needs such an address, but that I may sow a seed of new thought that you can implant into the heart of our citizenry with the fervent hope that it will bear fruit.

I regret to admit it, I regret to say it, but some of our citizens have forgotten the patriotism of George Washington, Patrick Henry, Nathan Hale, Ethan Allen, Molly Pitcher, and Betsy Ross. They have forgotten the patriotism, Americanism of Stephen Decatur, Francis Scott Key, and John Carroll of Carrollton, patriots who lived in our native State of Maryland.

They have forgotten the band of patriots who suffered and died at Valley Forge, patriots who trod through the snow and ice in their bare feet, half starved, half clothed; and the ground at Valley Forge was consecrated by the blood dripping from their frozen and cracked feet. Those patriots suffered and sacrificed their lives for you and for me and every person living within our shores, citizens and, yes, aliens.

They fought, bled, and died not for shaft or mausoleum but for freedom, for the Constitution and the Bill of Rights that we enjoy. They fought for remembrance in the hearts of men.

We are prone to treat lightly the noble heritage that they won for us and therefore it is our solemn and sacred duty to remind

our citizens and, yes, aliens, within our borders from time to time and at frequent intervals, what we enjoy here in America that is denied to the peoples of many of the European countries:

We have the right of trial by jury.

We are free to express our thoughts without fear.

We have a free and untrammeled press.

Freedom of speech and lawful assembly.

The right to worship God according to the dictates of our own conscience.

The right of petition.

We participate in our Government through the ballot (not the bullet).

We are secure in our homes from unlawful search and seizure.

We have the right of the writ of habeas corpus.

These rights comprise most of our Bill of Rights and are the bulwark of democracy, and if we cherish the principles of justice, freedom, equality, and democracy, we will see to it that they remain as our Bill of Rights.

Thanks to the heroic dead who have fought to preserve our Nation at various times in our history, we have a noble heritage. We have a stake in the world second to none. It includes the lives, families, and properties, and the rights of 130,000,000 people, occupying an area of 4,000,000 square miles and possessing one-half of the total wealth of the world.

Our country is young and vigorous. It is not perfect, we know it contains faults, but we esteem its virtues more and we believe these faults can be eliminated within the structure of democracy. Compared to the rest of the world, however, the men and women of our country are more secure in their property, more protected in their lives, and more happy in their outlook toward the future than the inhabitants of any other nation in the world.

There is hardly a man living today anywhere in Europe who, if given the opportunity and a free passport to America, would not drop his work and migrate to this country on the first available boat. There is hardly a man living in this country who would give up his citizenship or residence permanently, to leave this country to seek greater happiness abroad. American citizenship is priceless. The declaration "I am an American" stands today in the forefront of earthly titles. I believe it means as much today as the declaration "I am a Roman citizen" meant in the days of Julius Caesar and if we cherish the noble heritage that is ours, we will see to it that the declaration "I am an American" continues to stand in the forefront of earthly titles.

Despite the fact that we enjoy the highest rights and privileges—the highest standard of living in the world, there are within our borders citizens destitute of knowledge and undesirable aliens, who would tear down from our constitutional mast these rights and privileges and set up a totalitarian government.

There is abundant evidence in the files of Congress and the Dies committee that we have sinister and mischievous forces and influences within our borders seeking with sinister cunning to inject into the minds of our children and less educated adults the malignant virus of alien and destructive doctrines and to incite rabid, racial, social, and religious hatreds.

It may be well to remind these subversive agents regardless of their sponsors or their origin that the benevolence of our guarantee of freedom of speech and assembly has very definite limitations. Fritz Kuhn, a vest-pocket Hitler, the leader of the bund, is reported to have said, "We are not trying to change the form of government in this country, we are only trying to make it a Christian country, we want to improve its culture." Did you ever hear of such temerity and unmitigated gall? I say to Fritz Kuhn and his ilk, let them go back to the country where they have the Christianity he seeks and the culture he desires and we here in America will stand by and hold fast to the principles of our forefathers as set forth in the Declaration of Independence, namely, "We hold these truths to be self evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights and among these are life, liberty, and the pursuit of happiness."

The success of Americanism does not require unanimity in all matters affecting the State. We in this country enjoy the freedom of dissenting publicly, we have the privilege to present our views to Congress, the President, and the bar of public opinion. It is the spirit of Americanism which tolerates freedom of expression not only of applause but of criticism, which only democracies and especially our institutions, foster and encourage.

In other countries to question an official act is to ask for a one-way ticket to a concentration camp or banishment to frozen or desert wastes. Here our writers, authors, and our actors, without fear or danger, enjoy complete freedom of press and speech, all of us enjoy freedom of religion, all of us have our Constitution and Bill of Rights and yet these termites are poisoning the minds of our children and less fortunate adults with their alien and destructive doctrines. They would supplant our Americanism, our Democracy, with communism, fascism, and nazi-ism.

Now what is communism?

Communism deprives man of the right to worship God according to the dictates of his own conscience. It is a Godless country and a Godless government. It deprives man of the right of private property and inheritance. Under communism, the government owns all property. Communism promotes class hatred, it destroys all form of representative or democratic government, including all civil liberties such as freedom of speech, of the press, of lawful assembly, and trial by jury.

And what is fascism?

While theoretically you own your property under fascism, there is one man who tells you what you can and what you cannot do with it. It aims at a totalitarian state that is a highly centralized government under control of a political group which allows no representation to other political parties. The individual is subordinated to the good of the state. It destroys the independence of the judiciary and all other safeguards that a free society accords to its citizens.

And nazi-ism?

It includes all of fascism, every iota of it and in addition the most despicable trait of mankind—intolerance—a hatred for your fellow man—nazi-ism violates the command of God, Love thy neighbor as thyself.

Red shirts, black shirts, brown shirts, silver shirts, we want none of them here in America. If there is to be any goose stepping in this country, let it be in the United States Army under the glorious Star and Stripes of Old Glory and not under the banner of the swastika.

There is no room in this country for communism, fascism, nazi-ism, or any other ism, except Americanism and patriotism and we want 100 percent of that.

And what is Americanism?

It is an unfailing and undying love for our country and our flag. Loyalty to its institutions and its ideals, eagerness to defend it against all enemies, and a burning desire to secure the blessings of liberty for ourselves and our children.

And what is patriotism?

It is an intangible, invisible something that makes your heart beat faster when you hear the inspiring strains of The Star Spangled Banner.

It is a spiritual, sacred attribute that makes the blood in your fingertips tingle when you hear the thrilling story of the young patriot Capt. Nathan Hale, when you visualize him standing upon a scaffold with his hands tied behind him, when you hear the British officer address him, "Have you anything to say before you die?" And in your imagination you see young Hale straighten to his full height, every inch a soldier, and utter the words that will live as long as America lives, "Sir, I regret that I have but one life to give for my country." That, my comrades, was patriotism; that was an example of Americanism.

Oh, my fellow citizens and you young men and girls, our citizens of tomorrow, I conjure you, take unto your heart, the spirit, the determination of the members of the American Legion, that you will ever maintain, preserve, and protect our Constitution, our Bill of Rights, and our country, and in the words of Lincoln, "Let it be your proudest plume not that you were the last to desert our country, but that you never deserted her."

I do not believe that I could sum up my plea for Americanism better than to recite what I term a poem prayer written by William A. Chappell, of Milwaukee, Wis., and I commend it to you as a daily prayer during the critical days that lie ahead for our country:

"Our Father, who art above
Instill in our hearts a greater love
For the liberties we enjoy today,
Before it's too late and they're taken away.

"Continue to give us our daily bread,
Grant us the power to keep our head
When radicals rave of their favorite 'ism,'
With which they'd displace our Americanism.

"Forgive us for meddling in foreign affairs,
Teach us to mind our own business, not theirs;
To 'tend to our problems and ours alone,
To better conditions right here at home.

"Lead us not into war with the modern day Neroes
That would cost the lives of American heroes;
And wipe out democracy or worse still,
Subject us all to a dictator's will.

"Deliver us, our Father, who art above,
From the loss of these rights we cherish and love,
So that each night when we kneel and pray
We can say 'Thank God for the U. S. A.'"

Rights of the Workingman and Consuming Public

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

Mr. D'ALESANDRO. Mr. Speaker and Members of the House, I appear here today in behalf of the workers in the

sugar industry in the State of Maryland, who are 100 percent in favor of the Barry bill, which is a continuation of the expiring act of 1937.

The American Sugar Refining Co., which is located in Baltimore, has about 1,000 persons employed directly and from 1,200 to 1,300 indirectly. About 80 percent of the employees are residents and taxpayers in my district.

The unemployment situation is our greatest domestic problem today.

Approximately 16,000 persons are directly employed and about 32,000 indirectly employed in the sugar industry throughout the Nation.

The present Sugar Act is costing the consumers about $350,000,000 annually. The Cummings bill would cost about $78,000,000 extra.

The American people are fast getting wise to the fact that they are paying millions and millions of dollars annually to support the parasitical beet-sugar industry which has no more excuse for existence than a wealthy playboy on relief. That is what the beet-sugar farmers are: they are economic playboys enjoying the benefits and privileges of a benevolent Government mainly because we sugar consumers are gullible enough to fall for their phony arguments of justification.

The arrogance of the beet-sugar spokesmen in appearing before this committee and demanding still greater benefits is the thing that amazes me. I cannot for the life of me understand why the beet-sugar representatives are not intelligent enough to see that they are going to spoil a good thing if they do not silence further demands for cash hand-outs from the American sugar consumers.

Let us look at some figures. I can bring a pound of sugar into my home today for about 5½ cents. I should be paying only 3 cents a pound for sugar. The 2½ cents additional I must pay goes to support the economically unsound beet-sugar industry. That means the general public is paying about $325,000,000 a year more than they should be paying for their sugar. That is not bad enough. We now have before this committee the outrageous and preposterous proposal to raise the price of sugar still another half cent. That will go to the beet- and cane-sugar farmer and that will mean another $70,000,000 or $80,000,000 which the American people will have to pay for their sugar.

The irony, and I might say the tragedy, of all this is that the cane-sugar-refinery workers in Baltimore are called upon to foot part of this enormouus subsidy to the beet-sugar industry. In other words, the men and women workers in the Baltimore refinery are contributing to the support of their competitors. They are contributing to an industry which, if the annual demands are met by Congress, will soon destroy them.

Not satisfied with direct hand-outs from the Government, the beet-sugar farmers are now seeking further expansion. They want to have their cake and eat it, too. They want to rape Cuba of some 200,000 tons of sugar at a time when the island is experiencing great economic stress. They want more than that. They will take some of the quota now allocated to foreign countries. I want to warn them here and now that they will never get away with the pernicious scheme to rob the Treasury, gouge the consumer, and throw industrial workers out of employment. Public opinion is fast crystallizing against the beet-sugar industry and can possibly be melted only through the beet-sugar spokesmen making reasonable demands on their Government.

The people of Baltimore do not want this bill, and through me they appeal to your sense of fairness to see that it is never approved by this committee.

I am submitting with this statement a list of organizations in the State of Maryland which are absolutely opposed to any bill that will further reduce employment and at the same time gouge the consuming public.

The following list of names and organizations represent various labor groups who have either passed resolutions or endorsed the cause of the workers engaged in the cane-sugar refining industry of Baltimore, Md.:

Industrial Union of Marine and Shipbuilding Workers: James W. Atkins.

Third Ward Colored Democratic Club: Emory Bedford.

Regional director C. I. O., State of Maryland: Frank J. Bender.

Editor of Labor Herald: Charles S. Bernstein.

Housewives League: Mrs. E. M. Bond.

Roy S. Bond.

International Ladies Garment Workers Union: Samuel Caplan.

Benjamin F. Chilsom.

City Wide Young People's Forum (colored): Howard L. Cornish.

Baltimore Consumer Council: Miss Sarah Hartman.

National Association for the Advancement of Colored People: Mrs. Lillie M. Jackson.

Baltimore Industrial Council: Irving Kandel.

International Longshoremen's Association: James T. Kelly.

Baltimore Urban League: Edward S. Lewis.

Baltimore Federation of Labor: Joseph P. McCurdy.

Brotherhood of Railroad Trainmen: H. C. Miller, C. W. Mitzel, R. H. Murphy, R. H. White.

Seventh Ward Colored Republican Club Association: Charles L. Norris.

Baltimore Colored Youth Federation: Miss Hilda Orr.

Douglas High School: Harry T. Pratt.

Maryland Democratic League: Loyal Randolph.

Alvan S. Stanley.

Baptist ministers (colored): Rev. M. I. Tynes.

Funeral Directors Association of Maryland: Robert Young.

United Sugar Refining Workers, L. I. Union 276: Melvin Burgess, president.

International Union of Marine and Shipbuilding Workers, No. 31: Mr. Sinclair.

Maryland and District of Columbia Industrial Union Council: Sidney R. Katz, Washington, D. C.

International Union Mine, Mill, and Smelter Workers, No. 273: James P. Simms.

United Mine Workers of America, Local Union No. 2523: Thomas I. Metz, Barton, Md.

United Mine Workers of America, Local Union No. 2003: Benjamin C. Filer, Frostburg, Md.

United Mine Workers of America, Local Union No. 12138: Milton Aleksazka.

Amalgamated Clothing Workers of America, No. 131: Mary Powell, Frostburg, Md.

United Federal Workers of America, Local No. 23: Ingrid Millison, Washington, D. C.

United Construction Workers Organizing Committee No. 2: Arthur G. Pilon.

Egerton Bros.: Samuel and Stuart Egerton.

Sharp Street Community House: Mrs. Edna Rawlings.

Steel Workers Organizing Committee, Lodge 1224: Edwin Abbott.

American Legion Unit Ladies Auxiliary No. 14: Mrs. Catherine F. Johns.

Daughter Ruler of Frances E. W. Harper Temple 429, Daughters of Improved Benevolent Protective Order of Elks of the World.

Maryland Association for Promoting Business: Ellen S. Banks.

Preller Club: George James.

Maryland Dental Society: Albert A. Smith.

Arthur N. Grant.

Young Men's Christian Association.

William H. McAbee.

Ancient Egyptian Order of the Mystic Shrine: Thomas E. Kelson.

First District Democratic Club of the Sixth Ward: E. Walters, president.

A Fitting Tribute to a Pioneer Educator

EXTENSION OF REMARKS
OF
HON. JED JOHNSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1940

ADDRESS BY REFORD BOND

Mr. JOHNSON of Oklahoma. Mr. Speaker, the great Commonwealth of Oklahoma, among the last of the States to be admitted to the Union, has produced a number of outstanding orators and statesmen. Among those distinguished men and women of our great State who have been honored, respected, and revered by all who knew them, a goodly number were of Indian descent. One of the most brilliant attorneys of Oklahoma, whose eloquence is unsurpassed by any citizen of our State, is my personal friend of many years, Hon. Reford Bond, of Chickasha, Okla. Judge Bond is a native Oklahoman, is of Indian lineage, and received his early education at the El Meta Bond College.

On September 8, 1939, I had the pleasure of being present at the celebration in honor of Mrs. Meta Sager, at Minco, Okla., and hearing Judge Bond deliver a most beautiful, inspiring, and eloquent address. His speech was a very fitting and deserved tribute to Mrs. Sager, one of Oklahoma's well-known and much-beloved pioneer educators, who founded the El Meta Bond College at Minco, Okla., in 1889.

The address of Judge Bond is as follows:

It is a pleasure to return to the home town of my boyhood to pay honor to an educator who has been a potent factor in the life and education of our Commonwealth.

I am told that when General Barrett dedicated your armory our educator asserted that she had thrashed practically every man present. The general remarked that this was the home of the chairman of the corporation commission, and she promptly responded that on many occasions she had tanned the seat of the pants of the chairman of that commission. I acknowledge the salutation and signature. But, regardless of need or necessity, she seldom "taught reading and writing and arithmetic to the tune of a hickory stick." This story illustrates her art of punishing with wit and humor. One day during the recitation hour the strict disciplinarian was called from the schoolroom, and while absent a stray dog wandered in. The students hastily made him a pair of wire spectacles and tied him in Meta Sager's seat. When she returned and found the dog there, "Ah," she said, "I see that during my absence you held a meeting and elected one of your members as chairman."

In 1889 Meta Sager sacrificed family ties and civilization's comforts to cast her lot with the pioneers of Oklahoma. She saw Oklahoma when its prairies stretched to the horizon, untouched by the plow or the barbed-wire fence, when its forests lifted their treetops to the skies untouched by the saw or the ax, when the only home was the wigwam, the cow camp, and the ranch house.

She saw the old stagecoach supplanted by the steam engine, the teepee village transformed into the modern city. She saw the subjugation of the Kiowa, Comanche, and Apache. She saw the passing of the Indian brave. She saw the coming of the plainsman and mountaineer, the Puritan and Cavalier, and now she beholds the composite Oklahoman, the last and best, the Cincinnatus of the West.

She came to Oklahoma when statehood was only a mythical dream. She has lived with us for 50 years, 50 years of life, 50 years of service, 50 years of progress, 50 years of educational development.

She was the first woman educator to appear before the Chickasaw Legislature, the first to win tuition from the Chickasaw law makers, the first to convince the Chickasaws that coeducation was beneficial, the first to receive recognition from the Department of the Interior, the first among us to fight for higher education for women, the first among us to announce that a higher education should be the heritage of every daughter as well as the birthright of every son of our Republic.

Two highlights of 1889 will ever be pleasant memories in my life. The run and the meeting of Meta Sager. In the spring of that year, homeseekers commenced assembling at my father's ranch on the South Canadian, and at high noon, when the signal gun was fired, the land-hungry horde broke across the starting line and plunged into the river. Red water splashed at the impact of onrushing horses, there was a wild chase across the channel, a scramble up the far bank, and a maddening race for claims. The riders were mounted on every breed, from plow horse to thoroughbred. For miles I rode and raced with the horde. My mount had a boy rider to carry, knew how to change pace in sand and water, and how to sprint on the prairie. I rode with the fastest and slowed with the slowest. I saw the mad run, the wild stampede, its excitement, fears, hopes, and compensations.

I saw courage, hardihood, and endurance stake claims, face droughts, build homes, raise herds, and cultivate the soil. I saw genius, intellect, and energy give us splendid cities, a progressive constitution, and a wise code of laws. I saw the population and political ideas of the States meet, fuse, and merge in complete and free union.

In the fall of 1889 I saw a tall, willowy daughter of the South open a small school near Silver City and call it the Sunny South.

After the Rock Island crossed the Canadian, when Minco was in her infancy and Silver City was a memory, a magician's wand transformed the Sunny South into El Meta Bond College, and the educator continued to fire her students with ambition, thrill them with prophetic vision, and teach them to think, to work, to achieve, and accomplish.

Master writers have described Bryant Baker's masterpiece, his magnificent tribute to the pioneer woman, but in the presence of our pioneer educator, in the presence of the living model, all description fails and eulogy falls weak and baffled to the ground.

No human plummet can sound the depths of her devotion. No surveyor's chain can mark the limits of her faithful, patient endurance, and only the wings of an archangel can transcend that pinnacle to which the sublime principle of self-sacrifice exalts her soul. Dauntless from the God who gave her without fear to draw a breath, first at birth, last at death.

I unveil this lasting monument to Meta Sager, an educator strong in purpose and pure in strife, thereby making our lives stronger and purer, an inestimable influence. She taught that botany should point to the Rose of Sharon, geology to the Rock of Ages, and astronomy to the Star of Bethlehem.

President Franklin D. Roosevelt Had the Ability and Courage To Cause His Ideas on Social Security To Be Adopted

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1940

Mr. PATMAN. Mr. Speaker, it is so seldom that one, who has vision and an understanding of the major problems of the country, has an opportunity to put his ideas into effect. President Franklin D. Roosevelt not only had vision and understanding, but after assuming office, he had the ability and courage to carry out his convictions. In the latter part of 1931, long before he was nominated for the Presidency, he caused to be published a very interesting article on unemployment insurance. Our law on this subject so closely follows his ideas at that time that I am inserting herewith the article in full:

The Nation has a duty toward the human beings who create and support our Government. That duty is not fully performed until we supply a cushion against unemployment. That cushion is unemployment insurance.

Unemployment insurance is no cure-all for depression. It cannot prevent the recurrence of industrial crises. It is no panacea for human misery. But it softens the shock. It is a life belt for those who are swept overboard.

At the beginning of 1931 I called a conference of Governors to consider the problem. Unemployment insurance, the remedy they suggested, is not a radical or socialistic experiment. It is dangerous or unfair neither to employer nor employee. The adequate and detailed plan proposed by the conference should be translated into law as soon as legislative bodies can be persuaded to act.

The plan imposes upon every employer of six or more persons the duty of laying aside an amount equal to 2 percent of his pay roll until the reserve fund thus created totals $50 for each employee. Thereafter he contributes 1 percent until the total for each employee reaches $75. Then his contribution ceases.

The pool thus created is intended to give those who are laid off a maximum benefit of not more than $10 a week, or half his wage, whichever is lower, for a maximum period of 10 weeks within any 12 months.

The plan provides for any unemployment administration in every city, consisting of three members, representing labor, industry, and the public. The individual States are called upon to extend their

public employment office service. Where no such service exists they are to create a scientific system of employment exchanges.

One of the functions of the Unemployment Administration would be to encourage cooperation between individual firms and the industry of which they are a part. No industry can be stabilized effectively by a single firm, however large. Collective effort is the key to success.

The foregoing plan does not at first envisage any contribution from the employee. In times like the present such a contribution would thrust upon him an undue hardship. But when the insurance plan is established and conditions of employment are more stable the employees themselves should also bear a proportionate share of the burden. The self-respect of the American worker will insist upon this.

Few people visualize that every dollar the Government spends comes out of the taxpayer's pocket. Every taxpayer is his non-taxpaying brother's keeper. Every taxpayer pays for emergency relief in one form or another, whether he likes it or not, as society is now constituted.

Unemployment insurance lightens the taxpayer's load and takes from the worker's back the nightmare of starvation.

It banishes the shadow of the dole.

He did not stop with unemployment insurance but, when he became President, suggested a system that has been adopted that affords a measure of security to all the breadwinners of the entire family.

SECURITY FOR BREADWINNERS OF ENTIRE FAMILY

Crisis comes to a family when pay checks stop. When the breadwinner can no longer bring home a regular wage, the family cannot pay the landlord, the grocer, and the clothier, cannot plan ahead for the education of the children or even maintain its independence as a family.

The security of income is a basic need of family life.

OLD-AGE AND SURVIVORS' INSURANCE

The year 1940 has been a red-letter year in the history of the family security. For it is in 1940 that benefits have begun under the old-age and survivors' insurance system, a Federal system which protects workers in every field of commerce and industry against destitution in their old age, and provides a regular monthly income for their families in the event of their death.

UNEMPLOYMENT COMPENSATION

Old age and death are just two of the times when pay checks stop and family independence is threatened. Unemployment is another such time. So it was that the Social Security Act provided also for federally aided State systems of unemployment compensation—an opportunity which has been seized by every State.

PUBLIC ASSISTANCE ALSO ADDED

These insurance systems protect workers who have jobs. They are the front-line trench against destitution. But there must be protection, too, for those who have not been regularly employed in commerce and industry, and therefore, cannot be covered under an insurance system. So Congress, in passing the Social Security Act in 1935, provided for federally aided State programs of public assistance to care for the needy aged, the needy blind, and dependent children.

THE CAPSTONE OF THE NEW DEAL EDIFICE

These programs—(a) old-age and survivors' insurance, (b) employment security, and (c) public assistance—constitute the three parts of a well integrated social-security plan developed under the leadership of the current administration. This social-security system constitutes, in a very real sense, the capstone of the New Deal edifice. Let us examine it more closely. Let us see just how it is related to the other accomplishments of the New Deal. Let us see just what each of these programs has meant to America.

MAJOR PROBLEMS ATTACKED AND SOLVED BY NEW DEAL

Much of this program we call the New Deal has been concerned with an attack upon forces and practices which, though external to the family, have threatened its security. We have attacked fraudulent finance. We have created conditions for more effective bargaining between worker and employer. Depositors no longer lose their savings in banks. Farm debts, home debts, and business debts have been placed beyond the reach of usurers, profiteers, and manipulators. Employment has been created and stimulated in many fields.

These family protections had been undertaken before we embarked upon the broad social insurance enterprises set up by the Social Security Act. Social insurance has come later because dependable family security had to be built upon a solid national economic foundation. Family security could not be built effectively until the social and economic structure of the country was itself secure.

NO VISION IN TWENTIES

With more foresight in preceding years the 1930's might not have begun under the desperate threat of insecurity. From 1923 until 1929 we had our years of plenty. But the voice of Joseph was not heard in the land. There was no planning for lean years to follow. There was no assumption that lean years would ever come again. There was only a riotous assumption that a new era had dawned, that the chips would mount higher and higher, that family cars and chickens in every pot would multiply like rabbits, that a gambler's paradise was a new American way.

BY END OF ADMINISTRATION, MARCH 4, 1933, LAST DOLLAR SCRAPED OUT OF FAMILY SAVINGS

Half the lean years had passed by 1933, when we began to rebuild. The last dollar had been scraped out of family savings. Fathers had stood in bread lines. Families had been defeated and scattered. Opportunities for education, health, and the normal life around a family fireside had been destroyed for many.

INSECURITY DOES NOT CREATE INDEPENDENCE

These years will bear recalling because they illustrate a very fundamental relation, in a democratic country like ours, between the family and the Government. Those who talk theory will tell you that one must rely either upon the Government or upon the individual. They will tell you that as the Government grows strong, men and women rely upon it and family ties weaken. They do not want to see a working alliance between the Government and the ordinary man.

Americans do not believe their story.

Americans do not believe that it strengthens the character of a family to bet its security on the chance that American industry may find itself in a perpetual boom.

Americans do not believe that insecurity creates independence.

Give the American family a secure place to plant its feet and a reasonable grip on its own immediate future. Then, and then only, do you have the conditions upon which sound family life and independent living can be based.

SOCIAL-SECURITY SYSTEM STRENGTHENED IN 1939

The Social Security Act was passed in 1935. In 1937 the taxes which form the contributions for old-age and survivors' insurance began to be collected. In 1939, after a careful study of how its benefits could be liberalized without jeopardizing its financial integrity, Congress broadened and strengthened this system.

These amendments, passed last August, added new beneficiaries, increased the scale of benefits, and made them payable 2 years earlier than was thought possible in 1935.

RESULTS OF RECENT CHANGES

So immediate and impressive are the results of these changes that I would like to list them briefly:

Any worker qualified for this insurance who retires after 65 years of age will receive a benefit check every month for the rest of his life.

The wife of any such worker, when she is 65, will receive an additional benefit. If her husband dies she gets survivors' insurance monthly.

The minor children of such a worker will receive additional benefits to enable them to continue school and live their lives normally and securely under the family roof.

The widow and children of any qualified worker who dies will receive regular monthly benefit checks immediately upon application.

If there is no wife or minor child the worker's aged dependent parents receive benefits. In other cases a lump-sum death benefit may be paid.

These benefits became payable January 1, 1940. By the end of this year the number of beneficiaries will probably mount to near the million mark. Within 4 or 5 years about 3,000,000 people may be receiving these insurance payments—aged workers and their wives or young children, elderly widows, widows and children of workers who have died in the prime of life, dependent parents of workers who have died—all these will be receiving monthly insurance checks to which they have a right. Many of these people might otherwise have had to rely on public or private charity, but now, through this national insurance system, they will be able to maintain their self-respect and independence.

BENEFITS COME AS A MATTER OF RIGHT

This system has two characteristics: First, it is a sound, carefully financed system—a system which, like any well-planned business enterprise, is keeping its own future well within control. The benefits which flow from such a plan are not charity, not relief, not visionary promises. They are the result of systematic investment by workers and their employers, and to every eligible worker they come as a matter of right.

COST REDUCED 50 PERCENT

This is a system, moreover, which has operated at an administrative cost of less than half what was estimated by experts on social insurance and private insurance operations in 1935. It has built up under civil service a corps of loyal well-trained employees who will permanently assure its professional standing among the agencies of the Government. To administer old-age and survivors insurance nearly 500 field offices are scattered throughout the Nation, where local people can serve their fellow townsmen and their neighbors with a first-hand knowledge of the needs of particular regions, States, and communities.

THE OBJECT TO HOLD FAMILY TOGETHER

Its second and at least equally significant characteristic is that it stands squarely for family security; it operates in the interest of preserving the American home and all that the home means in American life. It is the family which is protected on retirement and for which additional benefits are paid. It is to hold the family together that monthly benefits have been provided for the survivors of workers who die.

FEDERAL-STATE SYSTEM OF UNEMPLOYMENT INSURANCE

But old-age and survivors' insurance is, as I have said, only one part of the broad social-security program. It is the one part which is entirely a Federal enterprise. In cooperation with the Federal Government, every State has protected its wage earners and their families against the threat of want due to unemployment.

Employment conditions vary from State to State. The needs of the people vary from State to State. The administration of a program of unemployment insurance must be close to the people. And yet, to be dependable, it must have behind it financial and social planning of the first order. The Federal-State program which has been developed has not only enabled every State to provide this protection but has also preserved the opportunity to deal with local problems in a local way, a principle which is basic in the American Federal system.

BEFORE PRESIDENT FRANKLIN D. ROOSEVELT ONLY ONE STATE HAD UNEMPLOYMENT COMPENSATION

Many people do not realize how much this program of employment security owes to the Roosevelt administration. Before congressional consideration of unemployment compensation, only one State had passed a law for this purpose. In 1935 and 1936, just after the Social Security Act was passed, 14 States and the District of Columbia had plans of unemployment compensation written into their statute books—15 unemployment-compensation acts in all, up to the first week in November 1936. And there were many in those days who did not know what the future would hold for family security. Many States were still governed by the do-nothingism of a previous political era. Fifteen unemployment-compensation laws up to the first week in November of 1936, and in that month the American people made it clear what kind of a future they believed that America should have.

NOW EVERY STATE HAS AN UNEMPLOYMENT-COMPENSATION LAW

In November and December 1936, after the election, 20 States wrote unemployment compensation onto their statute books. They knew America was not going to backslide. And by the time the other legislatures had finished their meetings in the spring of 1937, the final 15 States and Territories had been added. There is today provision for unemployment compensation in every State and Territory of the United States.

MILLIONS PROTECTED

More than 28,000,000 wage earners are now protected by these State laws. Last year 4,500,000 of these wage earners drew weekly benefits during temporary unemployment. More than $425,000,000 in purchasing power was thus made available to men and women who, through no fault of their own, were deprived for a time of their regular means of livelihood. This past year the payment of benefits has been merged with an expanded Nation-wide public-employment system, thus providing wage earners and their employers with a unified job-placement and compensation service. Employment security is the name and the objective of this broader program. This unemployment-compensation system has been built soundly. Its income is sufficient so that we can and should plan larger benefits for the unemployed in the very near future.

TWO PROGRAMS

There you have the two insurance systems. First, a Federal system of insurance to guard against the threat of want when old age or death cuts off earnings. These problems are the same from Maine to California and from Texas to the Canadian border. For death and old age we must plan coverage which protects the worker and his family throughout his working life and as he moves from State to State. Second, a system of insurance to provide compensation against the perils of unemployment—a Federal-State system which permits us to adjust to local conditions.

These insurance programs pay benefits as a matter of right to every qualified worker in American commerce and industry. They make their payments because the workers and their employers have cooperated with their Government to build a system which is their own. These insurances are valuable possessions. They belong to the worker in just as true a sense as a house or a plot of land. They provide for workers in commerce and industry that kind of a backlog of self-sufficiency which a farm or a homestead once represented to the people of an agricultural Nation.

ANOTHER PROGRAM FOR THOSE TOO OLD FOR WORKERS' PROGRAM

But there are some who cannot qualify for these insurance benefits, men and women who are already old and in need, families whom death has already left dependent. Insurance, by its very nature, cannot protect them; yet they, too, must be cared for. Insurance, we have noted, is only the first line of defense against dependency. The second line of defense is public assistance.

Last year some 2,500,000 of the needy—old people, blind people, and dependent children—received regular assistance in their own homes to the extent of $555,000,000 of combined Federal and State funds. This year the Federal contribution for each of these forms of assistance has been increased, thus permitting the States to make more liberal provision for their needy and dependent citizens. It is particularly gratifying to know that the Federal matching ratio for aid to dependent children has been increased from one-third to one-half the assistance granted, a change which I hope will

enable the States to care for thousands of children who have not yet received this aid.

ADDITIONAL PROGRAMS FOR NEEDY

Meantime cooperative Federal-State programs for public health, maternal and child welfare, care of crippled children, child-welfare services, and vocational rehabilitation of the physically handicapped have been making a great contribution to social security. These programs, also established under the Social Security Act, have prevented irreparable waste of our human resources and have restored to economic and social usefulness individuals who might otherwise have remained a burden to themselves and to the community. This year increases in the Federal funds available for these services will make it possible to develop and strengthen these essential protections.

Ten years ago the economic system of this country seemed to be shaking itself to pieces. To many finding jobs seemed hopeless. How to feed people was a big problem in that day. Years of boom had not created any system to provide security for the American family. In a depression there seemed little reason to hope for better things. It seemed then that security—even basic minimum security—was a long way off.

But after those first great economic reforms of 1933 and 1934, the year 1935 gave us the Social Security Act. It was conservative and practical. It provided for protection against immediate need through public assistance. It provided for prevention of future need through social insurance. Its purpose was to provide a foundation on which people could build their own security. But Congress was careful to make it a sound and dependable foundation that would not let the people down.

Congress strengthened the program through its fundamental amendments of 1939. I have described those liberalizing changes. But as important as the changes themselves is the fact that they are based upon experience—the careful consideration of American experience. They were not invented in the dark recess of a library. They were not the dreams of zealots. They were not an alien system. They were hard, practical, well-worked-out improvements within the framework of the American social-security system.

A DEPENDABLE SYSTEM, THOUGH NOT PERFECT

That method of change is the real bulwark of American family security. We have a system that can be depended upon. It is not perfect. Its protections do not yet reach all the individuals and families who should eventually be reached. It will be changed, little by little as experience points the way. With that kind of a history, with that kind of future, American workers and American families who depend upon it need not fear that they will wake up some morning and find that politics or financial disaster has swept away their security.

There may be critics who will call these enterprises paternalistic. We need not answer those critics. The social-security program speaks for itself. As we have called the roll of these enterprises, we have seen how each of these efforts is directed toward creating and maintaining the conditions under which an individual or a family can keep independence—or regain that independence when it has been lost.

GOVERNMENT ADVANCES ONLY IN THE SERVICE OF THE CITIZEN

No, there is no war in a democratic nation such as ours between the citizen and his government. That is well worth remembering in the world today, when many nations have turned their backs upon the democratic ideal. There are many who talk as though every advance of government were made through invading the rights of citizens; whereas, in a democratic society such as ours, government advances only in the service of the citizen. The government, as government, is never served. It is that distinction which is basic in drawing contrast between democracy and dictatorship. As Americans, we stand upon the record of democratic progress and face the future with confidence in our own capacity for self-government and self-protection.

Typical Electric Bills

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

Mr. RANKIN. Mr. Speaker, so much mail is piling into my office, from every State in the Union, with reference to the overcharges for electric lights and power, that I have decided to take this moment to tell the Members of the Congress and the people of the Nation who read this RECORD how to find out what electricity is costing the consumers anywhere in the United States.

As a result of the passage of a bill which I introduced in the House, and Senator NORRIS, of Nebraska, introduced in the Senate several years ago, the Federal Power Commission now issues a pamphlet entitled "Typical Electric Bills," showing residential rates charged in every community in America of more than 250 population, up to 500 kilowatt-hours a month, the commercial rates charged in every town of more than 2,500 population, up to 1,500 kilowatt-hours a month, and the industrial rates charged in every city of 10,000 or more population, up to 400,000 kilowatt-hours a month.

One of these pamphlets covering any State in the Union can be secured by simply writing to the Federal Power Commission, Washington, D. C., sending them 10 cents and asking for F. P. C. R–19, for 1940, and then giving the name of the State or States, sending 10 cents for each State named in the request.

While these pamphlets do not give the commercial rates in towns of less than 2,500 population, or the industrial rates in cities of less than 10,000, you can rest assured that the rates are equally as high in the smaller places as in the larger ones, if not higher.

If you want to compare the rates in your State, or in your town, with the rates in any other town, or any other city in another State, just order this pamphlet entitled "Typical Electric Bills," for both States, sending 10 cents for each one.

We will say, for instance, you live in New Hampshire, where they have the highest residential electric-light and power rates in America, if not in the world.

If you want to compare your rates with the T. V. A. rates, you can get one of these typical electric bills for New Hampshire, and one for Mississippi, Alabama, or Tennessee, and compare the New Hampshire rates with the T. V. A. rates.

Or if you want to compare them with the Tacoma or Seattle, Wash., rates, get one for the State of New Hampshire and one for the State of Washington; if you want to compare them with the Los Angeles rates, get one for the State of California.

If every power consumer in America could get one of these typical electric bills pamphlets for every State in the Union and make his own comparisons, there would be such a universal demand for justice to the electric-light and power consumers of America that they would get a reduction of at least $500,000,000—a half billion dollars—a year between now and the November election.

Just remember that if you want one of these typical electric bills for any State, write to the Federal Power Commission at Washington, D. C., and ask for F. P. C. R–19, 1940, for the State or States you are interested in, and send 10 cents in cash for each State mentioned. Then make your own comparison.

Air Corps Expansion

EXTENSION OF REMARKS

OF

HON. CHARLES R. CLASON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

ADDRESS BY BRIG. GEN. BARTON K. YOUNT

Mr. CLASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Brig. Gen. Barton K. Yount, Assistant Chief of the Air Corps, at Westover Field, Mass., on April 6, 1940:

Mr. Chairman, distinguished guests, ladies, and gentlemen, we have come together this afternoon to break the ground for the first permanent building at Westover Field and to raise the flag of our country over one of its newest Army posts. This is a historic locality and this should be a thought-provoking occasion. Our people settled in this vicinity in the earliest days of our colonial history. They have lived here continuously for over 300 years; and for more than a century and a half as thriving citizens of a growing democracy. They have watched the expansion of our great domain westward to the shores of the Pacific and beyond with lively interest and have shared in the increasing prosperity of a new, small country grown into one of the world's most powerful nations.

Throughout our history we have been vitally concerned with military defense. The very lives and continuing existence of our early pioneers on their farms and in their villages were dependent on their ability to cope with every conceivable hardship. Later generations brought devastating attacks from without and within against the principles and institutions of our young Republic. Within the lifetime of our adult population we have joined with other great nations in a titanic struggle for liberty and democracy. And today, while praying and working for peace and its manifold blessings, this mighty Nation is surrounded by a chaotic state of affairs throughout the world.

Along the road of national expansion our Army has marched hand in hand with the hosts of civic, commercial, and industrial development. From the days of the founding of our Republic, with the small handful of determined patriots that made up Washington's army—never more than a few thousand at any one time—through the War of 1812, the Indian struggles, the Mexican War, the great Civil War, and the Spanish War, to the mighty millions that turned the tide of victory in 1918, the military forces of the Nation have been a protecting shield for the principles and interests of our people and our Government. Not only in war, but in peace, the Army has contributed to our development. Our military engineers have led the field in the building of our inland waterways and transcontinental railroads. The Panama Canal is an example of the genius not only of our Army engineers, but of our Army medical service which fought a heroic and victorious battle against yellow fever and malaria, which made the completion of the Canal a possibility. The Army has set up records of civil administration in Cuba and the Philippines that have not been surpassed elsewhere in the world. In industry and science the Army, through its experiments in communication and aviation, has opened limitless fields for commercial endeavor.

For 12 years the anniversary of our entrance into the first World War has been designated as Army Day, for the purpose of celebrating its achievements. For this reason it is appropriate that we are here today to witness the establishment of one of the newest stations of the Army's newest fighting branch—the Air Corps.

I should like to digress for a moment from the subject of the Army in general and Westover Field in particular and say a few words about the Air Corps expansion program which has made this base possible.

In the early spring of 1939 the President recommended and the Congress appropriated the funds for a large augmentation of our Air Corps. Airplanes were to be increased from 2,300 to 5,500. The officer strength was to be raised from 1,600 to 4,600, and the enlisted strength from 18,000 to 45,000. Sixty-six new squadrons were to be formed and five new air bases and two air depots were to be added to those already in being. All this was to be accomplished within 2 years—by June 30, 1941.

As compared with our previous growth, this was really an enormous undertaking and though progressing satisfactorily to date, it his required prodigious effort on the part of all in the War Department, and particularly in the Air Corps.

Our first great problem was the procurement of the required number of airplanes, including engines and accessory equipment. The aviation industry was not prepared to manufacture them at the rate we desired. Moreover, we did not want to buy merely the additional number of the existing standard types for it was obvious that many of them would be obsolete by 1941. It was hazardous to order new types without subjecting them to the time-consuming service tests. Any numbers of things can happen to prevent a new airplane or engine from meeting its design expectations. It takes from 6 months to a year to prepare for the manufacture of a new type of airplane and we couldn't afford to spend that time, only to learn at the end that we had produced an unsatisfactory machine.

At best, we were between the sharp horns of a dilemma. Fortunately, there were in existence, and well advanced, some excellent improved types. Moreover, in anticipation of foreign orders, many airplane manufacturers had accumulated stocks of materials and made other preparations to speed up production and enlarge capacity. So it was decided to eliminate the long service test period on new machines and go right into production. Thus far our planes have been crowned with success and we will obtain the equipment necessary for the expanded Air Corps and there will be no finer air equipment in the world.

The next big problem was that of obtaining and training additional pilots and enlisted mechanics. Our pilot schools in the Army had been turning out about 500 pilots per year. It suddenly became necessary to produce them at more than twice that rate. Our training facilities in the Army were inadequate to produce that number, so we turned to civilian pilot schools for the primary training of all pilots. Nine such schools throughout the country are taking a total of about 400 cadets every 6 weeks and they are doing a splendid job. Those who complete the primary course are sent to Randolph, Brooks, and Kelly Fields where, after 6 months of basic and advanced training, they graduate and become Reserve officers and are sent to tactical squadrons for extended active duty. Each year the regular Air Corps strength is increased by about 130 officers so that at least that many Reserve officers are given regular commissions annually.

The training of some 18,000 enlisted specialists, such as airplane, engine and radio mechanics, armorers, parachute riggers, cooks, clerks, etc., also challenged our ingenuity and best efforts. Our technical schools at Chanute and Scott Fields in Illinois and at Lowry Field, Colo., were greatly expanded. Special courses are being given at many of our larger stations and over 2,000 enlisted men are being trained at civilian mechanics schools.

On February 1 of this year, the last of 66 new squadrons was formed to complete the additional units required for the increased number of airplanes and personnel.

It has been a complex problem to get pilots and mechanics trained and organized at the precise time that additional new aircraft were coming out of the factories and while shelter at old and new fields was being made available. But with the zeal, loyalty, and ingenuity of the American soldier, the task is well along toward successful completion.

Returning now to Westover Field, let me tell you briefly what an air base is, why this locality was selected for the location of one, and what it means to the Army and to the community to have an air base here.

An air force, like the Navy, with which the people of Massachusetts are familiar through generations of association with the sea, is dependent upon land bases. Ships of the air, like ships of the sea, after navigating or fighting in their proper elements, the skies or oceans, must return to the shelter of land bases for supplies and repairs. These bases, in the case of air forces, must be stocked with food, fuel, and munitions; equipped with machinery and tools to make repairs of all kinds, and with housing, hospital and recreational facilities to care for the personnel. The bases must also have communication facilities, both radio and wire, and means for weather forecasting, all of which are necessary for the operation of aircraft. Ample water, power supply, highways, and transportation facilities are essential to the operation and maintenance of these bases.

Obviously an air base, for reasons of economy of time and money, should be located as close as practicable to the area of employment of the air force which it supports. Also obviously it is necessary to employ a defensive air force in the vicinity of our most important and vital centers of population and industry. Heretofore New England has lacked an air base adequate for air operation on a large scale.

The War Department has long been aware of this deficiency, and so, when an augmentation of the Air Corps was provided a year ago, it was but natural that one of the five new air bases should be located in this general vicinity. The actual selection of the site for this new station was made only after long and careful consideration of the many factors involved, and the final decision happily met with general approval within civilian and military circles alike.

It is a source of deep satisfaction to the Army to see the establishment of a new air base in the Northeast. We are blessed with an enduring peace with our continental neighbors throughout this hemisphere and we have no fear of any difficulty with our fine neighbor to the north. The location of an air base in the Northeast is not due to presence of that neighbor, I can assure you, but to the development of aviation and of naval weapons which has reduced the effectiveness of the oceans as barriers to hostile operations from abroad, and if we are unfortunate enough to have to engage in another war, an air attack against our great seaports and industrial centers along the eastern seaboard is a distinct and

disturbing possibility. An indispensable element of defense against such attacks is an efficient air force. While we have many airports and landing fields in the New England area, we have not before had a major air base there, nor air units trained and accustomed to the task involved by habitual operations therein. The units regularly stationed at Westover Field will serve as a nucleus for any larger forces that might be needed, and the new air base will provide a strong backbone for the administrative organization required to sustain those forces.

To the people of this community and the neighboring areas the establishment of this new base should be a cause for gratification. It should bring an increased feeling of security to know that in your midst is a formidable unit of the Army's newest combat arm. There will be stationed here a bombardment group consisting of a headquarters and three bombardment squadrons. There will also be a reconnaissance squadron.

For administrative purposes, an air-base squadron and weather, communications, and supply detachments are also included in the garrison. Altogether there will be around 2,000 officers and men garrisoned here. The construction program which we are to inaugurate today includes temporary barracks, four hangars, a communications building, five officers' and six noncommissioned-officers' quarters, a hospital, central heating plant, fire and guard house, and warehouses and utilities buildings. When completed, this new station will be an important link in the chain of our air defense which has been greatly strengthened through the recent Air Corps expansion program.

It is expected that an initial detachment consisting of an officer and several enlisted men will be sent here just as soon as shelter and facilities are available, probably within a few months. All the buildings at present contemplated we hope will be completed by the summer of 1941.

Of particular interest and importance is the relationship that exists between the personnel of a military post and the civilian community in which it is located. Our American Army has always been close to the hearts of its civilian comrades. In this country the Army is at once the protector and servant of the civil population. We have never in time of peace had compulsory military service nor employed foreign mercenaries in the ranks of our defense forces. Our soldiers, like our Government, are "of the people and for the people." As a result, there has always been a mutual feeling of confidence and respect between the civilian and military elements of our population. With the establishment of this new post I hope you will feel that it is here not only for your protection but that it is a human part of a human community.

You will always be welcome at Westover Field at times and under conditions which do not interfere with the requirements of the military situation. And I should like to bespeak for the officers and men and families of the new garrison your consideration and hospitality. You will find them ever ready to do their full share in advancing your mutual interests. They are well grounded in the knowledge that in union there is strength, and they will always be eager to foster that cordial feeling of mutual respect and friendliness which have marked the contacts we have had thus far in this vicinity.

I am certain you will find the officers and enlisted men a fine, representative lot of American manhood. The officers are either graduates of West Point or they are, in most cases, graduates of our colleges and universities.

At the present time we are receiving and training the "cream" of American youth. They are well-educated, keen, courageous, and proud of the uniform they wear. You will find them interested in your communities, and many of them will be eager to assist in your civic problems if you make them feel that they "belong."

Our enlisted men are a fine, upstanding lot. Most of them are high-school graduates, and they will constitute a real addition to the cross-section of your communities. They are highly trained in the many technical branches of modern aviation. We are proud of them, and we know that you will be. Most of the officers and many of the enlisted men have wives and children, and we know that they, too will be welcomed into your midst.

I shall hope to come back from time to time during the next few years. I shall be intensely interested in seeing the progress of the work which begins with the upturning of the earth today. As I look into the future I can see a group of fine buildings, runways, magnificent bombing planes landing and taking off by day and by night, floodlights, searchlights, formations—a beehive of activity.

I can see a group of fine manhood trained to the minute and ready to go if need be to the defense of this country whose soil, institutions, and privileges mean so much to us.

God grant we may never have to go to war but the stronger we are and the better prepared we are, the less the chance that we may ever again be drawn into armed conflict.

We are the youngest of the branches trained for our country's defense but so powerful has the threat of air warfare become that a strong air force may keep America out of war and it may keep war out of America, and so I am certain that you will look upon this activity which begins today not only as an economic addition to this locality, but as a great institution of which you are a part and to which you owe a definite responsibility.

I do not like to close without saying a word about the naming of this field. It is an Air Corps tradition to name our stations in honor of our departed heroes. Because of the importance which we attach to this new station, it was named in honor of Maj. Gen. Oscar Westover, who, after a long and distinguished career in the Army and in the Air Corps, became Chief of our branch in 1935. He held the rating of pilot of both airplanes and airships. At the peak of his illustrous career he met a tragic death while piloting his own airplane, and the Air Corps and the Army are perpetuating the memory of his great name by giving it to a great station. The name of Westover means a great deal to the Army Air Corps.

In closing, I wish to thank the people of this community, both the officials with whom we have had most pleasant dealings, and the people whom they represent, for the excellent spirit of friendship and cooperation that has led up to this occasion. We in the Army Air Corps look forward to years of pleasant association with all of you, and you may count upon us to do our share in maintaining this happy relationship.

Responsibility of Businessmen and Bankers in Influencing Governmental Policies and National Legislation

---

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

LETTER FROM ALONZO B. SEE, AND REPLY

Mr. WHITE of Idaho. Mr. Speaker, much is heard in criticism of the Congress and the policies of the administration. In answer to some of these criticisms there is included herewith correspondence with Mr. Alonzo B. See, a prominent industrialist of New York.

BROOKLYN, N. Y., *March 15, 1940.*

I had worked in a factory up the Hudson and came to New York City to start in business in a small way repairing elevators.

I learned that the elevator in a store needed repairing and went there to see if I could have the repair work to do. I spoke to the man I saw walking up and down the store, who seemed to be a man of importance, about the work and he said he would give it consideration.

I went to the store the day following and was told that this man would not be there that day. While I stood looking longingly at the elevator whose repairing I wanted to do, the porter came to me and asked if he could do anything for me. I answered I had come to see about repairing the elevator but the man I had seen about it would not be there. When I described the man I had seen about the work the porter said, "Oh, hell, he is a floorwalker."

Because the 531 are floorwalkers and not statesmen, they dabble in things they cannot comprehend and in their ignorance pass laws that cripple business.

How proud we were of our dollar when we were here at home or abroad. United States of America whether on paper, silver, or gold meant a full dollar, but the 531 have so debauched our money that we hardly know what the word "dollar" means.

Our country's bankruptcy started shortly after March 4, 1933, when the 531 took $3,000,000,000 of the people's money away from them.

Let us not say it is perfidy that has caused the 531 to cast a blight over our country; let us say it is incompetency.

ALONZO B. SEE.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON IRRIGATION AND RECLAMATION,
Washington, D. C., April 15, 1940.

Mr. ALONZO B. SEE,
Brooklyn, N. Y.

DEAR MR. SEE: Your circular letter with reference to the qualifications of the present membership of Congress has been received. In considering the problem of Government pressing for solution and the course to be followed by the Congress in formulating policies and enacting laws to promote the welfare of people and safeguard our form of government, it is encouraging to find that influential businessmen are giving consideration to our national problems and advising those representing them in Congress, as evinced by your communication. Your interest in the conduct of our Government and the public welfare is to be commended.

It appears that your classification of the present Members of Congress, as stated in the fourth paragraph of your letter, is an indictment of our form of representative government and the product of its processes.

In considering your appraisal of the former worth of the monetary system, referred to in the fifth paragraph of your communication,

it should be understood that to properly weigh the value of this attribute of government it is necessary to take into consideration the quality of service the national currency system has performed for the American people as a whole in supplying the money function and the extent of the failure of our banking and monetary system to supply the American people with the necessary volume of currency with which to conduct their business transactions—a failure to which we must charge in a large measure the bankruptcy of business which overtook the country prior to March 4, 1933, when the 531 Members of Congress of whom you complain took over the legislative branch of government.

If you and the other influential businessmen who criticize the Members of Congress must insist on the continuation of our defective money and banking system, and the monopolistic business practices maintained by many business organizations which destroy competition and establish arbitrary price levels responsible for the price maladjustments that existed before March 4, 1933, then you must be prepared to endure the business conditions and tax burden that has resulted from the incompetency of the "floor-walkers" of the Congress which unreservedly accepted the advice of the big banking and big-business interests in formulating governmental policies and enacting legislation; that permitted the conditions to develop that caused the country's bankruptcy preceding the advent of the 531 now in office.

And now—let me tell you the remedy. Let the Government give the American people a good, workable, adequate monetary system freed from the present continuing interest charge, with which to transact business and with the establishment of this sound monetary system remove the restraint on production and trade which will automatically operate to restore the parity between the prices of the products of the basic industries—agriculture, mining, lumbering, and the fisheries—with the products of our manufacturing industries.

Let us cooperate, Mr. See, in putting into operation this simple program. If we can, I am sure the thrift, industry, and enterprise of the American people will soon restore national prosperity, and thereby insure our country its preeminent position among the nations of the world. Let us hope that the majority of businessmen will follow your example and give thought to constructive national policies, and interest themselves in promoting our country's general welfare.

Sincerely yours,

COMPTON I. WHITE, M. C.

Poll Taxes

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

SUMMARY OF TESTIMONY BEFORE HOUSE JUDICIARY SUBCOMMITTEE

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I include a news release on the hearings before the House Judiciary subcommittee on H. R. 7534, a bill to prevent the collection of a poll tax as a prerequisite for voting in Federal elections, as follows:

Passage of the Geyer anti-poll-tax bill, H. R. 7534, as an immediate step toward greater democracy in the eight Southern poll-tax States was urged today by witnesses appearing before a subcommittee of the House Judiciary Committee. Representative WALTER (Democrat), of Pennsylvania, is chairman of the subcommittee. The bill, introduced by Representative GEYER (Democrat) of California, prohibits the poll tax as a prerequisite for voting in Federal elections.

Those presenting arguments in behalf of the bill were Lucy Randolph Mason, Atlanta, public relations adviser for the Congress of Industrial Organizations in the South; Crampton Harris, of Birmingham, authority on constitutional law and former associate of Justice Hugo Black, of the Supreme Court; Congresswoman Caroline O'Day, of New York, formerly of Savannah, Ga.; Mrs. Albert Thomas, representing the Parent-Teachers Congress of Alabama and six other State-wide organizations; the Honorable George A. Pruner, Republican member of the House of Delegates of the Virginia Legislature; Arthur Shores, attorney, of Birmingham; Martin Popper, of the National Lawyers Guild; and Gerald Harris, vice president of the Alabama Farmers Union.

Mrs. Thomas told the committee that at least four of the seven State-wide organizations comprising the Women's Joint Legislative Council of Alabama which she represented are in favor of complete removal of the poll tax as a requirement for voting. She said they believe in the abolishment of the poll tax as a matter of fundamental democracy. In addition, they object to it on the ground that the law operates to build up an electorate of the older people and other specially privileged groups who are exempted. Payment of the tax is beyond the realm of possibility for thousands of families. "The $1.50," she said, "for the man and the woman of a family ($3 for both) may mean the difference between a child going to school or not going through even the 4, 5, or 7 months of the year—for it will buy a pair of shoes." Add to this the cumulative effect of the tax and it becomes utterly impossible for a great proportion of the families in Alabama to exercise their right to vote.

She brought out the fact that the farmers are able and do vote in the A. A. A. referendums and stressed the fact that it is no more justifiable to charge $1.50 for voting for representatives than for voting on strictly economic matters.

Mrs. Thomas said: "Women have seen the tremendous effect actions of their State and National Government are having upon the institutions they hold dear—notably the home and the school and community life. We have a real and genuine stake in Government. We oppose any handicap to our full participation in its council."

Martin Popper, testifying in behalf of the National Lawyers Guild, discussed general and constitutional aspects of the Geyer bill. He stated that the National Lawyers Guild endorses the bill and he submitted a comprehensive report analyzing the history and effect of the poll tax and filed a further analysis of its constitutionality drafted by Louis Boudin, eminent constitutional authority.

Gerald Harris, of the National Farmers Union, contended that the poverty of the people is responsible for their not paying the poll tax and it is not lack of interest in the affairs of government. The right to vote is a luxury in the poll-tax States and when the tax is paid, it means in most families the sacrifice of some necessity of life. "Before 1900," Mr. Harris remarked, "the small farmer of Alabama had a political voice, but after the inception of the poll tax that voice grew fainter and fainter until now it is almost still. The reason for that is the inability of the small farmer to keep up the poll-tax payment."

Congresswoman O'DAY, formerly of Savannah, Ga., called attention to the retarded development of progressive legislation in the States requiring a poll tax as a prerequisite to voting and explained this on the ground that in the poll-tax States fewer people vote and a smaller percentage of the voters are women. She pointed out that where it is possible from the standpoint of finances for only one person in a family to pay a poll tax, the man does the voting. As a result, "the leavening influence of a women's vote cannot be as effective in aiding the extension of progressive legislation and progressive policy."

Mrs. O'DAY reviewed the stand favoring abolition of the poll tax which the National Conference on Labor Legislation has taken since 1936.

"The poll tax," said Mrs. O'DAY, "is sapping some of the strength of our democracy—a strength we can ill afford to lose in these times."

Lucy Randolph Mason, public relations representative of the C. I. O. in the south, said that the poll tax, originally intended to disfranchises Negroes, has resulted in also disfranchising masses of white persons of small means, and has effectually throttled democracy.

Miss Mason pointed out that in Georgia that the $1 poll tax is merely the base for a mounting penalty of costs which often operates to permanently disfranchise vast numbers of people, unless their voting power is illegally restored for political purposes through manipulation of poll-tax requirements and the voters' register.

The county unit system of voting in Georgia, Miss Mason pointed out, interlocks with the poll tax and its heavy penalties to concentrate political power in the hands of the courthouse ring in the 54 small counties which have less than 1,000 registered voters and where a majority of even 1 decides the whole county's vote.

Hon. George Pruner, Member of the House of Delegates of Virginia, to illustrate his point that much fraud exists in connection with the poll-tax requirement, produced a copy of an order blank for paying other peoples poll taxes in Virginia. The politician passes these out for the voters to sign, he recounted, and then at the proper time turns in large numbers and pays the taxes. "Payment of a voter's poll tax is an indirect means of buying his vote," according to Mr. Pruner. Speaking also of the absentee-ballot racket, he quoted from an article in the Roanoke World News of January 19, 1940, to the effect that "the candidate with sufficient funds to employ canvassers can sew up an election before the polls open."

Mr. Pruner opposed the poll-tax requirement on the ground that (1) it is in opposition to our theory of government that the citizens are their own sovereigns; (2) that it discourages and prevents many capable citizens from seeking public office; (3) that payment of a citizen's poll tax by a candidate or political organization influences the voter; and (4) that the requirement is reducing those States which have it to second-rate States politically.

A table which Mr. Pruner presented for the record showed that in 1900, before the poll-tax requirement was placed in the Constitution of Virginia, there were polled 261,945 votes or more than were polled in 1920 even after the woman's suffrage amendment had been placed in the United States Constitution.

Arthur Shores, attorney of Birmingham, spoke of the poll tax as one method of disfranchising the Negro. He held that this was its main purpose, rather than the raising of revenue. He explained to the committee the connection between the disfranchisement

by means of the educational qualification and disfranchisement for nonpayment of poll tax and showed that the two together create a system of Negro disfranchisement in violation of the fifteenth amendment.

Among those scheduled to be heard before the subcommittee at some future date are: Senator Elbert Thomas of Utah; Morris Ernst, American Civil Liberties Union; Michael Widman, Jr., assistant director of organization, C. I. O.; J. Finley Wilson, exalted ruler of the Negro Elks; Mrs. Florence Fletcher, National Women's Trade Union League; Mr. Sidney Katz, Maryland-District of Columbia Industrial Union Council; Noel Beddew, southern regional director, Steel Workers Organizing Committee, Birmingham; and the Reverand Fred E. Maxey, Leeds, Ala., representing the Workers Alliance; Congressman Arthur W. Mitchell, of Illinois; Alton Lawrence, southern regional director of Labor's Non-Partisan League, Judge J. M. Nabrit, Jr., of National Association for the Advancement of Colored People.

The Widows and Orphans' Pensions

EXTENSION OF REMARKS
OF
HON. JOHN M. COSTELLO
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1940

Mr. COSTELLO. Mr. Speaker, I am not surprised that the gentleman from Mississippi objected to my request to discuss the bill H. R. 9000 on the floor of the House this afternoon. It is undoubtedly due to the fact that the bill itself cannot stand the spotlight of publicity being turned upon its expensive features, nor does the gentleman from Mississippi desire to have the inference drawn that this bill is but a stepping stone for universal pensions for all veterans who wore a uniform during the World War. The gentleman has previously declared that this is "but propaganda that ought not go into the RECORD," yet the fact remains that in the April issue of the magazine Foreign Service there appears an article by Mr. Millard W. Rice, legislative representative of the Veterans of Foreign Wars, in which he discussed the subject, Widows pension bill headed for vote. Mr. Rice stated:

Several years ago the Veterans of Foreign Wars decided that, if a serious attempt were made to secure the enactment of one all-inclusive bill to provide uniform pensions, there would be grave danger that in the process of securing the enactment of same—keeping in mind the inevitable compromises which are made—it would be probable that various classifications of veterans, and their dependents, would suffer reductions of current benefits in the process of equalizing all veteran benefits.

Apparently the World War veterans desire to equalize their benefits with the benefits veterans of other wars received, provided they can retain all the excess benefits, such as the bonus, free hospitalization, vocational training, and 10-percent civil-service preference, which were not granted to other groups of veterans.

Mr. Rice goes on to say,

It was therefore decided that the much better strategy would be to seek the enactment of piecemeal legislation, holding what we have, and gradually securing eligibility for certain benefits for various classifications of veterans, and the dependents of veterans, not previously entitled thereto, and increased benefits for certain classes of beneficiaries, more nearly, or if possible precisely, on the same basis and in the same amounts as previously granted to other groups of veterans, and the dependents of deceased veterans.

Mr. Rice asserts that the insistent vigorous advocacy by his organization "has acted as leverage pressure, and has had a strong influence upon congressional committees."

While the bill, H. R. 9000, is not all that the V. F. W. are advocating, it provides the first step toward satisfying their demands in their piecemeal program.

If the V. F. W. bill to provide pensions for the dependent widows and orphans of deceased World War veterans on the same basis as for the widows and orphans of Spanish-American War veterans, H. R. 7950, were enacted into law, then it is estimated that the dependent widows and orphans of about 148,300 deceased World War veterans would be entitled to pensions at a cost of about $70,286,000 during the first year, divided as follows: Widows without children, 67,100; children alone, 23,500; affecting 124,800 widows and 249,275 children, if all potential applicants proved themselves entitled.

On the basis of past experience, it is assumed that not more than half of the potential applicants would have proven themselves entitled during the first year after enactment of such proposed pensions. The actual number affected and actual cost thereof would therefore perhaps be about one-half of the above estimates, with double the number and twice the cost during the second year.

It will be seen from the above quotations that the ultimate cost of the pensions to widows and orphans will be in excess of $70,000,000 a year, rather than the $48,000,000 that I have previously mentioned and which is the cost proposed under the present bill.

The drive for general pensions for all widows of veterans even though the veteran has no service-connected disability, and hence, has no claim upon the Government himself, was started when the insurance policies of the Gold Star Mothers and Fathers expired. Recognizing the merit of the claim of the Gold Star Mothers and Fathers to continuing pensions even after the expiration of the insurance policies, the World War Veterans' Committee also provided benefits for widows of veterans suffering a 30-percent disability. The following year an effort was made to cut the 30-percent disability requirement to 10 percent. As a result of a compromise a bill providing for 20-percent disability was enacted into law. The following year this was again cut to 10 percent. Now comes the demand to eliminate all question of veteran disability. Judging from this past record, it is quite evident that the piecemeal program is being carried steadily forward due to the leverage pressure that is being brought to bear on Members of Congress.

In that connection, I might mention the fact that I have received a large number of telegrams from various Legion auxiliary units urging support of this legislation, which reminded one of the drive made by the utility companies of a few years ago. One such telegram is that which I print herewith, from the department commander of the Legion in California:

Representing 70,000 ex-servicemen in California I urge your support of bill H. R. 9000, known as widows and orphans bill. The American Legion in every locality in California is militantly fighting for this legislation.

WILLIAM S. DUNN,
Commander, Department California.

However, it is my opinion that all the service men are not of one mind as is indicated by this telegram. On the contrary, I have received numerous letters from various sections of the country commenting on the news item which mentioned that this bill had been stopped when previously before the House. Four such letters follow:

LOS ANGELES, CALIF., April 4, 1940.

Hon. JOHN M. COSTELLO,
Congressman, California Fifteenth District, House of Representatives, Washington, D. C.

SIR: My congratulations to you for your fortitude in opposing the bill to provide allowance for widows, orphans, and parents of veterans without regard to whether the veterans' deaths were connected with their service. I use the word "fortitude" because it takes just that to stand up against the pressure of those veterans who are demanding more and more benefits every year. However, I speak as a veteran and one who from actual service on the battle fields of France knows what war is. For the veteran who incurred disability in service I have every sympathy; but for the veteran who feels that, because he contributed to his country that measure of service which every loyal American citizen owes his country, the Government should forever after take care of him and his dependents and relatives when he himself incurred no disability in the service, I have no sympathy whatever. So all I can say to you is, more power to you.

Very sincerely yours,

———.

LOS ANGELES, CALIF., April 10, 1940.

Hon. JOHN M. COSTELLO,
House of Representatives, Washington, D. C.

DEAR REPRESENTATIVE COSTELLO: For some time I have felt the urge to express my personal satisfaction to you for what seems to me to be a very intelligent, constructive job that you are doing—and I say intelligent advisedly because, almost without exception, I find that I would have voted exactly as you did on the various controversial measures which came up.

As a member of the American Legion, but expressing only, of course, my personal opinion, I felt that your stand on the pension-extension program was most courageous and most intelligent.

* * * * * * *

With highest personal regards,
Respectfully yours,

———.

NORTHAMPTON, MASS., *April 3, 1940.*

Hon. JOHN M. COSTELLO,
Washington, D. C.

DEAR SIR: I noted the enclosed clipping in our local paper and thought I would drop you a line to tell you that I feel you have done a good job.

I feel that the group that is backing this bill are using the disabled veterans again for a stepping stone. If they were real veterans they would look out for the disabled in place of using them for their own gains. For example, right here in New England, the veterans' hospitals are ever crowded, not by disabled veterans of the World War, who only make up a small number of patients in all the hospitals, but it would not surprise me in the least to find as many Spanish War veterans in said hospitals as there are service-connected cases of the World War.

I find no fault with this, but I do oppose all moves to use the name of the disabled veterans of the World War for the benefits of others. We are in need of a hospital here to care for the disabled, so if the Government has any money to spend it should be for our care in place of women and children who had nothing to do and gave nothing in the World War. Right now about 99 cents out of every dollar the Government spends in the name of disabled veterans of the World War goes to the care of others. Now is the time to stop it, and I am glad to see that you have taken a step in that direction.

Very truly yours.

HOLLYWOOD, CALIF., *April 2, 1940.*

Hon. JOHN M. COSTELLO,
Washington, D. C.

SIR: We commend your courageous stand against veterans' families' pensions, from which President Wilson intended to protect us. It is popular to give others' money away, and I am glad you have the courage to stand against it.

Respectfully.

I cannot help but wonder how far we are going on this program of unjustifiable benefits to veterans. There is pending before the committee the Veterans of Foreign Wars disabled pension bill, H. R. 7980, which if enacted into law would bring some 800,000 new cases on the pensions rolls, as well as augment the compensation now received in certain other cases. In all 969,300 veterans would be affected by this proposed legislation, and the first year's cost, according to Mr. Rice's figures, would be $293,045,000. Included in this bill is the provision for a universal pension of $60 a month for all World War veterans of 65 years of age. The cost of this is computed the first year at approximately $14,000,000. Members will recall that when the Spanish War pension bill providing for $60 a month at 65 years was passed by the House, I stated that a drive would be made to provide the same pension for World War veterans, and I also presented a tabulation of the cost of that legislation.

It is estimated that the last World War veteran will die in 1996, and during the 56 years of this one pension provision would cost the Government in excess of $20,000,000,000, yet this innocent provision starts with a first year's cost of only $14,000,000! While the pending widows and orphans bill only calls for $30 per month instead of $60, it is reasonable to assume that benefits under this provision will survive beyond the year 1996, and as a result the total cost of this proposed legislation over the period of years will itself run into billions of dollars, even though between now and December, a period of 6 months, it may only cost $12,000,000, and even though between now and next June, after its first year of operation, it might only cost $24,000,000, and even though in the following year, when all presently eligible beneficiaries shall have applied, it might only incur a cost of $48,000,000 for that year, no one will hazard a guess as to the full and complete cost of this legislation. However, since we are spending in excess of $550,000,000 annually for the Veterans' Administration, and since demands such as the disability pension bill are constantly being made upon the Congress, it behooves us to move slowly in voicing our approval of these continual raids upon the Federal Treasury. I have stated before that this legislation will ultimately lead us to bankruptcy if we are going ato accede to insistent vigorous advocacy of veteran groups using leverage pressure to obtain universal pensions in the process of equalizing all veteran benefits while "holding what we have."

Continuance of Farm-Tenancy Program

EXTENSION OF REMARKS
OF
HON. PHIL FERGUSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1940

LETTERS FROM OKLAHOMA FARMERS

Mr. FERGUSON. Mr. Speaker, the tenant farmers of the Eighth District of Oklahoma present the best argument yet made for an appropriation to carry on the Bankhead-Jones Farm Tenant Act. Every one of these farmers want the program continued, even on a small scale. The Members who argued the program was a failure because so few farmers could buy farms have their answer in these letters. I have received over 200 letters on this subject, all in favor of continuing the Bankhead-Jones Act and the Lee-Jones Act, to insure farm-purchase mortgages.

The letters follow:

DEAR SIR: In reply to your letter on the opposite page, I am greatly in favor of the program continuing even if it has to continue on a small scale for a while. While I might not be able to secure a farm right away, I feel like it would be helping someone else. I don't intend to give up as long as there is a chance to buy one of these farms, because I feel that is the only way some of us renters can ever become landowners. I believe people would be more satisfied if they owned their home.

No, I don't feel that it has been an injustice to me because my application was not approved. I realized this is something new, and I hope it continues, as it has been my one ambition in life to own my home, and that I feel is the only chance I will ever have.

I am glad to answer this letter, as I'm for this program 100 percent.

Yours truly,

H. A. MASON,
Meno, Okla.

APRIL 3, 1940.

DEAR MR. FERGUSON: I have your letter of March 29 asking my attitude concerning the continuation of the purchasing of farms under the Bankhead-Jones Act.

I was an applicant for a farm this year, but was not chosen; however, I do not feel that an injustice has been done me, as I am fully aware that the program is in an experimental stage. To be sure, I will apply again if the opportunity presents itself.

The program, I believe, is very instrumental in helping those who sincerely hope to get back onto the farm, yet finances preventing it.

Speaking from my own standpoint, of which many come in the same class, I am a tenant hoping to acquire a farm of my own yet. I fully realize that it will be next to impossible unless under a long-time purchase plan.

So you can readily understand that I would only be hurting myself in not hoping for the continuation of the Bankhead-Jones Act.

Hoping that these few words will help the cause along, I am

Sincerely yours,

LOUIS J. HULA,
R. 5, Caldwell, Kans. (Grant County, Okla.).

APRIL 3, 1940.

DEAR SIR: Of course, I was very disappointed when the committee didn't see fit to let me buy a farm last year under the Bankhead-Jones Act. However, since that time I have sought to make such an improvement that they will consider me more favorably next time if my county is lucky enough to get appropriations.

Naturaly I am in favor of more appropriations to continue this program and hope for better luck next time.

My disappointment at not being able to buy a farm did not make me blind to the fact that there were a great many more applicants than it was possible to supply with funds, so I did not feel that an injustice had been done me. I am anxious to see more funds provided for the purpose and then I will be more hopeful.

Sincerely,

HUBERT HAND,
Ames, Okla.

APRIL 4, 1940.

DEAR SIR: Answering your letter of March 30, 1940, I having applied for a farm-purchase loan last year and also have application in for this year. As to last year's application, it was turned down on acccunt of there wasn't enough money available only

for four applicants. I think the Bankhead-Jones bill to be a splendid bill for tenants like myself.

I want to be one of those that are chosen this year for farm purchase. I do not have any grudge or sore spots because I wasn't chosen first. I hope to see this good work continue. I want to see each applicant that applied that is worthy of such a loan to be financed on this low-interest and long-term loans and handled through the Government and local set-ups.

I thank you, Mr. FERGUSON, also the Senate and the House for the splendid farm bills that have been passed.

Respectfully yours,

LYLE WOODRUFF,
Braman, Okla.

APRIL 3, 1940.

DEAR SIR: I wish to express my opinion about the continuation of funds to enable tenant farmers to buy farms. I submitted an application the past year but did not get a farm. I understood at the time I applied that there would only be enough funds available to buy five farms in this county (Kay). Later this was cut to four. I do not entertain any feeling of injustice because I was not one of those chosen but rather I have hopes that in the near future I may be able to obtain one. I am acquainted with three other men who applied and did not receive farms and I am confident that their views are the same as mine.

If I am not able to buy a farm through some such plan I am afraid I will not be able to accumulate enough to secure one otherwise. My wife and I have been farming 19 years and as is customary in this locality given one-half every year. I believe I have paid out enough to buy a good quarter section of land.

I think you and your fellow House Members may feel assured that those men who applied for farms last year and did not obtain them will be more than glad of another chance.

Yours truly,

K. C. SMITH, *Tonkawa, Okla.*

APRIL 3, 1940.

DEAR SIR: In answer to your letter we did apply for a farm but we were not angry because we didn't get one as we realize everyone can't have one and we were just hoping we could have another chance this year. We were glad for the people who did get farms. We most certainly are for a continuation of the program as some could get farms that way that might not be able to otherwise. We are very much interested in getting us a farm as our landowner wants everything put to wheat and we believe we could have a better living and it be a live-at-home method if we were on a farm where we could plant a variety of feeds, etc.

If some felt it was an injustice to them because their application was not approved, we did not know it, and we entertain no such thoughts. We would not be so selfish as to begrudge or envy what the other person has but we do want a farm badly.

Sincerely yours,

GLEN O. GOODRICK,
Renfrow, Okla.

APRIL 3, 1940.

DEAR SIR: Received your letter of March 30 and am very much in favor of the continuation of the farm-purchase plan. Although I was not fortunate enough to get a farm last year, I hope to be one of those selected in the near future. I think these tenants should be selected on their merits alone regardless of the number of dependents.

I attended the Farm Security meeting of Kay County and found out of the 200 in attendance a majority were in favor of the continuation of the farm program, only on a larger scale, where more tenants could become home owners.

I have been a tenant on this one place 22 years. I think every tenant would appreciate your efforts in helping them become a home owner.

Sincerely yours,

ADRIN CARR, *Tonkawa, Okla.*

APRIL 2, 1940.

DEAR SIR: I certainly am in favor of continuing the Bankhead-Jones Act. I consider it the best thing ever tried for the tenant farmers, also the most paying proposition for the Government.

I do not feel an injustice was done me by not being selected as a purchaser, as there are thousands as deserving as I and only money enough to buy a very few farms so someone had to be left out.

I think if more people could be land owners instead of so much land in the hands of one person or corporation that conditions would be better everywhere.

Yes; I am for the act 100 percent.

Very truly,

ELVER J. CLAUNCH,
Marshall, Okla.

APRIL 2, 1940.

NARDIN, OKLA., *April 2, 1940.*

DEAR SIR: We have your letter at hand in regard to the application for the purchase of a farm under the Bankhead-Jones Act. We should like very much to see this continued. We do not feel at outs with the program as we did not expect to be one of the first chosen, as we understood before sending in our application that there was only enough funds for just so many farms and that sometime we might have a chance. We would think it a good policy to start on a small scale, as we understand there are a good many things yet to be worked out about the plan.

In fact, we were one of the first five chosen to purchase a farm but could not find one within the price allotted us and then there wasn't enough for the purchase of all five, so we withdrew, hoping to find one if we were still on the list next time.

We see need of your plan if we can ever hope to have a home; we think farms are getting too large and that the graduated land tax would help a lot.

Sincerely,

VALDO LAYTON.

JET, OKLA., *April 2, 1940.*

DEAR MR. FERGUSON: I applied to purchase a farm under the Bankhead-Jones Act and while my loan wasn't accepted I wish to say I certainly am in sympathy with this program and would like to see it continued not only from a personal view but I think it is one of the greatest steps forward we Americans have made since the Cherokee strip was opened for settlement.

Helping a worthy tenant purchase a farm, in my opinion, is the step toward building a greater America. We didn't have the farm problems in colonial days we have now, because each farmer owned his farm. So I heartily endorse the continuation of the Bankhead-Jones Act in the future farm programs.

Very truly yours,

HERMAN VINCENT.

DEAR MR. FERGUSON: I am one who applied for a farm under the Bankhead-Jones Act, hoping to get a farm in the near future, and would like to see the program continued. No; I don't feel that it was injustice because my application was not approved. I would rather see farms purchased on small scales rather than not at all. If there are any funds provided for this program I would still be interested.

Yours truly,

HENRY MILLER, *Fairview, Okla.*

APRIL 3, 1940.

DEAR SIR: Will answer your letter with the utmost desire that this program be continued for the benefit of the American people. This is what this Nation needs today to give the poor laborers a chance in life, which is just due them.

I, for one, signed up and never expected to get anywhere because I had not been farming but was raised on a farm and am renting the house on the best farm in this county at this time, because I cannot find a place to rent and do not have cash for the purchase of a farm.

By all means, Mr. Ferguson, keep the good work up.

Your friend,

W. H. EMERY, *Byron, Okla.*

APRIL 2, 1940.

DEAR MR. FERGUSON: I am in receipt of your letter as to my wanting a farm. I applied for a farm under the Bankhead-Jones Act and would like to have one any time that I can get one, now, or next year, or even 1942. I personally would like to have the continuation of this program, even if I don't get a farm. It will help someone else, and to help the other fellow helps me; see?

I can't see why anyone would not like to see this program stay in effect. I think it a wonderful idea, myself.

Your friend,

GLEN PAUL BOYER,
Blackwell, Okla.

APRIL 4, 1940.

DEAR SIR: I am in favor of the Bankhead-Jones Act to continue buying farms on long-term time payment. This would help the tenant farmer to help himself more than any other program. I think 160-acre farms should be the limit in the first purchase, then as the tenant got able he could purchase more land.

I do not feel it an injustice at this time but hope in the near future to be able to buy a farm. Would like to see the program enlarged so more could benefit.

Yours truly,

PARK WILLIAMS, *Newkirk, Okla.*

APRIL 2, 1940.

DEAR SIR: Yes, I put in my application 2 years ago this July, but missed last year. I think that it is a great help to the people. The people have something to work for. You take, for instance, the W. P. A. and all the other work program—there are a certain percent of the people when they receive their checks have to have one, two, of three pints of whisky or whatever it might take. I know not one, but several, who work on the W. P. A. who do this very thing.

I hope that the House of Representatives does not turn down this appeal because I do not think that the people are on the outs with the program. I am living in hopes that the next time I put in my application to purchase a farm through the Bankhead-Jones Act that I am one of the lucky ones.

Sincerely yours,

FLOYD HEMPHILL,
Hunter, Okla.

APRIL 1, 1940.

DEAR SIR: In response to your recent inquiry about my reactions to the farm-loan plan, I will say first, I favor the plan as it seems to be the only chance the "little" farmer has of securing a place of his own, as it seems impossible for a renter to make a living and save enough for a down payment.

Naturally, I was disappointed when my application for a farm loan was turned down, but I felt no resentment as the other men had the cash to make a small payment when as I had no cash then. I owed the Government some at the time, but that is paid now, so if the farm loans are to be continued I hope to be a lucky one next time. Hope the loans can be continued on a larger scale next year.

Yours truly,

Mr. and Mrs. O. I. MCINTIRE,
Goltry, Okla.

APRIL 3, 1940.

DEAR MR. FERGUSON: I have your letter of March 30, 1940. Yes; I made application to purchase a farm on long terms. I was very disappointed at the time not getting in. Yes; I certainly would favor the continuation of the program with the hope that some time in the future I would be able to buy a farm on long-term payment. I am staying right in and really believe it is a good thing and the only way for some of us to ever own a farm.

I have a family of six. I have rented this farm for 13 years on 50–50. I have paid Mr. Manley more than $13,000 in rent the 13 years. That would be nearly enough to buy that farm, but it takes nearly $1,000 to keep up my machinery and taxes, doctor, and to care for my family, so at the end of the year I am not much better off than I was at the start. By all means keep it going.

Sincerely yours,

AUG. J. KAHNERT,
Ponca City, Okla.

APRIL 3, 1940.

DEAR SIR: In reply to your letter of inquiry about the farm tenant purchase program, will say that I did apply to buy a farm in Kay County, Okla., and I knew when I applied that I only stood about one chance in a hundred of getting one and I fully realize that we all could not get one. But every tenant is for the program, for we all want a home of our own. That is why we rent and strive to accumulate enough to buy one. I do not believe there is a bit of dissatisfaction about the program. The only bad thing there wasn't enough funds to buy farms.

It is next to impossible to rent a farm in Kay County. Three years ago I rented a farm for cash rent, and in 3 years I paid almost $1,800 worth of cash rent, and a landowner who owns 1 farm and rents 13 more raised the rent and I had to take a very poor farm this year. There are a number of others just like me. That is why I want to have a home of my own.

In the purchase of a farm this way if anything should happen there is always someone willing to go ahead, and if one fails you will still have the land left. It is not buying oil stock. We are all for it, and sometime in the future I hope to be a home owner.

Sincerely yours,

VERN R. TRACY,
Newkirk, Okla.

APRIL 2, 1940.

DEAR MR. FERGUSON: I had my application in to purchase a farm under the Bankhead-Jones Act program last year. I was not accepted, and sincerely hope the program will be continued that I may still have a chance to buy. Even though I should never be accepted, I would not be selfish enough to wish it to discontinue. I would be glad for those who were accepted because they would have the same desire as I, to own their home.

Hoping the program can continue, I remain,

Yours truly,

VINCENT V. TURPIN,
Ponca City, Okla.

APRIL 3, 1940.

DEAR MR. FERGUSON: I received a letter from you yesterday wanting to know what I thought of the Bankhead-Jones Act to provide those wanting to buy farms an opportunity. Some 2 years ago I applied for one of these loans in Garfield County. I was lucky enough to be one of the five to be drawn for the county, but when they drew three for the loans I was left out. I guess this was the lack of funds.

I do think this is a poor man's opportunity if he can qualify. Do all you can to have this program continued. Thanks a lot, Mr. FERGUSON, for your interest in me.

Yours truly,

MARION LEE, *Waukomis, Okla.*

APRIL 4, 1940.

DEAR SIR: Am sorry to hear that there is a possibility of discontinuing the purchase of farms under the Bankhead-Jones Act. I, of course, regret that my application was not chosen but realize that we all can't be selected at once. The plan, in my estimation, surely will be beneficial to the country in many ways. We surely appreciate your efforts in trying to keep it going, as we may be chosen later.

Sincerely yours,

CARL E. HOOVER, *Hunter, Okla.*

APRIL 3, 1940.

DEAR SIR: In reply to your letter on the Bankhead-Jones Act, I think this is a very fine thing, although my application was turned down. I would like to see this plan continued even if I knew that I would never personally get accepted, because it is about the only way a poor man has a chance to buy a farm and live on it.

I live in one of the choice farm sections of the county. They are consolidating our schools because there are only 6 or 8 to the schools where there were 25 or 30. Farm families can't find a place to live with whole sets of farm improvements empty on every side. This is caused by persons who live in the city generally buying the farms that are for sale and hiring some farm boy to put out 4 or 5 for a dollar a day, while the improvements stand empty and rot down. If it were possible for renters to buy farms, it would help overcome this.

Yours truly,

HOWARD WILSON,
Waukomis, Okla.

A Farmer's Wife Expresses Some Sound Thoughts on National Legislation

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1940

LETTER FROM MRS. ALTON FIZZELL

Mr. CRAWFORD. Mr. Speaker, a few days ago there came to my desk what I consider a very important letter written by the wife of one of the farmers residing in my district.

The letter from Mrs. Fizzell contains so many important observations that I feel it deserves a place in the CONGRESSIONAL RECORD.

Everyone who is familiar with the current farm problems and with the high degree of intelligence which the farmers of this country now apply toward the solution of their economic and social problems must realize that our farm people are today, as never before, thinking things through. No longer can political parties or so-called politicians parade around the country and "ballyhoo" the farm people into supporting any and every crackpot scheme that may be designed to trap them into voting for a continuation of a program which experience has demonstrated to them to be unsound.

Some day I hope the intelligence of all political parties and those individuals who operate the machinery of the parties will reach such a high level that they will comprehend what the farmers of this country want and are entitled to is a comparable price for their labor in the form of the farm products which they place on the American market. The industry of farming should not have to depend upon the whims of those who make appropriations and who administer the funds. The American farmer is entitled to a free market and a fair price, and with these factors he would not need appropriations.

ELSIE, MICH., *March 26, 1940.*

Hon. FRED L. CRAWFORD,
Representative, Eighth District, Michigan, Washington, D. C.

DEAR SIR: I have at hand your letter, No. 20, of March 22.

I know that if I do not stop now and take time to write you that it just won't get done.

My husband and I are very glad to get these letters, but I can't say they make us feel much easier in our minds as to the state of affairs.

We are very much opposed to Congress voting more billions to help (?) the farmer. We consider it merely another form of dole and a scheme to win the farm vote.

All the farmer wants is a square deal, not a dole. These sugar-coated reciprocal-trade treaties, why not call it by its good old name, free trade.

These so-called parity payments don't begin to make up to the farmer what they are taking away from him by not protecting the industry by a good high tariff.

We farmers are in much worse shape than we were during the depression. Then our produce didn't bring much, but we could take that little and buy what we needed, according to the price that we were being paid. Now we are on this sort of basis: For instance, in 1932 I sold eggs for perhaps 9 cents or 10 cents per

dozen. Now I sell for 13 cents, and buy a yard of cotton print and pay 19 cents. In 1932 I bought the print at 9 cents per yard.

It makes me depressed to see the people losing their farms. They just can't pay for them. You can't keep a farm up, live, and buy machinery. And who is buying those Federal loan farms? Wealthy city people, and they are keeping the farmer owners on as tenants. How many young people do you see starting out buying their own farms these days? Not many. Several people in our own neighborhood have had this happen to them, and through no fault of their own. It must be a bitter experience.

It is the great middle class that are taking the beating. The wealthy people don't know what it is all about, and the lower class are enjoying the "more abundant life."

Every time you have a chance, vote against anything that smacks of centralized government. I know that it is a great deal to expect of just one man in Congress to do much about all this, but do what you can, and we folks back home will appreciate it.

It's like voting; one vote doesn't count much, seemingly, but it does count, and I intend always to be there to cast mine as intelligently as possible. Then I have done my duty, and that's all any good citizen can do.

I am enclosing an editorial and cartoon from the Lansing Journal which I think are very apt and express conditions much better than I could. The majority of the farmers in our locality are against these large appropriations for farm relief.

It is just too bad F. D. R. can't think up a few more asinine schemes like this inter-American bank. I wish they would let the farmers have a little of that gold to buy some of the things they so badly need and cannot afford to buy.

How about shorter hours and more wages for farm folk. Will they never find out that when the farmer doesn't prosper the Nation doesn't, and vice versa.

Depression, recession, and the whole 7 years a magnificent obsession.

Respectfully yours,

MRS. ALTON FIZZELL.

What Good is Gold?

EXTENSION OF REMARKS
OF
HON. CHARLES L. GIFFORD
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

Mr. GIFFORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which is of real interest on the gold problem:

[Wirtschaftsdienst, XXV, 201, March 15, 1940]

WHAT GOOD IS GOLD?

People in the United States have recently been giving more attention than before to the future of gold, especially to the future of America's gold. Until lately it has been Europe's privilege to debate the indispensability of gold for currency, for note coverage, for bank reserves, and for settling international balances, and, with certain reservations, to deny that indispensability. Now, the problem has reached a pass when the Federal Reserve Bank of the United States, through its technical adviser, Dr. Goldenweiser, raises the question, what good is our gold? No very definite answer has been given. The best thing would be if the gold would go away of its own accord. But, there is no definite answer. To be sure the Government might give the people back the gold which it took away from them some years ago. They would be glad to get it, quite apart from its convenience for paying current bills. But, would they be so ready then to purchase Government obligations which pay them almost no interest? If, on the other hand, the gold is kept in the possession of the Government it is serving no useful purpose, for it is inconceivable that more than a small fraction of it could ever be used for making payments abroad. Quite the contrary.

Everything indicates that the flow of gold to the United States has far from ended, and people are beginning to take seriously the suggestion that it will not end until all the rest of the world has been stripped of its gold and all the gold mines have become American property. Furthermore, America's huge hoard of gold is not free from danger since it keeps the Government, the Federal Reserve Bank, and the credit system exposed to inflation. This danger may be exaggerated by many. Nevertheless, it is certain that the United States will never get any profit from its gold. No one will ever take it back at what the American Government paid for it, and the latter will have no choice except to depreciate it or to devalue it entirely. Why, then, does not the Government do something to stop a further inflow of gold? Goldenweiser says that a sudden stop to American gold purchases would create chaos in the exchange market. A desire to keep the American exchange market as stable as possible in the present parlous times is alleged to be the principal motive for the Government's buying gold. So we are to understand that the United States is monopolizing the world's supply, not in its own interest, but for the benefit of the world at large.

It is very evident that any changes in our monetary policies are viewed with alarm by those in authority, although they all now seem willing to acknowledge that what we have done and what we are doing is leading us into most serious consequences. Would it not be better to act courageously now? The longer we hesitate, the more disastrous the results.

Pending Sugar Legislation

EXTENSION OF REMARKS
OF
HON. JAMES F. O'CONNOR
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

STATEMENT BY HON. JAMES F. O'CONNOR, OF MONTANA

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement which I made recently before the Committee on Agriculture of the House in support of sugar legislation:

Mr. Chairman, if there is one proposition that deserves the support of every Member of Congress, it seems to me it is the proposition that the American market belongs, first, to the American farmer, the American businessman, and the American laborer.

Because I believe in this proposition, myself, so strongly, I appear here today, gentlemen, to throw every bit of influence and strength that I have behind the proposed legislation to continue the existing laws for the benefit and assistance of the American sugar growers, and for the American businessmen and American laborers who derive their profit and their wages from the production and sale of American beet and cane sugar.

It may be difficult for you and I to understand, gentlemen, but there are persons of prominence in this administration who apparently are determined to strike down the great American sugar industry and to continue the operation of a policy that may well be called "Be good neighbors to producers in other countries first, and let our own American farmers have what is left."

I want to say right now I condemn their attitude and I propose to do everything I can to defeat their purpose. I say, let's be good neighbors to our own people first and to outsiders afterward.

It is a simple matter to state the aims of those of us who are supporting the proposal for new sugar legislation. I believe I can make the situation clear in a very few words.

The condition of our American sugar beet and sugarcane industry is, at least partially, an outgrowth of the World War, which found the Federal Government encouraging and stimulating production of sugar as a vitally necessary food product. Our industry was helped by the Government and overexpansion was a natural result. Conditions within the industry became so critical for all participating that the administration investigated the problem and in 1934, at the recommendation of the President, mind you, Congress passed the first Sugar Act.

This law was projected as an attempt to safeguard the interests of consumers, farmers, and processors. It brought relief to all concerned, but it obviously was not a perfect law and was not so regarded by anyone. Before the law expired Congress in 1937 passed another sugar act, extending the provisions of the first law with certain refinements and revisions.

As we all know, the major features of the sugar legislation are the quota system to hold production to certain limits; the processing tax, and the payment of benefits, out of this tax, to the farmers who grow the sugar beets and sugarcane.

Because of the tax feature in this law the sugar program pays its own way. I want to specifically get it over to the committee that our producers take part in a farm program that doesn't cost the Government or the taxpayers a single cent. In addition, I wish to point out that according to the record of the Agricultural Department the retail price of sugar to the consumer has been lower under the operations of what is known as the sugar legislation or the quota system than it was under the tariff laws.

And, yet, now, when we all agree that the sugar industry is facing the same distress that brought about the enactment of the original Sugar Act, we find some who don't want new legislation to continue this program. We find some who say, in effect, "Now, let's don't do anything for the sugar beet and sugarcane farmers in our own country until after we've taken care of the farmers down in Cuba."

Why, gentlemen, it is a perfectly preposterous situation in my opinion.

Let us examine, briefly, just what these foes of our own farmers actually are accomplishing through their so-called good neighbor generosity. Let us see what is actually happening.

First, according to figures furnished by Director James W. Young, of the Bureau of Foreign and Domestic Commerce, of the Department of Commerce, our exports to Cuba in 1939, including all reexports, amounted to $81,643,791, while our imports were $104,930,345.

In other words, we were told that we must buy from Cuba so Cuba, in turn, could buy from us. And see what happened. Look at the official figures. While we were selling Cuba $81,000,000 worth of goods, we were buying back $104,000,000 worth.

And what were we buying? Why, we were buying, principally, Cuba's sugar in competition with our own sugar, production of which was held down to quota limits. In short, we let our own farmers grow about 29 percent of the whole sugar market. We gave away the 71-percent share of the market to Cuba and the producers elsewhere.

And yet, even that isn't the worst of this preposterous story. Consider this testimony, as it was presented on the floor of the Senate by Senator ELLENDER, of Louisiana, only a short time ago. He said:

"Senators, listen to these facts: The number of mills in Cuba aggregates 174. The number of mills that are owned and controlled by the United States citizens is 67. The production of sugar from these 67 mills aggregates 55.75 percent of the entire production of the island. That shows that Cuban capital owns about 55 mills, and the percentage of production of sugar on the island by Cuban-owned mills amounts to 22.2 percent.

"The other mills on the island belong to citizens of Spain, Canada, England, France, and Holland. These figures show that in respect to the entire production of sugar in Cuba, 55 percent of the benefit payments that accrue to Cuba find their way back to New York."

So, then, what really happens is this: Our good-neighbor policy, supposedly for the assistance of the Cuban farmer, supposedly to help the Cuban farmer buy more American goods, actually is working out so that the chief benefits go to the financial interests in Wall Street and in other countries who own most of the Cuban sugar industry.

And for this our American farmers must suffer. Is it any wonder Montana beet growers write me and demand that this situation be corrected. They are entitled to action.

I favor enaction of new legislation to continue and improve the present Sugar Act. I think, first, it should be continued without limitation. I think it should, as has been proposed in H. R. 8746, take steps to give the American sugar producer a parity price for his sugar.

If the officials in charge of the sugar program want to be fair with our American farmers, they will say to them "go ahead and produce all you can to fill the needs of the American market. Be assured you'll get a fair price for your crop. If you can't produce all our country needs, then it will be time enough to look to outsiders to supply any deficiency."

I am in favor of, and I hope to see put into the new sugar bill, gentlemen, amendments necessary to gradually increase the percentage of the market allotted to the American farmers, so that the American farmers not only can grow but, what is more important, can be assured that they can sell what they grow.

I think this increasing-scale percentage should be:

For 1941, 58.37 percent.
For 1942, 61.28 percent.
For 1943—63.73 percent.
For 1944—66.27 percent.
For 1945—68.26 percent.
For 1946—70.34 percent.
For 1947—71.74 percent.
For 1948—73.17 percent.
For 1949—74.63 percent.
For 1950—76.12 percent.

For each year thereafter, until the requirements of American consumers are wholly filled by our own American farmers, I feel the percentage should be increased annually by 2 percent over the percentage for the year immediately preceding.

I think the law should be written with such provisions as are necessary to adjust the allotments of our market to outside producers in accordance with this guaranteed allotment to our own American farmers.

I am reliably informed that Congressman Lemke will offer an amendment to the Cummings bill, providing for the increasing scale percentage herein set forth, and I am for and approve such an amendment and urge its adoption by the Committee.

In support of this amendment I wish to point out that in our sugar beet producing States that sugar beets and beans are produced on land that is artificially irrigated only. They are our two main cash crops. Refusing to enlarge our sugar-beet acreage in such territories does not make sense with our Federal reclamation program, as such restrictions of production necessarily conflicts with Federal reclamation expansion.

I insist, gentlemen, that in writing this sugar bill we make the American sugar farmer the first "good neighbor" to be considered. He is the man we should help first. To him and to the American businessmen and American laborers who have a part in our great domestic sugar industry—to them should we give the American market.

H. R. 8748

EXTENSION OF REMARKS

OF

HON. JAMES F. O'CONNOR

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

STATEMENT BY HON. JAMES F. O'CONNOR, OF MONTANA

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the House Committee on Agriculture:

Mr. Chairman, and members of the committee, I heartily endorse the provisions of H. R. 8748. It, in a measure, will assist in the solving of some of the farmer's problems. In considering this bill, I think it well to bear in mind the percentage of the land owned by the Government as a result of foreclosures and the land owned by private lending agencies as a result of the same procedure and the number of families that have been forced from farms as a result of foreclosures.

LAND OWNED BY GOVERNMENT AS RESULT OF FORECLOSURES

"Land owned by the Federal land banks and land bank commissioner totals approximately 7,000,000 acres. This is about two-thirds of 1 percent (0.664 percent) of all land in farms.

"As of December 31, 1939, the Federal land banks and land bank commissioner held 35,426 farms, including sheriff's certificates and involving an investment of $155,331,130." (Source of data: Bureau of Agricultural Economics, Farm Credit Administration.)

LAND OWNED BY PRIVATE LENDING AGENCIES AS RESULT OF FORECLOSURES

"Holdings of three principal groups of non-Federal lending agencies (life-insurance companies, joint-stock land banks, and three State credit agencies) total about 21,000,000 acres. This is about 2 percent of all land in farms." (Source of data: Bureau of Agricultural Economics, Farm Credit Administration.)

NUMBER OF FAMILIES FORCED FROM FARMS AS RESULT OF FORECLOSURES

Foreclosure data not helpful in that farmer foreclosed upon may become renter on the same or another farm.

"There is a net migration, however, from farms to cities. Farm population estimates for January 1, 1939, show that more persons moved from farms to villages, towns, and cities than moved to farms during 1938. It is estimated that 1,025,000 persons left farms and that 823,000 persons moved to farms."

The farmers in the past have been paying the highest rates of interest, at the same time offering as security for repayment of their loans and interest, the very best security we have in this country. The provisions with reference to reducing interest rates on land-bank and land commissioner loans will be of particular benefit to the farmers. This provision is covered in section 2A of the bill. Section 2–B also contains an excellent provision, providing that the interest rate of defaulted payments or on taxes, liens, judgments, or assessments, if not paid when due, shall bear 3 percent interest.

The provision for abolishing the requirement that borrowers purchase stock in their local farm association is indeed another splendid step for the Government to take. Many borrowers, to my personal knowledge objected to the purchase of stock, regarding such a purchase as a liability rather than an asset, as his shares were held as collateral security for the loans of other borrowers through his association. Such a provision necessarily penalizes borrowers who make good. The provision with reference to refinancing is likewise a needed one. Farmers will be furnished in one word more safe and certain credit and are not so likely to lose their homes.

Generally speaking, I may say that the chairman of the Agricultural Committee of the House and Senator WHEELER, of Montana, are indeed to be congratulated for introducing this bill and a like bill in the Senate. It will go a long way toward relieving the distress of the farmer. It is not a complete answer, however, to the farmer's problem. Some thought must be given by Congress later with reference to taxation. The farmer is made to bear an exceptionally heavy burden because the farmer must accept what he is offered for his products—not what he asks for them—he stands by himself in being unable to budget his taxes. His taxes vary little from year to year although his income from the land is subject to wide fluctuations. Simply, the manufacturer, and even the wage earner, pay a percentage of their volume—whether it is manufactured goods or wages—as taxes. The manufacturer sets the price on the article he makes. He can include the tax in the price he sets as its selling price. The wage earner knows how much he will receive, and can budget his tax bill as he knows exactly how much he will pay. If the farmer could pay his taxes in bushels of wheat or bales of cotton, he could more nearly budget his taxes. But in years when wheat is selling at 50 cents a bushel, it takes twice as much to pay his taxes as it

would in years when the price is $1 a bushel. The capacity of his land to produce more does not vary with prices received. As a result, there is a disparity not only in the price he receives, but in the taxes he pays as well.

In this connection, I wish to call the committee's attention to another outstanding inequity concerning taxation. That is, the amount of tax-exemption securities outstanding:

Amount of tax-exempt securities outstanding

[Billion dollars]

1930 (June 30):	
States, counties, cities, etc. (wholly exempt)	15.1
Territories and insular possessions (wholly exempt)	.1
Reconstruction Finance Corporation (partially exempt)	.8
Federal Home Loan System (partially exempt)	2.8
Federal Farm Loan System:	
Wholly exempt	1.2
Partially exempt	1.3
Total	2.5
United States Government:	
Wholly exempt	7.3
Partially exempt	24.2
Total	31.5
Grand total:	
Wholly exempt	23.8
Partially exempt	29.5
Wholly and partially exempt	53.3

This committee, of course, has nothing directly to do with relieving the situation created by these tax-exempt securities but all of these tax problems are tied in with the burden placed on the farmer and as we go along and as our Government becomes more complex and more expensive, the burden on the farmer increases accordingly. As an illustration, according to the latest published information by the Agriculture Department in pamphlet form we are advised that in 1932 and 1933 it required the farmers to sell an average of three and one-third times as much produce to pay their taxes as they sold for the same purpose in 1913. This comes about because farm taxes mounted while income of the farmer was sharply reduced. Illustrating, gross income per acre in 1932 was only 66 percent of that of 1913 as contrasted with real-estate taxes per acre at 189 percent of 1913. In other words, taxes in 1932 were 89 percent above, while gross income per acre was 34 percent below the pre-war level. (Authority: H. Doc. 406.)

We must broaden, in some fashion, the base of taxation. I realize, of course, that the great burden is placed on the farmer by local taxation. However, the Federal Government is deeply interested in a just revision of State, local, and Federal taxes to try to bring about a more equitable distribution of the burden of Government costs throughout. In broadening the base of taxation, we should include taxing the income from tax-exempt securities. This Committee, composed as it is of able and learned members, should give some thought, at an early date, to the question of taxation. If some relief is not afforded to place the burden of taxation upon the taxpayers of this country, in accordance with their ability to pay, the farmers' now disastrous condition will gradually become worse.

The farmer, in the past, has been actually eaten alive by the exhorbitant rates of interest, exacted from him by loan sharks of all kinds, and unconscionable commissions that had been charged him. The foregoing, together with the heavy burden of tax placed on him, coupled again with his low income, places him in a disastrous position and his future is really dark. It makes no difference which way he looks—it looks bad. This bill will answer, to a certain extent, the interest problem, the credit problem, and some of his other difficulties, but, of course, it will not answer the tax question. My own thought is that the question of tax cannot be answered unless we adopt either the cost of production theory, or proceed in some way on a plan of income tax based on the policy that we must pay our tax in accordance with our ability to pay. It might be suggested that the farmer stands out practically alone as having the kind of property, both real and personal that the assessor can find. Hence, under the present system, he must pay or lose his home—and that is happening every day.

British Propaganda Film

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

Mr. THILL. Mr. Speaker, a propaganda film which glorifies England's part in the present European war is being presented in the theaters of America. The title of the cinema production is "The Lion Has Wings," and it is produced by Alexander Korda. It is a London film production released through United Artists and narrated by Lowell Thomas. Emanuel Silverstone and Morris Helprin are listed as the agents of Alexander Korda Film Productions, Ltd., under the alien-registration law. Why must American citizens be subjected to such movie productions when practically everyone will admit that the motion picture The Lion Has Wings is an attempt to propagandize and influence American public opinion in favor of Great Britain? The following movie review article appeared in the Washington Post, March 7, 1940. It presents a short summary and review of the motion picture The Lion Has Wings.

LITTLE

Like an H. G. Wells forecast in terrifying reality, The Lion Has Wings is an avowedly propaganda film, at once ugly and fascinating. Made through the cooperation of the Royal Air Force, the Alexander Korda production opened yesterday at the Little Theater.

No matter how much one may wish England to win the war against Hitlerism, this film is a disturbing experience, a grim ultimatum that in wartime intelligence goes on the shelf while life is disorganized for a parade of destruction. Factories turn out death missiles, the triumphs of life becoming the deaths of others. Smiling Englishmen and grim-faced Nazis reflect the disease of civilization.

The Lion Has Wings is presented not only for its unquestionably interesting picture of how the war is being waged, but as an example of propaganda. One can only be thankful that here we are able to analyze its approach rather than be influenced by it.

Noncomparative things are compared. All Nazis goosestep; they have none of the traditional sports of the English. Death, when it comes to the flying English, come gloriously and off screen; but the Grim Reaper sends the taut-faced Nazi plummeting earthwards in his airplane in full view of the camera.

The details of modern war making are strikingly revealed. The amazing central control room from which all fighting planes are directed, where it is possible to listen by radio to a sky battle hundreds of miles away, and the R. A. F. in action over the Kiel Canal are tied together in a slim story which only years of future suffering can possibly conclude. Lowell Thomas voices the preliminary narration. Ralph Richardson, Merle Oberon, and June Duprez are the "names" in a cast drawn from England's fighters.

R. L. C.

National Labor Relations Board Bears Swords Instead of Scales

EXTENSION OF REMARKS

OF

HON. EDWIN A. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

ARTICLE FROM AMERICAN LAW AND LAWYERS, A NATIONAL WEEKLY LEGAL PAPER PUBLISHED IN CINCINNATI, OHIO

Mr. EDWIN A. HALL. Mr. Speaker, the following article is by Col. O. R. McGuire, a bar leader and general counsel of the American Good Government Society of Washington, D. C.

[From American Law and Lawyers]

SAYS BAR PLAN WOULD PREVENT UNFAIR RULINGS—TESTIMONY IN LABOR BOARD PROBE HELD TO SHOW VALUE OF LOGAN-WALTER MEASURE—CIVIL SERVICE URGED, TOO

WASHINGTON.—Testimony offered at the Smith committee investigation of the National Labor Relations Board proves beyond doubt that there has been inadequate administrative control and inadequate judicial review of the Board's factual decisions, according to Col. O. R. McGuire, chairman of the American Bar Association's committee on administrative law.

To the leader in the American Bar's campaign for legislation designed to bring the Federal bureaucracy under control, the Labor Board hearings have been an object lesson pointing to the necessity for a measure such as the Logan-Walter bill.

BEST AIMS DISCREDITED

The best objectives in Government may be discredited and defeated, Colonel McGuire declared, when:

1. Administrators come bearing swords instead of scales.

2. Administrators believe they have a mission to perform instead of administering the law as written.

3. Subordinates are able to threaten citizens.

4. Employees may attend meetings of either workers or employers at the expense of their hosts.

5. The record of hearings before examiners are such that they fail to show upon appeal to the Board or on review in the courts what actually transpired.

6. There are consultations between examiners and trial attorneys, with employer or employees or both excluded.

SUBJECT TO PRESSURE

It must be noted in mitigation of the Labor Board's faults, Colonel McGuire continued, that it has been subjected to pressure in the selection of its subordinates because it did not have the protection of civil-service laws.

"No administrator can build a permanent force under such a system as that prescribed in the law for the Labor Board. The same situation exists as to some of the other boards and commissions created since 1933 and some subordinates of such boards not only resent any attempt to bring them under the control of the law but they even go to the extent of opposing any attempt to subject appointments of examiners and attorneys for such agencies to the requirements of the civil-service law. Even where the heads of the agencies are sympathetic to both control by law and to civil service, these bureaucratic subordinates are able to make such reforms most difficult to obtain."

WOULD CORRECT FAULTS

Colonel McGuire added that the Logan-Walter administrative law bill would correct most if not all of the defects in the Labor Relations Act by requiring regulations to be issued after public notice and public hearing, subject to judicial review for the guidance of attorneys and examiners in the field; also, by requiring the record of all that transpired at the hearings to be openly, fairly, and accurately made for use on appeal to the Board or on review in the circuit courts of appeal, with the courts having sufficient jurisdiction to review and reverse the findings of facts when not reasonably supported by record evidence.

"Garrison at first and now Madden had a difficult job to perform," said McGuire, "and they have not always had the assistance of qualified and unbiased colleagues. Neither have they had procedure laid down in the law for their own guidance of their subordinates. I have many times pointed out that it is impossible for the head of a governmental agency to be informed as to the action of his subordinates unless such subordinates are compelled to make a proper record so that bias, mistakes, and ineptitude may be brought to the attention of such head.

"I believe that this investigation has already demonstrated that the Logan-Walter bill should be enacted into law at the earliest possible date so as to correct the defects uncovered in the administration of the Labor Relations Act and similar defects which could be uncovered in a number of other agencies if they were subjected to a similar searching investigation." After that will come reforms in the methods of selecting personnel pursuant to a selective civil-service law to man such agencies."

Checkrein for Bureaucracy

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

ARTICLE BY HON. RAYMOND S. SPRINGER, OF INDIANA

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks, I include the following article by the Honorable RAYMOND S. SPRINGER, my esteemed colleague from Indiana, which appears in the April issue of the National Republic:

[From the National Republic for April 1940]

CHECKREIN FOR BUREAUCRACY

Drastic developments in European history during the past few years have brought on conditions under which many of those countries now find their destinies subject to the whims and fancies of ambitious men who have usurped the power of "government by law" and established dictatorships. We abhor such forms of government, yet, perhaps, fail to see the existence in our own Government in Washington a startling parallel to the very methods by which those tyrants rose to power.

For the past 50 years the trend in our Nation has been away from "government by law," based on our fundamental concept of constitutional democracy, and toward a "government by men." The origin of this trend may be conceived as an inevitable necessity to supply methods of administrative regulations required to meet the expansion of Government concurrent with the rapid growth of our social and economic life. But the danger lies in failure to provide adequate safeguards against the usurpation of fundamental principles; against human weaknesses, and man's inhumanity to man.

The tendency toward expanding the powers of the Executive in Washington by creating administrative agencies with authority to regulate and control activities of the governed has increased manyfold in the last decade. Today there are one-hundred-and-thirty-odd administrative agencies of the Federal Government, not including the various bureaus into which the departments are divided. In addition to the great number of agencies in Washington there are scattered throughout the country a vast number of subsidiary offices of these agencies, each with its many officers and employees with discretionary powers to regulate and control. Thus is established in our Government in Washington, and throughout our Nation, an army of regulators whose conduct and control may be a real and potential menace to our democratic form of government.

To say that the danger in this situation is merely potential, and with ungrounded claim for real fear, is not true. There have been many instances where administrative officials have assumed authority beyond the written law. These instances have occurred in nearly every channel of enterprise and trade which, under our rapid social and economic advancement, has been subject to some degree of governmental regulation. Labor, industry, and agriculture alike have experienced unpleasantries of varying degree from the aberrations of a minor official to the administrative absolutism of a bureau chief.

There was a case in which a matter of law was preventing the introduction of certain documents as evidence in a hearing being conducted by a Federal commission in Washington. The Government's attorney had moved to have these documents admitted over the defense counsel's objections. The defense counsel insisted that under the rules of evidence the documents were inadmissible. The commission judge, with full power over the hearing, informed the attorney for defense that he (the judge) "would make a law" to fit the occasion. He legislated accordingly and the evidence was admitted.

The Federal Communications Commission not so long ago was forced by a storm of popular protest to rescind a ruling regarding the sale of time on the air for the discussion of controversial subjects. There was no available judicial remedy.

A few months ago the then Director of the Wage and Hour Division of the Department of Labor devised a policy which would have had disastrous effect on the small country weekly newspapers. At once he was besieged by protests from Members of Congress on both sides, and immediately he took steps to so clarify the ruling as to remove the objectionable features. Again there was no legal remedy.

These are instances where lusty and powerful groups were injured and whose protests could not be ignored. But the essence of democracy is to extend the protection of justice to otherwise defenseless minorities. For every case where public protest was effective there are scores of obscure cases where inarticulate groups and individuals must suffer in silence under the tyranny of man-made rules that contravene law-made rules.

The cause for the controversy which sprang up over certain questions to be incorporated in the taking of the census can be ascribed to an act of administrative absolutism. In the tempest over some of the questions to be asked, Senator CHARLES W. TOBEY (Republican, New Hampshire) points out that the questions to which he objected were not a matter of law. They were placed in the census questionnaire by the Secretary of Commerce, who, under the law is given the power to phrase the questions. Senator TOBEY'S objection was on the ground that the questions exceeded the law. In a letter to President Roosevelt he said, "If * * * an unauthorized ruling of a departmental bureau constitutes a law of the United States, then it is important that the people recall that such were the tactics of Hitler in gaining powers never sanctioned by the people. It is time to call a halt to attempts of departments to arrogate to themselves the function of a legislative body * * *."

In my district in Indiana there is now being conducted an investigation of a case in which a subscriber to the program of the Agricultural Adjustment Administration was ordered by a local official of the A. A. A. to mow down a certain percentage of his wheat acreage before it ripened. In answer to the farmer's protest that the order was not consistent with his total acreage the official assured him that it was the order of the county committee and must be complied with. Assuming that he had no choice but to obey the order, the farmer followed instructions, with the result that he was compelled to purchase seed for his next planting. As this is written a report of the investigation has not been received, but it is only reasonable to believe that if the order is shown to be in error the farmer still has no recourse to compensation. A similar case in another Midwestern State resulted in a reprimand from Washington being directed upon the State, county, and local officials, but left the farmer to suffer his loss.

These are but a few of the examples of the trend toward "government by men," and the abuse of uncontrolled discretionary power to regulate and control. When a rule adversely affects a given group sufficient pressure may be brought to change or qualify the rule; or when the action meets with the disapproval of the majority of the citizenry popular protest will nullify it; but when a single individual or concern is caused to suffer there is no choice but to bear the burden of "the forgotten man" with no right of appeal.

Regulation by commission began to attract attention long before the advent of the present administration, but the rapid growth of a tendency toward increased regulation, combined with the realization of a strange parallel to the trend which has culminated in totalitarian governments abroad, has brought an increasing demand for "a law to regulate the regulators." Documentary evidence of congressional heed to this need and demand lies in a bill introduced in the House of Representatives by Congressman FRANCIS E. WALTER, Democrat, of Pennsylvania, and in the Senate by the late Senator Marvil M. Logan, Democrat, of Kentucky. This bill, the so-called Walter-Logan bill, was prepared to meet the long-standing and ever-growing need for an administrative law act. The American Bar Association, and other groups interested in trends which endanger our "government by law," have recognized the need for, and urged the passage of, such an act.

As a minority member of the Judiciary Committee in the House of Representatives, of which Congressman WALTER is a ranking majority member, I have come to know and respect the man as a sincere believer in the preservation of constitutional rights and liberties. And as a member of the Judiciary Committee it has been my privilege not only to become familiar with the Walter-Logan bill, but also to make a study of the actual need for an administrative law. I am thoroughly convinced that recognition of the need alone influenced Mr. Walter to sponsor the House draft of the bill, and it was my pleasure to concur in the favorable report of the committee.

In order further to understand the need for an administrative law act it is best to look briefly over the developments in government upon which the tendency toward "government by men" has been permitted to feed.

Every schoolboy knows that the Constitution of the United States divided the power of Government into three parts, each acting as check on the other. The legislative power was vested in Congress; the executive and administrative powers in the Executive, and the judicial power in the courts. But, despite the fact that it was necessary for Congress to extend the administrative officers and agencies certain discretionary powers, it was never intended that those agencies should assume unrestrained legislative, executive, and judicial powers beyond constitutional provisions.

The statutes of 1789 created discretionary authority for the issuance of rules and regulations. Under these statutory provisions a system of complete review of administrative decisions of Federal agencies, both as to the law and the fact, was carried on by the courts until the turn of the present century. The trial-and-error method, at that time not involved with the complications of our present-day economic and social problems, sufficed until rapidly changing conditions drastically altered this practice of review by the courts. Later statutes, creating additional administrative agencies, in a great many instances provided for judicial review of administrative decisions. At the same time, however, many restrictions were placed on judicial review by these same statutes. In a recent United States Supreme Court decision the National Labor Relations Board was held to be free from judicial supervision regarding its findings of facts, although the facts were disputed.

There is a noticeable lack of uniformity, in statutes creating new Federal administrative agencies, of provisions for the scope of judicial review, and none of them contain provisions to establish the practice and procedure to be followed by the agencies in conducting hearings and deciding controversies. A few of these statutes provide that the decision of the agency is final and conclusive, only if supported by substantial evidence; in others, if supported by evidence; but some simply provide that the decision shall be final and conclusive.

Under this system it is not at all surprising that many of these administrative agencies consider themselves above the law, and practice a contemptuous disregard for both the Congress and the courts.

For obvious reasons it would be both impractical and impossible to abolish all of these administrative agencies. However, I do believe that those created for political reasons and others which have outlived their usefulness could and should be done away with. All those which are essential counterparts of the Federal Government and necessary to the needs of government should be subject to, and assisted by, "a uniform procedure for administrative determinations and for judicial review thereof to see that the administrative agencies remain within the terms of the law, both in the hearings accorded and in applying the law to the record facts." The Walter-Logan bill proposes to supply that procedure.

The bill (H. R. 6324) providing for the more expeditious settlement of disputes with the United States, and for other purposes, is not a hastily drawn bit of proposed legislation. For more than 3 years it was carefully considered by the American Bar Association. The principles have been approved not only by the board of governors and the house of delegates of that association, but also by the State bar associations of California, Colorado, Illinois, Nebraska, Ohio, and Oregon. Approval has been given the bill by the committee on administrative law of the National Association of Women Lawyers, the city bar associations of Boston, Cleveland, Dallas, St Louis, Phoenix, and Philadelphia, and undoubtedly additional bar associations will submit their approvals from meetings scheduled through the coming months. The bill is also acceptable to a number of associations and organizations of business and labor.

When the objectives of the bill, already approved by many nationally representative groups, associations, and organizations, become familiar to the country at large, there will unquestionably follow from the citizens who see the dangers of arbitrary rule by centralized government, hearty support for a legislative measure which proposes to curb the tendency of Federal agencies to exercise arbitrary and tyrannical administrative powers beyond the law.

In the studious consideration given this bill before its final drafting every effort was made to avoid all possible objectionable features, and particular attention was directed toward making it feasible without creating provisions that would in any way tend to retard the functions of administrative government or burden the judicial. That this effort was successful to a high degree is evidenced by the fact that the bill, after an exhaustive study by the Judiciary Committee, was unanimously reported by the committee with but little change from the original draft.

The progress of the bill in Congress has been satisfactory, but not too rapid to be consistent with its scope and importance. As this is written, its consideration has been temporarily postponed by legislative procedure which caused the measure to be stricken from the Consent Calendar, which action will necessitate its being reported under a rule. The rule has already been secured, and there is every indication that it will receive favorable action, which will bring the bill, H. R. 6324, to the floor of the House for debate and final action perhaps fairly concurrent with the appearance of this article in print. The companion bill in the Senate, S. 915, has been reported by the Senate Judiciary Committee and awaits consideration by the upper house. In the last session of Congress this same bill was passed by the Senate under a unanimous consent rule, but was rescinded at the request of Senator MINTON (Democrat, Indiana).

I would not be so presumptuous as to declare that the Walter-Logan bill will be a cure-all, but I sincerely believe that it represents a step in the right direction for removing unlimited power from the hands of administrative officials—a condition which, if permitted to continue without restrictions, can but mean the eventual loss of constitutional rights and liberties in America.

Communism in America

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

ARTICLE BY SOTERIOS NICHOLSON

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article entitled "Communism in America" which was written by Mr. Soterios Nicholson, distinguished Washington lawyer and author, which appeared in the California Greek Newspaper of February 16, 1940. Mr. Nicholson is a leader among Greek-American citizens of this country and his views concerning the dangers of Communism are worthy of careful thought and attention. He was born at Kalliani, Corinth, Greece, educated in Tripolis and Athens until 1903, when he came to the United States to complete his education at Emerson Institute and George Washington University Law School. He entered the United States Army during the World War and won a captain's commission, and served in various distinguished capacities. He has been admitted to practice law in the District of Columbia, Maryland, and Michigan, and before the Supreme Court of the United States. He is the

author of two books and is a former supreme counselor of the Greek-American Order of Ahepa. His article on Communism follows:

COMMUNISM IN AMERICA

WASHINGTON, D. C.—The freedom of speech and of the press, guaranteed by the Constitution of the United States to every person living within the borders of this great wide country, has been misunderstood and frequently abused by a certain class of people. One cannot very well blame the average man, woman, or child who listens to a flowery speech or reads some articles inspired by communistic propaganda and believes misstatements uttered or written about the fine work some other country or countries are doing contrary to our principles of government.

LET US EXAMINE THE CAUSE AND EFFECT

The main reason for being convinced in any argument is the novelty of the thing. Human beings are eager for more knowledge, and, particularly so when they hear or read something different than what they have known before. Another reason is the general and individual dissatisfaction of existing conditions. There are other factors, but those are the main points to discuss for our purpose. The first one—eagerness for more knowledge—is not confined to the educated class alone but to all classes. Of course, there are exceptions. The so-called educated class, however, analyzes the pros and cons and makes its own deductions. Some people of this category—nay, even professors—conclude contrary to what one may logically expect. Conversion of some of the people of this class to communism is the most dangerous. The reason is obvious. They have the faculty and ability to enlarge the arguments in favor of this theory and make it easier understood and more attractive for general consumption, though untrue.

The other cause—dissatisfaction—has more followers, because, when the people are discontented with their economical welfare, they are willing to have a change in usual forms of government or conditions and are ready to try anything for the better. It is this group which is the prey of Communists. The disapproval of existing conditions makes the mind of such a people more receptive of the change, and, hence, more supporters of the theory.

The effect is now happily understood by both classes of people above-mentioned, and they less and less adhere to the cause of communism. They understand that such a philosophy is unworkable, destructive to the natural initiative of each person, and, instead of bringing freedom to the individual or equality to all, as has been advocated by the proponents, it conclusively produces restraint, slavery, and autocratic powers to one individual, whose aim is not to look after the welfare of all the people in his realm but to his immediate supporters only.

Fortunately, the American people do not "fall" as easily as it was apparently thought by Communist leaders. Americans know how and when to show their displeasure of prevailing situations. They will do it in their own way—the constitutional way, the change of leadership, the polls. No one should be afraid of the state of affairs in America. If in doubt, look at the other countries of the world.

It is generally agreed that the United States should be still in a better position than it is today. It is a country of plenty, and yet there are people who actually starve, depend upon charity or dole. There is undoubtedly something wrong, but this eventually will be corrected. There are many elements as contributory causes for prevailing conditions. Too many to discuss in this short article, but the remedy lies with us—the people. One of the main causes of this condition is the lack of faith. Let us think of better times with faith. Instill faith in the youths of America. Keep them away from destructive elements—atheism, communism, and the other "isms." Their tender minds are apt to go in the wrong direction. It is not their fault. They are eager to learn. Their parents, teachers, professors, politicians, high officeholders, etc., should explain the difference very carefully so that they may see the right from the wrong way. Do not keep them in ignorance, but explain to them the truth. Then, and only then, we shall construct a better America for tomorrow.

Amendment of the Wage and Hour Act

EXTENSION OF REMARKS

OF

HON. GRAHAM A. BARDEN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1940

RADIO ADDRESS BY HON. GRAHAM A. BARDEN, OF NORTH CAROLINA

Mr. BARDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me recently over the radio:

My friends of the radio audience, the question, Shall the Barden amendments, H. R. 7133, be adopted, is one that I, together with practically every farm organization in America, and millions of agricultural people, very definitely answer in the affirmative? For the purpose of giving the background for these amendments, let me say that after the Wages and Hours Act had been in effect several months, it was discovered that Congress had not only failed in many instances to clarify the law, and provide adequate machinery with which to apply it without considerable dislocation, but had left certain phrases and terms open for interpretation, and when interpreted by the then Administrator, Mr. Andrews, he not only refused to recognize the exemption intended, and granted agriculture and agricultural operations by Congress, but he proceeded to put agriculture in a strait jacket. His ruling has not been set aside nor changed. Whether he changes the interpretation or not, the law should be so written that agriculture and processors of agricultural products would not face either a new interpretation of the law, or a change in regulations every time administrators are changed, or every time the Administrator changes his mind.

Let us, for a moment, look at the problems confronting agriculture, using the same base period as used by the Statistical Department of the United States Government that period, between 1910 and 1914. We find that in 1937 farm prices were 21 percent above base period; in 1938 farm prices were 22 percent lower than in 1937, and 5 percent lower than they were in 1910 and 1914. In 1939 farm prices were 24 percent lower than they were in 1937, and 7 percent lower than in 1910 to 1914. With labor supplies and materials used by agriculture increasing in cost, is it any wonder that agriculture should become alarmed with the same old custom in vogue of having the industrial areas fix the price on everything they sell, and also fix the price on everything they buy from the farmer?

These amendments do not hamper, hinder, or cost industrial labor 1 penny or add 1 minute to their day's work. They do not destroy nor attempt to destroy the wage-hour law. As a matter of fact they make it more workable.

The Wage-Hour Act has now been in operation approximately 2 years, during which time a number of problems have confronted both those operating under the act and the Administrator who is charged with its enforcement. In the brief time allotted me I can only discuss briefly the most important ones, which are:

First. The Puerto Rico and Virgin Islands situation;

Second. The partial exemption of agriculture from hours generally referred to as section 7 (c);

Third. White-collar exemptions;

Fourth. Area of production covering practically all agriculture;

Fifth. Home work or piece work in rural areas.

Discussing these subjects in the order mentioned, we come, first, to the Puerto Rico and Virgin Islands situation. The act as it now stands makes no provision for the Administrator to fit the law to the conditions existing in Puerto Rico and the Virgin Islands. As a result of an investigation conducted by the Labor Department, it was found that not only were conditions in Puerto Rico and the Virgin Islands entirely different from those existing in the United States but it was found that great hardships would be imposed on both labor and employers unless the Administrator were given some discretion in the application of the act to this Territory through industry committees. The identical amendments contained in the Barden bill were recommended by the Wage-Hour Division; by the Department of the Interior; by General Winship and by Admiral Leahy, Governor Generals; and by the Labor Committees of both the House and the Senate, and passed unanimously by the Senate. This history would certainly indicate that these amendments are not only desirable but most necessary.

Second. The partial exemption from hours generally referred to as section 7 (c) has practically been destroyed by interpretative bulletins and rulings by the Administrator.

Third. White-collar exemptions: In the present act there is no such thing as white-collar workers' exemption, except the following section, which is 13 (a) 1: "Any employee employed in a bona fide executive, administrative, professional, or local retail capacity, or in the capacity of outside salesman (as such terms are defined and delineated by regulations of the Administrator)." As absurd as it may sound, it is nevertheless true that the Administrator is now confronted with men drawing as much as $7,000 per year and more who are under this act, and apparently there is no way to take them out without an amendment. My amendment is very simple and provides as follows: After exempting those exempted in 13 (a) 1, I quote "or at a guaranteed monthly salary of $150 or more, or at a guaranteed yearly salary of $1,800 or more, if such employee is not required by his employer to work any specified minimum number of hours in any workday, workweek, or other period, and has been notified by his employer in writing to that effect." Without this amendment it is absolutely unfair to the Administrator to expect him to perform an utterly impossible job by enforcing the act. As it is now written, columnists, newspaper reporters, and others who have responsible jobs, and sometimes like to go to a baseball game, play golf, or take an afternoon out for fishing, either must forego this pleasure or violate the act. I am willing to leave it to the American people which would happen. It is very clear to me that we have in this country at the present time more than a sufficient number of law violators without attempting to increase the number by growing a new crop. It has been my pleasure to meet and know personally the present Administrator and a number of

his assistants. There is no question in my mind but that they are high-type intelligent gentlemen, striving as best they can to administer a law full of ambiguities and terms almost impossible of interpretation, construction, or application, and I am firmly of the opinion that unless the amendments included in the Barden bill or amendments of similar purport are adopted the act will pull its own house down, and industrial labor will lose the protection and benefits which it has heretofore and is now receiving.

Fourth. Area of production: This term has probably given more trouble both to the Administrator, to agriculture, and to agricultural operations than the remainder of the act, and is responsible for the introduction of these amendments. Section 13 (a) (10) under the heading of exemptions from wages and hours reads as follows:

"To any individual employed within the area of production (as defined by the Administrator) engaged in handling, packing, storing, ginning, compressing, pasteurizing, drying, preparing in their raw or natural state, or canning of agricultural or horticultural commodities for market, or in making cheese or butter or other dairy products."

The souce of the trouble being the term "area of production" (as defined by the Administrator). Since the former Administrator, Mr. Andrews, and his legal and economic departments finished defining this term, no one has ever been able to either understand it, apply it, or operate under it. His definition consists of four lengthy paragraphs, the first of which limits the number of employees to seven and the last one of which reads as follows:

"*(d)* If he performs those operations on materials all of which come from farms in the immediate locality of the establishment where he is employed and the establishment is located in the open country or in a rural community. As used in this subsection (d) 'immediate locality' shall not include any distance of more than 10 miles, and 'open country' or 'rural community' shall not include any city or town of 2,500 or greater population, according to the Fifteenth United States Census, 1930."

(Imagine area of production hatching this!)

There is no question in my mind, nor was there in the mind of Congress at the time the act was passed, but that they intended to exempt those agricultural operations carried on within the area where the commodities or products were normally and commercially produced. They did not intend to take in the country grist mill or the small gin or the seasonal cannery, the capping of strawberries, grading potatoes, packing fruits and vegetables, or any other similar operations dealing with agricultural commodities. Yet the Administrator, Mr. Andrews, so determined, and the present Administrator has not seen fit to change the order which, in brief, says there must not be over 7 people working the operation; it must not be in a town of over 2,500 people, and all of the commodities used in the operation must come from within a 10-mile circle, as the crow flies. How they expect the country cotton ginner to attach a speedometer to the crow has not been determined.

There is simply no way to enforce his definition; it is impracticable, unworkable, and in all my experience, I have not yet found one person who attempted to defend it in its entirety. The Labor Committee spent several months last year working on amendments to this act. Thousands of pages of evidence were accumulated, hearings were held, and yet, not one single representative of the great farming industry was permitted to enter the committee room for the purpose of saying one word or of giving one word of testimony in behalf of agriculture. Yet that committee was performing a major operation on agriculture without even the advice or consent of agriculture. My amendments simply discard the term "area of production" and set out the exemptions in clear, unequivocal, understandable terms, and can be administered for a small percentage of the cost that will be incurred in an attempt to enforce the present act, and then it will not be enforced. There may be a few people, a few hundred, or maybe a few thousand left out from under the act by these amendments that probably should be under it, but in my opinion, it is far better that we have 1,000 out from under the act that should be under it, than 20,000 under the act, who cannot live under it or operate under it; and if the conditions complained of and which I seek to correct are permitted to continue unabated, it will sooner or later lead to a tearing down of the whole structure. This we learned from our experience with the N. R. A.

FIFTH—HOME WORK OR THE PIECE WORK IN RURAL AREAS

In my amendments there is provision made for home work in rural areas, granting to the Administrator the right to make special provision and voluntary constant wage plans consistent with the purposes of section 7. Great injury has been done the rural areas by depriving them of a source of income which, prior to the act, made it possible for them to supplement the meager income from their farms and provide cash during crop season. There is also provision made for the Administrator to safeguard the minimum standards provided in the act. It is not difficult to understand how it is impossible for anyone to carry on this kind of work under the present law and keep the records required by the Department. The Administrator should not be called upon to bend over backward or strong-arm the law in order to prevent doing a great injustice. This is a responsibility resting upon the shoulders of Congress and which should be dealt with intelligently and expeditiously.

American Democracy

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1940

LETTER FROM HON. JOSEPHUS DANIELS, AMERICAN AMBASSADOR TO MEXICO

Mr. VOORHIS of California. Mr. Speaker, it is with sincere thankfulness that I am asking to include with my remarks the following letter of comment on my speech, What Democracy Means to Me. The letter is from Hon. Josephus Daniels, our present Ambassador to Mexico, former Secretary of the Navy in the Cabinet of Woodrow Wilson, and for years an outstanding exponent of native American democracy. It means a very great deal to me to have had this expression from him.

AMERICAN EMBASSY,
Mexico, March 15, 1940.

The Honorable JERRY VOORHIS,
House of Representatives, Washington, D. C.

MY DEAR MR. VOORHIS: May I thank you sincerely for your definition of American democracy which I read with real pleasure in the CONGRESSIONAL RECORD of March 5? You have compressed into small compass what truly should be the way of life for all Americans. You are correct in saying "true democracy can no more endure monopolistic power in finance or industry than in government." We say much about the importance of preserving the capitalistic system—it is a bad name for it—and you truly say monopoly destroys opportunities, and if it is not destroyed, it will destroy the kind of democracy you and I believe in.

With sentiments of regard and esteem.

Sincerely yours,

JOSEPHUS DANIELS.

H. R. 1, a Bill To Curb Absentee-Owned Interstate Chain Stores

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1940

STATEMENT BY HON. WRIGHT PATMAN, OF TEXAS, BEFORE WAYS AND MEANS SUBCOMMITTEE

Mr. PATMAN. Mr. Speaker, I am inserting herewith a copy of my direct testimony before the Subcommittee on Ways and Means, March 27, 1940. It is as follows:

STATEMENT OF HON. WRIGHT PATMAN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF TEXAS

Mr. PATMAN. Mr. Chairman, I desire to express my appreciation to the members of this subcommittee and to all the members of the Ways and Means Committee, and especially the chairman, the Honorable ROBERT L. DOUGHTON, and the chairman of this subcommittee, the Honorable JOHN MCCORMACK, for the privilege and opportunity of appearing before you in behalf of H. R. 1, a bill providing for an excise tax on retail chain stores.

The question involved is whether or not interstate chain stores are a good thing and should be encouraged regardless of their size, or whether or not they become so large that they are against the public interest and, therefore, should be curbed. I believe the best way to determine this question is to first determine what

is in the interest of the general welfare; in other words, keep in mind the greatest good to the greatest number.

The questions involved in this bill are of major importance. As to whether or not interstate chain stores should be curbed is a question about which honest men may differ.

H. R. 1, which was introduced by me on January 3, 1939, and referred to the Committee on Ways and Means, has already been put into the record by the chairman of this committee.

In the beginning, Mr. Chairman, I ask unanimous consent to revise the remarks that I shall make and to include therein certain excerpts that I may consider material, and certain tables, charts, and other information.

Mr. McCORMACK. Without objection, it is so ordered.

Mr. PATMAN. This bill, H. R. 1, takes into consideration the fact that small chains operating locally assume and pay a much larger tax burden locally and in the State than the national corporate chains pay. Hence the exemptions of the small number of stores.

PROVISIONS OF ORIGINAL BILL

The principal provisions of the bill are as follows: The first 9 stores are exempt from taxation. From 9 to 15 stores, the tax will be $50 a store. For each store not in excess of 25, $100 a store. The tax is graduated upward until the tax is $1,000 a store for all stores in excess of 500.

In addition to this tax, if the chain operates in more than one State, the tax shall be multiplied by the number of States in which it operates.

For the first year, however, the tax under section 1 will be 50 percent of the graduated rates, and under section 2 one-fourth of 1 percent of the amount specified in that section.

During the second year the tax will be 75 percent of the amount determined in accordance with section 1, and one-half of 1 percent of the amount provided in section 2.

The taxes for the first 2 years are sufficiently low to enable the present concerns owning a large number of stores to operate, but without expanding, and will give them an opportunity to dispose of their retail outlets that will be unprofitable after the second year. I predict that these stores can be sold at a price which will cause a return to each stockholder of an amount much greater than he could obtain for his stock. Local managers of these stores and other local people will gladly buy them for a fair and reasonable price.

Any concern whose gross annual business does not exceed $250,000, regardless of the number of stores or regardless of where located, will be exempt from this tax.

The bill also carries certain exemptions such as restaurants and newsstands in railroad and bus stations, which are maintained for the convenience of their customers. The exemptions are the ones usually carried in State laws that levy a tax on chain stores.

Filling stations that do not handle automobile tires or tubes are exempt. Voluntaries and cooperatives composed of individually owned stores are also exempt, and all individually owned stores are exempt. Section 4 (b) has other exemptions.

The bill carries the ordinary exemptions. There are 22 States that have laws against chain stores; that is, tax laws. We placed on the table a copy of each one of these laws. This bill was framed after reading those bills and determining the provisions that they contained and the usual exemptions that are contained in the State laws are contained in this one; in other words, as I have said, it carries an exemption as to restaurants and newsstands in railroad and bus stations which are maintained for the convenience of their customers. That is the principal exemption.

The bill, as written, does not include filling stations engaged primarily in the sale or distribution of petroleum products, if not engaged in the sale or distribution of automobile tires or tubes. I will ask you to eliminate this exemption. After careful consideration, I have decided, and those who are associated with me in sponsoring this proposal have decided, that this exemption should not be in the bill. Therefore I will ask the committee to eliminate this provision which exempts filling stations.

Why certain exemptions in bill? This bill does not include wholesalers or manufacturers. Our congressional committee, which agreed upon the terms of this bill, decided that we should confine our efforts to preserving for local people only that type of business which we know local people can and will conduct if permitted to do so. Many of the large wholesalers and manufacturers have retail stores, and this bill will apply to them the same as others.

In preparing this bill the chain-tax laws of 22 States were consulted and the exemptions usually carried in these State laws are contained in the bill.

PROPOSED AMENDMENTS

Now, I have some suggested amendments here which, without doubt, are material. I should like to indicate what those amendments are and I have had copies prepared for the use of the members of the committee and also the members of the press.

Mr. McCORMACK. Do you want them in the record at this point?

Mr. PATMAN. Yes, sir.

Mr. McCORMACK. Without objection, it is so ordered.

Mr. PATMAN. It was never the intention of the sponsors of this bill to unduly penalize or to place an undue burden upon local, sectional, or purely State chain-store concerns. The bill in this respect has been very much misrepresented. In order to make our intentions absolutely clear, the sponsors of this bill have agreed to certain amendments, which will remove any doubt as to the intentions of those of us who are pushing this measure.

We have agreed upon and will ask this committee to consider and adopt the following amendments to H. R. 1:

In section 1, reduce by 50 percent the amount of tax specified per store in each bracket. In other words, for each store not in excess of 15, $25 a store instead of $50 a store. And instead of $1,000 a store for each additional store in excess of 500, insert $500 a store for each additional store in excess of 500 stores and change the other brackets accordingly.

At the end of section 1, add subsection (c) as follows:

"The provisions of section 1 shall not apply to any person who does not open, establish, operate, or maintain more than 50 retail stores in the State in which his principal place of business is located or within a radius of 100 miles of the city or town in which is located the principal place of business of said person."

At the end of section 2, add another section, 2 (a), as follows:

"for a period of 7 years from and after the effective date of this act, section 2 shall not apply to any person opening, establishing, operating, or maintaining on the effective date of this act retail stores under the same general management, supervision, ownership, or control and located in more than one State if such person shall operate or maintain, throughout the said period, only such retail stores, or a smaller number thereof, provided, however, that section 2 of this section shall be applicable to such person who increases the number of retail stores owned by him at any time or changes the location of any such store during the said period."

Amend the bill on page 6, commencing with line 14, by striking out the following language:

"any filling station engaged primarily in the sale or distribution of petroleum products and not engaged in the sale or distribution of automobile tires or tubes."

FIRST 50 STORES EXEMPT

Under the terms of the amendment offered to section 1, any concern may operate or maintain 50 retail stores or less in the State in which the principal place of business is located, or within a radius of 100 miles of the principal place of business, without any tax whatsoever. In other words, it makes our intentions clear and plain that we are attempting to stop the large interstate chains that are attempting to spread all over the country and destroy local communities.

We are not sacrificing in any way the principal object of the bill to restrict interstate chain stores to the boundaries of one State or a smaller area.

SEVEN YEARS FOR LIQUIDATION OF BIG CHAINS

Section 2 has been referred to as the "death sentence" provision, because the tax in that section is determined by multiplying the tax in section 1 by the number of States in which a chain-store concern operates. The argument has been made that 2 years' time was not a sufficient time to allow these large interstate chain-store concerns to liquidate their stores. There is a possibility that the courts might frown upon such a short period allowed for liquidation, and we should not run that risk. This amendment to section 2 will allow them as long as 7 years from the time this act becomes effective. Certainly that is a sufficient time. The Holding Company Act allowed only 5 years for liquidation. Of course, the amendment goes further and provides that the tax provided in section 2 will be applicable if such a concern increases the number of retail stores owned at any time or changes the location of any such store during that period. In Switzerland in 1933 this kind of a law was passed; that is, one to freeze the large retail chain concerns and not permit them to expand any further or to even enlarge their present locations.

NO LOANS BY BANKS TO PERSONS IN COMPETITION WITH CHAINS

As it is now, the banks will not make loans to people who desire to engage in any kind of a retail business in which the interstate chain stores are engaged, because by the time one builds up a business in any locality, the interstate chain is likely to move in across the street and unfairly destroy the business of the one who borrowed the money from the bank. If this amendment passes, banks can safely make loans to people who desire to engage in retail business in a new locality with the knowledge that when the business is established by anyone that the large interstate chain store cannot move in next door and unfairly put him out of business. In other words, the large chains can keep all their units and not be subject to the tax provided in section 2, which is referred to as the "death sentence" tax, if the concern does not increase its number of stores and does not change the location of any store.

I have here, Mr. Chairman—which I will insert in the record under permission heretofore granted—a statement showing the growth and size of chain stores. It shows, I believe, without a doubt, that the period of the greatest growth of the interstate and other chains in this country was in the twenties, commencing about 1920 or the early part of 1921.

In fact, up until 1920 there were only 553 chains and only 15,000 stores, but by 1925 that had more than doubled, and by 1929 it had increased again; by 1930 it had increased once more.

AMENDED BILL

The bill as amended is as follows:

"*Be it enacted, etc.*, That (a) on and after the effective date of this act every person opening, establishing, operating, or maintaining under the same general management, supervision, ownership, or control 10 or more retail stores, shall pay annually an excise tax for each fiscal year ending June 30, measured by the number of retail stores so opened, established, operated, or maintained during such fiscal year as follows, except as provided in subsection (b) hereof:

"For each store not in excess of 15, $25 a store;
"For each additional store not in excess of 25, $50 a store;
"For each additional store not in excess of 50, $100 a store;
"For each additional store not in excess of 75, $125 a store;
"For each additional store not in excess of 100, $150 a store;
"For each additional store not in excess of 200, $225 a store;
"For each additional store not in excess of 300, $300 a store;
"For each additional store not in excess of 400, $375 a store;
"For each additional store not in excess of 500, $450 a store; and
"For each additional store in excess of 500, $500 a store.

"(b) For the first fiscal year beginning on July 1 following the date of enactment of this act, the tax under this section shall be one-half of the amount determined in accordance with subsection (a) hereof; and for the second fiscal year the tax shall be three-fourths of the amount determined in accordance with such subsection.

"(c) The provisions of section 1 shall not apply to any person who does not open, establish, operate, or maintain more than 50 retail stores in the State in which his principal place of business is located or within a radius of 100 miles of the city or town in which is located the principal place of business of said person.

"SEC. 2. If any person subject to the tax imposed by section 1 opens, establishes, operates, or maintains during the taxable year retail stores under the same general management, supervision, ownership, or control located in one or more State, the tax imposed by section 1 shall be multiplied by the number of States (including the District of Columbia) in which any of such stores are located, except that for the first fiscal year beginning on July 1 following the date of enactment of this act, the tax shall be one-fourth of 1 percent of the amount determined in accordance with the preceding provision hereof, and that for the second fiscal year the tax shall be one-half of 1 percent of the amount determined in accordance with such provision. If this section, or any provision or application thereof, shall be held invalid, the validity or application of section 1 shall not be affected thereby.

"For a period of 7 years from and after the effective date of this act section 2 shall not apply to any person opening, establishing, operating, or maintaining on the effective date of this act recall stores under the same general management, supervision, ownership, or control and located in more than one State if such person shall operate or maintain, throughout the said period, only such retail stores, or a similar number thereof: *Provided, however,* That section 2 of this act shall be applicable to such person who increases the number of retail stores owned by him at any time or changes the location of any such store during the said period.

"SEC. 3. (a) The tax imposed by this act shall be collected by the Bureau of Internal Revenue under the direction of the Secretary of the Treasury and shall be paid into the Treasury of the United States as internal-revenue collections. If the tax is not paid when due, there shall be added as part of the tax interest at the rate of one-half of 1 percent per month from the date the tax became due until paid.

"(b) Not later than July 31 next following the close of the taxable year, each person subject to the tax imposed by section 1 shall make a return of the tax under this act for such taxable year. Each such return shall be made under oath, shall be filed with the collector of internal revenue for the district in which is located the principal place of business of the taxpayer, or, if he has no principal place of business in the United States, then with the collector at Baltimore, Md., and shall contain such information and be made in such manner as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may by regulations prescribe. All provisions of law (including penalties) applicable in respect of the taxes imposed by section 600 of the Revenue Act of 1926, shall, insofar as not inconsistent with this act, be applicable in respect of the tax imposed by this act. The Commissioner may extend the time for filing the return of the tax imposed by this act, under such rules and regulations as he may prescribe with the approval of the Secretary of the Treasury, but no such extension shall be for more than 60 days.

"(c) Returns filed under this act shall be open to inspection in the same manner, to the same extent, and subject to the same provisions of law, including penalties, as returns made under title II of the Revenue Act of 1926.

"(d) The taxpayer may (except in case of the taxable period between the effective date and July 1 following) elect to pay the tax in four equal installments instead of in a single payment, in which case the first installment shall be paid not later than the last day prescribed for the filing of returns, the second installment shall be paid on or before the last day of the third month, the third installment on or before the last day of the sixth month, and the fourth installment on or before the last day of the ninth month, after such last day. If the tax or any installment thereof is not paid on or before the last day of the period fixed for its payment, the whole amount of the tax unpaid shall be paid upon notice and demand from the collector.

"(e) At the request of the taxpayer the time for payment of the tax or any installment thereof may be extended under regulations prescribed by the Commissioner with the approval of the Secretary of the Treasury, for a period not to exceed 6 months from the last day of the period prescribed for the payment of the tax or any installment thereof. The amount of the tax in respect of which any extension is granted shall be paid (with interest at the rate of one-half of 1 percent per month) on or before the date of the expiration of the period of the extension.

"(f) The Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, shall make and publish rules and regulations for the enforcement of this act.

"SEC. 4. When used in this act—

"(a) The term 'person' shall include any individual, corporation, partnership, association, joint stock company, or business trust, however organized and whether or not incorporated, but does not include any such person if during the taxable year the gross business of the retail stores opened, established, operated, or maintained by it does not exceed $250,000 or, in case of the taxable period between the effective date and July 1 following, does not exceed such part of $250,000 as such period bears to a year.

"(b) The term 'retail store' shall mean and include any store or mercantile establishment in which goods, wares, or merchandise of any kind or description are sold at retail; but said term shall not include any establishment or facility maintained by a common carrier as part of its transportation facilities primarily for furnishing meals or other commodities to its passengers and employees, or any branch office maintained by a newspaper for the distribution of its papers or for taking subscriptions or advertisements therefor, and shall not include individually owned stores, whose revenues in part or in whole are not made available to or inure to the immediate or ultimate benefit of any other individual store, store owner, or any other person, firm, or corporation operating a retail store as herein defined.

"(c) The term 'under the same general management, supervision, ownership, or control' shall include control or direction by one management or association of ultimate management, whether by legal control, direct or indirect, or by actual control, direct or indirect, through ownership or control of evidences of indebtedness, physical property, or other assets, through contract, lease, or agency arrangements, through interlocking directors or officers, or through any other means.

"(d) The term 'effective date' means January 1, April 1, July 1, or October 1, whichever date first follows the date of enactment of this act. In case the effective date of this act is a date other than July 1, the period between the effective date and the following July 1 shall be considered as a taxable year under this act, but the tax for such period shall be such part of the tax imposed by this act for the first fiscal year beginning July 1 as such period bears to a year.

"SEC. 5. If any provision of this act, or the application thereof to any person or circumstance, is held invalid, the remainder of the act, and the application of such provision to other persons or circumstances, shall not be affected thereby."

PERCENTAGE OF BUSINESS DONE BY CHAINS

In the shoe business at least 50 percent of retail sales are made by chain-store concerns; in the grocery business, 40 percent. Considering the fact that they only operate in a comparatively few cities—perhaps I had better not put it exactly that way; but in view of the fact that they do not operate all over the country and that there are lots of towns and cities where they do not operate and lots of communities where they do not operate; considering the fact that figure of 40 percent means that they almost have a monopoly in some towns and cities, if they can do 40 percent of the total business of the Nation, including those places where they do not even operate, that means that they are bound to be doing almost 100 percent of the business in many of the towns or cities in which they do operate.

In the variety-store business from 90 to 95 percent of the retail sales are made by chain stores.

Mr. Chairman, I should like to make a statement on the constitutionality of this bill. The question was carefully gone into.

BILL IS CONSTITUTIONAL

Recent Supreme Court decisions indicate that the Court finds nothing unreasonable in basing the tax upon the number of stores. In *Tax Commissioners* v. *Jackson* ((1930) 283 U. S. 587) the Supreme Court held that Indiana license tax upon retail mercantile establishments which increased with the number of stores operated did not violate the fourteenth amendment.

The principle that chain stores may be regarded as a distinct class for taxation purpose was also recognized in *Liggett Co.* v. *Lee* ((1933) 288 U. S. 517, 533), although it was held in that case that the statute was unconstitutional to the extent that it graduated the tax in accordance with the number of counties in which the chain operated.

The reasonableness of a tax which distinguishes between ownership of chain stores and individual ownership and which imposes a tax that increases with the size of the chain is established by the case of *Fox* v. *Standard Oil Co.* ((1935) 294 U. S. 87), in which the Court said (p. 100):

"* * * A chain, as we have seen, is a distinctive business species, with its own capacities and functions. Broadly speaking, its opportunities and powers become greater with the number of the component links; and the greater they become, the more far reaching are the consequences, both social and economic. For that reason the State may tax the large chains more heavily than the small ones, and upon a graduated basis, as indeed we have already held (*State Board of Tax Commissioners* v. *Jackson*, supra; *Liggett Co.* v. *Lee*, supra). Not only may it do this, but it may make the tax so heavy as to discourage multiplication of the units to an extent believed to be inordinate, and by the incidence of the burden develop other forms of industry."

The same principle was applied in *Great Atlantic & Pacific Tea Co.* v. *Gorsjean* ((1937) 301 U. S. 412), in which a State statute upon chain stores measured the tax on the number of stores both within and without the States was held constitutional.

The object of H. R. 1 is to restrict interstate chain stores to the boundaries of one State, or to a smaller area than some of them now cover.

The question is asked: "If that is the object, why not leave out the tax provision and offer a bill that says an interstate chain cannot operate in more than one State?"

My answer is that such a proposal, if enacted, would probably be held unconstitutional; whereas, if we use the taxing power of Congress to reach the same objective, there will be no doubt of the constitutionality of the law, when enacted.

It is not at all unusual for Congress to use its taxing power in passing a constitutional law to carry out a worth-while objective.

FEDERAL TRADE COMMISSION POINTS WAY THROUGH TAXATION

The Federal Trade Commission, in response to congressional inquiry, made a report on its chain-store investigation December 14, 1934. In this report, which is Senate Document No. 4, Seventy-fourth Congress, first session, page 91, it is stated:

"If, as a matter of policy, the Federal Government wishes to check the growth of chain-store merchandising on the theory that ultimate injury to the public interest outweighs any temporary benefits, it has been suggested that the course marked out by a recent State legislation suggests a possible solution, provided no constitutional barrier were successfully interposed. The Federal Government might conceivably impose a graduated tax on chain stores similar to those imposed by the States and upheld by the Supreme Court. While a graduated Federal tax on chain stores might be made to produce substantial revenue, it is well to bear in mind the words of Justice Brandeis in the *Florida Chain-Store Tax case, Liggett Co. et al.* v. *J. M. Lee, Comptroller* (288 U. S. 517):

" 'The chain store is treated as a thing menacing the public welfare. The aim of the statute, at the lowest, is to preserve the competition of the independent stores with the chain stores; at the highest its aim is to eliminate altogether the corporate chain store from retail distribution.'

"And as Justice Cardozo said in the same case:

" 'The system (of special chain-store taxation) has had its origin in the belief that the social utility or inutility of one group is less or greater than that of others, and that the choice of others to be taxed should be adjusted to social gains and losses. Courts would be lacking in candor if they were not to concede the presence of such a motive behind this chain-store legislation.'

"As pointed out in the discussion of State laws on the subject, judicial affirmance of the principle of the graduated tax opens the way theoretically to an enlargement of the tax until it attains the social ends which underlie such legislation. It may be doubted that any of the State laws on the subject has done more than reduce somewhat the competitive advantages of chains over independents. Such a tax may fail in its minimum social purpose until it is so graduated as to entirely offset those advantages, and as Justice Brandeis said, 'at the highest, its aim is to eliminate altogether the corporate chain store from retail distribution.' "

LOCAL BUSINESS FOR LOCAL PEOPLE

Local people cannot always operate a railroad, a telephone company, an investment firm, a manufacturing plant, or even a wholesale house. But, if permitted, they can and will operate a local bank, local retail stores, and other purely local businesses.

SOCIAL AS WELL AS ECONOMIC PROBLEM

I invite your attention to the fact that a tax has oftentimes been used as a vehicle for the purpose of correcting a social objection, or to remove evil social consequences.

I invite your attention to the fact that during President's Grant's administration we had all kinds of State banks all over the country that were issuing so-called wildcat currency. Congress wanted to pass a law that would stop these banks from issuing that wildcat currency. It was not in the interest of the country. They wanted to pass a law saying that hereafter it shall be unlawful for those banks to issue wildcat currency. But Congress decided that they could not pass a law that would be constitutional, that would have that effect. But someone suggested, "We can tax them and that will do the same thing"; so they passed a law to tax this currency issued by State banks 10 percent. That destroyed many State banks, but it served a more worthy purpose of preserving our great currency system of this country.

So that in President Grant's time the taxing power was used as a vehicle to correct an evil that could not be reached in any other manner in a constitutional way.

Now, with reference, for instance, to machine guns: This committee—and I venture to say many members who are sitting here on this committee today have personal knowledge of this—passed a bill taxing machine guns. I believe the rate was only $1 for the transfer of a machine gun. Did you do that to raise revenue? Of course, you did not. You did that for the purpose of cooperating with the Federal Bureau of Investigation in trying to break up these rackets among these desperados and criminals in different places in this country. You wanted to keep up with these machine guns, and you had no power to say that every American who purchased a machine gun had to file a statement with the Government. You did not have that power. Or if someone transferred title to a machine gun, you did not have the power to compel him to say that he had transferred it, or that another person had received it. But you did have the power to place a dollar tax upon the purchase of that machine gun, or its transfer. And if the tax was not paid, and a report not made, then a law was being violated.

There are two instances where a tax has been used as a vehicle to reach an entirely different objective.

BANK CANNOT HAVE BRANCHES ACROSS STATE LINES

And that has been done dozens and dozens of times by both Republican and Democratic administrations, so neither one can criticize the other for it. It is not new to propose that certain institutions should be restricted to a smaller area. I invite your attention, gentlemen, to the fact that a bank cannot now operate a branch across a State line. They cannot do it. They are confined within the boundaries of the State in which they are engaged, and then only may they have branches if the State law permits it. So there is a precedent for exactly what we are doing here today.

CIRCUS TAX

Now, I do not wish to compare business with a circus—not by any means—but for the purpose of making an illustration, I consider it in point. I invite your attention to the fact that in practically every city in this country today, including Washington, D. C., there is a heavy tax on the old traveling circus, and in most places they are not allowed to remain more than 1 or 2 days. The tax is exceedingly heavy.

Why is that tax placed on them? Because the people know that the big circus comes to town and drains the town of all of its money and takes it out of town.

I know that the circus is much worse in that respect than the interstate chain store, because they do it very quickly. They just move in with all of their employees, and sometimes with all of their food and everything else, collect all the money they can, and move out of town. So the different cities and the different counties and States have decided that they ought to have some amount of money left; they did not want the towns bled white and their reservoir of credit absolutely destroyed. That is the reason the tax was placed on that activity.

It is the same principle that we are applying to the interstate chain stores. They do not do that as fast as the old circus did, but they do it just as surely, if more slowly, than the old circus did. They are in business, not 1 day or 2 days during the year, but they are in business 365 days in the year, excepting the usual holidays and Sundays. And they are taking the money out of town every business day; not as fast as the circus, but eventually it will be just as effective as the circus in taking money out of the town and destroying the local reservoir of credit. That is exactly on all fours with the proposal that we have here, to compel a business to restrict its activity to a smaller area, where the net profits can remain in that area and serve all the people.

MONEY TAKEN OUT OF TOWN

I know that it is contended that if an interstate chain saves a customer a certain amount on each purchase, that that stays in the community, and that is a sufficient answer to what I have said. But I do not think it is, and I will tell you why. I do not care how much an interstate chain saves the consumer in a town on any or all purchases; if they take a certain amount out of that town every day, 365 days of the year, it is not going to be long before that local reservoir of credit will be entirely wiped out; it will be dried up. There will be no local reservoir of credit and money to support the local community.

Now, I consider, gentlemen of this committee, that the three greatest objections to the interstate corporate chain system are the following:

First, the concentration of money and credit.

Next, the destruction of local communities, and third, monopolies.

I believe everyone concedes that the period of greatest growth of the interstate chain-store system was from 1921 to 1933. During this time, more than 53 percent of the commercial banks of the Nation were forced to close their doors. There must have been

some good, substantial reasons why such a large percentage of the commercial banks were forced to close during a 12-year period. I insert herewith a table, which was prepared by the Comptroller of the Currency, which shows the number of commercial banks on June 30, 1921, and the number of commercial banks on June 30, 1933. This information is by States and is self-explanatory.

(The table referred to is as follows:)

Number of all classes of active banks, by States, June 30, 1921, and 1933

	1921	1933[1]	1921		1933[1]	
			National banks	Banks other than national	National banks	Banks other than national
Alabama	358	203	107	251	66	137

[1] Licensed banks operated on an unrestricted basis.

Information furnished by Comptroller of the Currency, Mar. 22, 1940.

The deposits of the 15 largest banks in New York City are given below:

	Total deposits	Demand deposits
Dec. 31, 1939	$14,223,000,000	$13,534,000,000
Dec. 31, 1938	11,407,000,000	10,795,000,000
Dec. 31, 1937	10,348,000,000	9,681,000,000
Dec. 31, 1929	9,010,000,000	[1] 8,054,000,000
Change from Dec. 31, 1929, to Dec. 31, 1939 (percent)	+58	+68

[1] Partly estimated.

It will be noticed that 15 large New York banks December 31, 1939, had about 33⅓ percent of the demand deposits of all banks, whereas on December 31, 1929—10 years before—they only had 25 percent of the total deposits.

Deposits in the 300 largest commercial banks in the United States, excluding possessions

[In millions of dollars]

	10 largest banks	15 largest banks	25 largest banks	100 largest banks	200 largest banks	300 largest banks
Total deposits:						
Dec. 31, 1939	14,375	17,595	21,635	31,691	36,362	38,950
Dec. 31, 1938	11,874	14,654	18,176	27,072	31,262	33,597
Dec. 31, 1937	10,788	13,327	16,575	24,992	28,999	31,231
Dec. 31, 1929	8,400	10,552	13,567	21,506	25,244	27,518
Change from Dec. 31, 1929, to Dec. 31, 1939 (percent)	+71	+67	+59	+47	+44	+42
Demand deposits:[1]						
Dec. 31, 1939	12,706	15,812	18,787	26,493	30,071	31,787
Dec. 31, 1938	10,224	12,665	15,392	22,017	25,029	26,601
Dec. 31, 1937	8,913	11,322	13,841	19,840	22,718	24,183
Dec. 31, 1929	6,671	8,488	10,600	15,616	18,179	19,522
Change from Dec. 31, 1929, to Dec. 31, 1939 (percent)	+90	+86	+77	+70	+65	+63

[1] Demand deposits of noninsured banks in 1939, 1938, and 1937, and of banks not members of the Federal Reserve System in 1929 are partly estimated.

The demand deposits of the 10 largest banks December 31, 1929, amounted to 20 percent of the demand deposits of all commercial banks, whereas December 31, 1939—10 years later—these banks had more than 30 percent of the demand deposits of all commercial banks.

Deposits in commercial banks in the United States, excluding possessions[1]

[In millions of dollars]

	All commercial banks	300 largest commercial banks	Other commercial banks	Percent of total held by—	
				300 largest banks	Other banks
Total deposits:					
Dec. 31, 1939	57,493	38,950	18,543	68	32
Dec. 31, 1938	51,170	33,597	17,573	66	34
Dec. 31, 1937	48,475	31,231	17,244	64	36
Dec. 31, 1929	51,205	27,518	23,687	54	46
Change from Dec. 31, 1929, to Dec. 31, 1939 (percent)	+11	+42	−22	----	----
Demand deposits:					
Dec. 31, 1939	41,964	31,787	10,177	76	24
Dec. 31, 1938	35,941	26,601	9,340	74	26
Dec. 31, 1937	33,199	24,183	9,016	73	27

Change from Dec. 31, 1929, to Dec. 31, 1939 (percent)	+33	+63	−15	----	----

[1] Deposits of noninsured banks in 1939, 1938, and 1937, and of banks not members of the Federal Reserve System in 1929 partly estimated.

Mr. PATMAN. I want to invite the attention of the committee to the fact that the 10 largest banks, from December 31, 1929, to December 31, 1939, increased their deposits 71 percent; the 15 largest banks increased their deposits 67 percent. The table, which is in the record, is self-explanatory.

As to the demand deposits, which are more impressive, because they represent the currency of this country—they represent the money. In other words, if everybody paid their debts we would not have any money. Someone has gone into debt and created deposits and those deposits have been going to the large banks of this country from the smaller towns and cities. And in that 10-year period, the 10 largest bank deposits increased 90 percent; the 300 largest banks increased their deposits 63 percent during that period. But the other banks, the country banks, and the other 14,700 banks in this Nation did not increase their deposits, but they actually lost 22 percent of their deposits during that time—total deposits including savings—and actually lost 15 percent of their demand deposits.

Mr. MCCORMACK. Are you including, in that 22 percent, the banks that failed?

Mr. PATMAN. No; of course, very few banks have failed since 1933.

Mr. MCCORMACK. I mean from 1929 to 1933.

Mr. PATMAN. None of these 10 that I have mentioned failed; that is not included in there. That is according to my information.

Mr. MCCORMACK. I am talking of the smaller banks.

Mr. PATMAN. That is not included; only those that are in existence today. It does not include those that failed.

AMAZING HOW MONEY IS BEING DRAINED INTO NEW YORK BANKS

These figures which are in these tables that I have put in the record show conclusively that the money is being drained from the country into the larger cities and especially New York City, where the largest banks are located.

The table further discloses that the deposits in all banks, excluding the 300 largest banks and including all deposits, actually decreased 22 percent.

May I repeat one or two of these figures, Mr. Chairman?

BIG BANKS BIGGER, SMALL BANKS SMALLER

It will be noticed that the demand deposits in the 10 largest banks during the past 10 years increased 90 percent; and in the 15 largest banks, 86 percent; in the 25 largest banks, 77 percent; in the 100 largest banks, 70 percent; in the 200 largest banks, 65 percent; in the 300 largest banks, 63 percent.

Whereas, during the same period of time, all commercial banks only increased their demand deposits 33 percent, and all the other banks—the country banks, not including the 300 largest—actually lost 15 percent of their demand deposits during this time. This shows conclusively that the money is being drained from the country into the larger cities and especially to New York City, where the largest banks are located.

The table further discloses that the deposits in all banks, excluding the 300 largest banks and including all deposits, actually decreased 22 percent during this 10-year period.

LOCAL COMMUNITY 40 YEARS AGO AND NOW

Let us take a look at the local community of 40 years ago and now. Then local people owned and operated the telephone company, the electric-light plant, and the gas company. They also owned and operated the water company, the picture shows, the retail stores, and all other local retail business. These represented the pillars of the community. As one was weakened or destroyed, the community was proportionately weakened or destroyed.

No one has ever contended that the telegraph companies or the railroad companies should be owned by local people. They are necessarily large and can only be owned by shareholders, and no one is objecting to it. A good, logical argument was made in favor of the integration of the telephone companies, electric-light plants, and gas companies.

Yet as they drifted into the hands of absentee owners, the local community was weakened in proportion. I recall one New York concern that purchased the electric-light plants in 1,900 towns and cities in this country.

After those purchases by the New York concern, 1,900 local print shops in these 1,900 towns lost a good customer, because all the printing was done in New York. That meant further that 1,900 local insurance agencies lost good customers in these 1,900 towns, because the insurance was carried by one agency in New York.

The acquisition of these utilities by the New York concern especially hurt the local banks in these 1,900 communities. But the people were glad to bow to the so-called more efficient and better system and apparently raised no objection.

After these three main utilities had been purchased by absentee owners, the local community was greatly injured, but at the same time was able to get along because of the other business locally owned.

The people owning them kept their net profits at home and placed their net profits in the local banks, which became a reserve for credit that could be used by themselves and by their neighbors and friends. This helped to preserve and build the community.

Then the water and ice companies in many of the principal towns and cities of our Nation were bid for and purchased by outside interests. I do not see any particular reason why a water or ice company can be operated more efficiently or why better service could be rendered by outside interests, but they were purchased just the same by the absentee owners.

I remember when the picture shows were owned by local people, who kept their profits at home in the local bank and patronized local insurance agencies and local printing establishments, as well as the local newspaper. All at once there seemed to be a demand for these picture shows and the local owners were induced to sell out to absentee owners. In many cases it has been charged that they were forced to sell, otherwise they could not obtain pictures from the producers. Anyway, the picture shows now are owned by eight concerns that are not in competition with one another. They operate in a different section of the country.

When the automobile came in, the filling stations were owned by local people, who kept their net profits at home and who patronized local business, but the large oil companies decided that they wanted to purchase these filling stations and they have succeeded in acquiring in one way or another most of the filling stations in this Nation.

Since the enactment of the Social Security Act, the larger oil companies have adopted a policy of leasing their stations to a local person, which will enable them to evade the payment of the social-security taxes.

Now, with the principal pillars of the local community gone—that is, the best utilities and money-making businesses having come into the hands of absentee owners—the local community is very much weakened, but it is not yet destroyed. Now, however, an effort is being made to acquire all the retail stores in the country. That is, to obtain control of retail distribution whether they acquire the existing establishments or not.

In the grocery business, the large chains operate in different sections of the country. They compete only to a limited extent. When they get control of retail distribution in their particular areas, it will be an easy matter for them to merge and consolidate, as has been done in many other instances, and give control of all retail distribution in the grocery business to a few men, as it is in other lines of business today.

A few years ago, along with good roads and automobiles, came the truck. Many local people were permitted to make fairly good wages and a fair annual income through the operation of trucks in their local communities.

Soon, however, these truck lines were merged and consolidated into larger operating units. Then they were merged and consolidated with other large operating units until, today, the bus and truck lines are owned by a few people, the same as the utilities and railroads are owned by a few people The whole tendency is in the direction of bigness.

RESULTS OF INTERSTATE CHAIN CONTROL

Let us see what will happen to the local community if the interstate chains get control of retail distribution I will enumerate a few of the things that will be the result of such absentee ownership:

1. Community life will be considerably weakened, if not destroyed, because hired hands of absentee owners do not assume the duties and burdens of local citizenship as well as local owners of stores.

2. Absentee-owned interstate chains do not contribute to local relief, local schools, churches, or charities as generously as owners of local businesses.

3. The local reservoir of credit will be destroyed in the local bank which will close the local bank. Net profits remaining in the community and deposited in the local bank circulate many times a year among local citizens. I do not care how much the absentee-owned chain apologists claim that they save the people on a purchase in a local community; regardless of that, if they take their net profits out of town, eventually the net profits taken from that town will be sufficient to completely wipe out the local reservoir of credit and drain out all the money and within a comparatively short period of time.

4. It will cause further concentration and control of wealth in the hands of a few. Even if they sell for less it is not real economy for you as a consumer to save $1 when it will cost you $4 as a taxpayer to take care of the unemployed caused by the $1 saving.

5. It will cause the cost of food and other goods and commodities to be higher, as monopoly always requires the people to pay just as much as the traffic will bear. We should not expect a benevolent monopoly in the retail field any more than we should expect a benevolent monopoly in any other field, or a benevolent monarchy in government.

So far as efficiency is concerned, a dictatorship is more efficient than a democracy, but who is willing to give up his democratic form of government and live under a dictatorship because it is more efficient? However, the interstate chains are not efficient.

6. The local insurance agencies will be destroyed. If you were to destroy the buying power of all the insurance people in your home town, you know it would considerably injure your community. Absentee owners never patronize local insurance agencies or agents.

7. The local newspapers will be destroyed. It is true that big business helps the large national magazines and the large daily newspapers, but the smaller newspapers and the country newspapers which the people need to preserve and protect are considerably harmed by the interstate chain-store system and will, if such a system obtains control, be absolutely crushed. While the chains are putting the local merchants out of business, they will, of course, be very good to the local newspapers, but we know in communities where they have already obtained control, they are putting out their own local advertising and it is printed elsewhere—not in the local community.

8. The local printing shops will be absolutely crushed, because absentee owners do not patronize local printers.

9. Local privileges and opportunities that formerly enabled citizens to assume local relief burdens and responsibilities are taken away. Before absentee owners purchased the money-making businesses in the local community, there was always a sufficient number of well-to-do people locally, who had kept their net profits at home, who could give employment where it was absolutely necessary, and they could contribute the amount necessary to take care of their local relief problems. But along with absentee ownership of business came Federal relief and the greatest unemployment problem that we have ever had in this country. The interstate chain system is responsible for our unemployment and relief problem.

10. Independent business will be destroyed unfairly.

11. The interstate chains do not go into a town until that town is built. You never heard of an interstate chain-store concern establishing a store where no town had been established. In other

words, they take away what others have created; they do not create for themselves.

12. Such a system will kill individual initiative and will crush the hopes and aspirations of ambitious young people. The independence and self-reliance that builds this Nation will be destroyed.

13. Such a system eliminates free competition. The interstate chains charge different prices in different cities in the same State and even in the same city, depending upon the competition from the independent merchants across the street, who is marked as the next victim.

14. The interstate chains narrow the market of the farmers and force down the prices that the farmers are compelled to accept. The interstate chains stand between the farmers and prosperity. And if the farmers are prosperous, the country is prosperous, so they are keeping our country in a depression.

15. The interstate chains are the first to arrive after a town is built and the first to leave when a town is overtaken by drought, cyclone, epidemic, or other unforeseen disasters. They are fair-weather friends only.

16. A dictatorship in government is not wanted; neither is a dictatorship in business desired. The interstate chain-store system will cause bureaucracy and dictatorship in business, and will destroy democracy in our country and substitute fascism instead.

17. Where will the millions of unemployed, both old and young, get jobs if we allow the interstate chains to destroy the purchasing power of the farmers and continue to put more people out of work? Four million young people under 25 are now out of work and a million are graduating every year. What is to happen to them?

18. No local attorney will be needed, as expert legal advice will be furnished from New York.

19. The local physician and dentist will be compelled to accept fees that people who receive small wages are able to pay.

20. The employment and discharge of all employees will be under the supervision of an executive with headquarters in New York. Your son, in order to get a job at starvation wages, will be forced to swallow his pride and go out, hat in hand, to someone who has a pull with this New York banker.

It is an illusion that man is efficient only as he moves in regimented groups at the bidding of a New York executive.

The New York owners of local business believe that individual man is no longer needed as the responsible pillar of his community to guide and support the civic welfare.

Absentee-owned chains mean goose-step regimentation of employees.

There are further objections to interstate chains.

Absentee control of business is a detriment to the future welfare of all classes and there is no class or group that escapes its detrimental effect upon our economic life.

Net profits from farms, mines, or business are the only means of building towns, cities, and States. These net profits—under the chain system—fly overnight to New York.

Every dollar that is taken from your State or mine in net profits is a loss of many times that $1 in buying power to the local residents.

Net profits remaining in the community and deposited in the local bank circulate many times a year among local citizens.

SERIOUS QUESTIONS TO BE ANSWERED

It is material in passing on the question of chain-store monopoly and the absentee ownership of retail business in this Nation to consider the following questions:

Shall we strive to keep open the broad highway of opportunity to our sons and daughters of America? Did you ever hear of any absentee-owned chains voluntarily contributing to any local charity, church, or school until State legislatures and the National Congress began making efforts to check their growing monopoly?

Did you ever hear of the largest chain-store concern in America taking out a fire-insurance policy on any store in your State through a local insurance agent in the town where the store was located?

Did you ever hear of the largest chain-store concern in America ever having any printing done in a union printing plant until I introduced a chain-store tax bill in the National Congress?

Did you know that in the banking crisis of 1932 and 1933 that in nearly every town the first firm to withdraw their local deposits and rush the money by registered mail to New York were the interstate corporate chains?

Did you ever hear of the national interstate corporate chains trying to cultivate the good will of farmers and wage earners until an effort was made to make them share their part of the burdens of government?

In the days gone by, when the retail stores, filling stations, and other business establishments were owned by individual owners, one who was out of work could create a job for himself. I remember when all kinds of gadgets and devices that were helpful and useful to independent businessmen were made and sold from store to store.

I mention this as a simple illustration of just how work was created by an unemployed person in the past.

But now it is impossible because the filling stations are owned by the large oil companies and one having anything to sell, regardless of how useful it might be to the local filling-station operator, could not sell it to him. He would have to see the New York manager of that filling station in order to make a sale.

The same thing applies to retail stores and to other establishments. This is a small matter, but I believe it illustrates the point and can be enlarged upon many times.

Small manufacturers are at a great disadvantage in an interstate chain-store system.

The interstate chain-store question does not constitute a battle between persons. We are engaged in an attempt to correct an uneconomic system through the passage of H. R. 1. There are social as well as economic reasons why it should be passed. If it becomes a law, it will result in the following:

IF BILL PASSES, RESULT

1. Needed revenue for old-age assistance and other worthy purposes.

2. It will cause the employment of millions of people.

3. It will grant reasonable security to small business but will not hold an umbrella over the inefficient. It will not penalize any business except monopolistic business. It will not place a premium or reward on inefficiency but will give every independent businessman a chance to work and earn a living for himself and his family and through that means help the entire country.

4. It will cause lower retail prices through clean competition.

5. It will benefit farmers and small manufacturers because there will be more buyers for their products. This is the direct opposite of the monopolistic picture.

6. If there are economies in bigness that permit a saving to be passed on to the consumer, H. R. 1 will not interfere, a sufficient number of stores is entirely exempt to permit a concern to obtain the maximum discount by reason of mass purchasing power. But the smallest chains will not have the chiseling and racketeering ability by reason of size as now possessed by the large interstate chains, which destroy the buying or purchasing power of the American farmer.

7. If chain stores bring lower prices, the passage of H. R. 1 will not cause higher prices because there will still be chain stores that will be in a position to grant to the consuming public every convenience, economy, and price that is now given or granted by the interstate chains.

MUST SERVE BEST INTEREST OF ALL CONCERNED

This bill cannot be justified unless it serves the best interest of all the people. The charge that it is intended to help the inefficient businessman meet competition with a more efficient distributive system is false and is used as a smokescreen. I would not favor any law to reward the inefficient. We have a situation now where the most efficient person who is honest, able, and popular with his people cannot successfully conduct a business because New York concerns that are able to sell goods below cost until he is destroyed go into competition with him and destroy his business. No concern should be allowed to grow so big that such destructive practices can be adopted. It is practically natural that they will be adopted because men are naturally selfish and they will do what they can to crush a competitor. Therefore, it is the duty of the Government to protect the weak against the strong, and we should certainly restrain the greed of such big concerns that are ruthlessly and unfairly destroying their competitors. It is against the interest of the country.

WHAT WILL YOUNG PEOPLE DO?

Now, opportunities for young people are at stake.

The Work Projects Administration has reported that every decade at least 2,000,000 young men and women must leave the farms and go into the cities—that the farms cannot take care of them. What are those 2,000,000 young folks going to do? If you have the chain-store system operating from one end of the country to the other, they have charge of all these local communities. The local printshop is out. The local lawyer is gone. They do not need him. In addition to that, the insurance agents are gone. He cannot go into the grocery business nor the drug business. What are those 2,000,000 young people going to do? If you prevent them from having the opportunity of going into business for themselves, what are you going to do with them? That is just the young people. It is a serious question.

A recent report discloses, as I suggested a while ago—I believe Mr. Owen D. Young was the chairman of the committee that made the report—that 4,000,000 young people under the age of 25 are now unemployed in this country.

If we do not distribute the privileges and opportunities in this country, there will be a serious demand made for a distribution of wealth. I believe it is far preferable to distribute privileges and opportunities and give everybody a chance to earn a living than to invite a serious effort to distribute the wealth of the country.

Now, what about the consumer?

The consumer is the father or mother of those young people. The consumer is also thinking about what will happen to him when he gets to be 45 or even 40 or 35 years of age. Private industry will not employ him. What can he do? In times gone by he could go into business for himself in one of many different kinds of business, but he cannot do it now. So you might just as well make arrangements to either curb the greed of a few people who are trying to get

control of retail distribution and all the privileges and opportunities of this Nation, or arrange to put many of them on some kind of relief roll when they get to be 21 years of age—certainly when they get to be 35, when they cannot get employment in private industry. It is a very serious question.

Now, I should like to make for the record a statement on the effect of the concentration of economic power upon maintenance of the competitive system.

BUSINESS ENTERPRISES LAST 40 YEARS

The history of business enterprise during the past 40 years has been marked by the apparently anomalous situation in which the population has steadily increased while the number of individual and private manufacturing concerns has steadily decreased. Normally it would seem that as consumer demand increased with a growing population the number of manufacturing concerns producing articles necessary to satisfy that demand would increase correspondingly. Such a result would be inevitable under a system of free competitive enterprise. A brief glance at statistics, however, shows an opposite trend.

The population of the United States increased from 75,000,000 in 1900 to 137,000,000, in 1940, an increase of 62,000,000. In 1900 there were approximately 15,000 manufacturers of tobacco products; today there are approximately 850. In 1900 there were 28,000 manufacturers of lumber products; today there are less than 8,000. In 1900 there were more than 700 manufacturers of agricultural equipment; today there are 260. In 1900 there were more than 2,000 manufacturers of boots and shoes; today there are less than 1,100. Even in industries where several hundred manufacturers exist, a very few companies control from 75 to 85 percent of the entire business.

Every census of industries of the United States shows a steady decline in the number of operating establishments in practically all industries and an equally constant increase in the size of the average establishment. Considering all manufacturing industries as a whole, the value of the product of the average single establishment has increased nearly 400 percent in the last 25 years, or from $77,000 value of product per establishment in 1915 to $365,000 in 1940. Certain industries show an even more pronounced increase. For example, agricultural implements have increased in terms of average output per establishment 850 percent in the past 25 years. Chemicals have increased nearly 400 percent; glass factories, 550 percent; petroleum refining, 335 percent; tobacco manufactures, 5,600 percent.

Even these figures are deceptive, since most industries are dominated by a comparatively few large concerns. In the cigarette industry, for example, which is the most important of tobacco products, six companies in 1937 had total assets in excess of $734,000,000. The three largest of these six companies had assets amounting to more than $640,000,000, or an average of more than $200,000,000 per establishment. The sales of these three companies amount approximately to $800,000,000, or approximately $263,000,000 per establishment. These three companies represent 80 percent of the output of the cigarettes in the United States. Obviously, entry of a successful competitor in the cigarette field would require a capital outlay of at least $25,000,000. The profits of the few tobacco companies are more per annum than the total amount paid to the farmers for tobacco.

The Standard Oil Co. of New Jersey alone had total assets in 1937 exceeding $2,000,000,000. The United States Steel Corporation owned assets of approximately $1,920,000,000. The Texas Corporation, another oil company, had assets of $615,000,000; Gulf Oil had assets of $560,000,000; Allied Chemical & Dye Corporation had assets of nearly $400,000,000; American Radiator in the plumbing field, $166,000,000; International Paper & Power in the paper industry, $258,000,000; and Crown-Zellerbach, $104,000,000.

Expressed in different form, figures presented before the Temporary National Economic Committee indicate that less than 6 percent of the number of companies producing tobacco products owned 92 percent of the assets of the entire tobacco industry; in the chemical industry, 2.7 percent of the companies engaged in business owned 86 percent of the assets; in rubber products, 4.3 percent of the companies owned 80 percent of the assets; in metal products, 2 percent of the companies owned 74 percent of the assets; in the pulp and paper industry, 3.5 percent of the companies owned 62 percent of the assets.

Even in the field of food products, widely scattered though they are, 1.2 percent of the producing companies owned 60 percent of the assets.

The figures set out above refer primarily to manufacturing establishments. The economic picture presents no less a discouraging outlook from the point of view of new enterprise in the field of distribution.

The distribution of food products will serve as an illustration. While there are thousands of retail grocery stores located throughout the country, this field is being dominated more and more by a few large concerns. In 1938 the net sales of any five of the large grocery chains amounted to more than $1,700,000,000. One chain alone enjoyed sales of approximately $380,000,000. The average sales for the five chains was more than $340,000,000 each. The invested capital required to conduct the business of five chains was approximately $322,000,000, or an average of approximately $65,000,000 per chain. One chain had invested capital of approximately $160,000,000.

One of the serious problems resulting from this concentration of volume of business in a few chains lies in the fact that to a great extent one chain does not overlap in the territory of another. The net result is that they throw a "wet blanket" over the entire United States in the form of thousands of individual units in every community. This stifles local enterprise. A generation ago anyone could start a corner grocery store with a little capital. Today, with the chain stores located on the best corners, it is suicide to attempt competition.

The same hazards beset an individual desiring to establish a local motion-picture theater. Twenty-five years ago, hundreds of ambitious young men started the exhibition of motion pictures on small capital in local neighborhoods, charging 5, 10, and 15 cents admission. Today, with chain theaters occupying preferred positions, with their vast buying power and ability to dictate terms, clearance, and even admission prices of competitors, individual attempts at competition merely invite early bankruptcy. There is no more certain way to lose $50,000 than to build an independent local motion-picture theater.

Whatever economic theory one may hold, the future must be judged by experience of the past. If the trend of the last 40 years continues for another generation, there will be a complete elimination of competition in all major industries. The management of the industrial life of the Nation will be vested in the hands of corporal's guard of businessmen, which will not be responsible to any democratic check, and whose chief aim will be multiplied profits.

New techniques must be developed with the instruments at hand, namely, the antitrust laws, if such laws are to be given a fair test. The giant corporations of today have created problems of administration and enforcement which would never have been possible had the control of corporation organization been widespread rather than concentrated in the hands of a few. A few pointed illustrations from the case book of the Antitrust Division of the Department of Justice will illustrate the difficulties inherent in restoring some semblance of competition.

At the present time the Government is engaged in prosecuting the Aluminum Co. of America. That corporation owns 99 percent of the products of virgin aluminum and sells approximately 100 percent of the aluminum products offered for sale in American markets. This monopoly was built up by the purchase of plants abroad, by cartel agreements with foreign producers, and by restrictive contracts, oppressive tactics, and discriminatory prices practiced against competitors in the industry by the aluminum giant. The Government in its suit seeks, among other things, dissolution of the Aluminum Co. of America. This in itself presents difficult problems. Who will purchase the component parts of the Aluminum Co. of America in the event the Government is successful? Whole communities have been built up around certain plants of the Aluminum Co. of America. Transportation facilities have been built around these communities. Dissolution might change the entire economic picture of a whole section of the country. On the other hand, continuation of the present monopoly permits a single corporate management to dictate in perpetuity the prices to be paid by the American public for aluminum products which are necessary and essential to the life of ordinary citizens.

Another suit brought by the Government involves the motion-picture industry. There the eight largest producers of motion pictures own their own theaters and distribute their own products. The theaters owned by these eight chains are so located as not to compete directly with one another. The country has been districted, so to speak, one chain operating in one section, another chain in another, and so forth. Independent exhibitors find it impossible to compete with the chain theaters on an equal basis due to lack of chain buying power.

The antitrust suit now pending on appeal against the General Motors Corporation demonstrates the power of a large automobile-manufacturing concern over 15,000 independent sales outlets. The control exercised by the manufacturer is such that the business of these 15,000 independent sales outlets is controlled in all its details by the manufacturers.

The difficulty of handling a case of the size of that involved in aluminum is illustrated by a brief calendar history. The case was under investigation for approximately 3 years prior to the filing of the petition on April 23, 1937. On June 28 to 29, 1937, the issue was presented as to whether or not the defendant, Aluminum, Ltd., was transacting business, and "found" in the southern district of New York on July 16, 1937, opinion by the district judge denying motion of Aluminum, Ltd., to quash service of process; on March 2, 1938, the Government filed an application for leave to file interrogatories; on April 19, 1938, argument was had on motion to quash subpena duces tecum directed to defendant; on April 25, 1938, argument on motion of Aluminum, Ltd., objecting to portion of interrogatories; April 28, 1938, court sustained interrogatories; April 29, 1938, agents representing British, Swiss, and French aluminum companies obtained orders to show cause why subpenas duces tecum addressed to them should not be quashed; May 2 to 5, 1938, argument on subpenas duces tecum continued; May 5, 1938, Government moved to amend petition; May 10, 1938, court granted same; May 31, 1938, motion from one of defendants to dismiss petition; June 1, 1938, trial commenced, and is still in progress at this date, namely, March 7, 1940. Indications are that the trial will last another 6 months. After this

the case will probably be carried through the circuit court of appeals on up to the United States Supreme Court.

Certain concerns have become so large that an individual or another corporation cannot cope with them in a court of justice. Too much money required to try a case, too many delays. Takes too long to get justice.

Even the Government does not have the money available in the Department of Justice to handle more than a few large cases each year. It is highly desirable that a large appropriation be made to enforce antitrust laws.

The report of December 30, 1939, discloses that the New York City banks have deposits aggregating $20,221,262,369, about one-third of the total deposits in the entire Nation. This was an increase during the 12 months by the huge figure $2,887,355,469.

The ratio of deposits to capital funds in these banks was, on December 30, 1939, 9.35 to 1.

In addition, these banks have approximately $4,000,000,000 in excess reserves. This is two-thirds of the excess reserves held by all the banks in the entire country. The banks in the country are privileged to make loans equal to an average of 7 to 1 on excess reserves. There are sufficient excess reserves in this one city alone to authorize the issuance of sufficient money or credit to absolutely buy the remainder of all money-making business properties throughout the Nation that are not now owned or controlled by a few people who own and control a few banks in this one city.

HOW BIG CHAINS CONNECT UP WITH LARGE BANKS

Mr. John A. Hartford, one of the principal owners of the A. & P. Co., which operates in about 40 of the 48 States, is also a director in the Guaranty Trust Co. of New York. The resources of this one bank—Guaranty Trust Co.—exceeds the resources of all the 1,455 banks in Texas, Arkansas, and Oklahoma, the population of these three States being approximately 11,000,000 people. There are interlocking directorates between the Guaranty Trust Co. of New York, the Chase National of New York, the Bankers Trust Co. of New York, the Chemical Bank & Trust Co. of New York, the J. P. Morgan & Co. of New York, and the New York Trust Co. The total resources of these six banks, according to the Comptroller's report for December 31, 1936, aggregate $7,409,904,000, and their total resources December 30, 1939, were $8,233,765,859. The resources of these six banks, which are closely related through interlocking directorates, one of the directors being Mr. John A. Hartford, are a billion dollars in excess of the resources of all the 3,710 banks in the 13 Southern States.

There are 24 banks in the United States, 13 of them being in New York City, that have resources equal to approximately one-third of the total resources of all the banks—15,000—in the United States. The 6 heretofore named are in this group of 24. There are close interlocking directorates between these 24 banks and the 175 nonfinancial corporations that own 58 percent of the corporate wealth of the Nation. Considerable time and thought was given to a study of this question. The study was placed in the CONGRESSIONAL RECORD June 15, 1937, and is contained in bound volumes for the first session of the Seventy-fifth Congress, pages 5777–5785, inclusive.

Banks under our present system, as heretofore pointed out, can create through their own bookkeeping systems and loan to their customers $7 for every $1 that they have as a reserve. Using this tremendous power and influence, these few banks can create sufficient money practically to control this country, and that is what they have been doing and what they are doing now.

WHAT CHANCE WILL PEOPLE HAVE?

The question is, What chance will the people, young and old, of the future have in this great country of ours if we continue to permit a few people to control so much of our country's wealth and foreclose to our people so many privileges and opportunities that they should rightfully enjoy?

A drive is now being made to legalize branch and chain banking across State lines. Mr. Hartford's Guaranty Trust of New York wants to do banking business over the entire Nation.

MIDDLEMEN WERE TO BE ELIMINATED

When the interstate chain-store system started operation, the claim was made that producers would enjoy greater profits; that consumers would benefit through increased savings; that definite economy would result through elimination of wholesalers and by taking traveling men off the road.

What happened? Why, the chain managements immediately set up their own wholesale houses and saved not 1 penny on distributive expense. They caused hundreds of thousands of traveling men to be taken off the road and thus seriously affected our unemployment problem. At the same time they have not saved the consumer one extra penny and have not given the producer one extra penny.

The United States Government figures disclose that the spread between the producer and consumer is much greater under interstate chain-store domination than under the old competitive system.

So the move that threw thousands of people directly into unemployment, also poured millions of dollars into the pockets of a few Wall Streeters. It also gave added millions to a few ambitious American girls, who took the money to foreign lands for their count husbands and no-account husbands to spend abroad.

I have prepared some statements here after examining information that was furnished to me by the Department of Agriculture. I made the statement a while ago that the spread is greater between the producer and the consumer under the interstate chain-store system than it was under the competitive system. You have a right to demand proof of that and it is my duty to give you proof of it, because it is a serious statement, but I believe that the proof is available, and here it is.

During the twenties was the period of the greatest growth of the interstate chain-store system. At my request, the Department of Agriculture has prepared tables, which disclose the farm value of certain agricultural products and the percentage of the retail value received by the farmer from 1913 down to and including the year 1939. It will be noticed that the farmer received more of the consumer's dollar before the interstate chain-store system obtained such a monopolistic grip upon the farmers and the consumers. The following tables prepared by the Department of Agriculture for the years indicated are self-explanatory:

Dairy products—Farm-to-retail price spreads

Year	Farm value of 100 pounds milk equivalent [1]	Retail value of 100 pounds milk equivalent [2]	Actual margin	Farm value as percentage of retail value
				Percent
1913	$1.47	$2.66	$1.19	55
1914	1.42	2.60	1.18	55
1915	1.44	2.58	1.14	56
1916	1.53	2.75	1.22	56
1917	1.89	3.40	1.51	56
1918	2.30	4.11	1.81	56
1919	2.63	4.86	2.23	54
1920	2.80	5.09	2.29	55
1921	2.16	4.19	2.03	52
1922	1.97	3.82	1.85	52
1923	2.23	4.15	1.92	54
1924	2.04	4.02	1.98	51
1925	2.10	4.14	2.04	51
1926	2.07	4.10	2.03	50
1927	2.13	4.19	2.06	51
1928	2.17	4.23	2.06	51
1929	2.16	4.19	2.03	52
1930	1.83	3.88	2.05	47
1931	1.37	3.26	1.89	42
1932	1.01	2.76	1.75	37
1933	1.01	2.70	1.69	37
1934	1.20	2.94	1.74	41
1935	1.40	3.13	1.73	45
1936	1.58	3.31	1.73	48
1937	1.64	3.42	1.78	48
1938	1.39	3.23	1.84	43
1939	1.31	3.12	1.81	42

[1] Farm value of 100 pounds of milk equivalent estimated as equal to value of 49 pounds wholesale milk plus value of 2 pounds butterfat.

[2] Retail value of 100 pounds of milk equivalent estimated as the combined values of 15.7 quarts of whole milk, 0.7 pound of cheese, 2.6 pounds of butter, and 2.5 14½-ounce cans of evaporated milk.

Pork products—Farm-to-retail price spreads

Year	Farm value of 1.90 pounds of live hogs [1]	Average retail price per pound of principal pork products [2]	Actual margin	Farm value as percentage of retail value
	Cents	*Cents*	*Cents*	*Percent*
1913	14.2	17.7	3.5	80
1914	14.4	17.9	3.5	80
1915	12.5	17.1	4.6	73
1916	15.6	19.2	3.6	81
1917	25.8	27.3	1.5	95
1918	30.2	33.7	3.5	90
1919	30.8	36.7	5.9	84
1920	24.7	33.9	9.2	73
1921	14.9	26.4	11.5	56
1922	16.0	25.3	9.3	63
1923	13.5	24.5	11.0	55
1924	14.2	24.6	10.4	58
1925	20.9	28.7	7.8	73
1926	22.4	30.6	8.2	73
1927	18.4	28.4	10.0	65
1928	16.6	27.1	10.5	61
1929	17.9	27.4	9.5	65
1930	16.9	26.4	9.5	64
1931	11.2	22.1	10.9	51
1932	6.6	15.7	9.1	42
1933 [3]	6.7	14.5	7.8	46
1934 [3]	8.1	18.2	10.1	45
1935 [3]	16.1	27.3	11.2	59
1936	17.4	26.7	9.3	65
1937	18.1	27.1	9.0	67
1938	14.7	23.8	9.1	62
1939	12.1	21.4	9.3	57

[1] 100 pounds of good grade live hogs yields 52.6 pounds of principal retail pork products, giving 1.90 pounds live weight per pound of retail products.

[2] Average retail price per pound obtained by weighting the price of each product by weights proportional to quantities of these products obtained per 100 pounds of good grade hogs.

[3] No allowance is made for processing taxes per 100 pounds live weight, which were: 50 cents, beginning Nov. 5, 1933; $1, beginning Dec. 1, 1933; $1.50, beginning Feb. 1, 1934; and $2.25 from Mar. 1, 1934, to Jan. 6, 1936.

NOTE.—These taxes are included in the margins as additional costs of processing.

White flour—Farm-to-retail price spreads

Year	Farm value of 1.41 pounds of wheat [1]	Retail price of 1 pound of flour	Actual margin	Farm value as percentage of retail value
	Cents	*Cents*	*Cents*	*Percent*
1913	1.9	3.3	1.4	58
1914	2.0	3.4	1.4	59
1915	2.6	4.2	1.6	62
1916	2.8	4.4	1.6	64
1917	4.8	7.0	2.2	69
1918	4.8	6.7	1.9	72
1919	5.1	7.2	2.1	71
1920	5.2	8.1	2.9	64
1921	2.7	5.8	3.1	47
1922	2.4	5.1	2.7	47
1923	2.3	4.7	2.4	49
1924	2.6	4.9	2.3	53
1925	3.5	6.1	2.6	57
1926	3.2	6.0	2.8	53
1927	2.8	5.5	2.7	51
1928	2.7	5.4	2.7	50
1929	2.4	5.1	2.7	47
1930	1.9	4.6	2.7	41
1931	1.1	3.6	2.5	31
1932	.9	3.2	2.3	28
1933	1.4	3.9	2.5	36
1934	1.9	4.9	3.0	39
1935	2.0	5.1	3.1	39
1936	2.3	4.8	2.5	48
1937	2.5	4.8	2.3	52
1938	1.6	4.0	2.4	40
1939	1.5	3.8	2.3	39

[1] One 60-pound bushel of wheat normally yields 42.6 pounds of white flour, making 1.41 pounds of wheat per pound of flour as retailed. No allowance is made for interseasonal variation in milling qualities of wheat.

NOTE.—No allowance is made for processing tax on wheat, which was 30 cents per bushel from July 9, 1933, to Jan. 6, 1936, or about 0.7 cent per pound of flour.

Onions—Farm-to-retail price spreads

Year	Farm value of 1 pound of onions [1]	Retail value of 1 pound of onions	Actual margin	Farm value as percentage of retail value
	Cents	*Cents*	*Cents*	*Percent*
1918	1.8	4.7	2.9	38
1919	3.0	7.4	4.4	41
1920	1.5	7.1	5.6	21
1921	2.4	5.5	3.1	44
1922	1.6	7.9	6.3	20
1923	2.5	6.4	3.9	39
1924	1.6	6.0	4.4	27
1925	2.0	7.1	5.1	28
1926	1.4	6.0	4.6	23
1927	1.5	6.4	4.9	23
1928	2.2	6.2	4.0	35
1929	1.3	6.8	5.5	19
1930	.9	5.0	4.1	18
1931	1.4	4.3	2.9	33
1932	.7	5.2	4.5	13
1933	1.1	3.6	2.5	31
1934	1.1	4.4	3.3	25
1935	1.3	5.2	3.9	25
1936	.8	3.8	3.0	20
1937	1.2	4.1	2.9	29
1938	1.1	4.3	3.2	26
1939	.8	3.8	3.0	21

[1] Farm value is based upon United States seasonal average farm price of onions per 100-pound sack.

Hens—Farm-to-retail price spreads

Year	Farm value of 1.11 of hens [1]	Retail value of 1 pound of hens	Actual margin	Farm value as percentage of retail value
	Cents	*Cents*	*Cents*	*Percent*
1913	13.2	21.3	8.1	62
1914	13.7	21.8	8.1	63
1915	13.0	20.8	7.8	62
1916	14.9	23.6	8.7	63
1917	18.8	28.7	9.9	66
1918	23.9	37.8	13.9	63
1919	27.0	41.1	14.1	66
1920	28.7	44.7	16.0	64
1921	23.3	39.7	16.4	59
1922	21.2	36.0	14.8	59
1923	21.1	35.0	13.9	60
1924	21.3	35.3	14.0	60
1925	22.6	36.7	14.1	62
1926	24.3	38.8	14.5	63
1927	22.6	36.9	14.3	61
1928	23.6	37.4	13.8	63
1929	24.9	39.7	14.8	63
1930	20.6	35.6	15.0	58
1931	17.2	31.0	13.8	55
1932	12.9	24.7	11.8	52

Hens—Farm-to-retail price spreads—Continued

Year	Farm value of 1.11 of hens	Retail value of 1 pound of hens	Actual margin	Farm value as percentage of retail value
	Cents	*Cents*	*Cents*	*Percent*
1933	10.7	20.9	10.2	51
1934	12.4	24.2	11.8	51
1935	16.5	29.2	12.7	57
1936	17.2	32.0	14.8	54
1937	17.3	33.5	16.2	52
1938	16.8	33.6	16.8	50
1939	14.9	30.1	15.2	50

[1] Estimating that there is 10 percent shrinkage between the weight of hens sold by the farmer and the weight purchased at retail gives 1.11 pounds at the farm per pound at retail.

Eggs—Farm-to-retail price spreads

Year	Farm value of 1 dozen eggs	Retail price of 1 dozen eggs	Actual margin	Farm value as percentage of retail value
	Cents	*Cents*	*Cents*	*Percent*
1913	21.5	34.5	13.0	62
1914	22.6	35.3	12.7	64
1915	21.7	34.1	12.4	64
1916	24.7	37.5	12.8	66
1917	34.0	48.1	14.1	71
1918	39.9	56.9	17.0	70
1919	44.7	62.8	18.1	71
1920	47.8	68.1	20.3	70
1921	33.1	50.9	17.8	65
1922	28.1	44.4	16.3	63
1923	29.8	46.5	16.7	64
1924	30.3	47.8	17.5	63
1925	33.7	52.1	18.4	65
1926	31.5	48.5	17.0	65
1927	28.2	45.2	17.0	62
1928	30.3	46.4	16.1	65
1929	32.1	49.0	16.9	66
1930	25.1	41.0	15.9	61
1931	18.6	31.7	13.1	59
1932	16.0	27.2	11.2	59
1933	15.3	26.0	10.7	59
1934	18.4	29.9	11.5	62
1935	24.1	36.6	12.5	66
1936	23.0	37.8	14.8	61
1937	21.7	36.9	15.2	59
1938	21.3	36.0	14.7	59
1939	18.4	32.6	14.2	56

NOTE.—The farmer averaged 67¼ cents of every consumer's dollar on eggs prior to the interstate chain control or during the period from 1913 to 1920. Last year he received 56 cents.

The farmers' loss on eggs last year compared with the period before interstate chains amounted to $112,500,000, or one-eighth of a billion dollars loss to the farmers in 1 year on eggs alone.

Potatoes—Farm-to-retail price spreads

Year	Farm value of 1 pound of potatoes	Retail price of 1 pound of potatoes	Actual margin	Farm value as percentage of retail value
	Cents	*Cents*	*Cents*	*Percent*
1913	1.0	1.7	0.7	59
1914	1.1	1.8	.7	61
1915	.9	1.5	.6	60
1916	1.8	2.7	.9	67
1917	3.1	4.3	1.2	72
1918	1.9	3.2	1.3	59
1919	2.4	3.8	1.4	63
1920	4.1	6.3	2.2	65
1921	1.7	3.1	1.4	55
1922	1.6	2.8	1.2	57
1923	1.4	2.9	1.5	48
1924	1.4	2.7	1.3	52
1925	1.9	3.6	1.7	53
1926	3.1	4.9	1.8	63
1927	2.2	3.8	1.6	58
1928	1.4	2.7	1.3	52
1929	1.6	3.2	1.6	50
1930	2.1	3.6	1.5	58
1931	1.2	2.3	1.1	52
1932	.7	1.7	1.0	41
1933	1.1	2.3	1.2	48
1934	1.1	2.3	1.2	48
1935	.8	1.9	1.1	42
1936	1.7	3.2	1.5	53
1937	1.5	2.8	1.3	54
1938	.9	2.1	1.2	43
1939	1.2	2.5	1.3	48

NOTE.—The average part of the consumers' dollar paid to the farmer on potatoes was 63¼ prior to chain control or from 1913 to 1920, inclusive, but last year it was 48 cents.

These tables, which I have put in the record, were prepared at my request by the Department of Agriculture and they disclose the farm value of certain agricultural products and the percentage of retail value received by the farmers from 1913 down to and including the year 1939. These are prepared by years.

It will be noticed that the farmer received more of the consumer's dollar before the interstate chain-store system obtained such a monopolistic grip on the farmer, and the tables, as I have said, which I have introduced, are self-explanatory.

Referring to the table on dairy products, it will be noted that before the interstate chains obtained such a monopolistic grip on the dairy industry, the farmers received an average of 55⅜ cents on every consumer's dollar (the average from 1913 to 1920, inclusive), but after the control of the interstate chains, they received 42 cents in 1939 of the consumer's dollar. If the farmer had received as many cents of each consumer's dollar on dairy products in 1939 as he received in 1920 and back to 1913, which was 55⅜ cents of each consumer's dollar, the farmers would have received $441,000,000 more for their dairy products in 1939 than they did receive.

Let us consider pork products. From 1913 to 1920, the farmer received on an average of 84 cents of each consumer's dollar. In 1939, he only received 57 cents of each consumer's dollar. That is a difference of 27 cents. That shows if the farmers had received as much in 1939 of the consumer's dollar as the farmers received on an average from 1913 to 1920, inclusive, the farmers would have received $378,000,000 more for pork products than they did receive in 1939.

Now, let us consider white flour. During the period from 1913 to 1920, inclusive, the farmers received an average of 65 cents of the consumer's dollar on white-flour purchases. During the year 1939, the farmers only received 39 cents of such consumer's dollar. The difference is 26 cents. That means if the farmers had received as much of the consumer's dollar on white flour in 1939 as they did during the period from 1913 to 1920, inclusive, they would have received $260,000,000 more than they did.

Let us consider onions. The farmer received an average of 32¼ cents of the consumer's dollar on onion purchases during the period from 1918 to 1935, inclusive. Last year they only received 21 cents of each consumer's dollar. Suppose that the farmers had received in 1939 as much of the consumer's dollar on onions as they received during the 8-year period on an average from 1918 to 1925, inclusive. They would have received an average of 32¼ cents of each consumer's dollar. In that event they would have received more than $33,000,000 in excess of what they did receive in 1939 for their onion crop.

Let us consider the price of hens before the interstate chain-store system obtained so much control and last year. The farmers received upon an average of 63½ cents of the consumer's dollar on hen purchases during the period from 1913 to 1920, inclusive. Last year, 1939, they received only 50 cents of each consumer's dollar on hen purchases. That means that if they had received as much last year during 1939 as they received on an average before the interstate chain-store system they would have received last year alone $67,500,000 in excess of what they did actually receive.

The farmers lost a large sum last year on the sale of their potatoes, compared with the period before the chain stores obtained such control. During the time from 1913 to 1920, inclusive, the farmers received 63¼ cents of every consumer's dollar on potato purchases. Last year, however, the farmers only received 48 cents of such purchases. There is a difference of 15¼ cents. Therefore, if the farmers had received as much for their potatoes as they did during the period from 1913 to 1920, inclusive, the farmers would have received in 1939 $45,750,000 more for their potatoes than they actually did receive from the interstate chain-store buyers.

I am inserting herewith a table, which was prepared by the Division of Marketing and Transportation Research of the Department of Agriculture, which explains the method used in arriving at the amount that the farmers lost last year under the interstate chain-store system, compared with the time when the interstate chains did not have sufficient buying power to control the farmers' market.

The table is as follows:

1939 cash farm income from sales and changes in farm income corresponding to specified changes in farmer's share of retail price

Commodity	1939 farm income (tentative estimates)	1939 farmer's share of retail price	If the 1938 farmer's share of retail price had been received in 1939			If the 1939 farmer's share of retail price had been 1 cent higher			If the 1939 farmer's share of retail price had been 5 cents higher		
			Farmer's share		Change in farm income	Farmer's share		Change in farm income	Farmer's share		Change in farm income
			Cents	Percent change		Cents	Percent change		Cents	Percent change	
		Cents per retail dollar									
Pork products (hogs)	$800,000,000	57	62	+8.8	+$70,000,000	58	+1.7	+$14,000,000	62	+8.8	+$70,000,000
Dairy products (milk and butterfat)	1,355,000,000	42	43	+2.4	+33,000,000	43	+2.4	+33,000,000	47	+11.9	+161,000,000
Hens (chickens)	230,000,000	50	50	0	0	51	+2.0	+5,000,000	55	+10.0	+23,000,000
Potatoes	157,000,000	48	43	−10.4	−16,000,000	49	+2.1	+3,000,000	53	+10.4	+16,000,000
White flour (all wheat)	397,000,000	39	40	+2.6	+10,000,000	40	+2.6	+10,000,000	44	+12.8	+51,000,000
Onions	[1] 14,000,000	21	26	+23.8	+3,000,000	22	+4.8	+700,000	26	+23.8	+3,000,000

[1] 1938–39 seasonal value of sales.

The changes in income associated with the several assumed changes in the farmer's share of retail price are calculated by assuming retail price and quantity of farm sales would remain unchanged.

INTERSTATE CHAINS CAUSE FARMERS TO LOSE BILLIONS ANNUALLY

On the six products mentioned above, the farmers lost a billion, two hundred million dollars last year, compared with what they would have received on an average each year during the 8 years preceding the control of the interstate chain-store system.

Possibly it will be thought that I selected the six products where the aggregate difference was the greatest. That is not true. The Bureau of Agricultural Economics of the Department of Agriculture has prepared a table, which discloses for each year from 1913 to 1939 the farm value, the retail value, and the margin on all of the 58 foods that are usually consumed by the typical American workingman's family. This table discloses that the difference that the farmer received last year of each consumer's dollar and the amount he received during the period from 1913 to 1920, inclusive, was even greater on the 58 products than on the 6, which I have given as an example. I am inserting herewith the table, which is self-explanatory:

Estimated retail value and equivalent farm value of quantities purchased annually by a typical American workingman's family

Year	Farm value [1]	Retail value [1]	Margin	Farm value as percentage of retail value
				Percent
1913	$134	$252	$118	53.0
1914	137	258	121	53.0
1915	134	258	124	52.0
1916	155	285	130	54.0
1917	223	370	147	60.0
1918	245	424	179	58.0
1919	267	470	203	57.0
1920	272	514	242	53.0
1921	179	404	225	44.0
1922	170	374	204	45.0
1923	173	384	211	45.0
1924	170	381	211	45.0
1925	198	410	212	48.0
1926	202	418	216	48.0
1927	190	406	216	47.0
1928	194	407	213	48.0
1929	195	415	220	47.0
1930	171	391	220	44.0
1931	121	322	201	38.0
1932	88	270	182	33.0
1933 [2]	92	264	172	35.0
1934 [2]	108	295	187	37.0
1935 [2]	138	331	193	42.0
1936	152	342	190	44.0
1937	160	353	193	45.0
1938	130	321	191	40.5
1939 [3]	126	311	185	40.5

[1] Retail-price data are from the Bureau of Labor Statistics, farm-price data are principally those estimated by the Bureau of Agricultural Economics.

[2] No allowance is made for processing taxes on wheat, rye, rice, hogs, corn, peanuts, and sugar, which, on the quantities of these products included in annual family purchases, amounted to about $2 in 1933, $10 in 1934, and $11 in 1935.

[3] Preliminary estimate.

Estimates of annual purchases of foods by a typical workingman's family were obtained from the 1918–19 cost-of-living survey made by the Bureau of Labor Statistics. The 58 foods include meat, dairy, and poultry products, bakery and cereal products, a number of fresh and canned fruits and vegetables, and several miscellaneous items.

FARMERS WOULD HAVE RECEIVED $3,000,000,000 MORE LAST YEAR THROUGH COMPETITIVE SYSTEM

It is my belief that had it not been for the interstate chain-store system that the farmers of this country last year would have received at least $3,000,000,000 more for what they produced than what they did receive. This would have meant that our national income would have been increased from fifteen to twenty billion dollars. It would have meant that the American workingman would have received billions of dollars more in additional purchasing power.

I have discussed the losses to the farmers on only 6 commodities. There are 52 others to be considered. Therefore my estimate is very conservative, especially in view of the fact that an increase of 1 cent in the farmer's part on the 6 products would amount to $10,000,000 on an average for each product, and when the average difference between what the farmers received in 1939 and what they received during the 1913–20 period was 21 cents on each of the 6 products, and there are 52 other commodities to be considered. I presume these 6 are the largest items.

Doubtless it will be contended by the opposition that during this period of time that wages have increased and cost of transportation has increased. No doubt that is true, but in a competitive system, the farmers' price would have advanced along with them. The monopolistic chains have obstructed the competitive system to the extent that the farmers' part of the consumer's dollar could not go along with other increases. Normally and without this obstruction, prices would have increased to the extent that the farmer would have received just as much of each consumer's dollar as he received in the past.

COMBINED PURCHASING POWER OF ALLIES

The United States Department of Agriculture, Office of the Secretary, Washington, on December 27, 1939, made a special report to the Agricultural Advisory Council on Economic Weapons of War Bear on Farm Exports. It contains the following significant statements:

"The Allies have pooled economic and financial resources and made arrangements to centralize purchases through government commissions. This is a big gun of trade control. It has not yet been brought to bear heavily upon United States farm exports. United States farm products for France and Britain are still being handled in much the usual channels. However, the centralized purchasing has borne on our export volume indirectly through the fact that the Allied centralized purchasing commissions have bought farm products heavily in British Dominions and in other countries where they could deal directly with governments."

This statement did not say so, because it dealt with a foreign situation, but I presume if the same consideration had been given to our domestic situation, that the Secretary would have called attention to the fact that the combined purchasing power of a few large interstate chains is just as destructive to the interest of the farmer as the combined purchasing power of the Allies. It is just as wrong for people in our own country to gang up on the farmer as it is for those in foreign countries to gang up on the farmer. The point here is that the farmers have been ganged up on by the Allies cooperating together in making their purchases of farm products in this country. The Secretary believes that it is not in the farmer's interest. I agree with him. At the same time, I say that when a few large chain stores get their representatives together and do exactly the same thing, it is just as wrong as if the Allies were doing it.

One national farm association—the National Grange—condemned the Allies' efforts to cooperatively buy from the farmers because it was destructive to the American farmers' interest. The same logic and reason will possibly cause them to condemn the cooperative buying by the few large chains, which control the farmers' market today.

NATIONAL GRANGE ON COOPERATIVE BUYING

January 19, 1940, the Evening Star, published here in Washington, carried the following statement, headnotes, and article:

"PRESIDENT IS URGED TO RESIST ALLIES' COMBINED BUYING—NATIONAL GRANGE MASTER SAYS EFFECT IS CRUSHING ON MANY PRODUCERS

"Louis J. Taber, master of the National Grange, said after a White House visit today that he had urged President Roosevelt to take the most vigorous attitude consistent with neutral diplomacy in protecting the interests of agriculture against combined purchasing by France and Great Britain.

"The Allies have pooled funds and worked out arrangements for buying in this country through a joint committee."

Mr. Taber could have pointed out to the President that the representatives of a few interstate corporate chains were purchasing two or three times as much from the American farmer as the Allies, and while it is true that the Allies' purchasing is detrimental to the farmer and should be stopped if at all possible, for the same reason the representatives of interstate chains, who are doing more damage than the Allies, should also be stopped.

The income to the farmers from fresh fruits and vegetables aggregate more than $1,000,000,000 each year. This is greater than the farmers' income from any other source except in dairy products. The Federal Trade Commission completed its investigation in 1937 of the fresh fruits and vegetables industry. The Commission's report contains some very interesting information, which discloses that the growers receive more when they sell through normal channels than they do when they sell direct to the interstate chain-store buyers.

INVESTIGATION BY FEDERAL TRADE COMMISSION

Now, the Federal Trade Commission, within the past 2 years, completed a thorough investigation, which included the principal farm products and the effect of interstate chain stores upon the farmers buying power. The following excerpts from this report are of particular interest.

I have here excerpts which are taken from the committee's report. and I will quote a few short ones:

ONLY A FEW COMPANIES BUY FARMERS' PRODUCTS

"In certain of the farm commodities made the subject of this inquiry there is a comparatively concentration of manufacturing or marketing in the hands of a relatively few companies" (p. 5 of the Report of the Federal Trade Commission on Principal Farm Products—Agricultural Income Inquiry, vol. 1).

A FEW COMPANIES HANDLE SUFFICIENT BUTTER AND CANNED MILK TO CONTROL MARKET

"Six of the larger chain-store companies, however, sold in a single nonidentical year, quantities of butter and canned milk equal to 17.4 and 22.1 percent, respectively, of the United States production of these commodities in 1934, and the three of these reporting the largest sales accounted for equivalents of 13.6 percent and 19.6 percent of these totals, respectively. The Great Atlantic & Pacific Tea Co. had sales of canned milk equal to about 15 percent of the total production, and was the outstanding retail chain in the distribution of this Product" (p. 9 of the Report of the Federal Trade Commission on Principal Farm Products—Agricultural Income Inquiry, vol. 1).

FARMER CANNOT SURVIVE UNLESS MONOPOLY BROKEN

"The Congress ordered this investigation because of 'the unsatisfactory condition of agriculture and of those engaged therein.' The Commission records with dismay its belief that the survival of independent farming by farmers who own their own farms and maintain an American standard of living is in jeopardy. Although the Commission's inquiry was necessarily limited to those subjects which the Congress directed it to investigate, and for which funds were provided, it finds that additional facts which have come to its attention during the inquiry express graphically the plight of agriculture" (p. 27 of the Report of the Federal Trade Commission on Principal Farm Products—Agricultural Income Inquiry, vol. 1).

Remember this is the Federal Trade Commission of the United States saying to the farmers of this country, the independent farmers, that they are recording with dismay the belief that the survival of independent farmers who own their own farms and maintain an American's standard of living is in jeopardy. How much more evidence do we need that the interstate chain-store system of this country is destroying the American farmer, that is, independent farming? Why is it in jeopardy?

Mr. BOEHNE. In what connection was that report made?

Mr. PATMAN. That was a report made by the Federal Trade Commission in connection with the agricultural inquiry. Now, quoting further from the Federal Trade Commission:

"FARMING SHOULD BE RESTORED

"The depression of agriculture has been a major economic problem ever since the war. The restoration of farming to a reasonable degree of prosperity which will permit farmers to share in the growing wealth and income of the country must be the result of different types of action directed at different parts of the problem (p. 29 of the Report of the Federal Trade Commission on Principal Farm Products—Agricultural Income Inquiry, vol. 1).

"FEDERAL TRADE REPORTS MONOPOLISTIC TENDENCIES OF THE LARGE GROCERY CHAIN-STORE SYSTEM AND OTHER CONCERNS

"Monopolistic tendencies—Amendment of antitrust laws: In the study of the situation of the handlers, manufacturers, and processors of agricultural products, the Commission has observed the existence in various industries of a high degree of monopolistic control which, in some cases, has been derived, in part, at least, by methods contrary to the letter or spirit of the law. In some cases, no doubt, ineffective enforcement has been in part responsible. In other cases, the law itself appears to require amendment. * * *

"* * * The history of various corporations which have been examined in connection with this inquiry indicates that their present dominant position in their respective industries has been obtained largely as a result of consolidations and mergers or acquisitions of the capital stock or assets of other corporations. This statement is true, for example, of General Mills in the case of flour milling, Armour & Co. in the case of meat packing Continental Baking Co. and National Biscuit Co. in the bakery field, National Dairy Products and the Borden Co. in milk, and of several of the large grocery chain-store systems (p. 30 of the Report of the Federal Trade Commission on Principal Farm Products—Agricultural Income Inquiry, vol. 1).

"Various restraints upon commerce and unfair methods of competition in the sale of potatoes have been disclosed by the inquiry" (p. 39 of the report of the Federal Trade Commission on Principal Farm Products—Agricultural Income Inquiry, vol. 1).

LARGE BUYERS DEPRESS PRICES RECEIVED BY THE PRODUCERS

The Federal Trade Commission reported June 10, 1937, as follows:

"Practices of certain large buyers, particularly chain-store buying companies, tend to depress prices received by the producer and are often discriminatory in their effect."

This inquiry had to do with fruit and vegetable buying by chains.

I have often said that chain-store buyers depress the prices paid to the producers. This statement has been challenged by the opposition. I have here cited what the Federal Trade Commission said in its report, which corroborates what I have often said. It is perfectly natural that when a few people get control of a market that they are going to use it to their own advantage and not to the advantage of the producers.

RETAIL CHAIN-STORE ORGANIZATIONS DETERMINE MARK-UP

The Agricultural Income Inquiry, part 1, 1937, the Federal Trade Commission, page 323—this report shows that the cottonseed trust continues, but it is broken up into State units, so as to prevent the Federal Government from having any control of its activity. The question of breaking up the cottonseed trust is now in the hands of State officials.

The same volume, page 614, shows the farmers had their price of potatoes depressed by the corporate chains.

The same volume, page 617: The report shows the margin of profit which chains make on potatoes and states that the large chains dominate the market.

The same volume, page 616:

"The other principal factor in the spread (potatoes) is the amount of mark-up by retailers. The amount of this mark-up is dominated by retail chain-store organizations."

Now, they tell us that they have framed up on the farmer, that they have ganged up on him, that they have destroyed his markets. And I have shown you figures that cannot be disputed, that they depressed the price of the farmers' products in this country more than $3,000,000,000 last year.

What further evidence do we need? We know that if the farmer's income increases $1, the wage earner's income increases $1. And we know that the national income increases several times that much. So, when you stand by and see a few buyers, working in their own selfish interest, destroying the buying power of the American farmer to the extent of $3,000,000,000, you will understand why I say that you are standing by and witnessing the national income being forced down twenty or twenty-two billion dollars and seeing $3,000,000,000 taken from the pockets of the American workingman.

SECRETARY OF AGRICULTURE REPORTS NONFARM POPULATION BUYING FOOD FOR TWO BILLIONS LESS THAN THEY SHOULD

On January 16, 1940, the Department of Agriculture made public a report from the Agricultural Advisory Council. In this report of the Agricultural Advisory Council as given to the newspapers by Secretary Wallace, there were statements from the Bureau of Agricultural Economics, which are very interesting. The following may be quoted as of special interest:

"Food prices are still relatively low in relation to prices of other goods in the average consumer's cost of living.

"Whether comparison is made with prices of 1937 or 1929; and this relatively low level of retail food prices, reflected equally in relatively low prices received by farmers for foods, contributes greatly to the present discrepancy between farm income and parity income."

I hope the gentleman from Minnesota will listen to this, because it goes right back to dairy products.

"Compared with 1929, retail food prices are 26 percent lower while prices of other items in living costs are 13 percent lower. In other words, were food prices 17 percent higher, they would bear the 1929 relation to other costs. The real significance of these figures is that the nonfarm population is now buying its food for about $2,000,000,000 less, on an annual basis, than it would be paying if food prices were not out of line with other prices.

"The council was unanimous in its expression that in the interest of national recovery, farm prices should be in balance with other prices, and there was considerable discussion of ways and means of trying to bring this about.

"Farmers are receiving a smaller share of the consumer's food dollar now than at the outbreak of the World War in 1914, this report of the advisory council states."

I desire to invite your attention especially to two points in the report of this Agricultural Advisory Council's report. The first point is that the farmers are losing $2,000,000,000 a year in food alone in purchasing power. (Therefore my estimate of $3,000,000,000 on all farm products cannot be high.)

I say this is brought about by the combined purchasing power of a few interstate chains that have ganged up on the farmer and have caused the farmer to lose this $2,000,000,000 a year. It is in the Nation's interest that this $2,000,000,000 be restored to the farmer. Every time the farmer receives a dollar, he puts it into circulation into the channels of trade and distribution. In this way, wage earners get part of this money, and over a period of years it has been discovered that for every dollar the farmer receives it increases the purchasing power of labor at least $1. In addition, every time the farmer receives a dollar and he spends that dollar, the national income is increased six to eight dollars during that year, because of the velocity of that dollar.

The other point is that the farmer is receiving a smaller part of a consumer's food dollar now than at any time since the outbreak of the World War in 1914. The only explanation I can think of for that is that the farmers have not been organized; they have been forced to take what was offered to them by the few buyers which they had for their products. The few buyers representing the interstate chains worked closely together and bought the farmer's products for just as low a price as it was possible.

The Bureau of Agricultural Economics of the Department of Agriculture, on January 16, 1940, made a special report on food prices, workers' purchasing power, and parity price and income for the Agricultural Advisory Council. In this report, it was stated:

"If food prices at 74.4 percent of 1929 are 'fair,' other prices in the cost of living should be 15 percent lower. If nonfood prices at 87.3 are 'fair,' then retail food prices should be 17 percent higher. Annual expenditures for food by the nonfarm population, with a national income of around $70,000,000,000, is over $12,000,000,000. If food prices were 17 percent higher, it would mean about $2,000,000,000 more available to farmers and all those engaged in food distribution."

In this report is was also stated: "Those relatively low prices contribute a great deal toward keeping farm income below the parity income level."

FARM SURPLUS

The national corporate chains claim much credit for disposing of certain surplus commodities of the farmers. One critic advised me that he had just purchased from a national chain store three cans of peas for 12 cents and challenged me to deny that such purchase was in his interest and the interest of the country. He incidentally pointed out that the farmers were helped as well as himself; that the farmers had a surplus of peas that the chain store was helping them to dispose of. Let us see who was helped by this sale of surplus peas at 4 cents a can. The can company made a fair profit on the can. The railroad company made a fair profit on transporting the can to the producer and cannery, and also on the transportation after the can was filled. The telephone company made a fair profit on the calls necessary to complete the sale to the distributor, but the farmer who produced the peas worked for less than 5 cents an hour and threw in absolutely free the soil on his farm required to produce them. The wage earner working in the cannery did not receive a living wage. The chain store either received a profit or else placed his competitor a little bit nearer to bankruptcy. The railroad company profited, the Can Trust profited, the telephone company profited, but the farmer and wage earner suffered.

POTATOES IN MAINE AND MICHIGAN

One Member of Congress from Michigan protested to the Federal Surplus Commodity Corporation because this Government organization was purchasing potatoes in Maine but not purchasing potatoes in Michigan. An investigation disclosed that the chain stores had framed upon the farmers in Maine and Government money had to be used to fix a fair price in that market, which was unnecessary in the Michigan market at the time. The Government money has been used by this corporation to prevent the chains from destroying entirely the farmers' market for potatoes on the Atlantic seaboard, onions in Massachusetts, grapefruit and grapefruit juice from Florida and Texas, and poultry products all over the Nation.

Mr. BOEHNE. Referring to your illustration of those cans of peas for 12 cents, will you call that a loss leader?

Mr. PATMAN. I would think that it was a loss leader; I do not know how it could be sold in any other way.

Mr. BOEHNE. I thought that there was certain legislation on the books affecting loss leaders.

Mr. PATMAN. The Federal Government has never passed any law against loss leaders that I know of. Some States have attempted to; that is, they have attempted to legislate on the subject, but I am not sure that this happened in one of the States where they had a so-called antiloss leader law.

Mr. DINGELL. Let me ask you this question. Does not the Robinson-Patman Act have any control over that practice?

Mr. PATMAN. Not so far as direct sales by retailers are concerned, because that is intrastate. That is an intrastate transaction. The Robinson-Patman Act only affects transactions between States. And besides it does not apply to loss leaders and it is not price fixing. We cannot deal purely with a local transaction.

The question is asked, will the pasasge of H. R. 1 make it harder on the farmer and producer by keeping high prices, less goods sold, less production, and less tax collections for the Government?

BRAG ABOUT KEEPING PRICES DOWN

Answer. In every chain-store argument one point is emphasized, and that is, "We keep prices down." If the farmers had $12,000,000,000 a year gross income, as they should have instead of $6,000,000,000 or $7,000,000,000 a year, one of the greatest markets in the world would be created for all goods and services produced in America. This additional purchasing power would represent acres of diamonds here in our own yard and would be better than the entire foreign trade of several of the other countries of the world. But with the interstate chains keeping the farmers' prices down, that reduces the buying power of the farmers who are the best customers of the people who live in the cities. The

people who live in the cities have lower wages because the farmers cannot buy; therefore low prices to farmers force low wages to factory workers. Low wages to the factory worker means he will buy less, because his debts, taxes, and other fixed charges have become proportionately higher by reason of his low wages.

So the effect of the passage of H. R. 1 will mean more purchasing power to the farmers in the form of higher prices but not unreasonably high prices. It means more goods sold because the aggregate wages will increase, which will make fixed charges easier for the wage earner to pay and will cause him to have remaining a much larger percentage of his earnings to buy goods, which will mean more goods sold. This will lead to more production and more tax collections for the Government.

Any consumer who demands a price so low that the farmer or wage earner does not receive a fair price or a fair wage to give him purchasing power, is demanding a price that will destroy the purchasing power of two-thirds of our people and will eventually destroy our Nation. If low prices were the paramount consideration, repeal of the protective tariff would be the logical step in that direction.

February 21, 1939, I received a letter from a farmer, which stated:

"I am a farmer and a producer of fruits and vegetables and ship them to most all eastern markets. For a number of years these markets have been declining so rapidly at present it is useless to ship at all. I ask the commission men what is the trouble and the answer from them all is the same—'chain-store control.'"

The same thing applies to dairy and other farm products.

FARMERS' PLIGHT WORSE AS CHAINS GROW

The question is asked: How does interstate chain buying power affect the farmer?

Answer. The chains' representatives know when perishable and other products of the farmer are moving to the market. They know exactly where each car is traveling every night. If they want to reduce the price on that market, all they have to do is to withdraw for the period of time necessary to effect their purpose. In this way they force prices down or force the farmer to take his products back home to await a more favorable market. The farmer cannot return his products because the freight charges would be more than his products would be worth.

As the interstate corporate chains have grown in number, size, and power, the farmer's plight has become more and more acute. As the sales volumes of these concerns approached their peak, farmers' prices sank lower and lower, until the yearly total of agriculture income became so low as to cause national alarm.

Question. What was done by the Government to protect the farmer against such an abuse of mass buying power?

Answer. The Federal Surplus Commodities Corporation was organized in 1933 under the Department of Agriculture. Large sums of money running into many millions of dollars each year appropriated by the Government have been used by this agency to go into the markets, where the chains were destroying the buying power of the farmer, and buy up some of the farmer's products at distressed prices and prevent a total collapse of the market in that area. It is a case of Government money being used in an effort to protect the producers against a conspiracy on the part of the big chains. It is well known that this agency is powerless, in many instances, properly to protect the producers against the tremendous power and influence of a few organized large buyers of national corporate chains.

FARM ORGANIZATIONS ON H. R. 1

The question is asked, Is it true as charged that the American Farm Bureau Federation, at its anual convention in New Orleans, passed a resolution against H. R. 1?

Answer. The proceedings of this convention disclose that the following resolution, No. 16, was passed:

"We condemn discriminatory and punitive taxes of all types designed to favor or penalize a selected group. The enactment of such legislation results in further efforts by other groups to obtain special privileges."

Evidently the delegates to this convention were sold on the theory that this resolution correctly outlined the aims and purposes of H. R. 1—at that time the bill was H. R. 9464 in the Seventy-fifth Congress. Doubtless our side was not presented. Let us see if the resolution properly describes our proposal. First, the primary object of H. R. 1 is not to levy discriminatory or punitive taxes. It is using the taxing power as a vehicle to correct a bad economic system. Suppose it should favor independent business, that is no excuse for opposition to it if it is in the country's interest. If chains were put out of business entirely the million and a half independent merchants would not have a monopoly. Another million and a half people could immediately go into competition with them. The resolution applies to the protective tariff, as it is a punitive tax.

The American Farm Bureau passed a resolution at the same convention against monopoly, as follows:

"RESOLUTION 15—MONOPOLY

"The alarming growth of monopolistic practices and monopolistic controls in industry and labor place a heavy burden upon American agriculture and constitute one of the chief reasons for the inequalities between farm prices, industrial prices, and industrial wages.

"We commend the Federal Trade Commission and the United States Department of Justice for instituting a more aggressive and effective enforcement of antitrust laws and urge a continued, vigorous attack upon illegal monopolies and unfair trade practices."

The interstate chains dominate more farm prices than any other group in America and have done more to destroy farm prices. One would think from the wording of that resolution that its object was severely to condemn the interstate chain systems.

I cannot agree that Resolution No. 16 was passed to praise the chains, as their defenders are contending, after the Farm Bureau passed Resolution No. 15 that hits them right on the nose.

IF FARMER PROSPEROUS—NATION PROSPEROUS

It is my belief that the prosperity of this Nation depends upon the prosperity of the American farmer. Any system that reduces the buying power of the farmer works a hardship on all the other people, whether they are engaged in the professions or business or wage earners. When the farmer is prosperous wage earners are prosperous. So the wage earner who insists on perpetuating a system that is reducing the purchasing power of the class that represents the best customer for what he—the wage earner—is manufacturing is certainly not acting in his own interest or in the country's interest.

The farmers of this Nation today, and especially those engaged in dairying, producing livestock, poultry, eggs, and all fruits and vegetables, would be enjoying a fair measure of prosperity were it not for the conspiracy of a few interstate chain-store owners who are dominating the market for these products and forcing the prices real low in order to accommodate their city consumers. City consumers who have vision realize this and know that it is against their interest and the interest of the country, and would not object to paying a fair price—one that would be fair to the producers.

FARMERS' WELFARE INVOLVED

How will the farmer be affected by this bill?

The large chains have framed up on the farmer and practically ruined him. Recently the largest chain in America carried the following advertisement all over the Nation. I quote:

"We have got food prices pinned down to startlingly low levels and are holding them down. We will keep them down—way down—every day in the week."

Mr. KNUTSON. What company was that?

Mr. PATMAN. Well, I said the largest chain in America. That would necessarily be the Great Atlantic & Pacific Tea Co. I will state to the gentlemen that this advertisement was carried in Dallas, Tex. But that statement means the producer of dairy products, poultry, eggs, etc.

That statement means that the producers of dairy products, poultry, eggs, tomatoes, potatoes, and all fruits and vegetables will continue to receive below the price of production in order that this concern might control prices and get a firmer monopolistic grip upon the throats of the American people.

It goes back much further than saving a few cents on farm products. Farmers work hard. They are entitled to a fair price and a sufficient income to enjoy the American standard of living, which they are not getting.

These big monopolistic concerns are destroying farm prices, placing farm families upon starvation, depriving farm children of an opportunity in life. And doing all this in your name and claiming that, as chains, they are a great benefit to you, the city consumers.

Time and time again the Federal Trade Commission has reported, in effect, that the 1 percent of the chain-store companies (seriously affected by this bill) are operating against the interest of the farmer.

LOW-INCOME GROUPS NOT HELPED BY CHAINS

The question is asked, Is the statement made by representatives of chain-store groups true, that the chain stores help low-income groups?

Answer. If that is true, which I deny, H. R. 1 will not deprive low-income groups of such help, as the passage of this bill will only seriously affect one-third of 1 percent of the chain-store companies. It will not destroy the one-third of 1 percent but will have a tendency to restrict each company in this category to the boundaries of one State or smaller area.

Question. Do low prices help the low-income groups?

Answer. What is known as the submerged one-third of our people will be helped more by good prices and good wages than they will by low prices and low wages. Suppose we should arbitrarily reduce prices 50 percent and wages 50 percent. The argument would be made that the wage earner earning $2 per day under the new scale would be able to buy as much as he formerly bought when he received $4 per day, since prices had been reduced in proportion. This is a beautiful theory, but in practice it does not work out. The people of this Nation owe more than $200,000,000,000 in debts. Much of it is owed by the one-third of our people in the low-income class. If we reduced their wages and prices 50 percent, we in effect would double their indebtedness, in what they have to pay with. Instead of owing $100, they will owe $200, measured in their paying power, and instead of paying 6 percent interest they will pay 12 percent interest.

Further, there are certain fixed charges that cannot be reduced and which become cheap or lower only with good prices and good wages. I refer to electricity, gas, water, and telephone service; also to railroad freight and passenger rates and such fixed charges as interest, debts, and taxes.

The lower the wages and the lower the prices of farm products and other commodities that go to make up purchasing power the higher in proportion becomes the debt and tax burden.

IF HOMES, CHURCHES, AND SCHOOLS ARE DESTROYED, THE NATION WILL BE DESTROYED

Three of the greatest institutions on earth are the homes, the churches, and the schools. Anything that destroys community life destroys or weakens these three great institutions. Not only are these three great institutions being destroyed by absentee ownership of local business but the increase in tenancy on the farms has increased to such an alarming extent that the farm problem has become a major problem.

Farming is a big business. According to the last census, there are 6,812,350 farmers in the United States; 31,800,907 people dependent upon farming for a livelihood, a million increase over 1930; about 1,080,000,000 acres are in cultivation. The land and buildings aggregate about $33,000,000,000 in value. There are 11,000,000 horses, 5,000,000 mules, 68,000,000 cattle, 25,000,000 milk cows, 51,000,000 sheep, 42,000,000 swine, and 575,000,000 chickens on these farms. They produce an average of 2,000,000,000 bushels of corn every year, about 750,000,000 bushels of wheat, and an average of about 13,000,000 bales of cotton. It is the greatest business in the world.

WHERE WEALTH ACCUMULATES AND MEN DECAY

Two hundred years ago a young boy was growing up in a village in central Ireland, who later became one of England's most famous poets. He witnessed the farms of his surrounding countryside passing from the hands of their local proprietors into those of absentee English landlords. Thirty years later he immortalized its wasted remains as The Deserted Village. Its lines are as vibrant with warning to us today as they were poignant with memories to his impoverished countrymen of that generation:

"Ill fares the land, to hastening ills a prey,
Where wealth accumulates, and men decay;
Princes and lords may flourish, or may fade;
A breath can make them, as a breath has made;
But a bold peasantry, their country's pride,
When once destroy'd, can never be supplied."

The peasantry to whom Goldsmith referred in those living lines was not the farmer as an employed laborer but the farmer as an independent proprietor and businessman, the owner and manager of his farm as a business enterprise. It was their independent proprietorship that gave them that sturdiness which was their country's pride; it was their reduction to tenancy and the ranks of employed labor that broke their spirit and sapped the life of their community. The problem that then afflicted rural Ireland menaces rural and urban America today.

THREE MAJOR PROBLEMS

I consider the three greatest problems confronting our country at this time are the following:

First. A monetary system that will provide an adequate supply of currency and credit for the needs of the people; a system that will not cause either inflation or deflation, but a system that is administered by the Government instead of by those who are selfishly interested.

Second. Parity prices for basic farm commodities.

This will provide one-third of our population with purchasing power, and bring prosperity to the other two-thirds of our people.

Third. Prevention of absentee ownership of any business that local people are able and willing to operate. Protection should also be afforded local business against destruction by absentee ownership. This is one of our greatest problems. If a few people control distribution, a few people will determine the price that producers and manufacturers shall receive for what they produce and manufacture, and the same few people will tell the consumers what they must pay. Monopoly invariably fixes a price just as high as they can fix it. Our experiences in the past are too convincing for anyone to assert the contrary.

I have often made the statement that the interstate chains were closely connected up with Wall Street interests. That statement has been denied. I believe that I have proof of it and, with the permission of the committee, I will insert herewith a chart that has been carefully prepared, which discloses the chains and retail outlets connected with seven private banking firms and four large commercial banks. It will be noticed that these chains and large subsidiaries represent the largest interstate chain-store concerns in our country. It is self-explanatory, and is as follows:

(Chart cannot be inserted but it will be contained in the printed hearings of the committee.)

This chart that I have introduced in the record, gentlemen, shows on one side the private banking houses, and the large commercial banks; in the middle of the chart, the chains and large subsidiaries, retail outlets, connected with seven private banking firms and four large commercial banks. It starts off with the Great Atlantic & Pacific Tea Co. and takes in the American Stores Co., the Economy Groceries Corporation, the Jewel Tea Co., the Kroger Grocery & Baking Co., the National Tea Co., the Purity Bakeries Corporation, the Borden Co., the National Dairy Products Co., the United Drug Co., etc.

I have attached in back of this chart a statement prepared by the legislative-reference department of the Library of Congress that discloses the number of chain outlets owned and operated by each one of these concerns and the amount of sales of each one of these concerns.

Mr. KNUTSON. Do you attempt to prove by this chart that the large banks own or control the chains?

Mr. PATMAN. I do not attempt to prove that the large banks own the chains.

Mr. KNUTSON. Or control them?

Mr. PATMAN. But I do believe that it is a matter of general knowledge that the financial director on any board has more influence on that board than any other director on it. And I certainly believe that he has influence that few directors have and, to that extent, they are influencing these concerns that have interlocking directorates.

Mr. KNUTSON. These companies have interlocking directorates—the companies that you name are on this sheet?

Mr. PATMAN. Yes, sir.

Now, in connection with Wall Street owning interstate chain stores: I have made the statement that the interstate chain-store concerns that would be seriously affected by this bill were practically all connected up with Wall Street interests. I stand by that statement and will offer proof of what I have said.

First, with the permission of the committee, I will insert in the record a chart which shows the number of chains and retail outlets in which Lehman Bros., of New York, have a director and also the suppliers of goods and services in which Lehman Bros. have a director. In other words, the names of all the chains and retail outlets are given on one side and the names of the suppliers of goods and services given on the other side. This table shows in the middle of the chart the names of the partners and those employed by Lehman Bros. who are directors in the concerns named. The chart is self-explanatory.

(Chart cannot be inserted here but will be contained in printed hearings of committee.)

With reference to one New York concern, Lehman Bros., I have introduced this chart and a statement covering retail outlets. On this chart there are listed the chains and the retail outlets, and on the other side of it the suppliers of goods and services, and in the middle the partners in this firm and the employees—that is, Lehman Bros.—showing the directorships in the retail field. That was prepared from information furnished to me by a source the reliability of which I have no doubt of. I am willing to state that it is true and correct.

I have, in addition to that, the name of each one of the concerns listed on that chart in which Lehman Bros. have a director, the number of outlets of that concern, and the amount of the sales.

This information shows that they represent—at least, have interlocking directorships in—concerns that own 13,402 outlets engaged in different kinds of business, that do a total business of $2,361,000,000 a year.

Now, we are asking that the filling stations be included in this bill, and I have had prepared a chart which shows the interlocking directors of the large oil companies and the large banks, and that chart is self-explanatory. This chart shows the connection between large banks and financial companies and the large oil and sulfur companies. The sulfur companies are not involved in this bill, however, except when their products are sold through chains. Most of the oil companies have a large number of retail filling stations. It is true that since the passage of the Social Security Act an effort has been made to evade this act by the large oil company leasing a filling station to the operator. In that way the social-security taxes have been successfully evaded. If H. R. 1 becomes a law and the amendment, which I have suggested, is eliminated from H. R. 1, all of these filling stations will be subject to the tax, will force the oil companies to permit them to be owned by private owners and will prevent the oil companies from evading the payment of the social-security tax through the lease arrangement as they are now evading the tax. The chart is self-explanatory and is as follows:

(See committee hearings.)

I have another chart here, which is self-explanatory. This shows three private banking houses in New York and two commercial banks in New York, and indicates the chains and retail outlets that they have through their directorships. The three private banks are Goldman, Sachs & Co., Lehman Bros., and J. P. Morgan & Co. The two commercial banks are the Chase National Bank and the Guaranty Trust Co., which have interlocking directors on the principal interstate chain-store boards in America; this commences with Montgomery Ward & Co., also the Great A. & P. Tea Co.; American Stores; Jewel Tea Co.; Kroger Grocery & Baking Co.; Borden Co.; National Dairy Products Co.; United Drug Co.; Sears, Roebuck & Co.; S. H. Kress & Co.; Associated Dry Goods Corporation; Allied Stores Corporation; Federated Department Stores; Franklin Simon & Co.; Gimbel Bros.; W. T. Grant; Interstate Department Stores; Kaufman Department Stores; May Department Stores Co.; Oppenheim-Collins & Co.; H. L. Green Co.; McCrory Stores Corporation; McClellan Stores; F. W. Woolworth.

(See committee hearings.)

A pipe line from every community in America to Wall Street banks: The Chase National Bank of New York, which has assets of more than $3,000,000,000, has interlocking directorates with the Atlantic & Pacific Tea Co., the Borden Co., Allied Stores, Inc., Oppenheim-Collins Co., and H. L. Green Co.

The Guaranty Trust Co., of New York, with assets of two and one-third billion dollars, has interlocking directorates with the Atlantic & Pacific Tea Co., W. T. Grant Co., McCrory Stores, Inc., and McClellan Stores Co.

The Atlantic & Pacific Tea Co. has a director on the board of the Chase National Bank and the Guaranty Trust Co.

Twenty-four banks own one-third of the resources of the entire 16,000 banks in America; 13 of these 24 banks are in New York City; the 2 banks—Chase National and Guaranty Trust—own one-fourth of the resources of these 24 banks.

A few men controlling a few banks now control the corporate wealth of the Nation.

The hand of greed should be taken from the throat of the American people.

When we take into consideration the fact that the Wall Street banks control practically all the money-making businesses of the country, we wonder what is going to happen. I doubt that a dictatorship would allow this to happen, yet we who live in a democracy tolerate this deplorable condition.

TWENTY-FOUR LARGE BANKS HAVE MORE THAN 30 PERCENT OF RESOURCES OF ALL BANKS

List of banks in the United States with resources in excess of $350,000,000 in the order of their size at Dec. 31, 1936

	Officers	Directors	Resources Dec. 31, 1929 (thousands)	Resources Dec. 31, 1936 (thousands)
1. Chase National Bank (N. Y.)	63	25	$1,714,829	$2,562,182
2. Guaranty Trust Co. (N. Y.)	42	23	2,017,119	2,086,979
3. National City Bank (N. Y.)	36	19	2,206,241	1,904,800
4. Bank of America National Trust & Savings Association	20	25	1,055,113	1,430,337
5. Continental Illinois National Bank & Trust Co	29	21	1,176,603	1,232,513
6. Bankers Trust Co. (N. Y.)	34	20	817,977	1,070,173
7. First National Bank of Chicago	45	25	365,559	991,280
8. Central Hanover Bank & Trust Co. (N. Y.)	34	23	769,259	979,309
9. First National Bank of Boston	28	25	703,347	756,202
10. Manufacturers Trust Co. (N. Y.)	29	25	508,226	748,564
11. Irving Trust Co. (N. Y.)	27	23	865,980	728,677
12. Chemical Bank & Trust Co. (N. Y.)	32	20	423,172	686,676
13. Security First National Bank (Los Angeles)	54	25	610,683	649,173
14. First National Bank of the City of New York	9	10	568,425	648,019
15. Bank of the Manhattan Co	30	14	506,939	570,538
16. J. P. Morgan & Co.-Drexel & Co	[1]19	19	[2]	550,338
17. Philadelphia National Bank	13	24	358,423	497,392
18. New York Trust Co	15	19	401,665	444,556
19. National Bank of Detroit	15	14	[3]	442,803
20. Union Trust Co. of Pittsburgh	10	14	217,786	386,913
21. Mellon National Bank (Pittsburgh)	7	23	192,501	380,895
22. Cleveland Trust Co	38	25	316,508	380,070
23. Corn Exchange Bank Trust Co. (N. Y.)	16	15	298,483	360,262
24. Northern Trust Co. (Chicago)	33	8	69,395	355,701
Total	678	484	16,164,233	20,853,352
Comparable figures 21 banks [4]			16,094,838	19,504,510
Total resources, all banks			72,038,566	67,525,335
Percent of total resources in 21 large banks			22.34	28.88

[1] Partners.
[2] No report made public.
[3] Organized Mar. 24, 1933.
[4] Eliminating J. P. Morgan & Co., National Bank of Detroit, and Northern Trust Co., Chicago.

The relationship of these banks to all banks and banking resources as of June 30, 1936, is shown as follows:

Relation of 24 largest commercial banks to all commercial banks

Class of banks	Number of banks	Total resources (thousands)	Percent of total
1. Resources exceeding $350,000,000	24	$20,853,352	30.88
2. All other banks	15,964	46,672,983	69.12
3. Total	15,988	67,525,335	100.00

From the above summary it is shown that over 30 percent of all commercial banking resources is in the hands of 24 banks out of a total of 15,988 (as of date indicated) or less than sixteen-hundredth of 1 percent of all banks. Reference to another tabulation indicates there was a trend toward increased concentration of banking resources for the period 1930–36.

As in the case of corporations, the banking control exercised by these banks extends beyond the resources in their own hands, since many of the smaller banks have banking relationships with the larger banks and are subject to their control in many ways.

These 24 banks are controlled by 484 directors, but from a practical standpoint, as in the case with boards of directors of other corporations, many directors are not generally active in the affairs of the banks.

The above number is also reduced due to duplications resulting from interlocking directorates. Therefore it may be assumed that the actual control of these banking resources is concentrated in the hands of a relatively few men.

The relationships among the 24 leading banks were studied and it was found that further concentration exists in this group, as evidenced by interlocking directorates.

CHART SHOWING INTERLOCKING DIRECTORS BETWEEN CORPORATIONS AND LARGE BANKS

From the study of interlocking control between banks and industry the following conclusions may be reached:

(1) There exists a definite community of interest and interlocking control between banks and industry.

(2) Of a total of 1,543 directorships in the 100 major corporations there are 403 connections with the 24 banks through interlocking directorates.

(3) Of a total of 488 directorships in the 24 leading banks there are 403 connections with the 100 corporations through the interlocking directorates.

(4) Of the 403 interlocking directorships between the 100 corporations and 24 banks, 230 are held by directors of 7 banks and 103 by directors of 2 banks.

(5) The 100 major corporate units having interlocking directorates represent concentration of wealth in their respective fields.

(6) Interlocking control is represented by the men holding the 403 interlocking directorates. One hundred men of this group represent the more important interlocking directorates and the potential control of a large part of our national wealth.

(7) The attached charts illustrate the relationship existing between the 24 leading banks and 100 major corporations. In the large chart each connection between the banks and companies is shown.

CHART SHOWING INTERLOCKING DIRECTORS BETWEEN 100 CORPORATIONS AND 24 LEADING BANKS

(See committee hearings.)

WHEEL OF WEALTH—SUMMARY CHART SHOWING INTERLOCKING DIRECTORS BETWEEN 100 CORPORATIONS AND 24 LEADING BANKS

(See committee hearings.)

What Woodrow Wilson said about concentration of wealth and large corporate units:

In 1909 Woodrow Wilson in his New Freedom maintained that as a result of the concentration of the credit system in the hands of the few we had become "the most highly controlled and dominated government in the civilized world." This subject was commented on from time to time by men prominent in public affairs, and as a result of those comments, and the general situation existing, Congress appointed the Pujo investigating committee in 1912, with Samuel Untermeyer as counsel. After extended investigation, this committee issued its report analyzing the financial control of the Nation as the committee then saw it. It directed attention to the First National Bank of New York, National City Bank of New York, Lee Higginson & Co., of Boston, Kidder, Peabody & Co., and Kuhn, Loeb & Co., as the most active agents in bringing about concentration of credit control.

The concentration of wealth in large corporate units and the ultimate control of this wealth by a few individuals have merited for some time the interest and study of men prominent in the affairs of the Nation. The following statements by Woodrow Wilson indicate the general tenor of a great mass of material on this subject, a portion of which may be obtained from the reference material listed in the first division of the study.

"It is true that while most men are thus submerged in the corporation, a few, a very few, are exalted to a part which, as individuals, they could never have warranted. To the great organizations of which they are the heads, a few are able to play a part unprecedented by anything in history in the control of the business operations of the country, and in the determination of the happiness of great numbers of people.

"American industry is not free, as it once was free; American enterprise is not free; the man with only a little capital is finding it harder to get into the field, more and more impossible to compete with the big fellow. No man can deny that the lines of endeavor have more and more narrowed and stiffened. No man who knows anything about the development of industry in this country can have failed to observe that the larger kinds of credit are more and more difficult to obtain unless you obtain them upon the terms of uniting your efforts with those who already control the industries of the country.

"The dominating danger in this land is not the existence of the great individual combinations—that is dangerous enough in all consciousness—but the combination of the combinations—of the railroads, the manufacturing enterprises, the great mining projects, the big enterprises of the development of natural water power in the country, banded together in the personnel of a series of boards

of directors into a "community of interest" more formidable than any conceivable single combination that dare appear in the open.

"The great monopoly in this country is the monopoly of big credits. So long as that exists our old variety of freedom and individual energy of development are out of the question. A great industrial nation is controlled by its system of credit. Our system of credit is practically concentrated. The growth of the Nation, therefore, and all our activities are in the hands of a few men who, even if their action be honest and intended for the public interest, are necessarily concentrated upon the great undertakings in which their own money is involved and who necessarily by the very reason of their own limitations chill and check and destroy genuine economic freedom. This is the greatest question of all, and to this statesmen must address themselves with a determination to serve a long future and the true liberties of men."

Mr. KNUTSON. What you say would indicate that the money changers have not been driven from the temple.

Mr. PATMAN. I think President Roosevelt has done more for this country than any other half dozen Presidents that have ever served as President; for the poor people especially and for the underprivileged classes, and the lower one-third as well as the people generally. But you cannot do everything in a short period of time. We must crawl before we can walk. It takes time to do these things, and these money masters have lots of interests and lots of controlling interests. They can greatly retard any President by placing obstacles in his way.

I do not believe that they can affect President Roosevelt or his administration. They have been hollering. And when they begin to make a noise you know that they have been hit.

I notice that the S. E. C. the other day issued a statement that they were going to compel these directors to ask for bids on contracts for the corporations they represent, where the amounts exceeded a certain sum. You noticed what they said about that. And you can just take the howls and the grumbles and the complaints of these New York banks and these big bankers over the country generally and put them down as evidence that something has been done to them in an effort to protect the interest of the people.

There are two things—money and monopoly—that I hope this administration will get after next. The Department of Justice is doing a good job on monopoly. I think within a reasonable time those two major evils will be corrected. But you cannot save all the banks in the country and all the homes, all the railroads and all the insurance companies, and raise the purchasing power of the people by helping the farmers and wage earners and send millions of boys and girls to school and give millions of people old-age pensions, and do everything else along with those things, without taking time. It takes time to do those things.

But I do not want to get into any discussion with the gentleman on politics.

Mr. KNUTSON. You can go ahead; I have a thick skin.

Mr. PATMAN. Of course, the gentleman and I are good friends and what we say about these things is accepted in the same spirit as what is said in a courthouse between lawyers.

WHO GETS THE DIVIDENDS?

It is said that the stock ownership of interstate chain stores is so widely distributed that the people in all the towns and cities where these stores are located receive dividends as though they were the local owners. This, if true (and I deny that it is true) is not a complete answer to the charge of remote and absentee ownership of a business that should be owned and conducted by local people.

The statistics of the Bureau of Internal Revenue, which were quoted by the President of the United States in his message to Congress on April 29, 1938, contain the following information relative to the ownership of corporations:

"Ownership of corporate assets: Of all corporations reporting from every part of the Nation, one-tenth of 1 percent of them owned 52 percent of the assets of all of them.

"And to clinch the point: Of all corporations reporting, less than 5 percent of them owned 87 percent of all the assets of all of them.

"Income and profits of corporations: Of all the corporations reporting from every part of the country, one-tenth of 1 percent of them earned 50 percent of the net income of all of them.

"And to clinch the point: Of all the manufacturing corporations reporting, less than 4 percent of them earned 84 percent of all the net profits of all of them."

The President, in this message, stated:

"The danger of this centralization in a handful of huge corporations is not reduced or eliminated, as is sometimes urged, by the wide public distribution of their securities. The mere number of security holders gives little clue to the size of their individual holdings or to their actual ability to have a voice in the management. In fact, the concentration of stock ownership of corporations in the hands of a tiny minority of the population matches the concentration of corporate assets.

"The year 1929 was a banner year for distribution of stock ownership.

"But in that year three-tenths of 1 percent of our population received 78 percent of the dividends reported by individuals. This has roughly the same effect as if, out of every 300 persons in our population, 1 person received 78 cents out of every dollar of corporate dividends while the other 299 persons divided up the other 22 cents between them.

"The effect of this concentration is reflected in the distribution of national income.

"A recent study by the National Resources Committee shows that in 1935–36, 47 percent of all American families and single individuals living alone had incomes of less than $1,000 for the year; and at the other end of the ladder a little less than 1½ percent of the Nation's families received incomes which in dollars and cents reached the same total as the incomes of the 47 percent at the bottom."

Then the President added these significant words:

"We believe in a way of living in which political democracy and free private enterprise for profit should serve and protect each other—to insure a maximum of human liberty not for a few but for all.

"It has been well said that, 'The freest government, if it could exist, would not be long acceptable, if the tendency of the laws were to create a rapid accumulation of property in few hands, and to render the great mass of the population dependent and penniless.' "

The fact is that a few men who control a few large banks control a majority of the corporate wealth of the entire Nation.

I have here some statistics, which were referred to by the President of the United States in his message, to show that these dividends go to a very few people, go to very few hands. I have a statement here which contains very unusual information and which shows conclusively that these dividends are not as widely distributed; and which also shows conclusively that these shares are not owned by the people all over the Nation.

A majority of the money-making businesses of this Nation are now controlled by a few men who own and control a few banks. I made this same statement on the floor of the House in the early part of the year 1938, and the Honorable Bertrand Snell, who was then the minority leader in the House, attempted to criticize me for the statement. On February 17, 1938, he attempted to show in a speech on the floor that my statement was misleading; that while a few large concerns own much of the business and industry of the country, they are corporations—according to his contention—and the stock is owned by people all over the country. In other words, that the stock was not concentrated into the hands of a few but it was widely owned by people in every nook and corner of the Nation. He listed a number of companies of the greatest wealth and gave them as examples of companies that were owned by such a large number of people throughout the country. I took it upon myself to contact these corporations and ask them for further information. In compliance with my request, I was furnished the information as to the number of shares of stock held by people in each State and the number of people who owned this stock in each State, as well as the par value. The information was obtained for the following-named corporations, as of the dates mentioned and assets after the names of the corporations:

	Assets
American Telephone & Telegraph Co., Dec. 15, 1937	$2,978,500,000
General Motors Corporation, Dec. 31, 1937	1,598,000,000
Pennsylvania R. R., Dec. 31, 1937	2,322,400,000
United Gas Improvement Corporation, Feb. 1, 1938	837,600,000
Standard Oil Co. of New Jersey, Dec. 31, 1937	2,044,600,000
North American Co., Mar. 2, 1938	931,600,000
Packard Motor Car Co	49,400,000
Socony-Vacuum Oil Co., Inc., Feb. 21, 1938	923,400,000
Pacific Gas & Electric Co., Jan. 31, 1938	764,300,000
Standard Oil Co. of Indiana, Feb. 15, 1938	724,600,000
Armour & Co., Illinois, Dec. 31, 1937	307,200,000
Du Pont de Nemours & Co., June–August 1936	810,500,000
National Dairy Products Corporation, Nov. 29, 1937	199,700,000
Commonwealth Edison Co., Nov. 10, 1937	824,300,000
American Waterworks & Electric Co., Inc., Mar. 15, 1938	399,500,000
New York Central R. R., Dec. 31, 1936	1,822,000,000
American Tobacco Co., Dec. 10, 1937–Feb. 10, 1938	276,700,000
Swift & Co	306,500,000
Total	18,120,600,000

The above figure of $18,120,600,000 is 15.1 percent of the estimate of $120,000,000,000, which was the estimate of the wealth of all nonfinancial corporations as of December 31, 1936.

Only information of the kind available: Volume 83, part 6, of the CONGRESSIONAL RECORD containing the tables which I inserted at that time. At page 6415 of this RECORD will be found a list of the 24 major American companies, showing stockholders, employees, and directors with banking connections, which were referred to by Mr. Snell in his criticism. Following this statement will be found the distribution of stockholders and shares of American Telephone & Telegraph Co., and the other 17 companies that furnished me the information about the number of stockholders and the number of shares in each State and the par value. I will not reproduce it here. It is too long. It is unusual information, and I believe it is the only information of the kind available.

However, I have had prepared one statement which shows the total number of shares of all these corporations that were held by citizens of each State. The statement also discloses the per capita shares of stock in each State and the percent held in each State. The table for the 18 large corporations by States is as follows:

Capital-stock distribution of 18 large corporations, by States[1]

State	Population [2]	Shares of stock		Percent held [4]
		Total	Per capita	
Delaware	261,000	21,264,553	81.50	8.67
New York	12,959,000	89,827,550	6.93	36.59
Pennsylvania	10,176,000	31,571,223	3.10	12.86
Massachusetts	4,426,000	13,477,123	3.05	5.49
New Jersey	4,343,000	11,204,161	2.58	4.56
Michigan	4,830,000	11,149,203	2.31	4.54
Connecticut	1,741,000	3,986,366	2.29	1.62
Illinois	7,878,000	17,159,901	2.18	6.99
Rhode Island	681,000	1,418,023	2.08	.58
California	6,154,000	11,611,011	1.89	4.74
New Hampshire	510,000	887,061	1.74	.36
Florida	1,670,000	1,786,982	1.07	.73
Vermont	383,000	400,678	1.04	.16
Maryland	1,679,000	1,662,076	.99	.68
Maine	856,000	800,590	.94	.33
Ohio	6,733,000	5,637,914	.84	2.30
Nevada	101,000	79,893	.79	.03
Missouri	3,989,000	3,055,103	.76	1.25
Colorado	1,071,000	817,310	.75	.33
Wyoming	235,000	170,560	.73	.07
Wisconsin	2,926,000	1,793,082	.61	.73
Virginia	2,706,000	1,607,791	.59	.66
Oklahoma	2,548,000	1,334,527	.52	.54
Indiana	3,474,000	1,745,367	.50	.71
West Virginia	1,865,000	827,901	.44	.34
Texas	6,172,000	2,358,906	.38	.96
Arizona	412,000	152,536	.37	.06
Kentucky	2,920,000	1,026,381	.35	.41
Minnesota	2,652,000	923,654	.35	.38
Washington	1,658,000	517,194	.31	.21
Iowa	2,552,000	772,452	.30	.32
Oregon	1,027,000	293,367	.29	.12
Montana	539,000	151,295	.28	.06
Kansas	1,864,000	487,201	.26	.20
Utah	519,000	131,369	.25	.05
New Mexico	422,000	104,961	.25	.04
Louisiana	2,132,000	493,844	.23	.20
Nebraska	1,364,000	319,414	.20	.13
Tennessee	2,893,000	539,248	.19	.22
North Carolina	3,492,000	630,931	.18	.26
Georgia	3,085,000	463,489	.15	.19
South Dakota	692,000	96,895	.14	.04
Idaho	493,000	57,522	.12	.02
North Dakota	706,000	72,527	.10	.03
South Carolina	1,875,000	172,479	.09	.07
Alabama	2,895,000	199,110	.06	.08
Mississippi	2,023,000	123,090	.06	.05
Arkansas	2,048,000	103,914	.05	.04

[1] Arranged in order of per capita holdings.
[2] 1937 midyear census estimate, United States Statistical Abstract 1938 (p. 9).
[3] Obtained by consolidating State reports of 18 large corporations inserted in Congressional Record (vol. 83, pt. 6, p. 6415-6422).
[4] Percentage of total shares of these corporations held in the 48 States, excluding the District of Columbia

Thomas R. Baldwin, Mar. 4, 1940.

The following table discloses the number of shareholders in each State and the number of shares held by each holder in these 18 large corporations:

	Number of shareholders	Shares per holder
Delaware	18,166	1,171
New York	465,314	193
Oklahoma	8,355	160
Michigan	74,496	150
Florida	15,589	115
Texas	22,277	106
Pennsylvania	352,044	90
New Jersey	143,627	78
Illinois	229,507	75
Virginia	22,842	70
Ohio	80,591	70
Rhode Island	21,407	66
Connecticut	61,868	64
California	171,747	63
Missouri	48,610	63
Massachusetts	229,868	59
West Virginia	14,546	57
New Mexico	1,867	56
North Carolina	11,699	54
Kentucky	19,238	53
Indiana	32,688	53
Wyoming	3,348	51
Colorado	16,183	51
Nevada	1,611	50
Louisiana	10,126	49
Tennessee	11,080	49
Arizona	3,217	47
Kansas	10,467	47
Maryland	35,436	47
Minnesota	22,580	41
Wisconsin	40,469	40
Utah	3,572	37
Nebraska	8,729	37

Georgia	13,095	35
Montana	4,477	34
Oregon	8,699	34
South Carolina	5,196	33
North Dakota	2,295	32
Idaho	1,994	29

In Dr. Prescott Webb's book on Divided We Stand, the United States is divided up into three sections—North, South, and West—for the purpose of showing that most of the wealth is owned in the North. I will use the regional lines used by Dr. Webb in his book and insert herewith a table, which shows how this stock is distributed between the North, South, and West. The table is as follows:

Capital-stock distribution of 18 large corporations, by regions

Region	Population (thousands)	Number of shareholders	Shares			Percent held
			Total	Per capita	Per holder	
North	73,049	1,935,723	218,736,080	2.99	113	89.1
South	35,776	157,575	10,334,066	.29	66	4.2
West	19,805	263,376	16,397,582	.83	62	6.7
Total	128,630	2,356,674	245,467,728	1.91	104	100.0

This manuscript supplements one entitled "Capital Stock Distribution of Eighteen Large Corporations, by States."

North: Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Delaware, Maryland, Pennsylvania, Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri. South: Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Texas. West: North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Montana, Idaho, Wyoming, Colorado, Utah, New Mexico, Arizona, Nevada, Washington, Oregon, California.

Since California holds 4.74 percent of the stock the other Western States hold less than 2 percent of the stock of these 18 companies, which is considered typical of all large corporations.

Dr. Webb's book: Dr. Walter Prescott Webb is a professor of American history at the University of Texas, Austin, Tex. He is the author of the book Divided We Stand—the Crises of Frontierless Democracy. This book was published in 1937 and has attracted a great deal of attention. It should be read and studied by every person in America who is interested in economic justice and freedom of opportunity for all the people.

In Dr. Webb's book he was able to use but one example of sectional distribution of stockholders, and that was the example of the American Sugar Refining stock, as of December 5, 1935. That distribution, shown by Dr. Webb in his book on page 43, follows very closely the distribution that I have prepared of the 18 large corporations. I repeat this type of information is very scarce and difficult to obtain.

This information is given, not for the purpose of criticizing northern ownership, except to point out that local privileges and local opportunities should be retained by the people in the South and West. Further, it is in the interest of the North that these opportunities and privileges be maintained by the people in the local communities. An effort is now being made by a few men who own a few banks in New York to acquire control over retail distribution in all the counties of the United States.

Very few of us have a thoroughgoing idea of the vast extent of empire controlled by the North, nor need I add here, parenthetically, that I am not indulging in carping criticism of the North, for that is idle occupation. But I am most diligently directing my effort and attention to curing the North of monopolistic evils that

threaten the complete and final ruin of many southern and western sections and which will result in great injury to the North.

We gain a comprehensive picture of northern influence and power upon examination of the following brief facts:

Railroads: Construction of railroads, as far back as 1860, was based on plans to make the West tributary to the North. From that time until the present practically all railroads were built to feed the North and incidentally to kill the flourishing river traffic that had so long nourished the South.

Tariff: Daniel Webster said of the Tariff Act of 1828:

"This bill, if adopted as amended, will keep the South and West in debt to New England for the next hundred years."

We could not accuse Mr. Webster, Dr. Webb says, of being short-sighted. He might well have said "for the next 200 years."

Pensions: Following the War between the States, of a total amount of slightly less than $8,000,000,000, approximately $7,000,000,000 went to the North and $1,000,000,000 to the South and West combined. It was pension money that caused the rise in manufacturing and industry in the North.

Patents: Still another subsidy received by the North came in the form of patent benefits, because practically all machinery and patents are owned by northerners. Patents protect the owners from domestic competition as tariff protects owners from foreign competition.

Dr. Walter Prescott Webb estimates that 90 percent of the effective money-producing patents are held in the North. Much of the statistical information used in this statement is obtained from Dr. Webb's book.

Corporations: Approximately 200 corporations of the United States own 25 percent of the national wealth and over 50 percent of the entire corporate wealth of the Nation. Of the 200 corporations, 180 are in the North, 9 are in the South, and 11 in the West.

Insurance: Citizens of the United States have about $105,000,000,000 worth of life insurance on the books.

Of this amount 95 percent is in the hands of northern companies. There are 14 companies, all located in the North, with over a billion dollars' worth of business. Seventy-five companies have over $200,000,000 each of insurance and together hold $93,000,000,000 of the $105,000,000,000 in force. Fifty-five of these companies are in the North, 14 are in the South, and 6 are in the West. The North has $27 of insurance for each dollar held in the South, and $65 for each dollar held in the West, and it has 19 times as much insurance as the other 2 sections combined. The life-insurance budget is approximately $5,000,000,000 annually. Out of each $100 of this income the North received $96.10, the South only $2.50, and the West a paltry $1.40. The South and West furnish 30 percent of the total insurance in America. They hold only 5 percent. This means that they send $5 of their insurance money North for each $1 they keep at home.

Since this information regarding insurance was compiled by Dr. Webb, the Temporary National Economic Committee has disclosed in part 4 of its report, which is on life insurance, that the 16 largest life-insurance companies have 80.6 percent of the assets of the 308 life-insurance companies reporting. This information is contained on page 1514 of this report. On the same page it is disclosed that 6 large life-insurance companies in New York City and in Newark, N. J.—which is just across the river from New York City—have assets amounting to 56.9 percent of the total assets of 308 life-insurance companies in the United States reporting.

Income: The North's percentage of excess of income over disbursements, of the 75 leading insurance companies, is greater than its proportion of income. Out of each $100 the North gets $97.50, the South gets $1.84, and the West trails with but 76 cents. Where the South made a gain of $1 the North gained $53; where the West made a gain of $1 the North gained $128.50.

Out of every $100 paid in dividends to stockholders of the large corporations, $90.97 is paid to the North, $4.55 to the South, and $4.46 to the West.

Dr. Webb's book discloses that the South and West have within their boundaries most of the natural wealth of America. Leaving aside the fact that they comprise nearly 80 percent of the area, they produce all the gold and silver, 95 percent of the oil, 45 percent of the coal, 90 percent of the lumber, and 63 percent of the agricultural dollars. In the face of all this they hold at the most liberal estimate less than 20 percent of the money, and probably less than 5.

Ancient feudalism was based on the ownership or acquisition of land, but contemporary feudalism is based on finance and capitalism. A glance at the roster of large-scale corporations will show that in almost every line of business, from sugar to petroleum products and from telephony to 10-cent stores, the home office stands grandly on granite pillars somewhere in the North.

And so we view a picture of nearly one-way traffic, with American dollars rolling across country, from the sunny orange groves and succulent apple orchards of the long Pacific coast and from the cotton and oil fields of the South, to the cashier cages in the Northern States.

I have no desire, and I repeat for emphasis, to criticize northern ownership except in point of robbing the South and West of local privilege and local opportunity, for it is only by giving the South and West these opportunities and privileges—and maintaining them—that all sections, including the North, can and will prosper.

Figures from the statistical abstract of the United States show that of nearly $14,000,000,000 of insurance written in 1931, a total of 69.4 percent went to the northern companies, whereas the southern companies had only 15.9 and western companies a shade less, with 14.7 percent of the business.

I have shown you the figures for life insurance and I can add, without further discussion, that the same sort of story is to be found in scores of other lines of business, including a very close parallel in the fire- and casualty-insurance field.

It is utterly obvious that, unless local privilege and opportunity are restored to the South and West, we cannot continue to support the Wall Street interests that are so typical of the North and its octopus tentacles of monopoly.

Finally let me put the picture up for your inspection in the extreme light: In an emergency, and estimated on the basis of $30 a month for each individual, every person in the North could live for 14 months, and here, for the first time, the West supersedes our southern area for the western people could live for 7½ months, whereas the southerners could only go for 2 months and 18 days on their savings. I quote these figures from Webb (p. 41). Nor can I refrain from a direct reference to the closing words in his volume, Divided We Stand. The case is stated most succinctly:

"That the North has the advantage we all admit. But when it faces the effects of its increasing drive for profits, the North will realize that the desire of the South and the West to live and share in the national prosperity is not only natural and legitimate for them, but is essential to its own continued prosperity."

Absentee ownership of any business that can be conducted and owned by local people is a dangerous thing for the country. The object of this bill is to give local people an opportunity to own and control local business and to prevent a few men who own and control a few banks in New York to carry out their conspiracy to get control of the retail distribution of this country. It is not in the interest of New York or the North for retail business to be owned and controlled by a few men in New York City or any other city.

I call your attention particularly to the excess reserves of banks. Where are these excess reserves? The answer is they are located in a few banks, mostly in New York City. A few banks in New York City have about $4,000,000,000 of the $6,000,000,000 excess reserves in all member national banks. These large banks will not make loans to small business; they make loans only to large business concerns; they will make loans to interstate chain-store companies but they will not make loans to their competitors.

Imagine the disproportion when you consider that out of every $100 in excess reserves $85.55 is in the North, $6.84 in the South, and $7.61 in the West. Notice, too, where the combined savings of the country are held.

Do not fail to consider the fact that demand deposits represent our money. All purchases of food, wearing apparel, durable goods such as lumber and hardware, and even luxuries such as jewelry, have a direct relationship to the per capita demand. Where deposits are high the people buy more comforts, necessities and luxuries of life than they do in a State where the per capita demand deposits are low. The standard of living in a State is determined by the available credit and money in that State.

With the assistance of the Comptroller of the Currency, and using the same regions for the North, South, and West that are used in Dr. Webb's book, tables have been prepared showing the deposits in banks in the different regions.

The following tables are self-explanatory:

TABLE 1.—*Time and savings deposits in all classes of active banks in the United States, by regions, June 30, 1939* [1]

Region	Population [2] (in thousands)	Time and savings deposits (in thousands)	Per capita	Percent of total time and savings deposits
North	73,975	$21,005,209	$283.95	81.16
South	36,151	1,637,246	45.29	6.33
West	19,959	3,238,120	162.24	12.51
Total	130,085	25,880,575	198.95	100.00

[1] Exclusive of possessions. [2] As of June 30, 1938.

TABLE 2.—*Demand deposits in all classes of active banks in the United States, by regions, June 30, 1939* [1]

Region	Population [2] (in thousands)	Demand deposits (in thousands)	Per capita	Percent of total demand deposits
North	73,975	$30,041,161	$406.10	78.35
South	36,151	4,292,040	118.73	11.19
West	19,959	4,012,073	201.02	10.46
Total	130,085	38,345,273	294.77	100.00

[1] Exclusive of possessions. [2] As of June 30, 1938.

TABLE 3.—*Reserves of member national banks in the United States, by regions, June 30, 1939*

Region	Reserves (in thousands)			Percent of total		
	Held	Required	Excess	Held	Required	Excess
North	$4,511,543	$2,629,944	$1,881,599	79.99	76.44	85.55
South	489,143	338,596	150,547	8.67	0.84	6.84
West	639,381	472,057	167,324	11.34	13.72	7.61
Total	5,640,067	3,440,597	2,199,470	100.00	100.00	100.00

I have here a statement of the assets of the banks. That has been prepared by dividing the country into 3 sections. I am not sectional, but I am doing this for convenience, just as the Federal Reserve Banking System is divided into 12 great regions. So for convenience and for the purpose of making the point, I have divided this country into 3 regions, the North, the South, and the West. Let us take the bank resources and find out where they are. In the North they are 79.69 percent; in the South only 9.24 percent, and in the West only 11.07 percent.

The people in the North realize that the concentration is just as great in the North as it is throughout the entire Nation. I will offer this table of total assets of all active banks in the United States by regions, June 30, 1939, in the record at this point.

Total assets of all active banks in the United States, by regions, June 30, 1939[1]

Region	Population[2] (in thousands)	Total assets (in thousands)	Per capita	Percent of total assets
North	73,975	$58,288,452	$787.95	79.69
South	36,151	6,761,513	187.04	9.24
West	19,959	8,099,334	405.80	11.07
Total, United States	130,085	73,149,299	562.32	100.00

[1] Exclusive of possessions. [2] As of June 30, 1938.

I also have some information here on the per capita demand deposits, which are, of course, low in the South and in the West, and they will be lowered more if interstate chain stores get control of this country, because the more control they have, the more business they do, the more net profits they drain from these towns that are now almost destroyed.

I have here a statement showing the demand deposits, subject to check, in each State in this Union for 1939, and I will insert that table along with this table of demand deposits of individuals, partnerships, and corporations in insured commercial banks in the United States, the first table being dated June 30, 1939, and the second September 21, 1938. I put those in the RECORD in accordance with permission heretofore granted.

The tables referred to are as follows:

Demand deposits of all active banks in the United States and possessions, June 30, 1939

	Number of banks	Demand deposits[1]	Population (approximate)[2]	Per capita demand deposits
Maine	102	$74,214,000	859,000	$86.40
New Hampshire	107	45,375,000	512,000	88.62
Vermont	84	27,329,000	386,000	70.80
Massachusetts	390	1,208,346,000	4,427,000	272.95
Rhode Island	35	128,689,000	681,000	188.97
Connecticut	207	339,254,000	1,748,000	194.08
Total, New England States	925	1,823,207,000	8,613,000	211.68
New York	888	10,086,194,000	12,983,000	776.88

[1] Exclusive of deposits of U. S. Government, deposits of banks, and certified and cashiers' checks, letters of credit and travelers' checks sold for cash, and amounts due to reserve agents (transit account).
[2] As of June 30, 1938.

This information discloses that the real money of the country—demand deposits—is concentrated and not properly distributed. The actual money is only a few dollars per capita as it is only about $6,000,000,000 in circulation and much of that is in bank vaults. The real business of the country is done on credit or demand deposits subject to check.

Demand deposits of individuals, partnerships, and corporations in insured commercial banks in the United States, Sept. 21, 1938

[Total and per capita amount insured and not insured by Federal Deposit Insurance Corporation by geographic regions]

	Population[1] (in thousands)	Demand deposits insured by Federal Deposit Insurance Corporation			Demand deposits not insured by Federal Deposit Insurance Corporation

[1] Approximate as of June 30, 1938.

NOTE.—Insured deposits include all accounts of $5,000 or less and the first $5,000 of accounts in excess of that amount. The amount of demand deposits actually protected is less than the amount indicated here as in computing insurance protection all accounts standing to the credit of a depositor are combined whereas in the above figures accounts were not combined. To the extent that depositors hold more than 1 demand account in a given bank and the aggregate of the balances in the accounts exceeds $5,000, the amount of insured demand deposits is overstated in this table. In addition, the above figures can be used to indicate the amount of insured demand deposits only to the extent that it is assumed that when an individual holds more than one type of deposit the insurance protection is given first to the demand deposit. In practice the Corporation does not differentiate between types of deposits in making payments to insured depositors.

Referring to this table that I have just put in the record, you will notice that in New York, the demand deposits are $776 per capita. You will notice that in the State of New Jersey, it is $166; in Pennsylvania, $214. The average in that group of States around New York is $452.49.

But the average of the Southern States is only $90, as contrasted with $776 in New York, or $452 for the average for that small group of States around New York.

For the Western States, it is only $192. In the Middle Western States, it is $146. In the Pacific States, it is $195.

STANDARD OF LIVING DETERMINED BY DEMAND DEPOSITS

The demand deposits subject to check represent our money. The actual money in circulation today is small, $6,000,000,000. Much of it is in the vaults of the banks and is held by people who do not put it in circulation. There is only a small amount of money in circulation. But the actual money of this country is the demand deposits in the banks. You can take any State and determine the amount of per capita demand deposits and compare that with other States, and you will find that where the per capita demand deposits are large, that the people have better schools, pay their teachers better salaries, provide better for their aged; have more comforts and conveniences and luxuries for themselves than do the people who live in the States where the per capita demand deposits are low.

We should not further concentrate these deposits into the hands of a few people in a few banks. It is not in the interest of the country.

Too many money-making businesses over the country are now owned by Wall Street. That is the reason our money and deposits are concentrated into a few hands.

Now, we are told that the banks of this country are just bursting open with money. Of course, that is not true. In fact, if every bank should be called upon today to pay its deposits, it would have but a dollar and seventy-five cents for every $100 that it owed. Yet we are not afraid of the banks. They are safe. The deposits are insured up to $5,000. And further, we know that the money will be made available through the Bureau of Engraving over here in Washington. So we are not afraid of the banks.

The point is that we should not allow this money to be concentrated. We should have it distributed throughout the length and breadth of our country instead of having 22 percent less money in the banks over the country today, when the large banks have 90 percent more, we should stop these few concerns from gobbling up all of these privileges and opportunities and taking the net profits away into these larger banks and giving them more control over the money-making businesses of this country.

Mr. McCORMACK. Mr. PATMAN, have you any figures as to the net profits that these companies have made in recent years?

Mr. PATMAN. That will be presented. Following my testimony we have asked that Governor Christianson be heard and then Mr. George Schulte from St. Louis. I believe Mr. Schulte has all of that information and will answer it if Governor Christianson does not and if there is one expert in this country on matters affecting the details as well as the fundamental principles of this vital problem, he is the expert. I am speaking from the side of the independents, and I am sure that he will be able to give you that information. Governor Christianson is also well informed on this subject and will doubtless be able to answer any question you ask.

I will state, gentlemen, that my own investigation discloses that while they claim to make only 1 or 2 percent profit on a dollar of sales, that they are making from 20 to 30 percent profit every year on every dollar invested in the concern. They never use those figures. They never quote that, because that does not sound so good. But it looks rather favorable to say that they only make 1½ or 2 cents on every dollar sale. But if you drain 1 or 2 percent out of a community on every sale, it will not take long before that community is left with its reservoir of credit absolutely dried up.

Mr. McCORMACK. I suppose the taxes would probably be the best evidence of that.

Mr. PATMAN. I shall have inserted here a statement that the President made about this matter that I think will be helpful, Mr. Chairman.

Mr. McCORMACK. I was just trying to get information for the record. I was not examining you, but just asking whether you had those figures.

Mr. PATMAN. Yes, sir. That information will be furnished by Mr. Schulte, if it is not furnished by Governor Christianson.

Mr. McCORMACK. I assume that we will also get official information ourselves.

Mr. PATMAN. I appreciate the patience of this committee, and I should like to close my testimony, but before doing so I should like to put in the record, in the hope that you gentlemen will read it, certain statements which have been made bearing on this subject. I do not care to burden the committee with reading it this morning.

I am inserting in the record in connection with what I have said, statements made by the President about why it is necessary that we should have local business locally owned and operated. And if the President were sending up a message on this particular bill, he could not use language with greater force, and that would apply to this bill more directly than the language that he has often used in messages presented to the House and the Senate. I am quoting some of those messages.

NEW YORK CITY A GREAT CITY

Incidentally I have said a great deal about New York. I want to add that I think New York City is the greatest city in the world. I know, too, that the entire city should not be charged with the greed of a few men in that city. It has many fine things—New York City does. But above all, it has one of the best mayors of any city in the United States, Mr. LaGuardia. Mr. LaGuardia, the mayor of New York, is not only an able, conscientious, and courageous mayor, but as a Member of Congress he demonstrated ability, knowledge, and courage in solving our national problems. I have never admired a man more for his ability than I admire Mayor LaGuardia.

The United States Daily on March 31, 1930, carried this statement:

"MERGER OF CHAIN STORES FORECAST—MR. LAGUARDIA WARNS THE INDEPENDENTS

"The chain-store system is threatening the existence of the independent grocery store and when the independents are eliminated, mergers of the chains and the higher prices may be expected."

That is just one of the many fine statements by prominent people from all over this Nation, from the President on down, regarding this particular problem.

PRESIDENT SAYS AMERICAN SYSTEM OF INITIATIVE AND PROFIT SHOULD BE ENCOURAGED

President Roosevelt, in his speech on June 27, 1936, to the Democratic Convention in Philadelphia, reviewed the condition of the country prior to the American Revolution. In commenting on these conditions he stated:

"There was no place among this royalty for our many thousands of small-business men and merchants who sought to make a worthy use of the American system of initiative and profit. They were no more free than the worker or the farmer.

* * * * * * *

"Throughout the Nation, opportunity was limited by monopoly. Individual initiative was crushed in the cogs of a great machine. The field open for free business was more and more restricted. Private enterprise became too private. It became privileged enterprise, not free enterprise.

"GIVE MAN SOMETHING TO LIVE FOR

"An old English judge once said: 'Necessitous men are not free men.' Liberty requires opportunity to make a living—a living decent according to the standard of the time, a living which gives many not only enough to live by, but something to live for.

"AGAINST SMALL GROUP CONTROLLING

"For too many of us the political equality we once had won was meaningless in the face of economic inequality. A small group had concentrated into their own hands an almost complete control over other people's property, other people's money, other people's labor—other people's lives. For too many of us life was no longer free, liberty no longer real; men could no longer follow the pursuit of happiness."

What the President said is on all fours with the present situation today regarding retail distribution.

PRESIDENT FOR SMALL-BUSINESS MEN

The President delivered a speech at Forbes Field, Pittsburgh, Pa., October 1, 1936, in which he stated:

"And so the program of this administration has protected the small business, the small corporation, the small shop from the wave of deflation which threatened them. We realized then as we do now that the vast army of small-business men, factory owners, and shopowners form the backbone—together with our farmers and workers—of the industrial life of America. In our long-range plan we recognized that the prosperity of America depended upon and would continue to depend upon the prosperity of them all."

IF A FEW OWN THE COUNTRY, WHO WILL FIGHT FOR IT?

The President recognizes, as he always recognized that the small-business man and shopkeeper along with the farmers and workers, form the backbone of the industrial life of America. Suppose a few greedy people in Wall Street succeed in obtaining control of the wealth of this Nation; suppose they succeed in owning it outright, and America should become involved in a war, do you believe that the people would very energetically, enthusiastically, or patriotically go to war to defend a country that they did not own even a part of and did not have an opportunity in the future to acquire a part of?

PRESIDENT SAYS CONCENTRATED WEALTH GOBBLED UP INDEPENDENT BUSINESS IN NEW ENGLAND

The President delivered an address on Boston Common, October 21, 1936, in which he was discussing the reasons why New England was handicapped under Republican administrations. For one of these reasons he stated:

"Concentrated wealth and economic power gobbled up or wiped out or moved away hundreds of small independent New England businesses, the kind of businesses with which at one time New England had conquered the markets of the world."

In this speech he also said:

"New England has traditionally been a land of moderate-sized independent business, a land of economic democracy. Its far-seeing statesmen always understood that democracy was impossible under the relentless pressures of concentration and monopoly wielded by the new power of high finance. The New England Puritan spirit of simplicity, the New England passion for democracy, the New England genius for democratic statecraft, are the very

sources of that program of this administration which set itself to end such concentration of wealth and economic power."

PRESIDENT'S FIGHT FOR LITTLE BUSINESS OPPOSED BY GREEDY FEW

The President, in a radio address from the White House, October 23, 1936, stated:

"An overwhelming majority of independent individual businessmen approve in their hearts what we did to save American business. I am equally sure that a handful of monopolistic businessmen hate what we did for American business. Business had become regimented. Free enterprise was being gobbled up piece by piece. Economic control of business in these few persons had developed into political control of government itself. They did not want us to take American business out of their grip.

"Our bill to place an excise tax on chain stores will prevent free enterprise from being gobbled up piece by piece."

OUR BILL WILL CARRY OUT PRESIDENT'S WISHES AS EXPRESSED IN SPEECHES AND MESSAGES

I have quoted many excerpts from speeches of our great President in favor of the local businessman; many others could be quoted. Our bill, H. R. 1, will carry out the will of the President as expressed in these messages and speeches. If this bill does not carry out his wishes on this subject, has a bill been introduced to carry them out? Are we, as Members of Congress, going to permit the President to keep on insisting that we do something for local business and take not a step in that direction? Legislation to carry out the President's wishes should be passed by Congress. It is the responsibility of Congress to propose, pass, and submit to the President, legislation which Congress believes proper and necessary.

The Kentucky Legislative Council asked Mr. Orba F. Traylor, research director of the legislative council, to prepare a statement on chain-store regulation. This statement was finished January 6, 1940, and it contains the following significant statements regarding chain stores in the State of Kentucky:

"POLICE CONSIDERATIONS

"Because of the chain method of conducting retail business, direct police costs needed to prevent theft, robbery, and burglary may, and probably do, exceed the cost of similar public services in the case of unit stores. Larger crowds, coupled with no delivery service, necessitate policing of traffic congestion and packages in parking areas which is not required to the same extent in smaller-unit stores.

"The existence in Kentucky of small home-town merchants has been regarded generally as a social asset—quite aside from the economic considerations which have been set forth. Chains tend to carry high-profit items; whereas, local dealers assume the burdens of carrying slow-selling stock and low-profit items that are needed by local consumers. Local dealers who own their stores have a stake in civic affairs, frequently lacking in the case of chain managers and clerks. Also, owners of single-unit stores are usually more inclined to contribute from profits to community improvements than chain executives. Unit stores extend credit to needy families when they do not have available funds. It is well known that chains frequently release older employees, allowing them to become charges either of the community or local businesses. Single-unit stores, usually locally owned, do not do this. Local dealers take more seriously community actions for the relief of the poor, protection of the community health, and guarding the morals of the youth than do the chain-store managers under pressure to make sales who, especially in rural communities, frequently have no interest in the community besides the job itself. Unit stores in taking a personal interest in local customers cannot afford to load them up with fancy-package, high-profit items instead of sensible staple merchandise. Moreover, the local store in itself has constituted in many cases a community center such as a chain store has never been. Insofar as chains affect unemployment, the gravamen is not just displacement of men by mechanical devices but more sales per man such as is found in the supermarkets.

"It is to the interest of the State to foster communities built up by men who have devoted their whole lives, paid their taxes, and invested all their capital in these communities. The State should not lose the chance for development of individual initiative that is so necessary to the development and vigor of a democracy. It may be substantially argued that in encouraging one-family-merchandising institutions the State is doing in this field what the National Government is doing in the field of soil erosion and conservation, and that established independent local merchants are just as necessary to industrial health as rich soil is to farming. Even if communal merchandising is a more efficient economic unit, Americans might nonetheless elect to remain one-family merchandising on a small scale the same as they probably would choose one-family farming over Russian Soviet communal farming."

LETTER BRINGS OUT GOOD POINT

"Speaking of un-American activities, I believe that it is very un-American of our Government to allow gigantic capital to wipe out and destroy small industries, small retailers, poor little farmers, canners, packers, distributors, salesmen, and along with this goes realty values of all small people in each and every community, both rural and urban." (This contained in letter from E. F. Hunter, 1017 Alabama Street, Lawrence, Kans.)

ANOTHER LETTER POINTS TO PROBLEM

"Twenty years ago this was the Golden West, where fathers and mothers ran stores and built homes. Today these fathers and mothers have disappeared from main streets. They worked hard to start their sons in business. But what has happened to these sons? Let us think: They are broke, and why? Because the chain stores sold so cheaply, the fathers were forced out of business.

"The sons now walk the streets, disgusted, and because they cannot make a living for their family in an honorable way they get into bad company and gangland. Gangland tells these boys that they have jobs for them, and they believe it. Before they know it they have become criminals and are in the hands of the law. These sons were once honest men but have now brought sorrow to their homes. Their lives have been ruined because of the big chain corporations, which have forced them out of private enterprise." (The above two paragraphs from letter from Frank Albright, Milbank, S. Dak., January 18, 1940.)

PRESIDENT ROOSEVELT HAS MANY TIMES DENOUNCED MONOPOLY, AND ESPECIALLY THE KIND OF MONOPOLY AIMED AT BY H. R. 1, A BILL PROVIDING FOR A FEDERAL TAX ON INTERSTATE CHAIN STORES

November 15, 1937, the President of the United States transmitted a message to Congress. This message is House Document 370, Seventy-fifth Congress, third session. In this message, which concerned the revision of our revenue laws, the President stated:

"Small businesses or even those of average size have difficulties of financing and distribution which are not shared by large corporations. Therefore, by special tax consideration they should receive more equal opportunity to compete with their more powerful competitors. In this way we may also find assistance in our search for a more effective method of checking the growing concentration of economic control and the resultant monopolistic practices which persist today in spite of antitrust statutes. A further search for additional methods to meet this threat to free competitive enterprise is called for at this time."

HELP SMALL BUSINESS

It will be noticed in this statement that the President refers to giving small business a more equal opportunity to compete with their more powerful competitors, and this should be done through special tax consideration.

CHECK ECONOMIC CONTROL

It should also be noticed that in dealing with the tax question the President suggests that we can find that we may also find an effective method of checking growing concentration of economic control and the resulting monopolistic practices.

LIBERTY OF DEMOCRACY

In the message from the President of the United States to Congress April 29, 1938, and which is printed and available as Senate Document 173, Seventy-fifth Congress, third session, in regard to strengthening and enforcement of antitrust laws, the President stated:

"The first truth is that the liberty of a democracy is not safe if the people tolerate the growth of private power to a point where it becomes stronger than their democratic state itself. That, in the essence, is fascism—ownership of government by an individual, by a group, or by any other controlling private power."

CORPORATIONS SO LARGE EVEN GOVERNMENT CANNOT COPE WITH THEM

We have many facts to support the conclusion that some large concerns are now so powerful that they have, in the language of the President, "become stronger than their democratic state itself." It costs the Government $100,000 to prosecute an antitrust suit against a large concern. A few suits and all of the money for antitrust violations is gone. Many of these concerns are so large that not only are the different States, their competitors, and other citizens of our country unable to cope with them in the courts of justice but they have become so large that even the Government of the United States is unable to properly and adequately enforce laws against them and protect the rights of competitors and consumers.

UNPARALLELED CONCENTRATION OF PRIVATE POWER

The President stated further in this message:

"Among us today a concentration of private power without equal in history is growing.

"This concentration is seriously impairing the economic effectiveness of private enterprise as a way of providing employment for labor and capital and as a way of assuring a more equitable distribution of income and earnings among the people of the Nation as a whole."

THIS MESSAGE SHOULD BE THOROUGHLY CONSIDERED

This message is 10 pages long and deals with growing concentration of economic power, financial control of industry, the decline of competition and its effects on employment—competition does not mean exploitation, the choice before us, and a program. Anyone interested in this question should certainly read and study this message.

The President in this message stated:

"We have learned that the so-called competitive system works differently in an industry where there are many independent units from the way it works in an industry where a few large producers dominate the market."

FARMERS HURT BY FEW BUYERS

It operates in the same way where there are many producers but few buyers. When the large interstate chain stores obtained sufficient control over the farmers' market to control prices, the number of cents that the farmer received of each consumer dollar

went down and down and down every year. This is perfectly natural, since the fewer buyers a farmer has for his products, the lower price he will receive, and these few buyers cannot resist the temptation of going in together and robbing the farmer. The Temporary National Economic Committee disclosed that when two concerns got sufficient control of the dairy industry that they were able to control prices the farmer received less and less for his milk.

PRESENT ADMINISTRATION FAVORS INDEPENDENT BUSINESS

The present administration has many times indicated its friendliness toward independent business. The problem is in the hands of Congress. If effective laws to curb absentee ownership are not passed it will not be because the present administration opposes them. How can any Member of Congress listen to the appeals of the President of the United States in behalf of local ownership of business and not be inspired to work unceasingly to that end?

PRESIDENT SAYS LOCAL OWNERSHIP PREFERRED TO ABSENTEE CONTROL

President Roosevelt, in his great speech at the Jackson Day dinner, January 8, 1938, made several very significant statements. In his speech he stated:

"I was interested the other day to read the report of a correspondent of a London financial magazine who had recently surveyed conditions in the Middle West and other parts of the Nation. He found a point of view in other parts of the country wholly different from that of the principal financial centers, such as New York, Philadelphia, and Chicago. And he found this other interesting development: Wherever an enterprise is controlled locally its managers have a local, independent point of view. But when the business is controlled from great financial centers the local manager takes his cue from what his bosses are saying and reflects the state of mind prevailing hundreds of miles away."

I desire to call your attention especially to one part of the statement, in which he states that where an enterprise is controlled locally its managers have a local, independent point of view.

LITTLE MAN SHOULD BE PROTECTED

In his speech the President also stated:

"I have recently described many other activities that should not be tolerated in our democracy—price rigging, unfair competition directed against the little man, and monopolistic practices of many kinds. Call them evils, call them abuses, call them unfortunate facts. It makes no difference. Give to me and give to your Government the credit for a definite intention to eradicate them. Give to me and give to your Government the credit for believing that in so doing we are helping and not hurting the overwhelming majority of businessmen and industrialists in the United States.

* * * * * * *

"The White House door is open to all our citizens who come offering to help eradicate the evils that flow from undue concentration of economic power or unfair business practices—who offer to do all that is possible by cooperative endeavor and to aid in corrective and helpful legislation where necessary.

"We know that there will be a few—a mere handful of the total of businessmen and bankers and industrialists—who will fight to the last ditch to retain such autocratic controls over the industry and the finances of the country as they now possess. With this handful it is going to be a fight—a cheerful fight on my part, but a fight in which there will be no compromise with evil—no let-up until the inevitable day of victory."

Please do not overlook what the President said in this statement regarding unfair competition directed against the little man and monopolistic practices of many kinds.

PRESIDENT ROOSEVELT FAVORS PROTECTING SMALL-BUSINESS MAN AND ENCOURAGING LOCAL OWNERSHIP OF LOCAL BUSINESS

The President definitely came out in favor of local business locally owned and owner-operated in a message that he delivered to Congress January 3, 1938. In this message it was stated:

"There are practices which most people believe should be ended * * * unfair competition which drives the smaller producer out of business locally, regionally, or even on a national scale.

"Another group of problems affecting business which cannot be termed 'specific abuses' gives us food for grave thought about the future. Generically, such problems arise out of the concentration of economic control to the detriment of the body politic—control of other people's money, other people's labor, other people's lives."

From these statements no one can question the direction the President of the United States is going. He is determined to protect local business, locally owned and owner-operated, as against absentee ownership or control.

ATTORNEY GENERAL ROBERT H. JACKSON REALIZES SERIOUSNESS OF PROBLEM

The Honorable Robert H. Jackson is the President's new Attorney General and chief of all Federal law enforcement. Recently Mr. Jackson gave a special interview to the United States News. As Solicitor General—chief of the Federal Government's legal staff—he sold the Supreme Court of the United States on 21 of the 24 cases he argued before that august body, according to this quoted interview.

In this interview he stated, according to the United States News:

"The President's 'favorite son' has one criticism to make of the last 7 years' reforms: If anything, they have been 'too moderate.'

"By this he means that the efforts to regulate business and finance have not been wholly successful. The trend toward concentration of wealth continues because the Roosevelt checks have been 'too moderate.'

"He explains: "The unvarnished truth is that the Government's recovery program has succeeded nowhere else so effectively as in restoring the profits of big business. Labor has had no such advance. The small merchant has had no such prosperity. The small manufacturer has had no such advantage.'

"Looking ahead, the new Attorney General sees the trend toward concentration threatening the individual competitive system. This concentration of the control of wealth, accompanied by the disappearance of the local utility, the independent merchant, and the small industry, he believes, is the most significant trend toward socialism in the United States."

Notice what Attorney General Jackson said about concentration of the control of wealth and the disappearance of the local utility, the independent merchant, and small industry.

INTERSTATE CHAIN STORES A MENACE TO THE ECONOMIC AND SOCIAL WELFARE OF THE PEOPLE, AND WILL DESTROY NEWSPAPERS

One of the most popular magazines in America has carried several articles favoring the interstate chain stores and particularly a great boost in a long special article for the Hartford brothers, owners of the Great Atlantic & Pacific Tea Co. This publication is now preparing another great boost for another large interstate chain-store concern. Recently a representative of individually owned stores—independent merchants—asked a representative of this popular magazine why the independents could never get anything published that was favorable to them when they had often requested it and had furnished information in which the public would be interested. This representative frankly confessed that the independents did not advertise with them and the interstate chains did; therefore, they felt obligated to help the chains because they were good customers and felt under no obligation to help the independents.

If a few large concerns can get control of retail distribution, they can carry their weekly advertisements, even including prices in the Saturday Evening Post, Collier's, and other popular magazines instead of the local papers. They will not have to sell below cost then to squeeze out competitors and their prices can be the same. They will certainly carry plenty of advertising in the large magazines to build up goodwill, but will they patronize the local newspapers? Any system that causes foreign ownership of local business will eventually destroy the local newspaper.

1937 AMERICAN FEDERATION OF LABOR REPORT AGAINST CHAIN STORES

The American Federation of Labor, at Denver, Colo., October 4 to 15, inclusive, 1937, asked for a Senate investigation of chains and unanimously endorsed the following statement in a resolution:

"It is an intolerable situation when highly organized chain systems can hammer down prices all over the Nation and then force manufacturers to make shoes at these prices or go out of business. This condition leads to steady demands upon the workers for wage cuts, and, with living costs steadily rising, wage cuts are impossible. Wage earner and manufacturer alike are dictated to by highly organized selling groups who deliberately fix prices for the whole country. The Boot and Shoe Workers' Union appeals to the organized trade-union movement for support. The very existence of entire communities is at stake, and the shoe industry is rapidly becoming a mere appendage to a few small groups who control prices throughout the United States and who manipulate these prices for their own profit and with absolute disregard for human welfare or social justice."

THE 1932 AMERICAN FEDERATION OF LABOR REPORT AGAINST CHAIN STORES

The American Federation of Labor, at its annual convention at Cincinnati, Ohio, November 21 to December 2, inclusive, 1932, unanimously endorsed a resolution which contained the following:

"Whereas the growth of these chain-store companies, both financially and in number of units operated, have shown remarkable growth at the expense of the people of the United States; and

"Whereas it is our thought that the present economic depression is due in part to consolidation, amalgamations, and the creation of some mammoth organizations of chain-store companies now operating in this country; and

"Whereas the laboring classes of the United States derive no benefit whatsoever from some mammoth combinations: Therefore be it."

AMERICAN FEDERATION OF LABOR DID NOT CONDEMN OUR BILL

In October 1938 the American Federation of Labor had a convention at Houston, Tex. One morning a headline article appeared on the front page of practically all of the newspapers in this country to the effect that this great organization had condemned the so-called Patman anti-chain-store bill. This article purported to give several paragraphs of a resolution that was supposed to have been passed at this convention condemning this proposed legislation.

This purported resolution was presented to different labor organizations all over the country in order to induce them to pass similar resolutions, and in many cases they did, the efforts of the interstate chains being successful.

The truth is no such resolution was passed by the American Federation of Labor at Houston, Tex., in 1938, nor any resolution condemning this bill. This false claim has been exposed, yet I have never seen the correction carried in one newspaper in America, although it has been fully carried in the CONGRESSIONAL

RECORD at different times. This is exhibit No. 1 of the influence of fourteen and one-half billion dollars. The truth is the interstate chain representatives went so far in their efforts to use money to influence this great organization that a real scandal will probably be exposed before many moons. It is a compliment to the loyal, alert representatives of the American Federation of Labor that they did not permit their organization to be so used.

DECEITFUL PROPAGANDA

The owners of large interstate chain stores caused to be organized the National Consumers' Tax Commission, of Chicago, Ill. It is supported by the large fortunes of a few very wealthy men, who made their money destroying community life. The object is to hire prominent women over the country to be a "front" for the interstate, absentee-owned chain stores, and carry on a deceitful and misleading fight in their behalf. Many prominent women have become victims of this treacherous and sordid conspiracy. Information is now in my possession which indicates enormous sums of money have been spent in organizing these associations locally. I was astounded to learn that many prominent women, who have held responsible positions with different women's organizations, have accepted huge sums from the owners of giant monopolies in return for the use of their names, which carries with it their prestige and standing, in behalf of those who are working against the interest of the plain people of this country and who would deny to the very children of these misled mothers a fair and equal opportunity in life. I am receiving information from all over the Nation about the activities of this association, and I hope people continue to send me this information.

Deceitful propaganda is very damaging to the interest of the general welfare of the people of this Nation and should be exposed at every opportunity. As further evidence of deceitful and misleading propaganda that is being published by the interstate chains through their 100-percent-owned institute of distribution should be mentioned the stand of the American Federation of Labor on this bill.

Chain-store propagandists are still making the false claim that the American Federation of Labor condemned our bill, H. R. 1.

MODERN LOBBY

Do any of you recall the power lobby? Well, the power lobby was amateurish compared to this modern, streamlined, absentee-ownership lobby. It is backed by tens of millions of dollars. It is spending huge sums of money each month in the effort to influence Members of Congress.

Money can hire brains and this lobby, having plenty of money, has obtained the best brains and the services of the most influential people money can buy. Today Washington is flooded with all kinds of "legislative consultants * * *" and others, who claim to know how to get things printed in the newspapers and how, through artful methods, to influence the Members of Congress. These lobbyists profess vast personal influence, and I might add that with my introduction of the Federal chain-store tax bill, many lobbyist slaves of the money masters have enjoyed steady employment.

Here is another illustration of chain-store pressure methods:

Away from Washington, and throughout the interior of our land, the interstate chains have compelled store managers to deliver sets of eight form letters to customers. They try to persuade customers, through the use of incorrect data, to write letters to Congressmen, urging them to oppose the Federal chain-store tax bill.

These letters are written on stationery supplied gratis by the interstate chains. When written they are turned in, unsealed, to local chain-store offices. After examination by chain officials, the letters are sealed, stamped, and mailed to Washington.

I admit that this is attention-getting propaganda. But I believe that the average Member of Congress gives more serious consideration to one uninspired letter from a good mother or father, with the vision to see local opportunities and local privileges slipping away from their children and into the hands of a few rich money masters of Wall Street, than he gives to a hundred chain-inspired letters.

They are also commencing a pressure campaign by telegraph.

WHAT ATTORNEY GENERAL MURPHY SAID ABOUT INDEPENDENT BUSINESS

Attorney General Frank Murphy, who was recently sworn in as a member of the United States Supreme Court, and who is one of the best and ablest men in this Nation, made this statement about the necessity of preserving independent business:

"Trusts and monopolies in America have been fostered and promoted in the past by the Federal Government to such an extent that they virtually have wiped out the small independent businessman. We must restore this independent businessman or we will be a nation of corporation peons in another decade.

"The day is already here when a boy graduating from college can seek a career only in some monopolistic enterprise if he has any hope whatever of achieving comparative success.

"We have come to the point of making jokes about the disappearance of the corner grocer."

PRESIDENT OF THE UNITED STATES ON ABSENTEE OWNERSHIP

The President of the United States visited Grand Coulee Dam, and in his speech on October 2, 1937, at the Grand Coulee Dam, he stated:

"The concentration of ownership and control of industry is fatal to the operation of competitive economy. Concentration destroys the sources and possibilities of competition, and the antitrust statutes attempt to check it; but the courts, blind to this purpose, have said 'size is no offense.'"

Concentration of corporate ownership of wealth, chiefly means of production, has proceeded to a surprising degree. In 1932, according to the statistics of the Bureau of Internal Revenue, 53 percent of all corporate-owned assets in this country was held by 618 corporations, which constitutes only two-tenths of 1 percent of the number of corporations reporting. Five percent of the corporations owned 85 percent of all the corporate-owned wealth in 1932. More than 50 percent of all the net income enjoyed by corporations in 1932 went to 232 corporations, while of the country's manufacturing corporations 1.2 percent of the total number accounted for 63 percent of the aggregate net profits. In 1934, the only group of corporations to earn an aggregate net profit was the group whose assets exceeded $50,000,000. Thus, the process of concentration was continuing.

There was likewise a high degree of concentration in the ownership of these corporations; 1929 was a banner year for stock ownership, and in that year the 3.28 percent of the population who filed individual income-tax returns accounted for the receipt of more than 83 percent of all dividends paid to individuals. And 78 percent of those dividends reported were received by three-tenths of 1 percent of our population.

In 1933 the Bureau of Internal Revenue statistics show that there were only, 1,747,740 taxable individual incomes in the United States and nearly one-third of all the property reported as passing by death was found in less than 4 percent of the estates. You are all familiar with the Brookings Institution's studies in 1929, which reports that about 6,000,000 families, or 21 percent of all families, had family incomes of less than $1,000 annually, and that 36,000 families in the high-income brackets received as much of our national income in that year as 11,000,000 families with the lowest incomes.

Even these statistics do not properly measure the degree of concentration of control of industry for by holding companies and interlocking directorates many corporations may be under a single control and there is no discernible limit to the centralizing tendency.

This is a strong argument in favor of local ownership and against absentee ownership or control of any business that can be conducted by local people.

I hope no one will overlook what the President said in the preceding statement relative to the local merchant, local manufacturer, local banker, and local utility man.

Notice the indictment the President of the United States has made against the chain store. The logical and reasonable argument that he has presented against absentee ownership cannot be answered by representatives of the interstate chains.

PRESIDENT COMMENTS ON BAD EFFECTS OF CHAIN STORES

In addition to this statement by our President at the Grand Coulee Dam, he also stated:

"This concentration of business accounts in large part for the lost influence of big business, and its press, and its legal lackeys, and its business organizations, in legislative and election struggles. Forty years ago big business had as its ally in every town and settlement the local merchant. Each was a leading citizen, on whom many depended for information and leadership as well as for credit and jobs. This type of man has largely gone. Why he has gone makes little difference.

"In the place of this strong and leading individual is a managing clerk at the chain store who cannot make a credit sale, and a local superintendent for the factory. The local bank is closed and nobody who has more authority than a bill collector represents the utility in most communities. Big business has found it to its advantage to rotate even these men so that no one of them is left in the community long enough to get his roots established or to really become a part of the life about him, to become a property owner, or to be regarded as a fellow citizen by those among whom he dwells as a representative of an absentee control.

"Thus, big business has destroyed its own defense, it has devoured its own young. The small-business man who used to be our most ardent capitalist and the most uncompromising of conservatives has been crushed, or merged, or consolidated, or otherwise retired. This has brought about a subtle change not only in economic life, but in social and political life as well. There are values in local independence and responsibility which are being sacrificed to balance-sheet values.

"The process seems not to be discernible to, or appreciated by, the people who dominate the large industries in our great cities. It is plainly discernible to those who live in smaller cities and see the life of the community as a whole."

INTERSTATE CHAINS FAIR-WEATHER FRIENDS OF LOCAL COMMUNITIES

Foreign-owned chain stores take away local privileges and opportunities that formerly enabled local citizens to assume local relief, assistance, and responsibility. They never fail to keep down the price of farm products. They are leeches who move in after a town is well established as a lively business community, and the first to leave when a town is overtaken by drought, cyclone, epidemic, or other unforeseen disaster. They charge different prices in different cities in the same State, and even in the same city, according to the competition from the independent merchant across the street, who is marked as the next victim.

EYES OF CONSPIRATORS ON EVERY COUNTY IN THE UNITED STATES

There are 3,070 counties in these United States. In every county there is one good town—usually the county seat—that has concrete highways leading to it from every section of the county. A few so-called wise men in the East have conspired to get control of retail distribution in this country.

They know that if they can get control of the retail business in these 3,070 county-seat towns that they can control the retail business of this Nation. They know, too, that when they get this control that they can dictate to the people from whom they buy the price that they must accept; and at the same time they will dictate to the consumers the price that they must pay. The interstate chain-store system should be stopped. It is absolutely destroying local community life in our Nation. It is responsible for unemployment and relief. We did not have a Federal relief problem until the local communities were weakened by interstate chain stores siphoning the net profits into the hands of their absentee owners.

LOANS TO SMALL BUSINESS

Mr. Chairman, I want to suggest one thing about loans to small business. Recently a witness before the Temporary National Economic Committee testified—I think it was last week; at least it came to my desk last week—in a way that was very interesting on the question of loans to small business. He testified that 56.9 percent of the reserves of life-insurance companies are in the hands of a few people within a radius of 25 miles, in New York City and Newark, N. J., which is just across the Hudson River from New York.

Fifty-six percent of the reserves of the life-insurance companies are in the hands of a few people within a radius of 25 miles, in New York City and Newark, N. J. Those life-insurance officials testified that they did not consider loans to business of less than $150,000; and most of them $200,000 and $250,000.

So the point that I am trying to make with you gentlemen is that as we encourage bigness through banks, insurance companies, interstate chains, and all other concerns that necessarily help one another, the small man is not helped, and if the small man goes out of the picture, it will put our country into a much worse condition than it is today.

In fact independent business built this country, and the same type of business which built this country up to 1920 should be allowed to continue as independent business. But since that time, all of these great money-making businesses have been bought up by a few and the money drained into the hands of a few people.

WHAT CHANCE HAS THE YOUNG MAN WHO WANTS TO GO INTO BUSINESS?

Now, if you were a banker, Mr. Chairman, and some young man who had worked in a store 10 years and was qualified to go out on his own, just as they used to—let us say in a clothing store—decide that he wanted to be in a store for himself. If he were to come to you and say, "Now, I have $10,000. I have saved that money. I have not spent anything. I want to go into business." I believe that if the chairman of this committee were the banker, he would say, "Young man, don't do that. You have not got a chance. I would not mind putting up a little money, because you have got $10,000, and you can give me good security, but why should I encourage you to lose your own money? You have not got a chance."

Well, the young fellow will say, "I will go out here into the suburbs. There is a nice place out there. I have built up good will among the people there. They all like me. I go to church; I go to Sunday school; I take an interest in civic affairs; I have lots of friends; I am a Boy Scout master. I have taken an active interest in all worthy undertakings for the people. Why could I not build up a good trade out there?"

I imagine that the chairman of this committee, if he were the banker, would say, "Young man, you might get your business built up and popularized, and then one of these interstate chains will come in and establish themselves right next to you."

The young man would say, "Well, I can compete with them."

"But, oh, no; you cannot," the banker would say. "They are not dependent upon that one store. They have thousands of stores. They can sell at a loss until they put you out of business and then put their prices up and make back their losses in extra profits. They can use the profits that they have made elsewhere, where they have already destroyed the independent merchant."

SUPPOSE IT IS A PUNITIVE TAX

That situation should not be allowed to continue to exist, and it will not be, if this bill is passed. It is a reasonable bill. The rates are not excessive. It is not a death sentence. It is not a punitive tax.

But suppose it is a punitive tax? I believe the first bill passed by Congress when it met in 1789 was a tariff bill, was it not, Mr. Chairman? I have heard that said. What is a tariff? You do not find the word "tariff" in the Constitution. Why did Congress pass the tariff bill? Why was it allowed to? Because it was a tax. The protective tariff is a punitive tax, that is all it is.

Mr. KNUTSON. You say the word "tariff" is not mentioned in the Constitution. But you will find the words "customs duties," which represent a synonymous tax.

Mr. PATMAN. I know; but they do not expect to collect those duties. If they collect the duties, then it would not be effective. The tariff is only effective if it fails to collect duties.

Mr. KNUTSON. I do not think that I quite follow you.

Mr. PATMAN. I believe the gentleman has had lots of experience in tariff matters; several times as much as I have had. I believe that he will admit that the tariff rates, where they are high, are high because they are not supposed to collect customs duties under the tariff laws. The object is protection, to keep the goods out. If they come in and pay customs duties, then the tariff has failed; it is not sufficiently high, according to the theory of those who are in sympathy with it.

Mr. KNUTSON. Do you subscribe to the theory of protection?

Mr. PATMAN. Well, I do not want to get off on that subject. I am not talking about tariffs now. I was just mentioning it as an illustration. But I say it is a perfect illustration.

Mr. MCCORMACK. I think we will limit the examination to the subject before us.

Mr. PATMAN. Mr. Chairman, I have one or two brief statements here which I should like to include in the record before I close.

Mr. MCCORMACK. Very well.

Mr. PATMAN. Mr. Willis J. Ballinger, director of studies and economic adviser to the Federal Trade Commission, testified before the Temporary National Economic Committee, February 28, 1939. In this statement to the Committee, he said:

"Some of them directly affect the consumer, others provide materials to a multitude of small industries, and still others are of primary interest to the producers of raw materials who must sell in a market where monopolies are the only buyers.

"In the Commission's opinion, one of the gravest problems before the Temporary National Economic Committee is one of recommending suitable changes in our present laws which will lead to an effective encouragement and protection to free initiative in business.

"To avoid the degeneration into totalitarian control, something that we know as free initiative must be permitted and encouraged.

"A cancer may live successfully at the expense of the body of its victim only until it kills the body and dies with it. There appear to be symptoms indicating that monopoly has so far weakened the body of capitalism that both are in danger of dissolution, to be followed, as in other nations, by some kind of authoritarian social order which should be highly distasteful to the American people."

It is in competitive markets that mankind has made his greatest progress to all civilizations that seek to rise to higher levels of economic achievement.

"American industry has always thriven, when it has thriven at all, on freedom; it has never thriven on monopoly.

"Limit individual opportunity, restrict the field of originative achievement, and you have cut out the heart and root of all prosperity. You cannot use monopoly in order to serve a free people. We purpose to prevent monopoly by law, to see to it that the methods by which monopoly are built up are legally made impossible. We design that private limitations on individual enterprise shall be removed so that the next generation of youngsters, as they come along, will not have to become proteges of trusts but will be free to go about making their own lines what they will."

BIGGEST LOBBY IN HISTORY

We are opposed in our fight against interstate chain stores by a fourteen and one-half billion dollar lobby. The biggest lobby in the history of the world.

Mr. Carl Byoir, president of Carl Byoir Associates, Inc., and public relations counsel for the Atlantic & Pacific Tea Co., made a speech at Rye, N. Y., September 19, 1938, before the members of the National Association of Chain Drug Stores, in which he, according to the printed proceedings, stated:

"I have clients in American industry with assets of $14,500,000,000."

How much is $14,500,000,000? It is twice as much as all the money in circulation in the United States. It is equal to the value of all the retail stores in the United States. It is equal to the value of all the public utilities in the United States. I estimate that this vast aggregation of wealth includes 90 percent of all the national advertising in this country.

Why do Collier's, Saturday Evening Post, Chicago Tribune, and many other large publications want big concerns instead of small ones? The answer is simple. If the citizens of every town owned its own utilities, these publications would not get thousands of dollars a day or week for full-page advertisements from one utility concern. Instead the local newspapers all over the country would benefit from such advertising. If any line of business or industry is owned or controlled by a few people in one city, the owners of the big newspapers and magazines have little trouble and practically no expense obtaining advertising of tremendous value to them. Whereas, if such business is separated into smaller units and scattered over the country, the smaller newspapers get more of the advertising and the larger ones less. It is in the selfish interest of the owners of the means of communication, including the newspaper and magazine, the radio, and the newsreel, that a few people control all business, industry, and banking. Therefore they may be expected to oppose any proposed law that will retard, restrict, or prevent absentee or foreign ownership of business.

Why the fourteen-and-one-half-billion-dollar boast? This fourteen-billion-and-five-hundred-million statement by Mr. Byoir was evidently made for the following purposes:

First, to let the newspapers of the country know that he controls enough advertising to determine whether or not any one newspaper which is dependent upon advertising is able to survive in business. By making this threat, newspapers that are dependent upon advertising for support will be very reluctant to fail to print and fail to give good publicity to any statement that is sent to them by Mr. Carl Byoir and will very quickly throw into the wastebasket anything against his interest.

Second, to threaten every member of the legislatures in all of the States, Members of the United States Congress, and all other public officials who have the power to restrict or curb absentee ownership of business. It advises them of his influence over the press and lets them know that it is within his power to injure them politically if they oppose his Wall Street clients.

Third, to advise the country that he possesses tremendous power over means of communication to the people, which results in obtaining favorable publicity for what he wants and the "playing down" or the stopping of all news that might be helpful to independent business.

Mr. Byoir's statement is an admission that the rich people of the Nation have pooled their wealth, their advantages, their advertising; and their influence for the purpose of deceiving the people.

Mr. Byoir said in the same speech:

"It is necessary to create organization to bring that force of public opinion to bear on the legislators or Congressmen or elected public officials. That is a thing that remains yet to be done."

In the same speech he quoted:

"If I were a politician and I wanted to make a public reputation, and I wanted to be sure that in the present state of public opinion I would have the support of the great majority of the American people, I would pick the Patman bill."

In other words, Mr. Byoir says that the Patman bill is right; that public opinion will support it; that public men can make a great name for themselves by advocating it; but he, Mr. Carl Byoir, is such an expert at directing the minds of the American people and teaching them what to think and what to believe that he can take the millions of dollars furnished to him each year for that purpose, backed by the advertising of the concerns worth fourteen and one-half billion dollars, and cause the American people to oppose a bill that is in the interest of the general welfare of all the people.

Benefits, propaganda a powerful weapon: Distortion and deceit accompanied by suppression of opponents' views represent a very powerful weapon. The people are getting wise to deceitful propaganda.

Mr. Byoir has not agreed to make Congressmen believe that black is white or that white is black, but he has taken upon himself a task just as extraordinary, and that is to make Congressmen believe that it is in the interest of the country for local business to be destroyed, private initiative crushed, and the wealth of the Nation concentrated into a few hands.

In addressing that group of chain-store representatives, he said:

"You had better sit down and assess yourself at $20, $40, $60, or $80 a store, and had better put it in a fund."

That was tantamount to saying that they should immediately raise from three to twelve million dollars and put it in a fund. This fund would be in addition to the one already created by the Atlantic & Pacific Tea Co., which aggregates millions of dollars. They are people who believe they can take a large slush fund and control State legislatures and Congress.

DISCLOSURES OF CONGRESSIONAL INVESTIGATING COMMITTEE

When I was chairman of a congressional committee in 1935 and 1936 investigating large-scale buying and selling, our committee discovered from testimony that among the things many of the people who were now opposing us in this fight against an interstate store monopoly were guilty of were the following:

(1) Conspiracy to obtain control of retail distribution America;

(2) Stopped the showing of a picture, Forward, America, which was favorable to independent business;

(3) Attempted through influence to have our committee appoint as our principal investigator a man who, it was later discovered, was employed by chain-store interests under investigation;

(4) Organized what they called a cornstalk brigade, which was composed of key farm leaders, whom they paid to go before legislatures and pose as farmers' representatives for the purpose of defeating certain legislation.

(5) Employed influential men in each State who were close to members of the legislature and the Governor and who could stop legislation they were opposed to.

(6) They admitted that their attorneys were instructed if they could not succeed in defeating a bill in a State legislature to get some amendment adopted which sounded good, but would cause the law to be declared unconstitutional if passed.

(7) Employed influential people on contingent basis to defeat legislation. That is, if the bill did not pass a certain session, they received a certain large amount of money. If it did pass, they did not receive anything.

(8) Faked consumer groups were organized to deceive the people, and at some meetings held by certain groups every person attending was on the pay roll of the interstate corporate chains.

(9) Schools were held to teach their representatives how to deceive the people.

(10) They had unlimited funds, which were used for bribery, deceit, trickery, and treachery.

(11) They brought pressure to bear on newspapers that carried their advertising to print nothing about independent business, but boost absentee-owned business.

ABSENTEE AND FOREIGN OWNERSHIP

Interstate chains are making ghost towns all over America. They are especially objectionable for the following reasons:

First, interstate chain stores cause three major evils—monopoly, community destruction, and money and credit concentration.

Second, foreign-owned chain stores constitute a conspiracy by a few big bankers to obtain control of retail distribution, national finances, and create a private monopoly.

Third, the few men who control the few banks that rule the corporate and much of the Nation's private wealth are interlocked in directorates with the few big chain-store systems: 24 banks own one-third of the banking resources of the entire Nation, and 13 of the 24 are in New York City.

Fourth, farmers are being ruined by the interstate chain-store system. The Department of Agriculture reported facts which prove that under the interstate chain-store system consumers pay more and farmers get less. Low-income groups, instead of being helped by the chains, are hard hit by them.

Fifth, the octopuslike foreign-owned chains are invading small cities and towns and making unsafe all lines of business.

Sixth, we must crush monopoly or monopoly will crush us.

Gentlemen, I have finished my statement. If there are any questions that members of the committee should like to ask me, I should be glad to yield and answer them to the best of my ability.

Mr. McCORMACK. It is now a little after 12 and the House is in session. The House has a very important bill before it today. I think it would be better if we adjourned at this time until tomorrow at 10 o'clock, when members will have an opportunity to question the gentleman from Texas.

If there is no objection, the committee will adjourn at this time until 10 o'clock tomorrow.

(Whereupon, the committee adjourned, to meet on Thursday, March 28, 1940, at 10 a. m.)

An Adequate Navy

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16 (legislative day of Monday, April 8), 1940

ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS, BEFORE DAUGHTERS OF THE AMERICAN REVOLUTION

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the Daughters of the American Revolution at Washington, D. C., on April 15, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

These are momentous days in world affairs and human destiny—momentous for all nations and all peoples everywhere on earth. In many respects and for many peoples they are terrifying and tragic days.

We in this land of freedom, at the same time that we give thanks for our escape from the holocaust of war which now engulfs Europe, must give thought—more thought, I venture to suggest, than ever before—on ways and means of our own protection and preservation, coupled with a high resolve, at all costs and at all hazards, to stay out of the war in Europe. Let us not be beguiled with the notion that we can make a late entry, bring a quick victory, and then get out unscathed and resume peacetime pursuits and preserve our democracy.

Let us face the stern reality that the moment we enter the war the mobilization of industry and the dictatorship which will of necessity then ensue, in conjunction with the existing enormous Federal debt, may seal the doom of our own democracy.

However, we are here today, not to discourse on the subject of foreign policy or neutrality, nor to debate the doctrines of the isolationist versus the internationalist, but rather upon the subject, An Adequate Navy. It is a subject upon which I have spoken many times and to which I have devoted much consideration and study during my years of service in the Senate and as a member of the Naval Affairs Committee.

Indeed, this is not the first time I have had the privilege of appearing before the congress of the Daughters of the American Revolution to speak about our Navy in terms of our national defense, which is but another phrase for an adequate Navy, for the measure of its adequacy is the measure of our national-defense needs.

We have come a long way since the days when the U. S. frigate *Constitution*—Old Ironsides, though her sides were only oaken plank—fought the frigate *Guerriere* on August 19, 1812, off the coast of Nova Scotia. We have come a long way since the battle of the *Monitor* and the *Merrimac* on March 8, 1862—the first real ironclads.

We have come a long way since our Navy sank the Spanish Fleet of Admiral Cervera as it sought to escape from Habana Harbor in 1898 and since Admiral Dewey steamed into Manila Bay.

We have come a long way since the close of the World War, and a long, long way since the Naval Disarmament Limitation Treaty of Washington in 1922.

At that time we had the largest Navy in the world as a consequence of our rapid expansion and construction during the World War. By the treaty of 1922, signed by the 5 great powers, and as our contribution to the cause of disarmament, and as a means to world peace, we scrapped 18 battleships then afloat, and, in addition, abandoned 11 capital ships then in various stages of construction, comprising nearly three-quarters of a million tons of combat ships.

We always speak of our Navy as our first line of defense and this is so because any conceivable enemy invader must first cross either the Atlantic or Pacific Ocean to reach our shores.

We invariably describe our Navy as planned and maintained solely for national defense, and this is so because any war of aggression or conquest by the United States is utterly inconceivable; nor do we propose to assume a rcle of international policeman.

We customarily look upon our Navy as a whole fleet of majestic battleships, mighty cruisers, swift destroyers, and silent submarines, and this is natural because although the Navy in reality is a composite and complex organization, the fleet is its central, paramount, and most integral part.

The question of what constitutes an adequate Navy for our national defense admits of no precise definition. One of the several factors is the comparative naval strength of the various world powers. Another important factor is world conditions.

When we signed the partial disarmament treaty in 1922 we took the position that an adequate Navy for the United States was one equal in size to that of Great Britain and in a ratio of 5–3 with the Navy of Japan. We adhered in theory to this definite concept, or to this yardstick of adequacy from that date to the expiration of the limitation treaties on December 31, 1936, although in fact we at no time in this period actually had or actually provided for a Navy that approached these ratios. In fact, from that day to the present, while we have undertaken a large construction program, our Navy has never been on a 5–5–3 ratio as planned to be adequate for us in peacetimes. Today the Navy of Great Britain is larger than ours and all the information available from Japan is that her Navy is in excess of the 5–5–3 ratio.

What the Great Britain Navy will be at the end of the present World War no one can prophesy at this time. It may be greater or it may be less than it is now. We do know that Japan is building naval vessels to the limit of her capacity. We know that Italy is engaged in a large-scale naval-construction program. We know that Germany aspires to be a great naval power.

Now let us consider how we may determine what may be an adequate Navy for our national defense, in the light of present world conditions. There are no treaty limits today. The 5–5–3 ratio has been abandoned. Events have demonstrated that treaties and international peace pacts afford no guaranty of peace and afford no security.

We are facing today disheartening realities and are forced to the realization that our only security lies in the strength of our Navy to prevent any power or group of powers from invading us.

I am not departing from the concept that we are speaking and thinking only in terms of defense—not in terms of aggression. No American wants a Navy for any other purpose than the protection of our people and our land. But to disregard all these factors in determining what is an adequate Navy, in view of the present European war, is short-sightedness. We cannot banish from our minds in any study of our naval-defense needs the possible outcome of the present war in Europe.

We must remember also that when we speak of an adequate Navy, we mean a Navy capable of meeting and defeating an enemy navy at sea, and thereby preventing a blockade, preventing bombardment of our coast, and invasion of our shores.

Congress dealt with the question of naval construction and our national defense needs in 1938, and adopted recommendations of the Navy experts, who presented a naval program based upon our needs following the expiration of the limitation treaties in 1936. The program then adopted authorized an increase in our Navy of about 20 percent. Since that time we have been appropriating increasingly large sums of money to construct ships authorized under this program. The Congress has before it now a bill appropriating $967,000,000, of which sum $340,000,000 represent naval vessel construction in various categories, for our naval needs in the fiscal year beginning July 1, 1940, and ending July 1, 1941.

We have by no means completed the construction contemplated and authorized by the 1938 naval expansion bill. However, the Congress at the present time is considering not only an acceleration of the construction program under the 1938 act but, in addition, is giving favorable consideration to legislation whereby the authorized limits of our Navy will be still further enlarged. This present naval expansion bill, upon which hearings are already being held before the Senate Committee on Naval Affairs, increases the authorized composition of the Navy from 1,557,470 tons to 1,724,480 tons—the size of navies is always referred to in tonnage rather than in number of vessels. This is an increase of 167,000 tons (approximately 21 vessels) in the following categories:

	Tons
(a) Aircraft carriers	79,500
(b) Cruisers	66,500
(c) Submarines	21,000

It increases the number of authorized naval airplanes from not less than 3,000 to not more than 4,500; it increases the authorized number of lighter-than-air craft to a total of not less than 12. There are now 7 blimps in service. It authorizes the President to acquire and convert or to undertake the construction of 75,000 tons of auxiliary vessels—approximately 22.

We have no assurance that if we pass this bill and if we build the ships this bill authorizes, that we shall then have attained our full naval requirements. Indeed, our naval experts warn us now that this program does not represent our maximum future needs.

When we discuss the question of the size and number of the ships that may be necessary to successfully combat any enemy or group of enemies that threaten to strike at our security we must not lose sight of the fact that it is more than a question of tonnage or steel in our ships or the number of our aircraft. It is also a question of education, training, skill, and efficiency of the manpower of our Navy. This is a vital element, impossible of exact measurement, but I believe that we have developed a standard of efficiency among our officers and enlisted men that is unexcelled by any other nation.

The geographical situation of the United States makes our problem of adequate defense and national security vastly different from that of European nations or Japan. We have on the one hand thousands of miles of seacoast to defend and the Panama Canal.

We have on the other hand a vast ocean separating us from any and every potential aggressor. We have nothing to fear from them so long as they are prevented from obtaining any base of operations in the Western Hemisphere. That means that if we are able to maintain control of the seas we are reasonably secure.

All this indicates the importance and seriousness of our present problem in formulating our naval program. In the last analysis we must rely on the experts of our country who have been studying all these facts and whose lives are solely devoted to an understanding of all the problems and ramifications relating to our national defense.

Adequate national defense and preparedness are the only insurance against war. Preparedness for defense is a necessity so long as great armaments, the spirit of fear, hate, militant nationalism, arrogance, and aggression linger in the world. President Coolidge well said in his Armistice Day address in 1928:

"All human experience seems to demonstrate that a country which makes reasonable preparedness for defense is less likely to be subject to hostile attack and less likely to suffer a violation of its rights which might lead to war. It is our duty to ourselves and to the cause of civilization, to preservation of domestic tranquillity, to our orderly and lawful relations with foreign people, to maintain an adequate army and navy."

History—even our own history—shows that war is like the angel of death. It comes unexpectedly. It is no respecter of nations. No spot on earth has ever been immune from its devastation. History is replete with never-ending conflicts of the human family, fighting against subjection by mightier forces and, in return, fighting desperately to throw off the oppressor and win back freedom.

We may hope for peace and pray for peace, but we must be prepared to defend our Nation if attack comes. Let us read the lessons of history. Let not our love for peace blind us to the realities of this present-day world. Let us perceive the dangers. Let us realize the priceless values of our homes, our loved ones, and our liberties. Let us remember again the words of Washington:

"To be prepared for war is the most effectual means of preserving peace."

Jefferson Day Dinner, Providence, R. I.

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16 (legislative day of Monday, April 8), 1940

ADDRESSES BY HON. THEODORE FRANCIS GREEN, OF RHODE ISLAND, AND HON. JAMES A. FARLEY

Mr. MINTON. Mr. President, on last Sunday evening, at the annual Jefferson Day dinner held at the Narragansett Hotel, Providence, R. I., the junior Senator from Rhode Island [Mr. GREEN] and the Postmaster General, Hon. James A. Farley, were guests of the evening and addressed the assemblage. I ask unanimous consent that their addresses may be inserted in the Appendix of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. THEODORE FRANCIS GREEN, OF RHODE ISLAND

It is good to be here with you again. It is always good to get home. I am especially glad to attend this Jeffersonian dinner. Thomas Jefferson was the founder of our party. The central theme of his political belief was the nobility of the common man. On that theme the Democratic Party was founded and built and today stands firm. It was maintained by Andrew Jackson with his frontier democracy, by Grover Cleveland, by Woodrow Wilson and the new freedom, and is now carried forward by Franklin Roosevelt and the New Deal.

I am glad to welcome here tonight another firm believer in that fundamental Jeffersonian principle in the person of a strong pillar of the present administration, a great administrator, my good friend, your friend, everybody's friend, Jim Farley. He comes here at personal inconvenience, for which I trust the warmth of our heartfelt welcome will in part repay him.

I have been asked to talk to you about certain recent events in Rhode Island which have gained Nation-wide publicity, and which have brought shame to the good name of our State. Let me summarize just what has happened in our National Capitol since this wire-tapping escapade was exposed.

After learning that the telephone wires leading to the home of Mayor McCoy, of Pawtucket, and the home and offices of Attorney General Jackvony had been tapped, I introduced in the United States Senate a resolution directing the Senate Committee on Interstate Commerce "to make a full and complete investigation of alleged instances of (1) interception, by means of wire tapping or otherwise, of wire communications to or from officials and employees of the Federal, State, and local governments; and (2) installation of dictographs or similar devices for the purpose of listening to or recording conversations participated in by such officials and employees." It also provided that "the committee shall report to the Senate as soon as practicable the results of its investigation, together with its recommendation for the enactment of any remedial legislation it may deem necessary."

Upon introduction this resolution was referred to the Senate Committee on Interstate Commerce, and Senator WHEELER, its chairman, immediately appointed a subcommittee to consider this legislation. This subcommittee, consisting of five Senators—three Democrats and two Republicans—held a private hearing, and, at the request of the committee, I invited J. Howard McGrath, the United States district attorney, and Louis Jackvony, the attorney general of Rhode Island, to attend and give a complete report of just what happened in Rhode Island. I was present at that meeting, and I want publicly to congratulate both Mr. McGrath and Mr. Jackvony upon the assistance they gave the committee. Immediately after this private hearing the subcommittee unanimously and favorably reported the bill to the full committee.

At its next meeting the Senate Committee on Interstate Commerce, consisting of 21 Senators, unanimously and favorably reported the bill to the Senate for consideration. As the bill included an appropriation it was then referred to the Committee to Audit and Control the Contingent Expenses of the Senate. This committee also unanimously and favorably reported the bill to the Senate itself, which gave it immediate consideration and passed it without objection from any Senator.

Soon after the bill passed, Senator WHEELER appointed as the investigating committee the same subcommittee which considered my bill when it was introduced. This committee, headed by Senator TOM STEWART, of Tennessee, has already held a number of meetings, has appointed investigators, and has under way an investigation which I am glad to tell you will begin in Rhode Island, and I believe will expose facts of interest not only to the good citizens of Rhode Island but also to those of the whole Nation.

Although the United States Attorney General last week ordered the United States district attorney not to press for indictments against those who were responsible for this wire tapping here in Rhode Island, I can assure you that the Senate committee acting under the resolution I introduced will make a thorough and complete investigation in Rhode Island, and that the efforts of Mr. McGrath and his associates, who worked on this matter day and night for 4 months, will not have been in vain.

The citizens of Rhode Island want to know who the master minds were behind this scheme, for it is unlikely that any one man conceived this idea of calling a private detective agency into Rhode Island to spy not only on public officials but also on responsible businessmen.

The citizens will be interested to learn of the activities of these agents who were imported here from New York. They will want to find out who these agents are, their records, their characters, their associates, and their connections.

The citizens want to know whether or not these agents are now working in Rhode Island, and further than that, who is paying them. Are some of them quartered at this very moment in a local hotel? Who gave these agents the leads and the information so that they could prey upon the citizens of our State? Were these informers rewarded by being placed on the State's pay roll? If so, who placed them there? This costs the State money—even if individuals contributed to the expense—generously and modestly—not letting the right hand know what the left hand gave. All this and much more here and in other States I hope and believe will be brought into the open when the Senate committee conducts its hearings.

I am interested in the enactment of remedial legislation to correct abuses such as this, for the main purpose of the investigation is to find the facts on which wise legislation may be based to suppress what the late Mr. Justice Holmes characterized as "dirty business."

The Senate committee in its report to the Senate made the following statement: "The importance of this investigation is great. Whether it be the use of wire tapping or dictographs by those seeking to detect crime, or their use by those seeking to commit crime, the effect on our judicial and social systems is far-reaching."

There are many other things I would like to talk to you about—but my time has expired. I cannot close, however, without expressing publicly the satisfaction I feel, and which I know you share with me, at the splendid work of our new State Chairman Denny Roberts. His enthusiasm is contagious, his energy is inexhaustible, and he, too, is filled with the Jeffersonian sympathy for the common man. We look to him for great work in the coming campaign.

Just one more word. All this enthusiasm for Jeffersonian principles will be of no avail unless you express it by going to the polls and voting. You cannot vote unless you register. So your first and immediate duty is to register and to get all your family and friends to register also. If the registration is large the victory is almost won.

ADDRESS OF HON. JAMES A. FARLEY, CHAIRMAN OF THE DEMOCRATIC NATIONAL COMMITTEE

I am glad to see so many of you here tonight because this is going to be a good year for Rhode Island Democrats.

Just 12 years ago your State adopted the wise practice of voting the Democratic ticket in Presidential elections. The habit has continued unbroken and this year again, with its customary good sense, I feel certain that Rhode Island will repeat the process. It is my firm conviction also that the temporary lapse of 2 years ago will be atoned for by the election of a Democratic State ticket and a Democratic United States Senator.

We are gathered here today, among other purposes, to pay honor to the memory of Thomas Jefferson, the founder of our party. For many years, the observance of Jefferson's anniversary was confined almost exclusively to those who professed allegiance to the Democratic faith. He was given rank among the outstanding Presidents but there was no general understanding of the role he played in molding the form of American institutions.

Fortunately, as the years go by, his fame has increased and each generation seems to arrive at a fresh appreciation of Jefferson's work. This is especially true in this age of chaos and upheaval when the principles and the institutions of popular government are being challenged throughout the world.

While many great men contributed to the establishment of the Republic, it was Jefferson who gave voice and purpose to the ideals and aspirations of the colonial patriots. He was the author of those stirring lines in the Declaration of Independence, guaranteeing life, liberty, and the pursuit of happiness, as the fundamental right of every American citizen. Later he was the mainspring in the movement to attach the Bill of Rights to the original Constitution, providing an enduring safeguard for the cherished rights of liberty of conscience, freedom of speech and press, and freedom of assembly.

A few years ago, under the impact of harsh social and economic conditions, it was fashionable in some quarters to scoff at democracy. There were individuals, even in high places, who questioned

whether the slow and sometimes tedious processes of popular government could survive in this present-day world. They looked across the water and professed to see unexpected merit in the uncompromising sway of dictatorship.

The passage of time has brought the world picture into focus and served to correct this false impression of the value of absolute government. It has brought home the fact that no dictator ever lived who could give something in exchange for the simple dignity of citizenship in a democracy. Once again people realize that without personal liberty and the right of self-expression life itself is hardly worth the living.

The great principles which Jefferson expounded have taken on new light and he is rightly regarded as the spiritual father of the finest system of government ever devised by man.

But Jefferson knew that democracy is not self-operating, that something more is needed than the mere declaration of principles. He was a rare combination of philosopher and thoroughgoing realist. He knew that popular government could not exist unless the mass of citizens was prepared to fight and struggle for its maintenance under the guidance of enlightened leaders. Even in the infant Republic, he was disturbed at the activities of those who wished to move away from democracy, those who wanted to perpetuate the rule of a privileged class on the theory that the best government is that which watches out for the interests of the best people.

To safeguard the Government which he had done so much to establish, Jefferson founded a political party. He sought support among the masses of the people, the toilers, the farmers, and the artisans, ignoring the cries of those who charged that he was catering to the rule of the mob. He had faith in the common people, and he was a born organizer. Although the facilities for propaganda were few and limited, he used them to excellent advantage, forging the strongest political party ever to exist in this country. This is the instrument by which he hoped to perpetuate the ideals of popular sovereignty in which he passionately believed.

The party which Jefferson founded has lived through 140 years of turbulent history. It has had periods of prosperity and lean years of adversity. The party has made mistakes, and at times it has been torn by discord and internal dissension, the usual fate of political organizations. On one or two occasions, in the heat of controversy over burning issues, it has made the error of losing sight of Jefferson's ideals. But in the main the Democratic Party has been the bulwark of popular government in this country, and the greatest champion the common man has ever known.

In the days of Andrew Jackson the party fought for the welfare of country against the fury and hate of a small oligarchy that tried to secure a strangle hold on the Nation's financial life. It won that struggle. Again, in our day, under the Wilson and Roosevelt administrations, the party has consistently adhered to the principles of liberal and progressive government laid down by its illustrious founder, Thomas Jefferson. That is why the Democratic Party is in the majority today, and why it is in a true sense the great American party.

The Democratic Party enters this campaign on its record for constructive achievement, both in the State and Nation, and on this record we propose to win the coming campaign. There is no political party which will dare to advocate the repeal of the splendid program of laws which the Roosevelt administration has placed on the statute books, because these laws have the sanction and approval of the vast majority of the American people. Recognizing the truth of this situation, the opposition party has seen fit to shift the basis of its attack. After putting forth every effort to hamper and hamstring the Democratic program, its spokesmen and leaders are now trying to swallow their words. They want the electorate to hand over the program to its enemies.

Here in Rhode Island you had the benefits of progressive government under a wise and far-seeing statesman, Theodore Francis Green. During his tenure as Governor there was enacted a program of labor legislation which lifted the State into the forefront of enlightened Commonwealths seeking to improve the lot of humble citizens.

Despite the fact that Rhode Island had been an industrial State for generations, it was backward in the protection of working men and women under Republican rule, and every individual here knows that to be a fact. Governor Green brought about the creation of a unified department of labor and made it an effective weapon in the administration of labor legislation. And in the passage of other legislation intended to safeguard the lives and happiness of those who toil; his record stands unsurpassed.

There was a minimum-wage law and a 48-hour law for women and children; a child labor act which is one of the best in the country; a prevailing wage law for public works, roads, and bridge construction; a law creating a special division of women and children in the new department of labor; far-reaching amendments to the workmen's compensation act; and, finally, an unemployment compensation and old-age-benefit law.

The value of this broad humanitarian program is undisputed. The proof lies in the fact that the Republican State administration has found it expedient to avoid changing a single comma in this excellent legislation. The sponsor of this program is now a Member of the United States Senate, and I am happy to inform you that he is just as useful, just as eminent, in Washington as he was in Providence.

In the field of national action, the story has been similar. The long and constant struggle to bring justice into the economic system and to make it work has been carried on almost exclusively by the Democratic Party. Some who were not members of the party have given valuable aid. A few Republican Senators and Representatives, able to rise above partisanship, have helped in the passage of individual measures. But the power, the leadership, and the drive came from the Democratic Party, without which this magnificent program of social and economic progress would never have become a reality. Again let me emphasize that the Democratic Party has lived up to the ideals of Jefferson.

The Republican Party has never been liberal and it never will be. It has a fringe of idealists and liberals who strive constantly to convert the party to progressive principles and to bring it in touch with the needs and aspirations of the average citizens. They have been disappointed in the past and they will be disappointed again this year. The Old Guard is reaching out to control the Philadelphia convention and to dictate the party nominees. The voice of liberalism may come through the loud speaker, but the controlling hand at the mechanism will be the same old hand of reaction.

To support this view it is not necessary to rely on my word alone. The standardbearer of the Republican Party in 1936 was Alfred M. Landon, of Kansas. Over a long period he has been identified with the so-called progressive wing of the G. O. P. In a recent speech, he sounded a plain warning that a group of "money-raisers," as he called them, should not be allowed to pick the Republican nominees.

You may be sure that Governor Landon never would have uttered this warning if he had not picked up ample evidence to show that the big money bags were planning to move in and take possession. He is too wise in the ways of politics and too practical in his own right to set up a straw man. He spoke because he has been deeply disturbed by the backstage maneuvering.

Enough has happened to give solid ground for Governor Landon's misgivings. A few weeks ago the Republican National Committee selected a national finance chairman to supervise the money-raising activities for the coming campaign. The choice was Ernest T. Weir, the steel industrialist, who has been a consistent foe of genuine collective bargaining and the rights of labor. A national magazine said of him that he treats his labor with so little ceremony that even steel men are appalled. He has been charged constantly in the press and elsewhere with using the most hateful kind of strong-arm tactics in dealing with his employees.

I do not question the right of the Republican National Committee to select Mr. Weir or any other individual as finance chairman. The objection to Mr. Weir does not arise from the fact that he is an industrialist, but from his views and attitude on matters of public policy. Mr. Weir, despite his recent efforts to acquire a thin coating of liberalism, still belongs to the Stone Age of industrial relations. The idea that he has agreed to raise a huge campaign fund to put a progressive President in the White House is too ridiculous for words.

The Republican Party made a gesture to the liberal and independent voters by publishing the Glenn Frank report with its outright approval of a host of Democratic measures. Then, in keeping with traditional party policy, a stalwart of the old guard was placed swiftly and securely in a key position in the party organization. The practice of facing both ways is an old political device, the purpose of which is to screen the real objective of those handling the controls. But it has been employed too often to fool the public. To speak of a liberal Republican Party is a contradiction in itself.

During the past 7 years, the finest program of constructive legislation in recent history has been enacted into law at Washington. The banking system has been stabilized, bank deposits insured, social security translated into reality, the issuance of wildcat securities halted, and agriculture rescued from the double threat of glutted markets and ruinous prices. The unemployed have been given work on useful projects, the C. C. C. camps have provided work for 2,000,000 young men, and hundreds of thousands of home owners have been saved from eviction by the Home Owners' Loan Corporation. Labor has been guaranteed the right of collective bargaining and standards have been fixed to put a floor under wages and a ceiling over hours of work. The list of worth-while enactments could be extended indefinitely.

The Social Security Act alone will live as a monument to humanitarian government, and I should like to remind you that Senator PETER G. GERRY voted for it, while the other Senator from Rhode Island, a Republican, voted against it. You have since taken care of that situation.

In considering this forward-looking program of legislation, it is well to remember that the Roosevelt administration came into power facing one of the worst economic depressions that ever vexed a government in modern times. The old policy of letting things drift on the theory that conditions would right themselves had reached a logical conclusion in a crisis of unparalleled magnitude. The task of restarting the industrial machinery was huge in itself. But even larger in scope was the human responsibility of providing a means of livelihood immediately for millions of citizens who were out of work and out of funds.

The Roosevelt administration moved to meet this problem in the only way it could be met—by using the Federal credit. Here in Rhode Island you saw the awful consequences of unemployment at first hand. You saw the bread lines and the soup kitchens. You know of your knowledge that this was not an imaginary problem—that it was deep, grave, and far reaching.

These millions of men and women, estimated at from 13,000,000 to 15,000,000, were not idle because of the faults of a Democratic administration. They constituted a legacy from 12 years of Re-

publican misrule. The Roosevelt administration had the courage and the foresight to put them back at work by using Federal funds to do the job. Those who were dumb and had nothing to suggest during the emergency now criticize the Roosevelt administration for its spending policy. But I wish to remind you that the Hoover administration increased the public debt by over five and one-half billions of dollars without doing a single effective act to restore the economic lifeblood of the Nation.

The Roosevelt administration has been compelled to contend with something more than a devastating domestic situation. The labor of revitalizing the Nation's economic life has had to be accomplished in a period of world strife and discord so widespread that it is necessary to go back to the time of Jefferson to find a comparable period.

Keeping the peace and protecting the essential rights of the Nation in foreign affairs has been a difficult task during the past 7 years. The civilized world has resounded to the tramp of armies, minorities have been crushed, treaties torn up as scraps of paper, neutral nations invaded, and savage terms imposed upon those who stood in the path of conquerors. The law of reason and right-dealing has been supplanted by the law of force and violence.

It is to the eternal credit of President Roosevelt that throughout this time of disaster and woe he has followed without deviation the course of peace and quickened the moral conscience of the world by his constant appeals for the end of hostilities. When other nations have gone down crushed and helpless, his administration has stood firm and fast for the preservation of America's rights. It has retained the respect of belligerent nations without sacrificing national honor or security.

The success of the Roosevelt administration in keeping the peace has not been due to accident or blind luck. It has been the result of sound public policy. The first step was to build up the Navy from the weakened condition in which it was left by the Hoover administration. The second step was enactment of the neutrality bill whereby the ships of Uncle Sam are kept out of belligerent waters. The only way to avoid war is to avoid the incidents that lead to war. Every day we read of neutral vessels being bombed or torpedoed by the warring powers. This has not happened to American ships, because they are forbidden to enter the trouble zones. In other words, we have been kept free of entanglements by the wise provisions of the Neutrality Act. Again I should like to remind you that it was a Democratic measure passed by Democratic votes, and that your two Senators were among those who had the good sense to vote for it.

The Democratic Party has kept the peace and restored the fabric of domestic life. Against tremendous odds, it has brought the Nation safely through one of the most trying periods in recent history. Taking control of the country when industry was stagnant and hope was low, it has made the United States once again the strongest and most powerful nation in the world. It has done the job and done it well.

The Republican Party enters the coming campaign with the advantage that always lies with the opposition party. Having accomplished nothing in the past 7 years, its leaders are free to criticize and condemn, to view with alarm, and to utter gloomy forebodings of approaching disaster. Their hope is to bring dissatisfaction to the boiling point. Like the unhappy salesman with a poor product to offer, they spend their time talking down the rival line of goods.

We are not disturbed. The same tactics were tried in past elections, with conspicuous lack of success. It is still true that you can't beat somebody with nobody.

The people of the United States want peace with the world and a government that keeps abreast of human needs. Their only hope lies in the Democratic Party.

"Due Process," and Mr. Justice Black

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16 (legislative day of Monday, April 8), 1940

ARTICLE BY RT. REV. MSGR. JOHN A. RYAN

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "'Due Process,' and Mr. Justice Black," by the Right Reverend Monsignor John A. Ryan, D. D. The article appeared in the Catholic World of April 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Catholic World for April 1940]

"DUE PROCESS," AND MR. JUSTICE BLACK

(By Rt. Rev. Msgr. John A. Ryan, D. D.)

Not the least of the contrasts between the American Government and all the varieties of totalitarianism is found in its protection for individual rights against arbitrary action by public officials, whether they be legislators, executives, or judges. In the unanimous decision of the Supreme Court, February 12, 1940 (*Chambers et al.* v. *the State of Florida*) this protection received striking and comprehensive confirmation. The case came before our highest Court on appeal from a decision by the Supreme Court of Florida which had upheld the conviction of and sentence of death upon four impoverished Negroes. They had been taken into custody in 1933, accused of murdering a white man. Arrested without a warrant, they were then subjected for 6 days to "questioning" by the sheriff and his associates. The prisoners were interrogated in secret and without the assistance of counsel. On the sixth day the "questioning" continued until about 5 o'clock the following morning, when the last of the four prisoners "confessed." Upon the basis of these "confessions" all four were convicted in the district court and sentenced to death. On three separate occasions, conviction and sentence were affirmed by the Supreme Court of Florida.

This judgment was reversed by the Supreme Court of the United States on the ground that it violated that clause of the fourteenth amendment to the Federal Constitution which forbids a State to deprive any person "of life, liberty, or property without due process of law." This clause is likewise found in the fifth amendment, which is one of the original ten, generally denominated the Bill of Rights. The fifth amendment is a restraint upon the Federal Government, while the fourteenth is binding upon the several States. Ratified in 1868, the fourteenth amendment was intended mainly for the benefit of the recently enfranchised slaves. In more than one southern State they had, immediately after the close of the Civil War, suffered discrimination as regards their liberty, property, and economic opportunity in the so-called "black codes." In the recent decision by the Supreme Court, the primary intention of those who drew up the fourteenth amendment is strikingly realized and fulfilled, for the amendment is utilized on behalf of the welfare and rights of Negroes.

In passing, it is interesting to note that these precious words of the fourteenth amendment have been frequently employed for the injury rather than the protection of the weak. For almost a century due process of law was construed by the Supreme Court (with a single insignificant and indecisive exception) as merely a procedural restriction. In other words, it was uniformly interpreted as preventing any person from being deprived of life, liberty, or property without a fair trial. Beginning about half a century ago, however, the courts have given the due process clause a substantive or legislative as well as a procedural interpretation. According to this new construction, no person could be deprived of life, liberty, or property by an enactment which is arbitrary or unreasonable. When is a law arbitrary or unreasonable? Obviously this question was, is, and always will be answered by the individual judge on the basis of his social, economic, ethical, and political associations, training, and opportunities. He cannot find a conclusive answer in the words of the Constitution. Hence the members of the Supreme Court, and of other courts, have given differing and contradictory answers in many cases which involved the validity of acts of Congress and of statutes enacted by the State legislatures.

The decisions in the minimum-wage cases are the most recent and striking illustrations of the elasticity inhering in the terms arbitrary and unreasonable. In the Adkins case (1923) involving the constitutionality of the minimum-wage law enacted by Congress for the District of Columbia, five of the Justices of the Supreme Court found that the statute was arbitrary, unreasonable, unfair, and, therefore, unconstitutional. It was invalid, said the majority of the Court, because it required the employer to pay his female employee a decent living wage. It deprived him of that freedom of contract which is comprehended in the word liberty, in the due process clause. The other three participating Justices denied that the law was thus vitiated and held it constitutional. In the Morehead case (1936), six of the Justices pronounced the minimum-wage law of New York unconstitutional, while the other three dissented.

Less than a year later, however, two of the six had changed their attitude and joined the three dissenters in holding constitutional the minimum-wage law of the State of Washington (*West Coast Hotel Co.* v. *Parrish*). Indeed, the Court went so far as to declare: "Our conclusion is that the case of *Adkins* v. *Children's Hospital* should be, and it is hereby, overruled." Not often has the Supreme Court dealt so drastically with a previous decision of its own. This action must have caused great chagrin to the amateur authorities on constitutional law who had pontifically proclaimed that the Court could not have given a different decision in the Adkins and Morehead cases without "disregarding their oaths of office," or "repudiating the settled interpretation of the Constitution." But the Supreme Court disagreed with this solemn judgment when it came to decide the Parrish case.

As a result of the decision in the Parrish case and of the changes that have since taken place in the personnel of the Supreme Court, we can be assured that for some years to come legislation in favor of the economically weak will be in no danger of judicial nullification on the ground that it violates the due-process clause. The

precious word "liberty" in that clause will not be construed to empower the economically strong to oppress the economically weak under an immoral theory of liberty of contract.

Lest I be misunderstood, let me express my rejection of a legal or judicial doctrine which would confine the due-process clause to its procedural signification. After all, the men who put into the Constitution the fourteenth amendment intended it to guarantee the right of the Negro to follow one of the ordinary callings. I hope that intention and that meaning will always be respected in judicial interpretations of the due-process clause. It was upon this interpretation that the Supreme Court declared unconstitutional the Oregon anti-private-school law. The Court declared that this law attempted to deprive the Sisters of the Holy Names and the directors of the Hill Military Academy of their constitutional right to exercise the vocation of teaching. This decision put upon the due-process clause a legislative and not merely a procedural construction. Other rights and opportunities are implied in this general right of following one of the ordinary callings and they should all continue to have the protection of due process. On the other hand, the conception of freedom of contract, which involves coercion of the weak by the strong, which amounts to legal power to impose extortionate contracts, should not be validated under the due-process clause or any other part of the Constitution.

Returning to the decision handed down February 12, I point out that its most beneficent effect will be to compel policemen and other law-enforcement officers to refrain from the use not only of rubber hose, blackjacks, and similar instruments of physical torture, in order to extort confessions, but also from those less vulgar but equally effective methods which fall under the head of fear, terror, mental confusion, mental coercion, and mental torture. So far as I know, the Chambers case marks the first decision when these reprehensible methods came clearly before the Supreme Court and were decisively judged and condemned as a violation of procedural due process. Every believer in human dignity and in essential human equality, every defender of the weak against the strong, every lover of his kind, every lover of justice should rejoice over this situation.

A prominent metropolitan newspaper refers to this decision as "far and away the most direct, sweeping, and brilliantly written application of the fourteenth amendment to human rights that has come from our highest court." Yet this journal had severely criticized the appointment to the Court of the man who wrote this decision. Now, it apologizes for what it then said against him. Who is the man? None other than Mr. Justice Hugo Lafayette Black. At the time when he ascended the bench, he was denounced by many religious and secular papers because at the beginning of his political career he had joined the K. K. K. Some of us who had sympathetically followed his 10 years of battling for social justice in the United States Senate, suggested that he ought to be forgiven for his youthful indiscretion as a "joiner." We pointed out that as a Klansman he had never displayed great activity, either in the burning of crosses or in any other overt manner. We pointed out that his main object in going into the Klan was probably the same as that which moves other politicians to join the Elks or the Knights of Columbus. In some places membership in these two organizations is a valuable political asset. In Alabama, membership in the K. K. K. was much more effective. We pointed out that in his 10 years' career in the Senate, Hugo Black had never exhibited racial or religious bigotry. Nevertheless, his critics denied that he had any claim to forgiveness. They treated his connection with the Klan as an unpardonable sin.

At any rate, Justice Black may well be proud both of the reasoning and of the language which he used in formulating the opinion of the Court. He pointed out that those who have suffered most from procedures such as that employed in the case of the Florida Negroes "have almost always been the poor, the ignorant, the numerically weak, the friendless, and the powerless." He also declared that:

"Due process of law, preserved for all by our Constitution, commands that no such practice as that disclosed in this record shall send any accused to death.

"Under our constitutional system courts stand against the winds that blow, as havens of refuge for those who might otherwise suffer because they are helpless, weak, outnumbered, or because they are nonconforming victims of prejudice and public excitement.

"No higher duty, no more solemn responsibility, rests upon this court than that of translating into living law and maintaining this constitutional shield, deliberately planned and inscribed for the benefit of every human being subject to our Constitution of whatever race, creed, or persuasion."

It was a graceful act on the part of Chief Justice Hughes to allot the writing of the opinion of the Court to this son of Alabama, a State which is not conspicuous for excessively considerate treatment of the Negro and which borders on Florida, where these four Negro prisoners had been denied due process of law. Indeed, the whole course of the case in the Supreme Court is not only reassuring for the future of procedural justice in this country, but adapted to make every genuine American proud of our American traditions of liberty and equity.

The forecast in the immediately preceding sentence about "the future of procedural justice" has already been fulfilled. On March 11 the Supreme Court reversed the decision of an Alabama State court which had sentenced to death a Negro who was convicted of murder on the "testimony" of a confession extorted from him by coercion. In this case the Court did not write any formal opinion; it merely noted that its decision was based upon the decision in the case of the Florida Negroes. Thus the latter decision is now among the precedents which the Court regards as so firmly established and so compelling that no argument of reasoning or explanation is necessary in connection with the decisions in similar cases. It is now the settled law of the land that not even obscure and indigent Negroes can be deprived of their lives or their liberty without due process of law.

The Challenge of Underconsumption

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16 (legislative day of Monday, April 8), 1940

ADDRESS BY MILO PERKINS

Mr. MEAD. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address delivered by Milo Perkins, President of the Federal Surplus Commodities Corporation, on the subject The Challenge of Underconsumption.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Most of the figures which we are going to consider today have not been available until now. They deal with how much we eat, commodity by commodity, at different levels of income. For the first time we are beginning to know about underconsumption in terms of simple arithmetic. That has a direct bearing on farm prices. Our farmers, you know, make up 25 percent of our population, and yet they get only 11 percent of our national income. They are producing more than they can sell in the present market at a profit. Surpluses of agricultural products have been a serious national problem now for over a decade. As I see it, there are three major causes behind this situation:

The first is the application of science to agricultural production. Briefly, we have learned how to make two blades of grass grow where one grew before, and we don't know where to sell the extra blade of grass. Yields of lint cotton, for example, are now 35 percent greater per acre than they were 10 years ago. Yields of corn in the 10 Corn Belt States during the years 1936–39 were 22.8 percent above the 1929–33 average. If there were time, we might consider similar efficiencies in nearly every phase of agricultural production.

Secretary Wallace recently stated this scientific progress in another way. He said: "One hundred and fifty years ago it required 19 people living on the land to support themselves and one person in town. Today, under greatly commercialized and industrialized conditions, one person on the land supports himself, three people in town, and contributes to the support of another person overseas."

All this is a tribute to our technological genius as a people, and we may well be proud of it. Some day we'll turn that genius to solving the problems of underconsumption. When that day comes the extra blade of grass will add to human happiness and not to human misery. For the first time in history we're suffering because we've got too much of the things we need most. The science of production has outrun the science of distribution. We've got to catch our breath—and catch up.

The second cause of our farm surpluses has to do with dislocations in foreign trade. Naturally, our export crops have been hit the worst. This goes back more than 20 years ago to the time when we changed from a debtor to a creditor Nation—to the time when we plowed up 40,000,000 acres of grasslands and ruined part of the Great Plains in an era of military hysteria. Wheat, you know, helped to win the war. Then came the time when the armies of the world were demobilized, and our farmers lost their markets for the crops they had been raising on those 40,000,000 acres.

Following that one country after another entered the frantic race to have its cake and eat it too. Every major nation in the world tried to sell all it could abroad and buy as little from other countries as possible. We were in the race from the beginning; part of the time we were out in front. Tariffs were raised, imports and exports were licensed, foreign exchange was blocked, food was produced under Government subsidies within certain countries at over twice the cost of producing it elsewhere. One of the tragedies of world history is that Secretary Hull couldn't have given us his leadership in a reciprocal trade agreements program 13 years before he became Secretary of State. Some day historians will measure that loss to the American farmer and to our whole economy.

In the long run, the present war seems certain to hurt our agricultural exports. When the war is over things are likely to be even worse. We'd better not dodge the facts. It's still a habit with us to refer to France and Great Britain as our sister democracies.

But in the rough and tumble of a war fought on the economic as well as on the military fronts they are finding it necessary to put their economies on a totalitarian basis just as fast as they can, particularly so far as international trade is concerned. They are employing the same economic weapons which Germany has been using for several years. As a matter of self-preservation, they are fighting fire with fire; it's a part of the death struggle in which they're engaged. Before it's over, however, the American farmer is likely to get badly burned in the process. Belligerents as well as neutrals are resorting to centralized controls of their foreign trade.

Great Britain, for instance, is doing more than to buy all the food she can from within her own empire so as to conserve her dollar exchange for other purposes. She is buying large amounts of agricultural products in countries which normally sell to Germany, and she is doing it vigorously as a part of her economic offensive. For example, she has bought huge quantities of tobacco and dried fruits from the Mediterranean countries, in addition to the fresh fruits which were available. The tobacco farmer here at home and the producer of raisins and prunes and apples and winter pears has lost his best customer. His exports have been savagely curtailed. Only quick and heavy Government purchases, as well as loans, have kept him from realizing fully just how serious a blow has been dealt him. The war is bringing about dislocations in foreign trade which may last for a generation or longer. Following our own Revolutionary War, for example, we changed from a nation of tea drinkers to a nation of coffee drinkers, and the habit is now 150 years old.

Barring a miracle of brotherhood and vision at the next peace conference, we are likely, as a nation, to find ourselves in a world loath to give up its barter economies. Having surpluses of both farm and city goods ourselves, we may find it extremely difficult to trade with other countries in such a world. Right now, of course, they can give us gold for our surplus of exports over imports. The country seems to think it's all right to swap 3½ tons of fuel oil for an ounce of gold. If the war lasts, however, we'll have most of the world's gold, and just what other nations will use for money to buy the things they may want to buy from us, no one seems to know. We could, of course, act like a creditor nation and accept goods from them in exchange for what we need to sell them. Whether or not our various pressure groups will continue to oppose a real expansion of foreign trade remains to be seen. Heretofore, they have all wanted increased exports, but as far as increased imports were concerned, they have wanted those to take place in the other fellow's back yard. It looks now as though there's trouble ahead for farmers who have been selling a substantial part of their crops abroad.

INDUSTRIAL UNEMPLOYMENT ADDS TO SURPLUS PROBLEMS

The third and last major cause of farm surpluses, as I see it, has to do with industrial unemployment in our own country. Farmers producing dairy and poultry products, and fruits and vegetables as well as meats, have been hit the hardest. These are the foods low-income folks start buying as soon as they get a little more money. The term "surpluses," as applied to these foods, is simply a smug, polite name for a shocking amount of underconsumption. During last December we virtually reached the 1929 level of industrial production, and yet some 10,000,000 of the unemployed were still with us. No intelligent person can look those figures in the face and reach the conclusion that the unemployment problem is going to solve itself. Every year there is a net increase in our working population of about 500,000 persons. Over half of the 10,000,000 folks who want work but can't get it belong to this group.

Better than half of the balance are said to have lost their jobs to machines. Industrial output per worker is said to have increased around 20 percent in the last 10 years. We've been smart enough to make tractors and mechanical cornpickers and dial telephones; are we smart enough, however, to find work for the folks they've thrown out of work? Upon our answer to that question—not in words but in new jobs—hangs the future of our industrial democracy. In other lands it has lost its race against time; if we have the courage to make it work here, then we shall in truth be a chosen people.

Personally, I think we can, and that what we need most is a redirection of our genius as a people. Heretofore, we've concentrated on methods of efficient production. Henceforth, we must concentrate on efficient and businesslike methods of increasing domestic consumption no matter how much violence it may do to some of our preconceived notions. We know how to produce almost anything—but we haven't learned how to distribute such things to the jobless who ask only the chance to work for them. This nightmare of underconsumption is the black plague of the twentieth century; we've got to make up our minds to wipe it out—with a vengeance. Only one thing can stop us and that's a mental sit-down strike—a kind of smug, nineteenth-century faith that things will work themselves out if only we don't do anything about it.

We musn't let that happen. It won't if we keep our eyes glued to the goal of fully utilizing all of our resources—and if we keep marching until we get there. We can have full employment in this country within a few years, but we've got to fight for it. If we slash out at underconsumption within our own country as we would at a foreign enemy, individual initiative and free enterprise will come into their own as they never have before. That's the only way in which we can be sure of their continuance. That's the only way I know of to assure a nineteenth century chance of opportunity to youngsters who are growing up to run the twentieth century.

We've got to restore confidence in this country—the confidence of our young folks—not by platitudes but by jobs. And we've got to do it not for just a few of them but for all of them who are willing and able to work. Any answer short of that is unworthy of the men who fought their way westward for us and our children. There's a job of internal pioneering ahead of us which has barely been started. The full conquest of underconsumption still belongs to our tomorrows.

One of the well-established truths in marketing is "know your product." Agriculture knows its product. It knows how to produce efficiently. It has taken many steps to widen the meaning of efficiency. More and more its efforts are being directed toward maintaining and improving its production resources. At the same time, however, an increasing emphasis is being put upon the importance of knowing its market and marketing conditions. Actually there are too many characteristics of that market that we have not known enough about in the past. For instance, who is it that buys our various agricultural products? What kinds of incomes do they have? What is their demand for food? Is it true that since our stomachs are limited in size we have an automatic limit to the demand for foodstuffs? What would happen to agricultural income if every family in America making less than $1,200 a year were to make that much money? These are typical of the questions we are asking ourselves in this new era. We are beginning to get some encouraging answers.

THE POTENTIAL LOW-INCOME MARKET

Recently the Bureau of Labor Statistics and the Bureau of Home Economics, with the collaboration of the National Resources Committee, made a detailed study of incomes in the United States during 1935–36. It covered about 29,400,000 families and 10,000,000 single individuals representing over 126,000,000 persons. These folks provide the principal market for agricultural commodities. Their incomes and their purchases are the key to agricultural prosperity, particularly for farmers who sell most of what they raise here at home.

It may come as a surprise to us, and an unpleasant one, to know that this study indicated that there were more than 4,000,000 families, or 14 percent of the total, who had an average income of only $312 for the year. There were more than 8,000,000 other families, 27.5 percent of the total, who had an average income of $758. And there were nearly 7,000,000 families, 23 percent of the total, who had average incomes of $1,224, or about $100 per month. In other words, nearly two-thirds of our families had incomes of less than $1,500, and the average was only $826 a year—$69 a month for a whole family. That's the story of underconsumption in one figure.

Frequently we hear statements about the average income in the United States. For instance, in 1935 the average family income was about $1,622. The important thing for us to remember is that 65 percent of the people were getting, on an average, only about one-half of this amount. You can get mighty hungry trying to eat on averages if you're out of a job.

About 85 percent of the farmers' income is derived from the production of commodities used for food. In 1935 over 29,400,000 families spent $13,700,000,000 for food. Here are some startling facts. Only $848,000,000 of that food bill, or 6 percent, came from 4,200,000 of our lowest-income families, who were about 14 percent of all families. Only 20 percent came from another 8,000,000 of our families, who were 27.5 percent of the total. In other words, nearly 42 percent of our families provided only 26 percent of our food market.

According to a recent study, the 14 percent of our families with the lowest incomes, that is, families receiving $312 on the average, are spending only slightly more than $1 per person per week for food (actually, in order to keep going, they spent about 50 percent more for all purposes than they earned; some merchant got stuck for part of the difference). With an increased income to an average of $758, the weekly per capita expenditure for food rose to about $1.62. With an average income of $1,224, people spent about $2.18 per person per week for food. I would guess the average weekly expenditure for those of us in this room at around $5. As income increased above the $100-a-month level, food expenditures also increased but at a somewhat slower rate. In other words, this tells us that people with incomes of under $500 a year have about 5 cents per person per meal to spend for food. Families getting an income of $100 a month have around 10 cents per person per meal for food. The market for our farmers is doubled, so far as this group is concerned.

NEW FIGURES ON UNDERCONSUMPTION

What would happen if every family head who was receiving less than $100 per month got that much money? Of course, we could speculate on what would happen if every family made $2,500 or $5,000 a year, in which case we'd get some Utopian answers for the American farmer. We'd better stick to what we can and should achieve in the decade of the forties, however. The data that we have show that if all families getting less than $100 per month had been able overnight to increase their incomes to that level, in terms of the 1935 situation, this would have meant an increase in expenditures for food of approximately one and nine-tenths billion dollars. The expenditures of these people would have been increased by 51 percent. The national food bill, not counting purchases by single individuals, would have been increased 14 percent, and the health of the low-income people would have been

very much improved. Farmers would have received directly nearly $1,000,000,000 more in income. The extra demand certainly would have improved farm prices and farm income by a large additional amount. Such an increase would have been an enormous contribution to the general welfare, and would have reduced unemployment in our cities.

What is this potential low-income market like? Evidently these underprivileged people can and will spend more money for food if they have an opportunity. Does this mean that they pay higher prices for better food, or do they actually seek more food? The answer is that they do both. We know that low-income people are eating about half as much as they want. They will buy more food and greater varieties of it if they have the opportunity. There are calory as well as vitamin deficiencies in the diets of our less-fortunate families.

Some preliminary studies made of consumer purchase habits indicate that there are considerable differences in the ways in which people will increase their purchases of individual commodities as incomes increase. We have brought together some of this preliminary information, and it tells an extremely interesting story.

We have our greatest underconsumption of farm products among families whose income averages less than $100 a month, and it holds true for more than half of our population. In the broadening of that market lies the greatest single hope for our farmers who produce the foods that are largely consumed in this country and do not go into export in any volume.

The information we have shows how purchases of fruits, meats, dairy products, vegetables, eggs, and wheat products change with changes in income. The per capita consumption by urban nonrelief families at the $100 a month level is equal to 100. That's lower than we like to think of as an American standard of living for a whole family, but we're thinking realistically in terms of what we've got a chance to reach in the next few years rather than in terms of what we'd like to see. We find that those millions of families receiving less than $500 per year on the average purchased only 38 percent as much fruit as was purchased by the group receiving about $100 per month. In other words, the per capita consumption of fruits of 14 percent of our families was only slightly more than one-third of the per capita consumption of urban families receiving about $100 per month.

The meat purchases of the lowest-income group were only 56 percent of the per capita consumption at the $100 level. For dairy products, purchases were only 43 percent; for eggs, they were 57 percent; for vegetables, 58 percent. Only for wheat products does the consumption of the lowest-income groups come relatively close to the consumption of other levels. For these commodities the quantities purchased were equal to about 94 percent of the $1,200 consumption level. People have nearly enough bread in this country, even though the poorer families do their own baking.

A less drastic but similar story of underconsumption is told with regard to families who have to get along on an average income of $758 a year. Almost without exception, the percentage increase in purchases is larger as incomes increase to $1,200 per year than it is when they increase above that level. The farmer's real stake is in the bottom two-thirds of our city families, who are fighting for an income of $100 a month on which to exist. That's his greatest potential market—and it's right here at home. The overstuffed third at the top, to which most of us in this room belong, has enough to eat anyway.

What we now know is that many of our people have been underfed or badly nourished. May I repeat, if every family making less than $1,200 a year had earned at least $100 a month, under 1935 conditions, this would have increased food expenditures by the groups below $100 a month by about 51 percent. The total demand for food by families would have been increased by 14 percent. Agricultural income probably could have been increased directly by nearly $1,000,000,000. No economist would want to guess how much more could have been added to that income by this increased demand. Prices certainly would have improved on the entire production of most of our crops going largely into domestic consumption.

The most important thing about these specific figures on underconsumption is the fact that they get us down to earth in our thinking. It's all right for well-meaning people to rant up in the stratosphere about want in the midst of plenty, but we need to know, in terms of simple arithmetic, crop by crop, just how far we can go in solving our surplus problems by giving the underfed a chance to eat the surplus. The figures we have been considering were based upon a study of consumer purchases by nonfarm, nonrelief families. Since May of 1939 we have gathered some very interesting figures dealing with food-consumption habits among persons getting public assistance, particularly so far as their purchases of surplus farm products are concerned. This has been done in connection with our food-stamp plan, and the figures are based upon day-to-day purchases by families using the stamps. After 9 months of actual experience with this program we are convinced that such an approach holds great promise for farmers producing certain crops, although it holds very little for a few other crops—chiefly those on an export basis. We are anxious to get at the facts as they are, however, and to shape our programs accordingly.

THE FOOD-STAMP PLAN

Some of you may not know how the stamp plan started. Secretary Wallace became convinced that this paradox of want in the midst of plenty could be licked only by the united effort and ingenuity of our whole people. So he asked some of us to get together with farm leaders, with public-welfare officials, and with key people in the food trades to see if we could not develop a businesslike way of solving this problem in a wholly nonpartisan fashion. The stamp plan was the composite result. Some day that same approach, in principle, will be taken to our unemployment problem. I must get back to the job of distributing surplus foods through normal trade channels, however.

Most of you, I take it, are familiar with the objectives as well as the details of the food-stamp plan. Briefly, this is the way it works:

1. Studies indicate that persons getting public assistance spend an average of about $1 a week per person for food.

2. On a voluntary basis, such persons may buy a minimum of $1 worth of orange stamps a week for each member of the family. These are good for any food at any grocery store.

3. Persons buying orange stamps receive half again as many blue stamps free. They receive these in place of the commodities they formerly got at food depots. These blue stamps also are good at any grocery store but only for foods found to be "in surplus" by the Secretary of Agriculture—chiefly dairy and poultry products, meats, fruits, and vegetables.

4. Grocers paste the stamps, each worth 25 cents, on $5 cards and redeem them through their banks, their wholesalers, or through us. The Government pays for both colored stamps; the blue stamps are redeemed from the same funds that are now used to purchase surplus commodities directly.

5. Under the stamp plan, therefore, persons receiving public aid can get surplus foods at the corner grocery store. They have 7½ cents to spend for each meal rather than the 5 cents a meal they formerly spent. That improves farm income as well as the public health. The idea is to eat the surplus—that is, the part that can be consumed in this country.

Since the program was put in effect on May 16, 1939, the surplus commodities have been changed from time to time, in accordance with changes in economic conditions and seasonal factors. The first commodities on the list were butter, eggs, wheat and graham flour, corn meal, dried prunes, oranges, grapefruit, and dry beans. On July 16 oranges and grapefruit were dropped and a number of new commodities were added. These included rice, fresh peaches, fresh pears, cabbage, peas, tomatoes, and onions. On October 1 peaches, cabbage, peas, tomatoes, and rice were dropped from the list, and raisins, apples, snap beans (for October), and pork lard were added. On December 15 pork meats, rice, hominy grits, oranges, and grapefruit were added.

The inauguration of the food-stamp plan has been announced in about 50 cities and county areas. It is now contemplated that by July 1, 1940, it will be in effect in about 100 cities throughout the United States. Nearly 600 cities have applied for the program. During December approximately 400,000 persons were participating in the program on a voluntary basis. When the programs now announced are in operation, nearly 2,000,000 persons will be participating. By July 1 it is expected that between three and four million persons will be taking part in this dual effort to find a wider market for surplus agricultural commodities and to improve the diets of low-income persons in our cities at the same time.

There has been some confusion about how the retailer gets his supplies under the stamp plan. Sometimes it has been assumed that under this program the Federal Surplus Commodities Corporation purchases surplus commodities and sells them to retailers who then supply them to the needy people in exchange for stamps. This is not the case. All the commodities on the list are handled through regular commercial channels. The retailer makes his purchases in the usual way and so does the wholesaler. After the persons receiving public assistance receive their stamps, they may go to any retail store they wish in order to select the commodities they want in exchange for their stamps. The program does not involve any price fixing or price regulation, nor are special stores designated to receive the stamps. We have relied upon competition to keep the retailers' margins at a minimum. Any retail food establishment may, in accordance with the regulations established by the Secretary of Agriculture, accept the food stamps in exchange for the designated commodities.

There is another misconception that the stamp plan is a substitute for local relief. I want to make it plain that none of our activities is intended to supersede present relief assistance. On the contrary, the distribution of surplus foods by the Federal Government is designed to supplement local relief and other forms of public assistance. Every effort is made to prevent any substitution of our funds for other relief funds. Local units of government requesting the stamp plan are required to sign a contract by which they agree not to reduce relief grants on account of the stamp program. This is an important requirement. If substitution of funds were permitted, the purchasing power made available through the stamp plan would not be additional purchasing power. That net increase in purchasing power is needed if farmers are to enjoy a broader market and if underprivileged families are to get better balanced diets.

RESULTS OF STAMP-PLAN OPERATION

Fundamentally we are concerned with the contribution that this program can make to higher farm income and improved nutrition among our low-income families. We are, therefore, conducting continuous studies of the economic and marketing aspects of the food-stamp plan in addition to some work on its nutritional aspects. These are extremely important. In a number of key cities through-

out the country our economic analysis section is following in considerable detail changes in food sales, prices, total sales of surplus commodities, and the sales through the use of blue stamps. Additional supplementary information is obtained on the nature and extent of the voluntary participation in the program, as well as general economic and marketing background data. All of these are designed to give us a clear understanding of what is happening and to guide our future activities in this newest approach to widening the home market for surplus agricultural commodities.

We are watching the selection that low-income families are making of commodities placed on the surplus list. This gives all of us a much better understanding of what low-income people will buy if they are given an opportunity. At the same time it provides a basis for calculating the extent of the contribution that this program may make to the economic welfare of growers of particular commodities. A very important consideration is the measurement of the net increase in the domestic demand that may result from these efforts.

Finally, we are trying to obtain a sufficiently wide body of experience so that the people, the Congress, and the Department can determine the relation of this work to our other farm programs. Obviously, the Nation wants to work toward an integrated approach to the whole farm problem.

Although the stamp plan has not been in operation long enough to measure the ultimate economic effects accurately or to come to final conclusions, we have been maintaining current information to guide us in our operations. This has been made possible through the cooperation of wholesale and retail merchants in a number of cities, including Des Moines. These businessmen have devoted considerable time to giving us accurate reports. The stores have been selected on a basis which would assure a representative sample of low, upper, and intermediate income areas in each city. The cooperation that these merchants have shown is extremely helpful. I should like to take this occasion to thank them. It is very important to all of us that they continue to give us the basic information that we need. They are making a real contribution to the general welfare, which is deeply appreciated.

What are our low-income consumers buying with their surplus stamps? Preliminary figures now available are of great interest to every farmer in America. First of all, we can see how persons getting public aid are using their blue stamps on a wholly voluntary basis. We can tell which agricultural products are most popular and what percentage of the blue surplus stamps is going for each one on the list. We have records which bring this out in great detail for three periods when different surplus commodities were available.

With changes in the surplus list on December 16, 1939, there were indications of some marked changes in blue-stamp purchases. The period is too short, however, for any final conclusion and should be interpreted in terms of possible tendencies rather than of stable averages. Pork meats were placed on the list for the first time. They were very popular. From 20 to 25 percent of the increased purchasing power was used to buy these products. Another 6 percent was used for pork lard. The demand for butter and eggs decreased somewhat, though each accounted for 17 percent of the surplus buying.

Were the stamp plan operating nationally, this would be a very healthy situation from an agricultural viewpoint. Prior to the addition of pork meats to the surplus list on December 15, butter and eggs were taking about 25 percent each of the blue-stamp purchasing power. This meant that there was a potential new market each year under a national food-stamp plan for over 300,000,000 pounds of butter, and over 300,000,000 dozen eggs. That was about 12 percent to 13 percent more of each of these products than the country consumed annually during the previous 10-year period. Had it been possible to establish the stamp plan throughout the country overnight, prices of butter and eggs would have shot through the ceiling under such an increased demand. A more healthy price situation would obtain, of course, if the new demand for butter and eggs represented only 4 percent or 5 percent of former domestic consumption. The balance of the blue-stamp purchasing power would then be available to help lift other farm prices. We are very glad, therefore, to see this shift to the purchase of surplus pork products. If the stamp program were operating on a national basis today, farmers in the Corn Belt would be getting a much better price for their hogs than they are today. Fortunately, we'll have a chance to learn a lot more about supply and demand conditions for these surplus products before it will be possible to expand this program to cover the country.

One last word about the stamp plan. We look upon it as a necessary stopgap measure during this difficult period, when we are trying to find ways to put idle capital to work so that idle men can get jobs. From my own point of view, there are only three figures which I hope will stick in your minds as a result of this talk. The man getting public assistance has to live on about 5 cents a meal. If he's lucky enough to live in a town where the stamp plan is operating, he lives on 7½ cents a meal. When it's possible for him to get off relief and get a job at good wages he spends about 12 cents a meal. Every time an unemployed man gets a job, therefore, every farmer in America ought to yell "Hallelujah!" That's the real answer to many of his surplus problems.

I have devoted a good deal of time to the food-stamp plan as a method of disposing of some of our agricultural surpluses, both because of the popular interest in this new program and because Des Moines was selected as one of the early test areas. Recently the Secretary of Agriculture announced a cotton-stamp program. It is similar in principle to the food-stamp plan. We are going to try it out on an experimental basis in a few selected cities to test its possible value in actual practice. Until we have had an experience record we would rather not make any predictions about it. Within less than a week from the time it was announced, however, some 20 cities applied for its adoption in their communities. We received over 50 letters from one city alone. A table showing the underconsumption of cotton goods by low-income groups appears in the appendix.

OTHER PROGRAMS FOR DEALING WITH SURPLUSES

There are many other programs in the Department of Agriculture for dealing with surplus problems. This fiscal year, for example, the Federal Surplus Commodities Corporation will spend around $80,000,000 buying agricultural surpluses directly at the points of overproduction. These foods are being shipped in carlots to the public welfare departments of every State in the Union. They in turn distribute them through commodity depots, largely to families certified as eligible to receive them. This distribution to individual families is stopped in areas where the food-stamp plan is in operation. Direct distribution usually is continued, however, even in stamp-plan cities, to certain charitable institutions, and to schools participating in our school-lunch program.

We look upon this latter activity as one of our most important jobs, and we hope it will be possible for us to expand the program considerably. Nearly 2,000,000 undernourished children are now getting their noonday lunches, in whole or in part, from vitamin-rich surplus foods which the Congress has authorized us to buy and distribute for this purpose. Aside from the obvious social benefits of such an activity, it fits in perfectly with certain difficult surplus problems faced by some of our farmers. There are crops that move to market so rapidly that the stamp plan cannot be counted upon to soak up the surplus. Cling peaches, which are canned and used in our school-lunch program, as a good example. Quick and direct purchases often must be made to maintain farm income; surely, no better use can be made of foods bought under these conditions than to make them available to growing youngsters who happen to have been born into our less fortunate families.

We are spending some of the money available to us to develop new industrial uses for our surplus farm products. Here, we take a laboratory approach to our job. If we try 20 experiments, and only 1 succeeds, we still feel that we have done a good job. Our plan is to work very closely with the four regional laboratories which have just been set up to do research in this field. We know how important this work is for the long pull, but we also know how little it can offer the farmer this year or next by way of improved outlets for his price-depressing surpluses. A decade or two from now, however, it can be very important, indeed.

Part of our money has been spent to divert agricultural surpluses to domestic outlets which would have been impossible without a government subsidy. The diversion of surplus edible peanuts to oil is a good case in point. Under this program, the peanut farmers of the country have made several dollars by way of improved income for their entire crop for every Government dollar spent for surplus diversion payments. About a fifth of our money this fiscal year has been used to subsidize the exports of cotton and cotton goods. These exports will run about double what they did last cotton year, however, largely as a result of this activity. A similar but much less costly effort to help the American farmer hold his fair share of the world market has been made through our export subsidy payments in connection with wheat and flour. Under our marketing agreement programs, farmers are able to control the grade and size of fruits and vegetables moving to market. Where they care to do so, they can regularize the volume of such shipments, in addition, through the use of weekly prorate orders. All of these regulations must be approved by the Secretary of Agriculture.

Under our marketing agreement and order programs for milk, prices received by farmers from handlers and processors are set after public hearings. All orders now being issued include a special price for fluid milk to be delivered to families getting public aid. This is somewhat lower than the customary class I price but higher than the price the farmer receives for milk which goes into manufactured products. Through cooperation with local welfare agencies, and by virtue of a small subsidy from our funds, this makes it possible, in the city of Boston, for example, for families receiving general relief to get milk at 5 cents a quart and for W. P. A. families to get it at 7 cents a quart. Milk handlers and processors file competitive bids for this business. We feel that a program along these general lines has proved itself in practice and that it should be gradually expanded. There is a shocking underconsumption of fluid milk by our low-income families.

So much for surplus-removal programs in our own shop. Elsewhere in the Department we are dealing with these problems through our agricultural and soil-conservation programs, through our crop-insurance work, and through the lending activities of the Commodity Credit Corporation. Our ever-normal granary program is the answer of human ingenuity to the unpredictable changes of the weather. In years of abundance, farmers can get loans on their crops which can be carried into years of possible scarcity. They not only stand to benefit if prices rise but the presence of such a supply protects our city working people from any runaway prices in years of flood or drought. Of all the contributions which Secretary Wallace has made to American agriculture, historians are likely to put his ever normal granary program at the top of the list.

LOOK AT HOME NEEDS THROUGH MICROSCOPE

We probably shall hear more and more, during the next few years, about solving our surplus agricultural problems by feeding and clothing the destitute peoples of other continents, particularly those ravaged by war. Early this month, for example, when speaking before the Overseas Press Club of America, former President Hoover is reported to have said: "I do not believe that as a Christian nation or as a nation loving liberty we have any moral right to stand by with these large surpluses of food and see people starve to death wholesale, who are helpless to help themselves." I hesitate to mention that charity should begin at home, because I agree with Mr. Hoover that it should not end there. The present situation in Finland, for example, has pulled at our national heartstrings. I should like to suggest, however, that before we look at this problem of human hunger through a telescope that we look at it through a microscope right here in our own country, and remember the millions of youngsters we are pumping into our own society every year on 5 cents a meal. Innocent victims af malnutrition make mighty poor citizens.

This is where industrial democracy is going to make its last stand. We dare not lose our fight—not with our heritage! We won't if we tackle the problems of unemployment and underconsumption vigorously—as vigorously as the pioneers set out to conquer the West—as vigorously as our fathers set out to build a machine age to free men from inhuman drudgery. We stand between them and our children. We've got to build bridges between the old days and the new. We've got to make it possible for these youngsters to work for tickets of access to what we've got all around us. They won't wait forever.

MUST SOLVE UNEMPLOYMENT AND UNDERCONSUMPTION PROBLEMS

There isn't any single answer to this goal of full employment. No single genius is going to arise and light one torch in the darkness. We've got to move forward on many fronts, and the job has got to be done by thousands of ordinary people, like ourselves, who believe in tomorrow and are willing to fight for their convictions today. In the last analysis, of course, the national problem is an individual problem. Therein lies the real value of a meeting like this, and I should like to pay tribute to the men who made it possible.

We come here as individuals, each with his own particular job to do. We go back home, each to his same particular job. What really matters is whether or not we go back as individuals with a new vision. If we don't, we're sunk. If we do, anything is possible. If we go back thoroughly convinced that we can lick this modern headache of underconsumption, then each of us will start a bonfire in his own world and in his own unique way. That sort of enthusiasm is contagious. Others will light their fagots at our little fires and start their own bonfires. The flames will spread until they become like a crown fire in the forests which will burn away this ugly paradox of want in the midst of abundance.

We'll find ways to make it possible for those who want work to get it—thousands of them—and they'll be worked out by thousands of people. It won't come overnight any more than our machine age came overnight, any more than we settled in the West overnight. But it will come, it must come, if we keep our eyes on such a goal and keep marching until we reach it. That's the challenge of our generation. We couldn't have been born during more exciting times. Our destiny is to make the most of them.

Let's not get the notion that because there are 130,000,000 people in the country that 1 person can't do very much. We count enormously as individuals, and thank Heaven our responsibilities end with our own circles of influence. Not one of us has a bigger job before him than he is able to do. Within those circles of influence, however, we've got to make good. We've got to be worthy of the richest country, in terms of tangible resources, that was ever given to any people. We've got to move forward from this halting place of uncertainty to a new day. As I've said elsewhere, we've got to face the fact that a money-rich, consumption-poor economy cannot survive.

It doesn't matter whether we lead a squad or a regiment. It only matters that we know that we don't have to put up with this nightmare of underconsumption in a land of plenty forever, and that we know it with such certainty that it will make us conquerors to the core. No obstacle on earth can stand against such singleness of purpose. The day we wake up to the fact that the problems of unemployment and underconsumption are not going to solve themselves we'll have gone better than half the way toward solving them. Out of such leadership, springing up in thousands of places, will be built the America of tomorrow. Personally, I have faith that we'll measure up to the tradition of businesslike action which has made for progress throughout our history.

The 65 percent of our families living on an average of $69 a month need twice that much income for a minimum standard of living. The unsatisfied wants of two-thirds of our people make up the greatest new market that has ever loomed before our businessmen and our farmers. It's right in our own back yard. We've got to use some imagination and find ways to build a more industrious and therefore a more prosperous America.

Unemployment

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16 (legislative day of Monday, April 8), 1940

ARTICLE BY CHARLES G. ROSS

Mr. SCHWARTZ. Mr. President, in the Washington Evening Star of April 15, 1940, there appears a very interesting article by Charles G. Ross, one of our prominent columnists, entitled "Big Riddle Studied by O'MAHONEY; Method of Seeking Answer to Job Question Praised." I ask unanimous consent to have the article printed in the Appendix of the RECORD. It deals with the question of unemployment, which is being considered by the Temporary National Economic Committee, presided over by the senior Senator from Wyoming [Mr. O'MAHONEY].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Evening Star of April 15, 1940]

BIG RIDDLE STUDIED BY O'MAHONEY—METHOD OF SEEKING ANSWER TO JOB QUESTION PRAISED

(By Charles G. Ross)

The temporary National Economic Committee (the O'Mahoney committee) has begun a hearing on "the all-important riddle of our time, namely, why it is that in a world of inexhaustible natural resources, inhabited by men who know more about the physical and chemical secrets of nature than all the generations who preceded them, we still have not learned how to apply the wonders of technology in such a fashion as to provide decent jobs for the millions of idle who are able and willing to work." The words are those of the chairman in outlining the study.

Why is it that with production hitting the 1929 prosperity level, as it did toward the end of last year, we still had 10,000,000 unemployed?

Why is it that we have 8,000,000 families with incomes of less than $750 a year and an additional 11,000,000 with incomes between $750 and $1,500?

Why is it—to lump a hundred questions into one—that the genius which has enabled us to solve the problem of production has failed tragically before the problem of distribution?

PROSPECTUS ADMIRABLE

To put the question is to show the profound importance of the committee's inquiry into the social and economic effects of technology. Chairman O'Mahoney's prospectus is altogether admirable: "The leaders who have been invited to testify are under no restriction of any kind. We are not trying to prove a case for any remedy or for any approach. We are not seeking to solicit evidence to justify more government or to justify increased expenditures."

Admirable, too, was the manner in which the hearing was opened by the committee's economic adviser, Dr. Theodore J. Kreps, an economics professor at Stanford. It is possible here only to glance at his paper, for anyone who will take the trouble to go through it and study its charts and graphs there's a liberal education in the subject.

One of the statistical facts at the root of the problem of technological unemployment: From 1924 to 1938, thanks to the machine—by which is meant all forms of improved methods of production—the productivity of labor increased 40 percent. Since 1929 the output per man-hour has increased 25 to 30 percent.

Another point brought out by Dr. Kreps: The percentage of available workers from 45 to 64 is increasing rapidly and "finding jobs for men over 40 will in the near future require every scrap of ingenuity that leaders in business and Government can summon."

THE BRIGHTER SIDE

On the brighter side, suggesting the infinite possibilities that lie in industrial pioneering: Substantial portions of the output of some of the largest chemical companies consist of products that a few years ago were unknown. For example, the Monsanto Chemical Co., of St. Louis, reported recently that products put into commercial manufacture since 1929 accounted for 39 percent of its sales in 1938. Forty percent of the business of the Du Pont Co. in 1937 was done in products relatively unknown in 1929.

The present needs of industry: Not more capacity but more market. Industry is equipped to produce a national income of ninety to one hundred billion dollars.

At this point Chairman O'MAHONEY summed up: "That is another way of saying that the problem now is one of distribution rather than of production."

Dr. KREPS: "Yes, I think that would follow."

The question was posed: Who has received the benefits of technology in the last 20 years? The answer, roughly, was that benefits had been distributed to the consumer, in the form of lower prices, but not to the extent that they should have been—not to the extent that they must be if the beneficent possibilities of the machine are to be realized. As the case was stated by Dr. Kreps: "The best argument for, if not the proof and substance of, technical progress, consists in the lower prices that are quoted to consumers. These savings from increasing productivity, if passed on to consumers, increase the purchasing power of millions of people and thereby give increased opportunities for employment to millions of businesses throughout the country."

PROBLEM STATED GRAPHICALLY

This is what might happen: It has happened up to now in a degree far from sufficient to make the machine the unmixed blessing that it ought to be. Instead, along with its benefits, the machine has helped to produce "complete absence of employment in a quantity we don't know."

Dr. Kreps stated graphically the problem with which the committee is wrestling: "There are some truly gigantic bridges to be built, economic bridges connecting the needs of these families (the 19,000,000 at the bottom of the economic scale) with the goods which our superb machines can produce.

"There are, in short, two frontiers, the industrial frontier and the frontier of economic adjustment. * * * If we vigorously push advances in technology and refuse to make the requisite economic adjustment we will set up grave tensions in our society. To call a moratorium on the progress of the machine is both unwise and impossible. But the shortsightedness of those who argue that the industrial frontier is gone is only exceeded by the stupid defeatism of those who wish to call a halt to economic adjustment."

What form should this adjustment take? Chairman O'MAHONEY and the economist, between them, arrived at this answer: There should be no limitation of production, but a building up of the consuming capacity of those 19,000,000 families.

It gets the T. N. E. C.'s hearing off to a good start to have the problem so clearly recognized and stated.

Civil Aeronautics Authority

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16 (legislative day of Monday, April 8), 1940

LETTER FROM DAVID L. BEHNCKE, AND NEWSPAPER ARTICLES

Mr. McCARRAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter over the signature of David L. Behncke, president of the Air Line Pilots' Association, bearing on the subject of the recent Executive order doing away with the Civil Aeronautics Authority.

I also ask unanimous consent to insert in the RECORD two very able articles from the American Aviation Daily on the same subject.

I also ask unanimous consent to have inserted in the RECORD an article by David Lawrence, published in the Washington Evening Star of April 15, 1940, perhaps one of the most comprehensive articles published on the subject of the Executive order doing away with the Civil Aeronautics Authority.

I also ask unanimous consent to have inserted in the RECORD an article by Messrs. Drew and Pearson under the caption Washington Daily Merry-Go-Round, published in the Washington Times-Herald of April 16, 1940, which deals with the same subject.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

AIR LINE PILOTS ASSOCIATION,
Chicago, April 5, 1940.

Hon. PAT MCCARRAN,
United States Senate, Washington, D. C.

DEAR SENATOR: I thought it would be timely and fitting to call your attention to the fact that air transportation recently completed 12 months of service without a passenger fatality.

Briefly, the record made during this period is as follows: Between March 26, 1939, and March 26, 1940, the air carriers flew 814,906,250 passenger-miles, 87,325,145 plane-miles, and carried 2,028,817 passengers without a fatality.

There is an old axiom, "actions speak louder than words," which may be appropriately carried a step further in this situation by adding the phrase, "good performance is the sum total of proper legislative planning and foresight."

Now that the well-known band wagon is creaking and groaning under the weight of the would-be credit seekers, I hear no mention of the legislators who made such a fine safety record possible, and, in fact, very little is said about the pilots who called a spade a spade only a short time ago as to what was necessary to stop the many terrible crashes that were being experienced and thereby put the industry on its feet.

Be all that as it may, the pilots wish you to know that they have not forgotten the very important part you played in the transitionary and revolutionizing period in air transportation that has resulted so commendably.

It is a commonly recognized fact that commercial flying, and especially air transportation, is the backbone of the Nation's aviation. To have something, so important to the security and well-being of the American people, flounder and stumble so far short of its rightful goal because of the needless accidents which have happened in the past, represented a truly chaotic condition. The part you played in eliminating this chaotic condition is something that you can mark down in your book of accomplishments that will reflect to your everlasting credit.

My only prayer now is that we'll be able to keep it up. I believe we will if the Civil Aeronautics Act of 1938 is properly administered, and if the Air Safety Board is kept strong and free from influences that will deter it from that which it was established to do, namely, to call a spade a spade where safety is involved.

The Air Safety Board is truly the sentinel of safety in air travel, and so long as it is kept at its post armed with the necessary wherewith to properly do its duties both in finance and proper backing in Congress and the regulation-making and enforcing part of the Civil Aeronautics Authority, we have an excellent chance of continuing the splendid safety record that has been created during the past 12 months.

If, on the other hand, the Air Safety Board is hampered and curbed in what it was established by Congress to do, there is an excellent chance that we will slowly drift back into a situation similar to that prior to the time that the Civil Aeronautics Act of 1938 was passed.

While we are on the subject of how the Civil Aeronautics Act is working out, it might also be well to mention that labor relations under the labor provisions of this act are working out excellently.

Your continued cooperation in the interest of maintaining and perpetuating the splendid safety record that has placed American air transportation in No. 1 position in world aviation will be genuinely appreciated by the air-line pilots.

Sincerely yours,

DAVID L. BEHNCKE, *President.*

[From American Aviation Daily of April 11, 1940]

REORGANIZATION PLAN PLACES AVIATION UNDER COMMERCE

The President's Reorganization Plan No. IV, sent to Congress today, places the Civil Aeronautics Authority (renamed Civil Aeronautics Board) in the Department of Commerce; abolishes the Air Safety Board; and transfers the Weather Bureau from the Department of Agriculture to the Commerce Department.

TEXT AFFECTING C. A. A. AND WEATHER BUREAU

The text of the President's message concerning the C. A. A. and Weather Bureau follows:

"Department of Commerce

"SEC. 7. Transfer of Civil Aeronautics Authority:

"(a) The Civil Aeronautics Authority and its functions, the office of the Administrator of Civil Aeronautics and its functions, and the functions of the Air Safety Board are transferred to the Department of Commerce.

"(b) The functions of the Air Safety Board are consolidated with the functions of the Civil Aeronautics Authority, which shall hereafter be known as the Civil Aeronautics Board, and which shall, in addition to its other functions, discharge the duties heretofore vested in the Air Safety Board so as to provide for the independent investigation of aircraft accidents. The offices of the members of the Air Safety Board are abolished.

"(c) The Administrator of Civil Aeronautics, whose functions shall be administered under the direction and supervision of the Secretary of Commerce, and the Civil Aeronautics Board, which shall report to Congress and the President, through the Secretary of Commerce, shall constitute the Civil Aeronautics Authority within the Department of Commerce: *Provided*, That the Civil Aeronautics Board shall exercise its functions of rule making (including the prescription of rules, regulations, and standards), adjudication, and investigation independently of the Secretary of Commerce: *Provided further*, That the budgeting, accounting, personnel, procurement, and related routine management functions of the Civil Aeronautics Board shall be performed under the direction and supervision of the Secretary of Commerce through such facilities as he shall designate or establish.

"SEC. 8. Transfer of Weather Bureau: The Weather Bureau in the Department of Agriculture and its functions are transferred to the Department of Commerce and shall be administered under the direction and supervision of the Secretary of Commerce: *Provided*, That the Department of Agriculture may continue to make snow surveys and to conduct research concerning (a) relationships between weather and crops, (b) long-range weather forecasting, and (c) relationships between weather and soil erosion."

TEXT OF PRESIDENT'S EXPLANATION FOR THE CHANGES

The President, elsewhere in his message to Congress, explains the various shifts in more detail, as follows:

"Department of Commerce

"One of the purposes of the Reorganization Act is to reduce the number of administrative agencies and thereby simplifying the tasks of executive management. We have made substantial progress toward this objective under previous reorganization plans. I am now proposing another step in this direction by placing the Civil Aeronautics Authority within the framework of the Department of Commerce.

"Reorganization Plan III, which deals with intra-departmental changes, draws a more practical separation between the functions of the Administrator and the Civil Aeronautics Board. In plan IV, which is connected with interdepartmental reorganization, I am bringing the Authority into the departmental structure.

"The Administrator will report to the Secretary of Commerce. The five-member Board, however, will perform its rule-making, adjudicative, and investigative functions independent of the Department. In the interest of efficiency it will be supplied by the Department with budgeting, accounting, procurement, and other office services.

"As a result of the adjustments provided in plans III and IV I believe the Civil Aeronautics Board will be able effectively to carry forward the important work of accident investigation heretofore performed by the Air Safety Board. In addition to the effective and coordinated discharge of accident investigation work which this transfer will facilitate, economies in administration will be possible.

"The importance of the Weather Bureau's functions to the Nation's commerce has also led to the decision to transfer this Bureau to the Department of Commerce. The development of the aviation industry has imposed upon the Weather Bureau a major responsibility in the field of air transportation. The transfer to the Department of Commerce, as provided in this plan, will permit better coordination of Government activities relating to aviation and to commerce generally without in any way lessening the Bureau's contribution to agriculture."

COMMENT ON THE PLAN

The President's Reorganization Order No. IV was called the biggest political double-cross of the century by a prominent aviation official today. This summarizes initial reaction in both Government and industry circles to the worst blow civil aviation may have had for many years.

Members of the Authority, the Administrator, and the Air Safety Board were stunned by the news. It is probable that if the order becomes effective there will be important resignations and the present high morale of the entire Government organization in civil aviation may be seriously broken. The proposed transfer puts the C. A. A. back into the highly political Commerce Department with potential disastrous effects for both air lines and manufacturers of civil airplanes.

The order was promulgated by the Brownlow reorganization group. No hint of the order had leaked out and no person connected with the C. A. A. had the slightest inkling it was coming. Believed to be prominent in the behind-the-scenes activities were Edward J. Noble, former chairman of the C. A. A., whose maladministration bogged down the C. A. A. in its early days and who now is Under Secretary of Commerce; C. Stuart Guthrie, former general counsel of the C. A. A. who is now with the Department of Commerce, and who is a protégé of Tommy Corcoran; and Col. J. Monroe Johnson, Assistant Secretary of Commerce, who formerly had charge of the highly political Bureau of Air Commerce.

(NOTE.—According to the Reorganization Act (Public 19, 76th Cong.) the reorganization plan becomes effective upon the expiration of 60 days after the plan is transmitted to Congress, but only if during the 60-day period "there has not been passed by the two Houses a concurrent resolution stating in substance that the Congress does not favor the reorganization plan." Consequently, the approval of either House has the effect of putting reorganization into operation. It is impossible to effect a rejection of a reorganization plan by filibustering as this would prevent a vote within the legally specified 60-day period. On the other hand, Senators favoring the reorganization plan might filibuster to avoid a rejection vote within the 60-day period. The House, of course, is barred from filibustering through limited-debate procedure.)

The Daily passes on a suggestion made by a highly competent authority on governmental procedure as one means of making an effective protest in Congress. There are special reorganization committees in both the House and Senate headed respectively by Representative JOHN J. COCHRAN, of Missouri, and Senator JAMES F. BYRNES, of South Carolina. In past reorganization orders sent to Congress by the President these committees have not held hearings. The committees do have the power to hold hearings, however, and to subpena witnesses. If the industry could secure hearings by these committees, the entire reorganization plan could be placed in the open with witnesses forced to appear. The individual who made this suggestion to the Daily believes this to be one of the most effective means of killing the Executive order, although a negative vote in both Houses must be obtained within 60 days regardless.

The industry is faced with one of its most difficult legislative tasks if it desires to defeat the order. This is election year, and the President still holds a powerful hand over Congress by reason of his not declaring himself out of this year's elections. Although it is known that he will not run unless the European situation becomes much worse, his failure to declare will keep many Democrats in line. Republicans will probably oppose the reorganization plan to a man, but these votes are not sufficient. Senator PAT MCCARRAN (Democrat, Nevada) will doubtless be the opposition leader in the Senate.

Clinton M. Hester, C. A. A. Administrator, evidently was not involved in either the order of last week or today. Several years ago Mr. Hester was draftsman of legislation sponsored by the Brownlow committee, but the present order is believed to eliminate definitely Hester from any current connection, and is directly contrary to his own beliefs.

Manufacturers of civil aircraft are just as much affected by the order as air lines in that the multitudinous technical problems relating to aircraft airworthiness (which cost the manufacturers much grief under the old Bureau of Air Commerce) would again be placed in a red-tape Government department subject to political domination. The C. A. A. has been 99 percent immune from politics.

The shift reduces civil aviation to the status of a bureau in a Cabinet Department in direct contrast to the importance aviation is receiving in other nations, although the possible military reasons the President may have are not yet known.

NOTE.—Although the Authority has made a splendid record and accomplished much, the fact remains that the slowness and delay in handling regulatory and quasi-judicial air-carrier cases may be a contributing reason to the present order. Brownlow, who opposed the existing C. A. A. set-up, was given good evidence that he was right in his views by the dilatory tactics of C. A. A. on airline matters. Part of this delay originated with Ed J. Noble and Stuart Guthrie, while since Noble's transfer to the Commerce Department the Authority has dallied too long with purely administrative matters and such activities as the civilian pilot training program, and so forth. The initial reaction in Washington is that if the Authority had cut red tape on economic regulatory matters there would be no reorganization order for it today, although the President may have reasons not yet revealed. Nevertheless, it is believed the industry would a thousand times prefer the present C. A. A. than a political Commerce Department.

What steps will be taken by the industry to offset the order are not known yet, but the job is no small one and will require mustering the support of not only every segment of the industry but as much affiliated and allied help as possible if the industry desires to make an effective protest. It is possible that the reorganization order will have wide ramifications in the 1940 political campaign, although this is a first day's reaction.

The Daily will appreciate being advised of plans, comments, reactions, and opinions from the industry as a guide to its news-covering in regard to the order.

[From the American Aviation Daily of April 12, 1940]

REORGANIZATION DEVELOPMENTS

The President's Reorganization Plan No. IV made public yesterday was chief source of conversation in aviation circles today. Developments since late yesterday are:

1. Senator PAT MCCARRAN, aviation champion in the Senate, introduced a concurrent resolution yesterday afternoon (S. Con. Res. 42) rejecting both Reorganization Plans No. III and No. IV, the former making intra-agency changes and the latter being the shift of the C. A. A. into the Commerce Department. He was to make an extemporaneous speech on the floor of the Senate this afternoon as a prelude to his fight to defeat the President's order.

2. David L. Behncke, president of the Air Line Pilots Association, issued a statement in Pittsburgh last night vigorously protesting against the proposed reorganization, especially the abolition of the Air Safety Board. He was due in Washington today. He will lead the fight of airline pilots for retention of the Board.

3. The daily press was quick to catch the controversial angles in the order. The Washington Times-Herald, especially, gave the proposed change much attention and gave MCCARRAN and Behncke headlines for their protests. Press reaction is expected to be unfavorable to the proposed order.

4. Air-transport industry: Airline officials now in Washington are noncommital. It is not likely that the industry will rush into any campaign to defeat the order. Most of them personally oppose the proposed change, but recommend a cautious approach in protesting. Col. Edgar S. Gorrell, president of the Air Transport Association, is recuperating from serious illness and apparently is not able, physically, to be active. Some airline officials are decidedly lukewarm and are not as high in their praise of existing C. A. A. as the C. A. A. had assumed they would be.

5. National Aeronautic Association: Gill Robb Wilson, president, has had discussions with Government and congressional people but is noncommital.

6. Aeronautical Chamber of Commerce: Col. John H. Jouett, president, told the Daily the chamber is definitely neutral and noncommittal until members have had an opportunity to study the proposed change and make recommendations.

Other developments are:

PRESIDENT'S PRESS CONFERENCE

The President at his press conference this morning was questioned specifically on the C. A. A. phase of the order. He said that the present machinery will remain intact and that the order simply carries out a plan under which the President is not required to talk to so many different agencies, and this is a move in that direction. He pointed out the plan saves some top salaries and denied the Air Safety Board would be imperiled by the shift.

CONGRESS

Both the Reorganization Plans III and IV have been referred to the Select Committee on Government Reorganization, headed in the Senate by Senator JAMES F. BYRNES, of South Carolina. MCCARRAN explained that he rushed his resolution to forestall an effort by Senator BYRNES to push approval of the plans, although some observers point out that one such order last year obtained congressional approval because an opponent filed his resolution too soon, permitting the administration forces to rush the measure through for final action before opposition had had time to organize. Senator MCCARRAN says he is well aware of this possibility but expects to forestall such hasty action. He is forced to leave town for a few days, after which time he hopes to fight the proposed reorganization.

Few in Congress would be quoted today. Senator BYRNES endorsed the President's plan, but refused to comment specifically on the C. C. A. phase. Several Senators expressed wholehearted disapproval in off-the-record comments. Representative CLARENCE LEA had not been reached for comment up to press time. Sentiment in the House will probably oppose the order but whether the votes can be obtained in this, an election year, remains a very debatable question. Senator BENNETT CLARK, chairman of the Senate Commerce Committee, who should have much to say, is still out of the city. His committee is considering holding a special meeting to determine policy. It is evident that many Members of Congress are only today becoming aware of the seriousness of the order, not merely for the C. A. A. change, but for other shifts including the provision for continuing the President's power to make executive changes. This latter provision might well be the decisive issue.

C. A. A.

If the plan goes through in 60 days, observers expect several resignations. Robert H. Hinckley, C. A. A. Chairman, is expected to leave. Grant Mason will probably do likewise. Clinton M. Hester, Administrator, could not do much else. Messrs. Branch, Ryan, and Warner would probably remain. The order has done much to upset C. A. A. activities and personnel are thinking of little else. Mr. Hinckley was in New York today for an address but will be back tomorrow.

TRENDS

The initial reaction yesterday was that if the reorganization plan is to be defeated the industry must take the initiative. Evidently certain Government officials expected this to happen. However it is now clear the industry will not rush to make comments or take any action. It will probably be a week or more before the industry attitude is known and considered. There will be some within the industry who oppose taking any steps. On the other hand, there is a growing belief that a strong group in Congress with the aid of newspaper publicity may be able to turn the trick.

NOTE.—It is very significant that a comment was made from inside top Democratic Party circles this morning that the party is afraid of this order as a political issue, especially because newspaper and radio commentators seem to oppose the plan. It is conceded that this latest order could be made into important political capital by Republican and antiadministration Democrats.)

A long fight in Congress, however, does not seem to be in the cards at present. Congressmen want to go home in June.

As background comment it may be recalled that a move to include the C. A. A. in the group of all other administrative quasi-judicial agencies exempt from reorganization was defeated last year by a close Senate vote. Senator BENNETT CHAMP CLARK was partially responsible for this defeat. However, the situation has materially changed since that time and the C. A. A. has obtained much favorable support in Congress in view of the airline safety record.

OTHER COMMENT

In regard to strategy on the Hill, Senator MCCARRAN attempted to have his concurrent resolution referred to the Senate Commerce Committee where it would receive more cordial reception. The presiding officer yesterday, however, denied the Senator's request and it went to Senator BYRNES' reorganization committee.

There is some talk in Washington that Clinton Hester, C. A. A. Administrator, might resign and openly and actively join forces with the opposition to the order on the Hill, partly as a means of offsetting rather deep impressions in some quarters that he had a hand somewhere in the President's plan. Mr. Hester was noncommittal on the order but is nevertheless known to have bitterly opposed it in private, as have members of the Authority.

Who will file the concurrent resolution in the House is not yet known.

Although the C. A. A. is the most important single element in the reorganization plan, aviation interests are by no means all that are affected. Food and drug interests are expected to wield considerable influence on another section of the order.

[From the American Aviation Daily of April 12, 1940]

STATEMENT OF SENATOR MCCARRAN ON C. A. A. REORGANIZATION

Senator PAT MCCARRAN released to the Daily today the following statement on C. A. A. reorganization:

"In March 1934 I introduced my first bill, which provided for an independent agency. The President sent a message to Congress of date June 7, 1935, wherein as against my bill, he recommended that all transportation facilities should be under the Interstate Commerce Commission. After that the President called me for a conference. As a consequence of that conference I redrafted my legislation, putting the Interstate Commerce Commission in charge of the set-up. This bill was defeated by a filibuster.

"Early in 1938 the President again called me to the White House and stated that he thought I was right in my first idea—that it should be an independent agency. Following this conference I wrote the present civil aeronautics bill. Thus the Civil Aeronautics Authority was born.

"At the conference he called in his son, Mr. James Roosevelt, and discussed his ideas at length, repeating his belief in the correctness of my position. But, in the course of the conversation, he stated that, in his judgment, there was involved in the independent agency the legislative, the executive, and the judicial; that in the legislative and judicial phase of the agency the President had no place. But as regards the executive phase, to use the President's homely expression—the 'housekeeping agency'—the President should be advised, and reports should be made to him. He suggested, and I afterwards drafted into my bill, a provision for what is known as the position of Administrator.

"Pursuant to the suggestion of the President, I from time to time in the redrafting of the bill, conferred with his then secretary, Mr. James Roosevelt. All of the time we kept in mind the message of the President and his urgent advice that the Civil Aeronautics Authority be made an independent agency.

"The bill I drafted was presented to the Senate Commerce Committee, of which the late Senator Copeland was chairman. This bill was brought out of the Committee on Commerce and, after a protracted debate on the floor of the Senate, was finally adopted by the Senate. During all of the history of the legislation I refused to recede from the demand for an independent safety board. The same controversy was carried on through the committee of the House and Senate conferees, of which I was a member; and out of this conference committee came the provision for the independent safety board. The whole policy of the legislation, the whole spirit of the law initiated by myself in 1934, carried on until it became a law, was that the Civil Aeronautics Authority should be an independent agency.

"There is no agency today authorized by Federal statute which demands more of independence from political interference than the Civil Aeronautics Authority. The fact that it has been independent and unhampered has led to a safety record unexcelled by any transportation facility through all the ages of civilization, a record in which 87,325,145 plane-miles and 814,906,250 passenger-miles have been flown in 1 year in continental and extra-continental United States without a single fatality.

"My reason for initiating this legislation, my reason for taking this transportation facility out of the Department of Commerce, was to take this important agency out of politics. There can be no reason for putting it back into the Department of Commerce except to put it under the control of the greatest political agency in the world. My reason for setting up the Safety Board was to insure the safety of human life and property in this all-important transportation facility. There is no reason why this Safety Board should be destroyed.

"I have offered a concurrent resolution pursuant to law, against the adoption of the reorganization orders.

"We have arrived at a time in the history of this Government when Congress should either assume absolute responsibility for the initiation of legislative acts or Congress—the Senate and the House of Representatives—should honestly admit their inability to perform under our constitutional democracy. If an act, passed after 5 years of consideration by both Houses of Congress—which involves one of the greatest activities in which a people or a nation can engage, namely, public transportation—can be set aside by a mere stroke of the Executive pen, then better a thousand times that the people should know that Congress does not represent the people.

"I care not who the Executive may be nor how much I have adhered to the progressive government effected by the Executive. I care more for our Constitution and our constitutional democracy, and the freedom of legislative action under our constitutional democracy—than I do for any man or any set of men.

"With this principle I shall go forward regardless of the time during which I may serve in public life.

"The reorganization order sent into the Senate yesterday, consigning the fate and destiny of the Civil Aeronautics Authority to the Secretary of Commerce, is destructive and not constructive."

[From the Washington Evening Star of April 15, 1940]

AERONAUTICS REVAMPING PLAN HIT—HIGH PRAISE GIVEN WORK OF SAFETY BOARD AND C. A. A.

(By David Lawrence)

American public opinion will shortly have a significant test. Can it think penetratingly of anything else but war events abroad? Will it manifest disapproval of one of the most unfortunate mistakes that has been made in Washington in many years, and which must be corrected within the next 60 days, or else the public interest will suffer?

These questions arise out of an extraordinary set of circumstances in connection with President Roosevelt's reorganization order abolishing the Air Safety Board and placing the Civil Aeronautics Authority inside the Department of Commerce as a subordinate bureau.

Of all the governmental boards created in a decade or more, the Civil Aeronautics Board is admittedly the best functioning, and the Air Safety Board the most valuable. Not only is the personnel of fine quality and integrity but the law creating the two agencies is the product of many years of unselfish service by some of the best legal minds of the country. Senator PAT MCCARRAN, of Nevada, Democrat, known as father of the legislation, worked over 21 different bills before he finally pressed for passage the one that seemed best suited to administer the regulatory powers of government over the airways of America and the aviation industry.

Few examples are afforded of any better cooperation anywhere between government and business than between the aviation industry and the Civil Aeronautics Authority. Few examples are afforded also of keener admiration on the part of students of government, even inside the New Deal, of the fairness of procedure and efficiency of administration of the C. A. A.

But all of a sudden the prestige which this new institution has enjoyed as an independent body is to be impaired as it is made the tool of a political department instead of the independent servant of the Congress.

Nobody in the Department of Commerce asked that the Civil Aeronautics Authority be placed in that Department. Nobody in Congress who had any interest in aviation was consulted; certainly not the leaders like Senator MCCARRAN. Nobody in the C. A. A. itself was consulted, either. This may sound strange to persons outside of Washington, but it is a fact.

Who, then, started it and carried it through to President Roosevelt and persuaded him to sign the order?

The answer is that ever since the reorganization bill came before Congress there has been a group of theorists who have no use for practical suggestions about governmental operations but want to fit every bureau and commission into a pattern of their own designing. They are sincere theorists. They have no ulterior motive. They simply believe that independent commissions belong in the executive branch of the Government, and they have the ear of Mr. Roosevelt, who is so harassed by detail and so pressed for time by public problems that he has assented to a change without giving everybody concerned a chance to be heard.

The President cannot be blamed, in a sense, for what has happened. He has been warned that reorganization orders must be planned in secret and sent to Congress so that a backfire cannot be built to prevent the order from being decided upon. Congress itself recognized that this might happen when it delegated power to the President to issue such reorganization orders but legislated a provision that the orders could be disapproved if a majority of both Houses so voted within 60 days.

This is an important safeguard, but it may not work, because it is not easy to rivet public attention on a technical order affecting reorganization of a particular board or bureau. Also, people who have other responsibilities and work to do, especially in the aviation industry, now must come to Washington and, in effect, lobby for a change that never should have been ordered in the first place.

If the President had given a hearing to all interests concerned, the order never would have been issued. In the last 24 hours since the order was published Senator MCCARRAN has had telegrams from all parts of the country expressing grave concern that the Air Safety Board is to be abolished and that the C. A. A. is to be made a bureau. Representative WOODRUM of Virginia has taken a stand against the order in the House.

The present executive reorganization law provides that the resolution of disapproval must come out of congressional committees in 16 days and debate is limited in both Houses.

[From the Washington Times-Herald of April 16, 1940]

WASHINGTON DAILY MERRY-GO-ROUND

(By Drew Pearson and Robert S. Allen)

WEIRD REORGANIZATION

Just 2 weeks ago the air lines of the United States celebrated their first year without a single fatality. It was a national landmark in transportation, and thousands of congratulatory messages poured in upon the Civil Aeronautics Authority, which had contributed so materially to this record. Among those messages was one from President Roosevelt personally to able Civil Aeronautics Authority Chairman Robert Hinckley.

Hinckley and his four associates had taken hold of a broken-down, politics-ridden agency which was so scandal-soaked that Congress wrenched it out of the Department of Commerce and forced the administration to accept it as an independent commission. And in two short years the Civil Aeronautics Authority Commissioners made it one of the model agencies of the New Deal.

But now, just 2 weeks after the brilliant no-fatality air record, the Civil Aeronautics Authority finds itself right back where it started. It has been dumped into the lap of the Commerce Department, with Chairman Hinckley and his capable colleagues shorn of their power.

All this was done through the latest Government reorganization messages to Congress.

And believe it or not, but Harry Hopkins, boss of the Commerce Department, did not know 15 minutes in advance that he was to take back the Aeronautics Authority. Furthermore, there seems to be some doubt whether the President himself knew that the Civil Aeronautics Authority was being transferred to the Commerce Department.

For when outraged friends of Chairman Hinckley went to the White House to find out what the transfer was about, Roosevelt was just as blank as they.

"Why, I thought we were giving Bob (Hinckley) control of the whole Civil Aeronautics Authority," he said.

WHO RULES REORGANIZATION

All of this brings up the very important question of who is writing the Government reorganization orders with which the President has been peppering Congress. Chief master minds are:

Louis Brownlow, an affable exnewspaperman, formerly city manager of Petersburg, Va., and Knoxville, Tenn., who now operates the Public Administration Clearing House in Chicago. It was Brownlow who wrote the President's reorganization bill.

William H. McReynolds, who for 34 years has been wound up in Government red tape in the Post Office, the now defunct Bureau of Efficiency, the Budget Bureau, and the Farm Credit Administration; and who finally was sold to Roosevelt by his pal, Henry Morgenthau. McReynolds now is a member of the enlarged White House secretariat.

Both men, it is interesting to note, are close friends of Clinton M. Hester, Civil Aeronautics Authority Administrator and, another Government careerist. During his career, Hester became familiar with red tape all the way from the Interior Department to the Treasury, including the Shipping Board, Alien Property Custodian, and Justice Department, where he ran into a storm with the late Mrs. Homer Cummings.

Hester, as administrator of the Civil Aeronautics Authority, was kept under rein by Chairman Hinckley. But suddenly, friends Brownlow and McReynolds inserted in their first reorganization of the Civil Aeronautics Authority a deft provision whereby most of Hinckley's powers suddenly were transferred to Hester. They put this plan under the President's nose, he signed it, and overnight Hester became czar of the Civil Aeronautics Authority.

But not for long. Perhaps worried over the resultant storm plus knowledge that Chairman Hinckley would resign, they wrote a new reorganization message for the White House. This time they transferred Civil Aeronautics back to the Commerce Department and old-fashioned politics.

Thus, in 2 weeks, and for no apparent reason, came two reorganizations of an agency which had just chalked up one of the most notable records of the New Deal. And all of this has been done by a reform measure supposed to streamline Government.

The Labor Board

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16 (legislative day of Monday, April 8), 1940

EDITORIAL FROM NEW YORK POST

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an exhaustive and brilliant editorial on the philosophy and operation of the National Labor Relations Act, appearing in the New York Post of Monday, April 8, 1940.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Post of April 8, 1940]

THE LABOR BOARD

Five years ago our democracy, in a creative mood, invented the National Labor Relations Board. It selected three men and said to

them: "You are the Labor Board. Now bring peace to American industry." With a definite objective but with only a few suggestions as to procedure, it set the Board afloat, to succeed or to fail, to sink or to swim.

The prospects were not good when the work started. Employers, through their organizations, declared war on the Board before it had handled a single case. Labor organizers stormed the least progressive areas of the country, promising: "You may safely join a union; the Labor Board will protect you." At almost the same time, labor itself split into two camps, each side jealous lest the Board give the advantage, by even a hair, to the other. And in a hundred Federal courts, injunctions were handed down, effectively estopping the Board from its work until the Supreme Court should rule.

This was high social adventure, begun in a mood of social bitterness. With all these handicaps the Board has handled more than 20,000 cases. The disposition of these cases is shown below:

Fifty percent, both satisfied; 11,121 cases closed by agreement; 1,874,345 workers.

Twenty-seven percent, employer wins; 6,053 cases withdrawn; 1,165,363 workers.

Sixteen percent, employer wins; 3,611 cases dismissed; 877,555 workers.

Seven percent, labor wins 2 out of 3; 1,617 cases; 584,486 workers go to trial and decision.

A LIMITED LAW

The word "union" appears nowhere in the National Labor Relations Act. Nor will you find in it anything about rates of pay, or hours per week, or closed shop or open shop. Let us focus clearly on what the Board may do: Its only function is to protect the right of collective bargaining. It has no other function. It cannot add a penny to a pay check; it cannot cut a minute from a working day.

A SELF-REPEALING LAW

It follows that once an employer has recognized the right of collective bargaining, he is through so far as the Board is concerned, and the Board is through so far as he is concerned.

It follows, again, that if all industry (as in the case in England) freely recognizes the right of labor to bargain collectively, the Board's function will be ended, except for routine handling of technical complaints. The act will, in effect, have been repealed. A bit of it is repealed whenever a new union contract is signed.

So sharply is the Board's function limited that once a corporation (say United States Steel or General Motors) recognizes the right of collective bargaining, the Board becomes merely a convenience to it, protecting it against unfair charges of bias, keeping it from being pinched between opposing unions in jurisdictional conflicts.

HOW THE RECORD READS

Three years ago friends of the act and the Board had to make this argument in theoretical terms. They had to promise (on their word, for there was nothing else to go by) that the Board would be fair, that the Board would be moderate, that the Board would not harass business. Today we have elaborate statistical data.

There is a theory, sometimes urged in less than scrupulous fashion, that the Board is loaded against the employer, that it is a club which any union can wield at its pleasure. Where facts refute a theory, the theory must be abandoned.

Out of every hundred cases—

1. Fifty are settled to the mutual satisfaction of labor and employer long before the stage of trial before an examiner and decision by the Board.

2. Twenty-seven cases are withdrawn by labor, which means, most often, that the Board has told some labor union with a low flash point that it had no evidence to support its charge of unfair labor practices and that it had better withdraw. These are victories for the employer.

3. Sixteen cases are dismissed by the Board. These, too, are victories for the employer.

4. Only 7 cases out of 100 go to final process; of these, only 5.3 cases are unfair-labor-practice cases; and even of these labor wins only two-thirds.

It is worth noting that the Federal Bureau of Investigation convicts 98 out of every 100 persons it brings to trial—and it brings its prisoners to trial before juries and Federal judges, not members of the F. B. I. It is not on the basis of the number of final convictions, therefore, but on the basis of a study of procedural methods, that we can tell whether a legal process is fair or unfair.

PRODUCTION UP; STRIKES DOWN

A sharp rise in business took place last year. By December the (Federal Reserve Board) index of industrial production reached 128, highest in our history. This was accompanied by a rise in prices. Normally there would have been a sharp increase in the number, duration, and severity of strikes during such a period. Strikes always rise during a period of expanding business activity, because the cost of living goes up and because "you have to have a job before you can strike."

December 1939 marked our highest recorded level of business activity, and it produced the lowest loss of man-days through strikes of any month since 1932.

Here we have the outline of a trend startling enough to make an economist feel that something new has come into his world. For it seems to carry the promise that democracy can, by wise management of its affairs, reverse an "immutable law." It is now true for the first time in our history that a major rise in production has been accompanied by an actual decline in strikes.

Can the Board take credit? The decline in strikes in interstate industries, over which the Board has jurisdiction, is almost twice as great as the decline in strikes in intrastate industries, with which the Board is not concerned.

UNION MEMBERSHIP UP, STRIKES DOWN

Proof that our bold social adventure is succeeding can be shown quickly in another way: There are now 9,000,000 organized workers as compared with 6,000,000 in 1937; but the number of strikes has been cut in half, the number of workers affected has been cut by two-thirds, the number of man-days lost by two-thirds.

AN ADMINISTRATIVE AGENCY

We turn now to the complaint that the Board (in deciding whether a man has been fired for joining a union or whether the employer has established a company union or whether an employer is using coercion) acts as "prosecutor, judge, and jury." It brings the charge, it hears the evidence, it decides. Can it perform all three functions fairly?

Here we must broaden the issue and insist on an honorable approach to the problem.

The Board has the three functions outlined above because it is an administrative agency. It has no more powers and in some respects fewer powers than several hundreds of other administrative agencies, Federal and State. The administrative agency itself is a great and bold democratic convention deliberately designed to have all three powers in a limited field in order to "make democracy work;" i. e., to carry forward a particular policy which has been accepted as the policy of the country.

WHY HAVE ADMINISTRATIVE AGENCIES?

The New Deal did not invent the administrative agency. The oldest is the Interstate Commerce Commission, now in its second half century. Administrative agencies came into being as our society grew in complexity, and as it became clear that in a complicated technical field of specialized regulation Congress did not have the time nor the expert knowledge needed to lay down hundreds of detailed rules, that the President did not have the time nor the ability to prosecute thousands of individual cases, that the courts did not have the time nor the ability to render thousands of decisions as to fact, requiring expert knowledge, uniformity of policy throughout the country, and a continuing relationship with the field to be regulated.

NO UNLIMITED POWERS

It is therefore disingenuous to single out one agency, the National Labor Relations Board, and criticize it as a usurper of powers and commingler of powers, for following the ordinary routine of all administrative agencies.

The Board's powers are sharply defined. It may make rules, but only in the field allotted it by Congress, and Congress can change any of its rules. It may hear the evidence, but only according to a procedure that is fair and acceptable to the courts. It may make findings, but only when these are supported by evidence. Finally, after it has made its findings, it can enforce them only by taking its verdict to a Federal Court, proving to the court that the verdict is based on evidence and not on caprice, and then obtaining an order of enforcement from the court—an order which can in every case be appealed higher. No one, in 22,000 cases, has ever been sent to jail for violating the act or for defying the Board.

We will not, therefore, discuss here those arguments against the Board which are arguments against administrative agencies in general, for that dispute is two generations old, and the great authorities are on the side of the administrative-agency idea.

A CHANGE IN ATTITUDES

One purpose of the act was to change the attitude of a small minority of employers toward collective bargaining. Yet (this is what only an administrative agency can do) the act has also changed the attitude of labor toward government, toward its boards and courts. Starting with April 1937, the very month in which the Supreme Court finally validated the act, the number of workers involved in peaceful, orderly cases before the Board rose above the number involved in strikes. It is fair to say that labor has come to trust in government more than ever before in our history.

Now, in a typical month (January 1940) there are 148,000 workers involved in peaceful settlement of their complaints before the Board, and only 48,000 on strike. The historical fact that this trend began with the Supreme Court's validation of the labor law shows that this trend is to be credited to the law.

Thus, out of the muck of controversy and the fury of day-to-day argument, our democracy is sending strong new feelers toward a more stable, a more peaceful future. We do not say that these trends should be decisive in making up our minds concerning the Board; they would not excuse acts of unfairness. But we must keep them in mind as we go on to consider complaints against the Board and suggestions for altering the act.

CHANGES OF CONTENT

One group of proposed changes are changes in content, not form. For example, the National Association of Manufacturers suggests that the act be amended to include a ban on the closed shop and on the check-off.

Here again we have to look to the fundamentals. The Board has nothing whatever to do with the closed shop or with the open shop

either. The Board exists solely (remember our first paragraphs, above) to protect the right of collective bargaining. The closed shop was in existence long before the Board. The closed shop may arise as the outcome of collective bargaining or it may not.

The act and the Board rest on the theory that the people of the country want to see the right of collective bargaining protected. That is all. To include specifications as to what the outcome of the bargaining must be is to get into entirely new ground, to pervert and distort the purpose of the act.

Let us remember that labor's right to bargain collectively was not created by this act. It existed a hundred years before the act and exists outside of and apart from the act today. The act is merely an expression of the public will that this right be protected; only this and nothing more.

CHANGES OF DEFINITION

Of a similar nature are the subtle changes of definition which are (except for the broadside attacks on the Board's power to act at all) the most dangerous items in the amendments offered by Represenative HOWARD W. SMITH. These would redefine the word "employee" so as to exclude anyone who committed an act of violence and to exclude agricultural workers, including those in canneries and sawmills, from the protection of the act.

But the right of agricultural workers to bargain collectively does not rest on this act, and the punishment of acts of violence is no part of the theory on which this act was passed. That belongs to local penal codes, and it would be as sensible to include a provision against burglary in the act as one against violence. Certainly, the Board should not argue on behalf of burglars. If local authorities are vigilant, it will be unable to do so; the burglar will be in jail.

CHANGES OF JURISDICTION

It is also proposed that the act be made fair by including provisions against unfair practices by trade-unions as well as against unfair practices by employers.

Again we return to the definition. This act has one function—to protect the right of collective bargaining. It does protect that right, even on behalf of one union against another, through the democratic means of ordering elections so that a minority union is prevented from taking control.

But as to unions which make impossible demands or which set up uneconomic rules, other remedy must be sought. The Board is not a censor of union contracts; the people would not stand for it if it were.

OUR CONCLUSIONS

The basic question is simply this: Are we for collective bargaining or are we not? It seems that the country is overwhelmingly for collective bargaining. Since this is so, we can see no reason for any change in the theory on which the act is written.

Nor can we see any reason for a change in the administrative set-up. A Board which has won in full 12 out of 16 cases before the Supreme Court, and 2 others in part, a Board whose operations and whose rules have been described by Chief Justice Hughes in these words: "We construe the procedural provisions as affording adequate opportunity to secure judicial protection against arbitrary action. * * * " has earned honors rather than rebuke.

Slowly a change is taking place. Social attitudes are changing. For one, the proportion of unfair-labor-practice cases before the Board is declining and the number of representation and union election cases is increasing, for which see the accompanying bargraph. In other words, employers are accepting the law and the Board is more and more devoting itself to administrative work concerning proper union certification, in which the employer is not involved; in which, in fact, the employer is protected from cross picketing and jurisdictional conflict.

THE ACT IS NOT RIGID

As for improvements in procedure, we are for these from now on for all time eternal, for such improvement is the soul of democratic process. Many of these can take place and are taking place within the Board itself.

Even Board Member Leiserson, hostile to Chairman Madden and Member Smith, and superbly placed within the Board to discover fault, has suggested only minor technical changes in procedure. Leiserson's defense of the act, given to the Smith committee on December 11, 1939, compared it in democratic consequence to the public-school system, and is one of the most eloquent statements yet made on behalf of the act and the Board.

NONSTATISTICAL FACTORS

This outline would be incomplete without some mention of factors relating to the act which cannot be put into figures.

In terms of the dignity of the individual, his sense of equality and place, his sense of participation in his country's economic life, the act creates benefits which cannot be charted, but which are nevertheless of prime importance. That this democratic trend should occur in our country at a time when an antidemocratic trend runs around the world is proof of our national vitality and of the vitality of the American dream. Let us hold this in mind, too, when we consider detailed objections to the act and to its enforcing Board.

Transfer of Civil Aeronautics Authority to Department of Commerce

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16 (legislative day of Monday, April 8), 1940

EDITORIALS FROM THE NEW YORK TIMES, WASHINGTON POST, AND WASHINGTON STAR

Mr. McCARRAN. Mr. President, I ask unanimous consent to have printed in the RECORD an outstanding editorial from the New York Times of April 13, bearing on the subject of the transfer of the Civil Aeronautics Authority to the Department of Commerce; also an editorial appearing in the Washington (D. C.) Post of April 13, 1940, bearing on the same subject; also an editorial from the Washington (D. C.) Evening Star of April 12, 1940; and an editorial from the Washington (D. C.) Evening Star of April 15, 1940, on the same subject.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of April 13, 1940]

SHIFTING C. A. A.

It is difficult to see any good reason for the provision in the fourth Government reorganization plan which makes the Civil Aeronautics Authority an appanage of the Department of Commerce. This independent authority and the Air Safety Board, which would be abolished—its important functions having been transferred to a board within the Department—were created after long and earnest consideration on the part of both Government and the air carriers. The C. A. A. has functioned exceedingly well. It has been criticized for taking a middle-of-the-road position and endeavoring, when confronted with controversial problems, to carry water on both shoulders. In nearly all cases, however, events have proved its wisdom. It has shown initiative, notably in the pilot-training program, and has earned the respect and the thorough cooperation of the air lines.

The Air Safety Board has put force in what used to be the all-too-perfunctory function of accident investigation. It has not hesitated to censure where blame was due. While there has been some lag in the translation of its recommendations into action, healthful punitive measures have been taken. There has been rather widespread and to some degree justified complaint among private flyers over the red tape and complexities of the restrictions on their activities under the air regulation section of the C. A. A. But on the whole these restrictions have made for safer flying of unscheduled as well as of scheduled character. The splendid record of the air lines, which has now extended well over a year without fatality or serious injury to passenger or crew member, stems in great part from their own efforts, but unquestionably a contributing factor has been the level-headed cooperation of the C. A. A. To make this independent agency a mere bureau of the Commerce Department seems to be a course of doubtful wisdom.

[From the Washington Post of April 13, 1940]

DISCUSSION IMPERATIVE

One of the most controversial features of the President's fourth reorganization order is the proposed transfer of the Civil Aeronautics Authority to the Department of Commerce and the vesting of the functions of the abolished Air Safety Board in the C. A. A.—to be known hereafter as the Civil Aeronautics Board. Members of Congress, officials of the agencies concerned, and representatives of the aviation industry are reported to be both surprised and deeply concerned by this unexpected announcement.

It would be interesting to know who are the master minds engaged in directing the reorganization of the Government's administrative machinery. For it is quite evident that the officials, public and private, who are most directly affected by proposed changes are frequently taken unawares, as in the present instance.

It would seem only an act of common courtesy to give Government officials whose positions are to be wiped out, or whose status is to be radically altered, advance notice of such intentions. Furthermore, the advice and admonition of practical administrators are needed to prevent errors of judgment.

Had expert advice been sought in advance, the President might have hesitated to return control over aviation to the Department of Commerce, especially in view of the unsavory record of the old

Bureau of Air Commerce. To be sure, the order provides that the Civil Aeronautics Board is to conduct its quasi-judicial and rule-making functions independently of the Secretary of Commerce. But the fate of the once independent Farm Credit Administration, following its transfer to the Department of Agriculture, is a warning against taking assurances of continued independence too seriously.

It is also doubtful whether the functions of the Air Safety Board can be handled as well by an agency also charged with regulation of air commerce. David Behncke, president of the Air Line Pilots' Association, believes that the two functions must be kept separate to secure a maximum degree of air safety, so that "those who make the regulations will not be placed in the position of investigating themselves when a crash occurs."

For these reasons and because of the excellent work done by the Air Safety Board since its establishment, the proposed changes in organization set-up are meeting with strong opposition. Senator McCARRAN has already introduced a resolution calling for Senate disapproval of the third as well as fourth reorganization plans. The former provides for separation of the functions of the Administrator of Civil Aeronautics from that of the Board.

It is to be hoped that the Senate will avail itself of the opportunity thus afforded to discuss the advantages and disadvantages of the proposed changes, instead of permitting them to become effective by merely remaining silent for 60 days.

[From the Washington Star of April 12, 1940]

OPEN TO QUESTION

For all practical purposes, President Roosevelt's latest plan of Government reorganization would return supervision of the air industry to the Commerce Department, and in the light of experience the wisdom of that move is open to serious question.

The President proposes that the Civil Aeronautics Administrator, in charge of such important functions as operation of airways and pilot training, report to the Secretary of Commerce, who would also control the purse strings of the Civil Aeronautics Board—now Authority. The latter would perform adjudicative, rule-making, and investigative functions independent of the Department, assuming in the shift the duties of the Air Safety Board, but a Secretary out of sympathy with policies of the Administrator and the Board could make their path exceedingly difficult.

The Civil Aeronautics Authority was set up as an independent agency in 1938 after politics had snarled the administration of the air branch of the Commerce Department. Since that time the industry has established an enviable record and has just completed a year without a fatal accident. Under these circumstances a change should not be made unless there are the most persuasive reasons for it. Senator McCARRAN was quick to announce that he would fight the new proposal, which is based in part on an earlier reorganization plan now before Congress.

There are other highly important and interesting proposals in the new plan, but they, too, require the most careful study before being given final approval.

[From the Washington Star of April 15, 1940]

A BACKWARD STEP

The numerous expressions of alarm and dismay which have greeted the President's executive order transferring the independent Civil Aeronautics Authority to the Commerce Department and abolishing the Air Safety Board indicate a strong belief throughout the aviation industry that such a transfer would be a disastrous step backward.

Fresh in the minds of those connected with American aviation is that period from 1933 to 1938 when the Civil Aeronautics Act went into effect. During those 5 years the predecessor of the Civil Aeronautics Authority, the Bureau of Air Commerce, was a branch of the Commerce Department, subject to departmental politics. The results were most unhappy; the whole period is considered one of the blackest in the history of air transportation and civil aeronautics generally.

One congressional investigation followed another. The lack of a general Federal policy for handling civil aviation development and a lack of confidence in a politics-ridden Federal agency prevented proper air-line development. All of the air lines were operating at deficits and many suffered financial collapse.

The situation became so intolerable that Congress, with the support of virtually every responsible aviation organization, finally enacted the Civil Aeronautics Act, intended primarily to take aviation out of the Commerce Department, to free it from politics and political pressure, to give a continuing policy of Federal regulation, and to build up an expert "career" personnel to handle civil aeronautics development.

The results were successful beyond the most sanguine expectations of supporters of the legislation. Assured of a sound, nonpolitical, continuing policy of Federal control, the air lines confidently began expansion programs and air transportation entered into a period of tremendous growth. Within a year most of them were out of the red and recently the domestic air lines completed a year of operations without accident. A feeling of stability and complete confidence spread through the entire industry.

The effects were felt not only by the air transport systems. Private flying began to increase to an unprecedented degree, even prior to the inauguration of the very successful civil pilot training program of the C. A. A., now in progress at more than 400 centers throughout the Nation.

In view of the great benefits which have followed the creation of an independent, nonpolitical agency to control civil aeronautics, it is difficult to understand why the President now is proposing transfer of the Authority back to the Commerce Department. Announcement of the proposal has come as a bombshell to the aviation industry and, apparently, to officials of the C. A. A., who do not appear to have been consulted. The plan is widely denounced and there does not appear to be a voice raised in favor of the transfer, which, it is feared, was worked out along completely theoretical lines without any consideration of the real needs of aviation.

It is certain that a real fight against the proposed transfer will be made in the Senate and it is to be hoped that approval will not be given to this change unless persuasive reasons for it can be advanced.

The American Forum

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the first issue of the American Forum on the question, Have 7 years of the Roosevelt administration benefited the Nation? as the same was published in the Washington Daily News on Saturday, April 13, 1940.

In posing the question, Mr. Theodore Granik, director of the American Forum, makes the following statement:

Seven years ago Franklin Delano Roosevelt took the oath of office as President of the United States, bringing into being a new administration which was quickly labeled the New Deal.

1. What have 7 years of this regime accomplished?
2. How do we stand today—as a Nation—compared to how we stood 7 years ago?
3. Have these 7 years of the Roosevelt administration benefited the country?

With a Presidential election ahead of us, these questions comprise the issue uppermost in the mind of every citizen. The views of two outstanding political authorities, the rival chairmen of the major parties, are given in these articles, written exclusively for the American Forum. They reveal in each writer's own words the difference of opinion which the country will have to resolve in November.

James A. Farley, chairman of the Democratic National Committee, says, "Yes." John Hamilton, chairman of the Republican National Committee, says, "No." Their respective arguments appear below.

At a time like the present, when the totalitarian governments in the benighted countries of Europe have stifled the press, done away with freedom of expression, and driven fear into the hearts of men, so that no one is free to express himself as he wishes, we, fortunate enough to dwell in and be citizens of this great American democracy, present a totally different picture. Here, we permit full expression of individual opinion, no matter what the question may be involved, and no man need be afraid.

Great tribute should be paid to the United Features Syndicate for syndicating this important feature to newspapers throughout the country. Equally high tribute should go to the Washington Daily News for printing the same. And high praise should of course go to Theodore Granik, who conceived and now directs this very important forum of public opinion—one that is possible only in our blessed democracy.

Mr. Farley's views are herewith set forth:

YES!

(By James A. Farley, chairman, Democratic National Committee)

When the Democratic Party came into power on March 4, 1933, it inherited from the Republican Party a defeated, discouraged United States, tangled in the bog of financial and economic chaos.

We inherited a prostrate banking system, 15,000,000 unemployed workers, farmers in or at the edge of bankruptcy, trade and commerce at a standstill, and a Federal Budget badly out of balance. We started, not from scratch, but from way behind it.

Under 7 years of our administration business has been revived, agriculture has been improved, the national income has been almost doubled, foreign trade has been substantially increased, and the

total of unemployed reduced by millions. The spirit of the Nation has been transformed from despair to courage and hope. In a world shaken by war and conquest the United States has become the last great bulwark of freedom and peace.

This is the Democratic record, and we are proud to stand upon it. The inheritance of wreckage taken over from the Republican Party has been converted into a legacy of hope and vigor for the present and future generations.

The goal of the Democratic administration has been security—security for the Nation and security for the mass of common citizens who must find happiness and a means of livelihood in a harsh and complex industrial age. The old policy of drift and shift, of doing nothing and letting things take their course, produced only bitter fruits and tragic failure.

The constructive achievements of the Democratic administration stand unmatched in recent history. While other nations have wasted their substance on war and destruction, the United States has been conserving its natural resources and human manpower. The soil has been protected against the ravages of wind and drought, water power has been developed, and the benefits of time- and labor-saving electricity carried to rural homes and rural firesides.

Idle hands have been given employment in the building of roads, schoolhouses, bridges, dams, airports, landing fields, and other useful public projects. As a result of this program, undertaken in a time of economic emergency, the Nation's physical plant is in better shape today than it ever was before.

These splendid benefits are here and now benefits that will accrue to future generations as well as to our own. A social-security law has been enacted to provide a measure of financial security for men and women workers who arrive at old age without independent means. Payments under the act are beginning this year. The law was designed to correct one of the gravest abuses in the industrial system and before many years have passed it will take its place as one of the most humane pieces of legislation ever enacted by a far-seeing government.

Bank deposits are now insured, guaranteeing against a repetition of the misery and disaster caused by the wholesale collapse of the banking structure under the last Republican regime. A brake has been placed on the issuance of wildcat securities and phoney stock certificates. Wholesome regulations have been adopted to curb the type of reckless speculation in security markets which did so much to bring on the last tragic depression.

Labor has had the right of collective bargaining given the sanction of law. An excellent start has been made on the difficult task of putting a floor under wages and a ceiling over hours of toil.

A program of agricultural aid has been placed in effect, under which the prices received by farmers have risen far above the ruinous rates received in 1932.

The national defense has been strengthened and relations with Latin American countries vastly improved by the good-neighbor policy.

The list of worth-while, workable measures written into law by the Democratic administration could be extended indefinitely. It is significant that the Republican program committee, headed by Dr. Glenn Frank, found it expedient to put a reluctant stamp of approval on many of the major measures sponsored by a Democratic President and a Democratic Congress. A political party, facing a national election, could hardly do otherwise.

The critics, of course, are dissatisfied. Under the grand old American way, they have a right to fill their lungs with air and then scream until the heavens echo their plaintive cries. They still have that right, because the Democratic administration has been zealous in its protection of civil liberties.

What disturbs our critics? First of all, they complain about the size of the public debt, neglecting, of course, to remind the electorate that the debt rose more than five and one-half billions during Mr. Hoover's regime, when nothing was done to turn the tide. The Democratic administration had a choice to make in the face of a dreadful calamity—it could balance the Budget or it could use the public credit to meet human needs. The latter course called for greater courage. But it was right, and it was chosen.

The debt has gone up, but spending has advanced the national income and saved millions of worthy citizens from privation and want. There was no other way to do the job. The public credit has been strengthened, not weakened, and United States bonds are selling above the levels that prevailed when this administration came into power.

"Look at the unemployed." This is another favorite cry of the critics. What did the Hoover administration do to solve unemployment? Has any Republican candidate offered a single concrete suggestion for meeting the problem? I mean apart from the usual bunkum about business improving if the Republicans are returned to power. In other words, "prosperity is just around the corner" provided the Grand Old Party gets back in the saddle. The same old medicine in a different bottle.

Senator BARKLEY, majority leader, stated the case in a recent speech summarizing the work of the Democratic administration.

"It must be remembered," he said, "that we have had only 7 years to climb the hill from the depths of the depression as it existed in 1933. If it took 12 years of political and economic folly to throw 13,000,000 men out of work, we claim to have attained a miraculous success if we have been able to put three-fourths of them back to work in 7 years in addition to the absorption of those who have newly come upon the scene and those who have been displaced by mechanical improvements."

Mr. Hamilton's views are now presented:

NO!

(By John Hamilton, chairman, Republican National Committee)

I do not suppose there was ever a national administration that was wholly good or entirely bad. Every administration from the beginning of the country has made some worth-while contribution to American life, and every administration has done things, undoubtedly with the best of intentions, that have reacted adversely on the Nation's welfare.

This needs to be said in any discussion of whether the present Democratic regime has benefited or injured the country, because by special pleading it is possible to make it appear that the Roosevelt administration is all black or all white. It is neither. It has sponsored in the field of social reform many worth-while undertakings which certainly should be and will be continued. On the other hand, it has miserably failed to solve our economic problems, and, indeed, has greatly weakened the country's financial foundations.

Thus, in discussing the question propounded in this forum, we should take a long-range view. No single act, nor the record of a brief period, should be considered as sufficient evidence on which to predicate an answer. We must consider all that the New Deal has done and the results against the background of our history of progress as well as the effect on the Nation tomorrow.

President Roosevelt has supplied us with a yardstick with which to measure the greatness of his administration. In his recent Jackson Day speech he declared that "the measure of greatness of any party leadership of a country is the measure in which it gets done in its time the big job that has to be done."

What was the big job before the Roosevelt administration when it came into power in 1933? It was to restore this country to a sound economic recovery. It was to end unemployment; to restore farm prices to parity; to raise the national income to its previous levels and even higher; to end deficit financing by the Federal Government—in short, to put our governmental and economic house in order.

For approximately the first 90 days of this Democratic regime, steps toward that end were taken. President Roosevelt acted in that honeymoon period as a Democrat and in accord with the Democratic platform on which he was elected. But by June of 1933 he had completely abandoned his platform pledges, ceased to act as a member of the party of Thomas Jefferson, and capitulated to the miracle prophets and socialistic "brain trusters."

Forgotten was the President's 1932 declaration, speaking of the 10,000,000 unemployed of that year, that it was pessimism—"hair shirt hypocrisy"—to say there was "no hope for a restoration of normal employment for these 10,000,000 people." His "brain trusters" said we were confronted with a permanent army of unemployed—that private industry never could support them, and that henceforth a great part of this army of jobless must become wards of the Government, living on relief rolls.

Today we still have 10,000,000 unemployed. Is that getting done "the big job that has to be done"? Has this administration benefited those 10,000,000 who want work at decent wages, but now for 7 years have been condemned to a hand-to-mouth existence on a meager relief allowance?

Has the American farmer been benefited? Is he better off now than he was in the 1920's? Surely his economic condition was nothing to boast about in the 7 years before the New Deal, but his plight is worse today. This is evidenced by the Agricultural Department's own figures which show that annual average income per farm for the 1926–32 period was $1,432, compared with $1,062 for the 1933–39 period, including Government payments in the latter period.

National income last year totaled $68,500,000,000, which was less than in 1937 and was $14,000,000,000 less than in 1929. Indeed, national income last year was less than it was in 1925, when we had some 10,000,000 fewer persons in the country. Average annual national income on a per capita basis was 18 percent less during the New Deal years than in the preceding 7 years. Is this evidence that the Roosevelt administration has benefited the country?

On the contrary, it is evidence of the failure of the New Deal to solve our economic problems. Not only has it failed, but it has pursued policies obviously harmful. Such has been its spending program, under which the national debt in 7 years has been increased from less than twenty-one billions to more than forty-two billions, plus some five billions of guaranteed obligations on the side. This debt is the New Deal's "gift" to posterity. It is a millstone around the neck of a generation yet unborn, and it can be removed only through repudiation or taxes paid in the sweat of the labor of everyone.

Already the Federal tax burden is twice what it was before the New Deal, and unless the present spending orgy is stopped it will become heavier. Concededly, the New Deal has done some good things, but the price for them has been much too high.

The greatest cost, however, cannot be measured in taxes or dollars. It is found in the demoralized condition of American business, the dangerous centralization of authority in the hands of one man in Washington, and in the blasted lives of a generation of youth denied jobs and an opportunity to carve out careers and attain happiness in the American way.

The radicalism and recklessness of New Deal economic policies have placed in a strait jacket the American system of free enterprise which, under a more sympathetic regime, can produce abundance and jobs for all willing and able-bodied workers. By these

policies it has likewise placed in jeopardy its own social reforms, for this country must function at its maximum economic potentialities to pay the bill for these things.

Thus, when we view the 7 New Deal years as a whole and from all sides, we see that instead of benefiting the country the administration has seriously hampered its forward progress.

National Bituminous Coal Act

EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

STATEMENT BY J. D. A. MORROW

Mr. ALLEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement prepared by Mr. J. D. A. Morrow, of the Pittsburgh Coal Co., expressing the damaging effect of the National Bituminous Coal Act of 1937 on the bituminous coal industry. This statement by Mr. Morrow was prepared for presentation before the Senate Appropriations Committee, but unfortunately could not be presented at that time. I therefore include it herewith.

STATEMENT BY J. D. A. MORROW, PRESIDENT OF PITTSBURGH COAL CO.

My appearance before you is made in behalf of the Committee for Amendment of the National Bituminous Coal Act of 1937. That committee represents bituminous coal operators who have been and are opposed to that act. We feel that Congress should make no further appropriations for the administration of the present law.

The committee membership includes both large and small producers in all parts of the country, whose combined annual production represents between 30 and 40 percent of the commercial output of the country, and we know that the committee likewise expresses the sentiments of many other coal producers, both commercial and captive, who are in accord with our views, so that your committee may consider that we represent the views of perhaps half the bituminous coal output of the United States.

I wish to make it emphatically clear that I shall say nothing here that is, or is intended to be, a reflection or criticism of any kind on the honesty or capacity of the men who have the duty of administering this act. It is my belief that Mr. Howard A. Gray, director of the Bituminous Coal Division of the Department of the Interior, Mr. Thurlow G. Lewis, Mr. Charles O. Fowler, and Mr. Samuel H. Jaffee, trial examiners connected with the Coal Division, and Mr. C. J. Potter, assistant chief of the Marketing Section thereof, will doubtless do as good a job as anyone could do, but this law is simply so bad that nobody can or should be required to administer the act.

We recognize the fact that when Congress creates an agency of government, it has a moral responsibility to provide funds for such agency to perform its duties, but we feel that the Bituminous Coal Act is so exceptional that in its case Congress is justified in departing from this traditional policy.

The original act was bitterly fought by producers of about half the coal output of the United States, but it was passed in spite of their assertion that it was unsound, impractical, and impossible of administration. Because of the uncertainty with regard to the effects of the act, it was regarded as an experiment, its duration was limited to 4 years, and it will expire by limitation on April 26, 1941, or within about a year from date. We oppose any further appropriation of funds for the administration of this law because we are satisfied that the experiences of the past 3 years are quite sufficient to prove the experiment a disastrous failure. Therefore it should be ended now.

Three years have passed since the enactment of this law, and no prices have yet been fixed under its provisions. In effect, it requires the fixing of hundreds of thousands of individual coal prices by what amounts to a series of long lawsuits under a procedure so involved and intricate that an eventual just decision for each and every producer is almost impossible and, even if finally reached, would probably be more disastrous to coal producers than if no decision had ever been made.

This statement is deliberate and considered. Here are the facts to justify it:

When coal comes out of the mine originally in run-of-mine form, it consists of a conglomeration of broken pieces from lumps a foot or more in size to dust as fine as flour, with intermediate sizes between those extremes all mixed together. To prepare this coal for market, it is run over screens which separate this mixture of varying size particles into groups of uniformly sized classifications. My own company, operating 18 mines, regularly sells 106 sizes of coal—at one plant alone we prepare 41 different sizes—made as they are made because the uses of our customers require these particular sizes for the most efficient utilization of the coal.

The Coal Division, in the report of the trial examiners who are conducting the last phase of the many in this intricate price-fixing procedure, states that there are 13,500 mines in the United States, which mines ship coal to a total of 150,000 individual destinations in the United States and Canada.

If each of these 13,500 mines on the average makes no more than four sizes of coal, that would require the fixing at these mines of 54,000 prices, but these prices must be fixed from each mine on each size of coal so that at each of the 150,000 destinations every size and grade and kind of coal from every mine that can sell to each of these destinations reaches a possible customer at each such point on a basis of equivalent value, after allowing for all the differences in freight rates and/or boat charges and/or trucking charges.

Now, when you start with a minimum of some 50,000 different sizes, kinds, grades, and qualities of coal, and multiply that number by the possible destinations to which each mine can ship, allowing for all the differences in freight rates and boat rates and trucking charges between mines and markets you will find between the 13,500 operators who compete with each other on different transportation charges to these destinations, you will find the total of individual prices to be fixed under the act. That total reaches astronomical figures and even when reduced by throwing mines and destinations into classifications, so far as possible, the Coal Division admits that the total prices to be fixed still run into the hundreds of thousands.

The individual prices proposed, for instance, for my own company, exceed 3,000, plus so many exceptions and special prices to cover differences in freight rates and boat and truck charges that we have not yet ascertained the complete total that we will be expected to observe if the proposed prices are actually put into effect.

But this is merely the beginning of the complications. The specific terms of the act impose on the administrator conflicting and mathematically irreconcilable standards that he is obliged to observe in fixing these hundreds of thousands of prices. He is required, in respect of each individual size of coal from every mine, to fix a minimum price after taking into account the myriad of interrelated competitive factors that change constantly and endlessly with respect to each other, according to differences in the ash, sulfur content, heat value, friability, and other significant characteristics of each size of coal at each mine as compared with each size of coal at every other mine that competes with it. He must also take into account every increment of freight rates, boat and truck charges, as coal moves away from the mines, and every such increment in transportation rates changes the comparative values of competing coals at different destinations.

These competitive or comparative values differ again depending upon the uses to which the coal is put, or the kinds of equipment utilized by one consumer as compared with another. Furthermore, when all these minimum prices are finally fixed, they must be fixed so that the average price realized approximates as nearly as possible the average production cost in each of certain specific coal-producing areas of the United States. They must also be fixed so that each interested coal producer will be given an opportunity to be heard with respect to his prices and those of his competitors, either through his district board or individually, if he so elects.

In the face of these requirements it is no wonder that no prices are in effect after 3 years of effort. The Coal Division is now in the process of promulgating its minimum prices, but these are subject to exceptions, further argument and the filing of still more briefs by interested parties and the Division cannot fix any specific date when the prices will be made effective.

Just take a realistic view of this final effort by the Division. The trial examiners in their report state that the record of the hearings they have held in this last phase of the administrative task imposed on them by this act contains in excess of 26,000 pages of testimony and arguments, about 200 written protests, 112 briefs, and some 2,000 exhibits. That is, however, one of the greatest examples of understatement known to official literature.

That record actually contains, not 26,000, but nearer to 75,000 pages. Examination of the 2,000 exhibits reveals that one of them alone contains a further record of 5,000 pages of testimony not included in the 26,000 total, and also contains 500 subexhibits not counted in the 2,000 total of exhibits reported. Another of the 2,000 exhibits adds another 8,000 pages of testimony and 600 more uncounted subexhibits. Still another of the 2,000 exhibits piles up thousands upon thousands of individual pages of detailed statistical matter, and the remaining 1,997 exhibits reported by the trial examiners contain additional uncounted thousands of pages of intricate statistical computations and tabulations, many of them huge sheets, each of which is a veritable wilderness of figures.

The mere statement of the actual size and character of this record does not at all reveal its actual significance. Remember that thousands upon thousands of pages of that record are made up of detailed and intricate statistical exhibits, that more than half the 75,000 or more pages in that record contains testimony of interested parties, expert witnesses and Government officials, that shows almost every degree of contradictory, irreconcilable, and doubtful testimony. By some of that testimony you can prove that a particular coal is one of the poorest known; in fact, almost fireproof. By other testimony that same coal is portrayed as one of the finest in the United States.

Now, gentlemen, remember that every one of the 13,500 coal operators who is a victim of this procedure must protect himself against the fixing of incorrect prices on his product by properly presenting fact, testimony, opinion, or whatnot against the counter testimony and assertions of his competitors and against the inevitable honest errors of the administrator who tries to find one grain of dependable fact and some semblance of justice in this enormous blizzard of complex and contradictory material; and remember further that the operator who fails in this duty does so at his peril.

In view of that responsibility, consider the position of any operator, large or small, confronted with this 75,000 page record, for which no official index is available. To protect himself against the improper fixing of prices on his coals with relation to the prices on the coals of his competitors he must plow through these thousands of pages of testimony and he must analyze thousands of pages of highly intricate statistical exhibits. Why, if every operator were an analytical genius and able to dispose of 500 pages a day of that record, it would take him 6 months to begin to find out why his prices had been fixed as they were, and probably even then he never could find out, because the record reveals many arbitrary decisions affecting the prices proposed for which no explanation or justification is advanced.

In the light of these facts, let me for a moment emphasize the seriousness of slight errors in fixing these minimum coal prices. The prices tentatively proposed reveal that in most cases the minimums will be above the actual prices at which coal is now sold and therefore the minimums when fixed will become the market prices.

Coal is purchased by industrial consumers from one operator as against another on price variances as little as 1 cent per ton or even less. In the open competitive market for coal, operators can negotiate with buyers to keep their business against competition, run their mines, keep their men at work, and keep their companies alive. No matter how capable and honest the personnel of the Coal Division may be, it is a certainty, in view of the thousands of individual prices to be fixed, and in view of the standards and procedure imposed, that in thousands of cases errors will be made in fixing these prices, with the consequence that one operator will have an advantage as against another.

Let me remind you again that coal is sold in a variety of different sizes. The sales of coal for shipment from the mines must be made so that the correct quantities of each size produced are sold and shipped simultaneously. Otherwise one size begins to pile up at the mines and not move to market. Coal is a bulky commodity. Hundreds of mines located in narrow mountain valleys have no place available at which an oversupply of one size or another can be stored pending sale. Mines are not equipped for such storage which involves additional cost, degradation of coal, and rescreening when taken out of storage. Coal cannot be stored in railroad cars because railroad tariffs will not permit such storage except at prohibitive demurrage costs. Consequently, each of these separate sizes must be sold and shipped concurrently with the production of its companion sizes. Now if the minimum price on a single one of those different sizes at any mine is improperly fixed under this act, so that competing operators take the business from that mine on any one of its several sizes of coal, then production of all coal from that mine will quickly cease. The producer is unable to supply his customers for his other sizes, his mine is idle, his men out of work, his customers become dissatisfied because he does not ship to them when other companies can ship, they go elsewhere and he loses his business.

Now what is his remedy? He may appeal directly to the Coal Division for relief, but before he can present and sustain an argument in favor of relief, he must plow through those 75,000 pages of record full of conflicting and even contradictory statements which may concern his coal, and in which the Coal Division can find plenty of evidence to sustain any opinion they may assert or any decision they may make. He must assume the burden of attacking that huge record and overturning the substantial evidence that may be arrayed against him from the pages of this enormous compilation of fact, fancy, and figures.

Remember, too, gentlemen, that the coal division will not readily make changes in this highly complicated, interrelated fabric of prices if ever established. If the administrator changes one price out of those hundreds of thousands, he immediately changes the relationships of hundreds and possibly thousands of prices with every single change he makes, because while a complainant may have lost his business to one or two competitors only, if the coal division changes his price or prices, such change or changes will affect, not merely the one or two competitors directly involved, but hundreds of other competitors at other points on other coals with perhaps different freight rates or boat or truck charges, and different values with which this complaining producer can come into competition, so that consequently, if the administrator starts to change prices, he is immediately forced into consideration of an ever-increasing and ever-widening circle of price disruption. Even Einstein's celebrated theory of relativity would not be comprehensive enough to unravel the complications arising from such a situation.

Gentlemen, please consider a moment. If you were running a factory, a retail store, or a coal mine, would you like to have the prices at which you are going to sell your goods or your manufactured product or your coal fixed in a lawsuit that required 9 months and produced a record of 75,000 pages? How would you like the prospect of relief from a decision in such a proceeding as already outlined when you look ahead at the prospects for any prompt or businesslike action as a result of your appeal?

Remember, too, that if the interests of your situation in your view would lead you to resort to the courts for final relief, you face the cost of presenting that record to a court of competent jurisdiction. That cost would be so great as to be prohibitive and to work the denial of the right of appeal to the courts upon nearly every operator subject to the administration of this act.

How would any of you who are lawyers like to protect the interests of a coal operator client in such circumstances? I am not a lawyer, but my counsel advises me that if this kind of procedure and this kind of protection of the individual is due process, then that time-honored cornerstone of our concept of justice has become nothing but an outworn museum piece to be stored away with other dusty relics of the past. Let us be realistic. The picture presented here is incredible. It is the kind of nightmare that in sleep men struggle and strive to escape. It is a page out of Alice in Wonderland, and belongs with the Mad Hatter's tea party.

But these are not the only reasons for our assertion that this act is already a proven failure, that therefore the experiment is over and should be ended.

Over a long period of years the Interstate Commerce Commission in lengthy proceedings after due consideration has established a structure of freight rates from the different coal fields that has resulted in the development of the present producing districts as they are, and from which the railroads derive the revenues on coal they now receive. The requirement of this act that the administrator in fixing minimum prices take into account differences in freight rates has resulted in the practical wiping out of this entire structure of freight rate differentials built up in formal proceedings by the Interstate Commerce Commission. Attached hereto is an exhibit that shows a few instances of the complete wiping out of present freight rate differentials and the modification of other differentials. As we understand it, the statute compels the Coal Division to take this action in order to protect high-cost mines and high-cost districts against the competition of lower-cost mines and lower-cost districts, and in order to comply with the requirement to give every present operator an equal opportunity as against every other operator to sell his coal in whatever markets he reaches. But the present producing districts and the present volume of tonnage from those districts has been built up on the freight-rate structure in effect over many years. We do not believe that Congress intended to repeal the rate-fixing powers of the Interstate Commerce Commission with respect to bituminous coal when it passed the Bituminous Coal Act, nor to put into the hands of the administrators of that act the unlimited power over freight-rate relationships on coal that they are now exercising.

The law forbids operators to make their customary yearly contracts for the sale of their coal. They have thus been compelled by this statute to sell their coal from day to day on orders good for not more than 30 days. This has produced a continuous bargain sale of coal, and in consequence our coal markets have never before witnessed such a demoralization of prices as created by this act, a demoralization that at a conservative estimate has cost the bituminous coal operators over $100,000,000.

Furthermore, if the Coal Division does establish its hundreds of thousands of minimum prices not only may any operator lose his business to some other coal operator but he is surrounded by a horde of fuel-oil and natural-gas salesmen trying to get his customers away from him. In fact, some of us wonder if the natural gas and oil industries were not secretly influential in getting this law passed and put over on the bituminous coal operators. What an opportunity those gas and oil salesmen will have if minimum coal prices go into effect. Every coal operator competitor will be nailed to the cross of fixed Government prices, unable to get any permanent reduction on a single price for a single customer except at the end of a long lawsuit, even though the operator concerned can produce coal at a cost which would enable him to compete with oil and gas, if he were at liberty to do so, and unable to make contracts for longer than 30 days, if by some miracle he does obtain a competitive price. On the other hand, the oil and gas salesmen can quote any prices they like and make contracts for any period that will permanently land the business for him.

Prior to the enactment of the National Bituminous Coal Act prices in the bituminous coal industry were like waves in the ocean—constantly responsive to every change in customer demand and requirement, subject to all the efforts of every individual producer to improve his product, reduce his cost, and increase his business. The level of prices rose and fell with consumer demand, with changes in production costs, and with all the changing economic influences that bear upon any industry in the United States. It was absolutely vital to every single coal producer that he should be entirely free to change his prices currently on every size of coal, up or down, as conditions might make necessary.

This Bituminous Coal Act imposes on its Administrator the duty of leveling off these waves in the ocean of trade and of keeping it eternally smooth, in spite of the fact that every economic influence that necessitates instant change of coal prices will still impinge with undiminished force upon the helpless coal industry.

Gentlemen, we submit that the record of 3 years under this act and the inevitable distressing consequences if prices are fixed under the act make it your duty as legislators to end this incredible experiment by cutting off any and all appropriations for that purpose.

Supreme Court Judges Appointed Only "During Good Behavior"

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

Mr. THORKELSON. Mr. Speaker, those who approve and applaud the taking of liberties with our Constitution by judges of the Supreme Court of the United States would do well to acquaint themselves with the provisions in article I of the Constitution for impeachment, the provision in article III making the term of office "during good behavior," and the provision in article VI requiring an oath of office "to support this Constitution."

The fact that no member of the Supreme Court has yet been impeached does not mean that the reserved power in such connection has lapsed, or that such safeguarding provisions in the Constitution are thereby shown to have been unwisely adopted.

In these critical times, when intense propaganda seeks to influence the Supreme Court's decisions along lines contravening the plain letter and spirit of the Constitution, it behooves the public and each member of the Court to ponder well the aforesaid provisions in articles I, III, and VI of the Constitution. There may be temporary immunity, but a day of reckoning should be expected as to any and all violations of the plain letter and spirit of the Constitution. While a flagrantly unconstitutional decision must, nevertheless, be obeyed, until overruled, it need not, and should not, be respected. A fortiori, those who participate in the making of an unconstitutional decision of a nature involving patent misbehavior in office, necessarily forfeit further public respect and confidence, and should be tried for such misbehavior and removed from office as promptly as possible. Although the Supreme Court is ordinarily the last bulwark of constitutional American liberty, our forefathers had the foresight to provide methods of dealing with treachery or other misbehavior committed in such bulwark.

Those who consider chicanery or perfidy on the part of a member or members of the Supreme Court to be legally or actually impossible would do well to turn back the pages of history to the year 1857.

On March 4, 1857, President Buchanan delivered his inaugural address, in which—referring to the then undecided Dred Scott case before the Supreme Court—he said:

> Besides, it is a judicial question, which legitimately belongs to the Supreme Court of the United States, before whom it is now pending, and will, it is understood, be speedily and finally settled. To their decision, in common with all good citizens, I shall cheerfully submit, whatever this may be (vol. X, the Works of James Buchanan, p. 106).

On March 6, 1857, 2 days later, the Supreme Court handed down its astounding decision in the *Dred Scott case* (19 How. 393), declaring lack of power in Congress or a Territorial Legislature to prohibit slavery in a Territory.

Abraham Lincoln called the decision "an astonisher in legal history," and charged it to be "based upon falsehood in the main as to the facts" upon which the Court rested its conclusions—volume 3, Writings of Abraham Lincoln, Constitutional Edition, pages 55–56. It was with respect to this decision, and the surrounding circumstances, that Lincoln delivered his well-known classic, the equal of his Gettysburg Address:

> Why the incoming President's advance exhortation in favor of the decision? These things look like the cautious patting and petting of a spirited horse preparatory to mounting him, when it is dreaded that he may give the rider a fall. And why the hasty after-endorsement of the decision by the President and others?
>
> We cannot absolutely know that all these exact adaptations are the result of preconcert. But when we see a lot of framed timbers, different portions of which we know have been gotten out at different times and places and by different workmen—Stephen, Franklin, Roger, and James, for instance—and when we see these timbers joined together, and see they exactly make the frame of a house or a mill, all the tenons and mortises exactly fitting, and all the lengths and proportions of the different pieces exactly adapted to their respective places, and not a piece too many or too few—not omitting even scaffolding—or if a single piece be lacking, we see the place in the frame exactly fitted and prepared yet to bring such piece in—in such a case, we find it impossible not to believe that Stephen, and Franklin, and Roger, and James all understood one another from the beginning, and all worked upon a common plan or draft drawn up before the first blow was struck (vol. 3, the Writings of Abraham Lincoln, Constitutional Edition, page 8).

Lincoln's clever and annihilating analysis on this matter was later confirmed, after Buchanan's death in 1863, when

the Buchanan papers were found to contain letters to Buchanan from Judge Catron of February 19, 1857, and from Judge Grier of February 23, 1857, directly implicating both of them, together with Judge Wayne and Chief Judge Taney, in secretly imparting advance information to President-Elect Buchanan as to the Dred Scott decision, to permit the use of his inaugural address to flimflam the public about the matter—volume X, The Works of James Buchanan, pages 106–108, where said letters are reproduced.

When these letters became known, only one of said named judges was still alive, namely, Judge Grier, who lost no time in resigning—January 1870. In order that the aforesaid letters of Judge Catron and Grier may be judged from their texts, they are here reproduced:

THURSDAY, FEBY. 19TH [1857].

MY DEAR SIR: The Dred Scott case has been before the Judges several times since last Saturday, and I think you may safely say in your Inaugural,

"That the question involving the constitutionality of the Missouri Compromise line is presented to the appropriate tribunal to decide; to wit, to the Supreme Court of the United States. It is due to its high and independent character to suppose that it will decide & settle a controversy which has so long and seriously agitated the country, and which must ultimately be decided by the Supreme Court. And until the case now before it, (on two arguments) presenting the direct question, is disposed of, I would deem it improper to express any opinion on the subject."

A majority of my Brethren will be forced up to this point by two dissentients.

Will you drop Grier a line, saying how necessary it is—& how good the opportunity is, to settle the agitation by an affirmative decision of the Supreme Court, the one way or the other. He ought not to occupy so doubtful a ground as the outside issue—that admitting the constitutionality of the Mo. Comp. line of 1820, still, as no domicile was acquired by the negro at Ft. Snelling, & he returned to Missouri, he was not free. He has no doubt about the question on the main contest, but has been persuaded to take the smooth handle for the sake of repose.

Sincerely yr. frd.

J. CATRON.

TO MR. BUCHANAN.

WASHINGTON, FEBY. 23D, 1857.

MY DEAR SIR Your letter came to hand this morning. I have taken the liberty to shew it in confidence to our mutual friends Judge Wayne and the Chief Justice. We fully appreciate and concur in your views as to the desirableness at this time of having an expression of the opinion of the court on this troublesome question. With their concurrence, I will give you in confidence the history of the case before us, with the probable result. Owing to the sickness and absence of a member of the Court, the case was not taken up in conference till lately. The first question which presented itself was the right of a negro to sue in the courts of the United States. A majority of the court were of the opinion that the question did not arise on the pleadings and that we were compelled to give an opinion on the merits. After much discussion it was finally agreed that the merits of the case might be satisfactorily decided without giving an opinion on the question of the Missouri compromise; and the case was committed to Judge Nelson to write the opinion of the court affirming the judgment of the court below, but leaving both those difficult questions untouched. But it appeared that our brothers who dissented from the majority, especially Justice McLean, were determined to come out with a long and labored dissent, including their opinions & arguments on both the troublesome points, although not necessary to a decision of the case. In our opinion both the points are in the case and may be legitimately considered. Those who hold a different opinion from Messrs. McLean & Curtis on the powers of Congress & the validity of the compromise act feel compelled to express their opinions on the subject, Nelson & myself refusing to commit ourselves. A majority including all the judges south of Mason & Dixon's line agreeing in the result but not in their reasons—as the question will be thus forced upon us, I am anxious that it should not appear that the line of latitude should mark the line of division in the court. I feel also that the opinion of the majority will fail of much of its effect if founded on clashing & inconsistent arguments. On conversation with the chief justice I have agreed to concur with him. Brother Wayne & myself will also use our endeavors to get brothers Daniels & Campbell & Catron to do the same. So that if the question must be met, there will be an opinion of the court upon it, if possible, without the contradictory views which would weaken its force. But I fear some rather extreme views may be thrown out by some of our southern brethren. There will therefore be six if not seven (perhaps Nelson will remain neutral) who will decide the compromise law of 1820 to be of non-effect. But the opinions will not be delivered before Friday the 6th of March. We will not let any others of our brethren know any thing about the cause of our anxiety to produce this result, and though contrary to our usual practice, we have thought due to you to state to you in candor & confidence the real state of the matter.

Very Truly Yours

D. GRIER.

HON. JAMES BUCHANAN.

P. S.—It is the weak state of the Chief Justice's health which will postpone the opinion to that time.

There has been too much veneration for the Supreme Court, or at least too much forbearance regarding its steady impairment of plain and undoubted constitutional rights. There should have been some early impeachments to serve as an example against Federal encroachments upon the plain rights of the people.

Almost from the beginning that Court virtually superseded one of the most vital safeguards in the Constitution to protect the citizen against the Federal Government, namely, that contained in the fifth amendment prohibiting the taking of private property for public use without just compensation, by holding that the Federal Government must first give its consent before it can be sued in any case. It is perfectly manifest, of course, that our forefathers did not intend that this vital provision in the Constitution should be rendered nugatory by adopting a negating policy patterned after the British Crown, which we had spurned. In 1912 the Supreme Court carried such negating policy still further by holding that when the Federal Government shall condescend to give its consent to suit it may take private property without any payment or appropriation for payment at the time of the taking, leaving the citizen with a mere claim for just compensation, rather than the just compensation itself guaranteed by the Constitution (*Crozier* v. *Fried Krupp Aktiengesellschaft*, 224 U. S. 290). The citizen may, of course, starve to death between the taking of his property and the ultimate awarding to him of just compensation therefor under this kind of substitute for the constitutional safeguard. Everyone with a grain of sense knows that our forefathers never intended any such substitute for the perfectly plain and simple provision in the Constitution.

Another conspicuous example of patently unconstitutional action by the Supreme Court is the *Block* v. *Hirsh* decision of 1921 (256 U. S. 135). It overruled, without the slightest warrant, the well-known *Ex parte Milligan* decision of 1866 (4 Wall. 2) which had held our constitutional safeguards to be effective at all times. The Block against Hirsh decision substituted the patently unconstituted holding that, in emergencies, Congress could set aside constitutional safeguards. The Milligan decision, which the Block against Hirsh decision overruled, pointed out most clearly and unanswerably that the setting aside of constitutional safeguards for either an actual or a supposed emergency would endanger the sacrifice of all the cardinal principles of liberty, and would be wholly without sanction in the Constitution.

It is significant, in this connection, that the deciding vote in that patently unconstitutional Block against Hirsh decision was cast by Judge Brandeis who, 4 years later—in 1925—dissented from the masterly decision of the Supreme Court in *Gitlow* v. *New York* (268 U. S. 652). The Supreme Court held to be criminal and anarchistic the advocacy of overthrow of government by force and violence, whereas Judge Brandeis, in his dissent, sought to defend it as free speech.

It is further significant that this same Judge Brandeis also cast the deciding vote in the patently unconstitutional *Gold Clause* decisions of 1935 (294 U. S. 240), thereby paving the way for an ultimate financial collapse in this country at the behest of international gold hoarders.

Let us also not fail to recall that this same Judge Brandeis has been called the father of the New Deal, which has been insidiously and steadily destroying constitutional American liberty. Alert patriotic Americans have a right to ask why Judge Brandeis was permitted to retire on full pay, instead of being impeached.

Has not the time arrived when the President of the United States and the members of the Supreme Court should be given to understand that they are—no less than the Members of the Senate and House—public servants, and in no sense public masters. Let us have no more foolish talk about a supposed duty to trust the President, the Supreme Court, and the Congress. Our salutary system of checks and balances requires active vigilance, not supine trust. Let us build up the respect for public office by promptly removing the unfit and unworthy in the ways prescribed by the Constitution.

In Lincoln's time there was a conspiracy to perpetuate and extend Negro slavery throughout our Republic. Today, the conspiracy on foot is obviously much more far-reaching. It would regiment and enslave the people generally, and utterly destroy constitutional American liberty. And it would accomplish it through plain usurpation, against which Washington warned in his Farewell Address.

Let those in the executive, legislative, and judicial branches of our Government, who have taken oaths to support this Constitution, ask themselves, frankly, whether they are patriots or traitors when aiding and abetting such usurpation. Let them also ask themselves what will be their status and that of those nearest and dearest to them when such usurpation shall have destroyed constitutional American liberty, even if impeachment or criminal proceedings should fail to reach them in the interim. Are they willing to trust their own future and that of their offspring to the destroyers of constitutional American liberty?

California Farm Leaders Oppose H. R. 8748

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

REPORT BY GEORGE HODGKIN, MANAGER OF CALAVO GROWERS OF CALIFORNIA

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report by George Hodgkin, manager of Calavo Growers of California, stating the position taken by officials of the California Farm Bureau Federation, the California State Grange, and other farm organizations concerning Federal farm loan agencies at a meeting held March 26, 1940:

Reestablishment of the Farm Credit Administration as an independent agency and opposition to destroying the cooperative features of the Federal farm-loan system and substituting a Government direct-lending agency were unanimously endorsed in a meeting of California farm leaders in Los Angeles this morning. George Hodgkin, manager of Calavo Growers, of California, and chairman of the agricultural committee, Los Angeles Chamber of Commerce, stated that the group represented almost every phase of agriculture in California, and while not authorized to act for their respective organizations agreed to report back the action of the meeting and urge a unified program on the part of all California farm groups.

Unanimously approved were S. 3480 and H. R. 8825. These are identical bills, now before Congress, and provide for the reestablishment of the Farm Credit Administration as an independent agency of the Government. These bills were introduced at the request of the American Farm Bureau Federation, the National Grange, the National Association of Farm Cooperatives, the National Wool Growers' Association, and the American National Livestock Association. Under this legislation, the present administrative set-up—that is, a governor plus four commissioners—is done away with and instead there is established a Federal farm credit board.

This board consists of six members, of which the Secretary of Agriculture is a member ex officio, the other five members being appointed by the President. Not more than three of such board members shall be appointed from one political party. All five of the appointed members shall devote their full time to business of the board and receive an annual salary of $10,000. Their appointments are for a period of 10 years and are staggered so that one appointment comes up each 2 years.

Vigorous opposition was recommended against S. 3509 and H. R. 8748. These bills would wreck the efforts of the farmers of this Nation over the last 25 years to establish a cooperatively owned farm-loan system. Instead would be substituted a Government direct lending agency. This would be accomplished by eliminating the cooperative features of the national farm-loan associations. Farmers would not own stock in national farm-loan associations, and farm-loan associations would not endorse loans made by Federal land banks to their farmer members. The farm-loan associations might continue as service agencies, but even this function could be eliminated by action of the Governor.

While thus breaking down the cooperative system which the farmers have endeavored to build up, the bill offers tempting bait by a reduction of interest rate to 3 percent on all outstanding loans and loans made prior to June 30, 1946. Federal subsidy is provided for in order to make possible this 3-percent loan. Government guarantee of Federal land-bank bonds is offered as further inducement. The bills also would eliminate deficiency judgments and provide far-reaching refinancing provisions, which would undoubtedly result in maintenance of submarginal farmers on farms long after their inability to operate economically had been determined.

Deep concern and alarm over this legislation was expressed. The ultimate result of such legislation would inevitably be nationalization of farms. Instead of farmers being assisted in improving their financial condition and getting out of debt, they would be encouraged into more and continued debts. Much of the Government subsidy provided in these bills to keep the less efficient farmer in business would come from the better farmers of the country. The latter would also suffer the burden of continued competition from subsidized submarginal operators.

The bills would place a premium on delinquency and a penalty on thrift. The subsidy would last only so long as Congress responded to the farmers' pleas. Congresses in the past have not always been sympathetic to farm problems and may not always be in the future. Farm votes represent only a minority of the electorate. Failure of an unsympathetic Congress to provide continued subsidy would leave farmers without either the substantial credit agency which now serves them and which they own in a large part (64 percent in the eleventh Federal land bank district) or the more tempting provisions of this legislation.

Private credit agencies would be forced out of the farm-mortgage business and the Government would soon hold practically all of the $7,082,000,000 national farm-mortgage debt. The national debt would be increased by the losses incurred on bad loans taken over and the Government would have a contingent liability of tremendous proportions.

With the Government saddled with a tremendous amount of bad loans, popular opinion would turn away from the farmer. When this day of reckoning comes the liquidation of the Government's holdings would demoralize the whole agricultural industry. The time appears to be at hand when we must think in terms of the long-time welfare of agriculture rather than a temporary, tempting expedient.

The farmer has long been regarded as the backbone of the Nation. He has fought hard and in recent times somewhat successfully for better consideration of his problems. He is not willing now to let the politicians run away with his program, making him a ward of the Government and subject to its whims. He has had too much experience in the past both with the Government and private agencies not supplying his credit requirements when most needed. Instead of going back to dependence upon some other agency, he expects to strengthen and extend the cooperative features of his own system.

Those attending in addition to Hodgkin included E. C. Kimball, first vice president, California Farm Bureau Federation; George Sehlmeyer, master, California State Grange; Paul Armstrong, general manager, and C. E. Meyer, director, California Fruit Growers Exchange; Carlyle Thorpe, general manager, California Walnut Growers Association; Dr. C. B. Hutchison, dean, College of Agriculture, University of California; H. W. Amelung, general manager, Poultrymen's Cooperative Association; Ralph Taylor, executive secretary, Agricultural Council of California; Dwight Rutherford, southern California editor, Pacific Rural Press; Will Wood, editor, California Cultivator; Dr. George Hecke, woodland farmer; W. F. Cowan, grower relations manager, Calavo Growers of California; Dr. George P. Clements and Howard Miller of the Los Angeles Chamber of Commerce. The group also had as guests Mr. Ray McKaig, master of the Idaho State Grange, and Mr. C. C. Cogswell, master of the Kansas State Grange. R. V. Garrod, State president, Farmers Educational and Cooperative Union of America, was unable to attend the meeting but later evidenced his approval of the action taken.

Arguments for the Townsend Bill

EXTENSION OF REMARKS

OF

HON. JOHN G. ALEXANDER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

Mr. ALEXANDER. Mr. Speaker, since introduction of H. R. 8264, the new Townsend plan bill, I have received many messages regarding it, but none more potent or well prepared than two which came to me today from young people.

In the first of these the point is made that the plan is a great moral issue. It goes on to say that the question as to whether we shall honor our parents, allowing them to enjoy the fruits of their many years of hard labor, or force them to live on the crumbs that fall from the money changers' tables is exactly in issue. Shall our young people have an opportunity to marry and live normal lives, or shall they be forced to live in idleness and poverty, is asked. Shall we have money for construction and for doing good, or only for war and other destruction? It certainly cannot be denied that these questions, and many more which might be asked in connection with our present unsatisfactory condition, are moral issues which no intelligent American can evade without becoming seriously responsible before both God and man.

We are our brother's keeper, and no amount of human evasion or fruitless lawmaking can alter the eternal truth of the Biblical assertion.

How a so-called Christian nation can expect God to bless and protect a generation which allows its fathers and mothers to be driven from their homes and be made to beg for food and shelter, they and their friends being ridiculed when they attempt to improve conditions, is, indeed, a question I ponder considerably.

The article goes on further, as follows:

Like everything which has a human origin the Townsend plan undoubtedly will be improved. However, the idea of a dividend, commonly called a pension, to those who have built this Nation is absolutely Scriptural and correct from every standpoint. In Numbers 8:25 we learn that God commanded Moses to pension the Levites at the age of 50 although they were permitted to minister with their brethren. The dividend plan, as advocated by the Townsend plan, is not only a moral necessity it is also necessary from a political and monetary viewpoint. No nation can expect its citizens to support a government which allows the Governor of the so-called Federal Reserve bank $50,000 a year, and then attempt to compel millions of others who have labored and toiled for years to live on a measly $20 or $30 a month. This is not only an insult to those who have built this Nation, it is an abominable sin in the sight of God.

The Townsend plan is much like the plan put into effect by Nehemiah when a money depression came to the land of Judea. In verses 1 and 3 of Nehemiah 5 we read the following: "And there was a great cry of the people and of their wives against their brethren the Jews. Some also there were that said, We have mortgaged our lands, vineyards, and houses, that we might buy corn, because of the dearth." In verse 5 we read that the people said "other men have our lands and vineyards." This is what has happened in our day. Through our debt money system and the use of mortgage and usury, a comparatively few men have gained control of nearly everything in our land including, apparently, our Government. In verse 6 Nehemiah says, "And I was very angry when I heard their cry and those words." In verse 10 he commanded "Leave off this usury." Verse 11 of Nehemiah 5 reads as follows: "Restore, I pray you, to them, even this day, their lands, their vineyards, their olive yards, and their houses, also the hundredth part of the money, and of the corn, the wine, and the oil, that ye exact of them." In verse 12 we read, "Then said they, We will restore them. * * * Then I—Nehemiah—called the priests, and took an oath of them, that they should do according to this promise." This restoring to the people that which had been taken from them was a moral necessity, and so it is today. While we cannot restore to the people their homes, businesses, and farms, with the lost opportunities which have been taken from them, we can and we must issue a monthly dividend or pension to the older people, at least. These pensions, in order to turn the wheels of industry, must be large enough to enable the ones receiving the dividends to live on a high standard, buying what they desire and need. A pension of $30 a month is like trying to turn a water wheel built for the Niagara by a small trickly stream of water. Nehemiah commanded that usury be discontinued. The Townsend plan would strike a telling blow to usury, rightly called civilization's greatest curse, in this that it would offset the terrible scarcity of money which causes the usury business to flourish. In this respect the Townsend plan is in harmony with the Scriptures, for both the Old and New Testaments forbid the taking of interest.

The other letter is equally interesting, and reads as follows:

MINNEAPOLIS, MINN., *April 15, 1940.*

Hon. JOHN G. ALEXANDER,
House of Representatives, Washington, D. C.

DEAR MR. ALEXANDER: As a young citizen, anxious to preserve and perpetuate our American ideals and constitutional form of government, I am setting forth herein my reasons for urging your militant support of the new Townsend national recovery plan bill, H. R. 8264:

Contrary to the belief of some people, the Townsend plan is not merely an old-age pension proposal; it is a national recovery program. Its primary purpose is to establish in the United States a sound and sensible economy that will increase business, assure steady employment in private industry for us younger people, and adequate security for our senior citizens.

How will it do this? Let us use the gasoline tax as an example. In 1919, when this method of taxation was first adopted, the revenue therefrom was only $1,022,514. However, this small amount was used for a specific purpose, namely, to build good roads. These improved roads—few as they were at that time—created a greater demand for more travel. This, in turn, meant the use of more gasoline, which automatically increased the gas-tax revenues proportionately, to be used for the construction of more good roads. And right there, from that small beginning, we put into operation, for the first time in the history of this Nation, a complete cycle of tax dollars in forced circulation. The annual revenue from this tax is now more than $1,000,000,000 and it continues to increase each year. Today the widespread benefits derived from this method of taxation is unparalleled in tax annals.

Now the Townsend national recovery plan employs the identical principles of the gasoline tax. It proposes to tax the use of our money—which is the gasoline used in our economic engine—by placing a 2-percent tax upon all gross incomes of individuals and business concerns, when these gross incomes are more than $250 per month. (All gross incomes of $250 or less per month are tax-exempt.) The revenue from this tax will also be used for a specific purpose, namely, the voluntary retirement of American citizens 60 years of age and over, from all gainful occupation. This will start providing employment and business opportunities for many of our younger folks now unemployed or on relief rolls. Eventually, by this retirement procedure alone, it is conservatively estimated that more than 3,000,000 permanent jobs will be made available for our citizens under 60 years of age.

The revenue from this tax will be prorated equally among those citizens applying for the annuities. No annuitant can receive more than his or her prorated share. The amount of these shares or annuities will depend—at all times—solely upon business conditions, but at no time can the annuitants receive more than the maximum amount of $200 per month. These annuities must be spent for goods and services within 30 days after they are received by the annuitants. The perpetual spending of these annuities each month will gradually create a greater demand for more goods and services, making more business and employment, which in turn will automatically increase the revenue to be again prorated among the annuitants. Thus, in this manner, regardless of what the annuities may be to start with, we will once more place into operation another complete cycle of tax dollars in forced circulation that will, in the due course of time, accomplish for our entire economic system what our gasoline tax has so successfully accomplished for our national highway system. Because of the practical principles involved, this becomes a mathematical certainty, as any fair and open-minded study of the Townsend national recovery program will reveal.

This plan actually provides a scientific pay-as-you-go solution for the perplexing economic problems caused by our modern mass production and power age.

Respectfully yours,

MAMIE M. STEABNER.

It is apparent from the above excerpts taken from my voluminous correspondence on the pension and social-security problem that even the youth of America are alive to the need for constructive thought. I feel that this is a good sign and a healthy indication of future progress.

The Logan-Walter Bill

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

ARTICLES BY E. A. EVANS

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following series of news articles published by one of the leading chains of newspapers in America:

SAFEGUARD ON FEDERAL BUREAUS' POWER TO MAKE LAWS IS PURPOSE OF LOGAN-WALTER BILL, NOW BEFORE CONGRESS

(By E. A. Evans)

WASHINGTON.—Some 130 Federal agencies—not one member or employee of any of them elected by the people—now have authority to make laws, administer laws, and enforce laws.

The men who adopted the Constitution would have been astounded and dismayed if they could have foreseen this fact. The people's freedom, they believed, depended upon keeping separate the three powers of government—legislative, executive, and judicial—checking and balancing them against each other. That these powers should ever be combined in appointed officials, far removed from direct responsibility to the people, would have seemed to the founding fathers to involve intolerable dangers.

Nowadays, however, almost everyone agrees that a system of administrative agencies is necessary. Civilization has become more complex, Government has been called upon to undertake functions not even imagined a century and a half ago, and Congress perforce has placed more and more power in administrators.

So, over many years, the administrative system has grown to its present vast proportions, most rapidly in the last 7 years under the New Deal.

Congress, for instance, has undertaken to deal with such problems as the regulation of security markets, the protection of labor's right to organize for collective bargaining, and a host of others. It has enacted general statutes on these subjects. It has created agencies to administer and enforce these general statutes. And it has delegated to the agencies the authority to implement and interpret the statutes by making rules which, in effect, are laws.

Everyone agrees that this system does present dangerous possibilities of abuse of bureaucratic powers. And almost everyone agrees that, in many of the agencies, there have been abuses, and that something should be done to correct them and to prevent them in the future. As to exactly what should be done, however, there is no such complete agreement.

But, long before the New Deal began, this question was discussed; and one product of the discussion is the Logan-Walter bill, now being battled over in Congress.

The bill, in substantially its present form, was drafted by the Administrative Law Committee of the American Bar Association, after an extended study during which its provisions were submitted for criticism and suggestions by many lawyers, law-school deans, and others. It has been endorsed by the A. B. A., by many State and city bar associations, and it has been approved by the Judiciary Committees of both House and Senate.

Its original Senate sponsor, the late Senator M. M. Logan, Democrat, of Kentucky, obtained its passage by the Senate last July, without debate. Administration forces later moved for reconsideration, and in the present session of Congress the bill has come up first in the House, where its sponsor is Representative FRANCIS E. WALTER, Democrat, Pennsylvania.

The first part of the bill deals with the power of administrative agencies to make laws, or rules, and undertakes to provide a uniform procedure for the exercise of this power.

It would require published notice and public hearings before any rule affecting personal or property rights could be issued. A rule, having been issued, would have to be published within 10 days, and would not become effective—unless the President declared a public emergency—until it has been published.

Administrative rules under all future statutes of Congress would have to be issued within 1 year of the statute's enactment, but thereafter additional rules could be issued or existing rules amended as necessary.

Any person substantially interested in the effects of a rule now in force would be permitted to petition the head of the appropriate agency for a reconsideration of the rule and might request a public hearing on his petition. Within 10 days after the hearing the head of the agency would be required to determine whether the rule should be continued in force, modified, or rescinded, and to publish his decision.

There would be a right of appeal from the decisions of agencies to the District of Columbia Court of Appeals, and to other Federal circuit courts throughout the country. The courts could declare an administrative rule invalid only if they found it in conflict with the Constitution or a statute of Congress; would have no authority to go into the question of the rule's wisdom.

Advocates of the Logan-Walter bill argue that these provisions would safeguard personal and property rights from abuse of the administrative lawmaking power; would speed up the proper use of that power; would enable citizens and agency subordinates to know promptly, and without extended litigation, what their rights and duties are; and, by giving the agencies reason to use greater care to make their rules conform to law, would decrease the number of rules contested.

Opponents of the bill maintain that the scores of different agencies, handling different problems, require different procedures, and would be put into a strait jacket by the attempt to provide uniform procedure; that the courts would be overloaded with appeals; that judges do not have the technical information to deal with matters which the agency heads decide on the basis of expert knowledge; and that the shifting of added responsibility to the courts would have a harmful effect on administrative efficiency.

PROTECTION AGAINST LONG DELAYS AND HEAVY EXPENSE IN DISPUTES WITH FEDERAL AGENCIES PROPOSED IN BILL

(By E. A. Evans)

WASHINGTON, April 12.—The maxim that "justice delayed is justice denied" applies with special force in the vast American bureaucracy.

The citizen who has business with the Government deals with 1 or more of the 130 administrative agencies which have been created as government has been called upon to undertake more and more functions. And his dealings must be, for the most part, with subordinate officials.

Some of the agencies are headed by single individuals, such as Cabinet officers. Many others are headed by boards or commissions with three or more members. The men at the top, in whom rests authority to make final decisions so far as their agencies are concerned, can't possibly give personal attention to all the intricate details of all the claims and cases that fall within their province.

So the citizen deals with members of an army of underlings—trial examiners, lawyers, clerks, and others to whom the agency heads have delegated limited authority. More often than not, in many agencies, these subordinates adjust matters to the citizen's satisfaction and approval of the adjustment by agency heads follows automatically.

But the citizen whose case involves unusual, technical, and controversial issues and who is not satisfied with what he gets from subordinates may have great difficulty, meet long delay, and incur heavy expense in obtaining from the agency heads a final decision which, if he is still not satisfied, he can make the basis of an appeal to the courts.

One purpose of the Logan-Walter bill now before Congress is, as explained in a previous article, to provide a fair and uniform system for exercise of the administrative agencies' power to make rules which, in effect, are laws. A second purpose is to provide a prompter and uniform system for exercise of their quasi-judicial power—the power to make decisions.

Where an agency is headed by a single individual, he would be required to designate employees of his agency for service on three-member boards of review.

At least one member of each board of review, the chairman, would be a lawyer. An agency might have one such board or, if needed, several. Board members, when not engaged in hearing administrative appeals, would be assigned to other duties in the agencies. Where practicable, boards could be designated to hear controversies in those sections of the country, remote from Washington, where they arise.

Any individual or corporation aggrieved by a decision of agency subordinates could, within 20 days after being notified of the decision, state his objections in writing to the head of the agency and demand a review.

A full and fair hearing by a three-member board of review would then be required at an early day, the aggrieved person having the right to introduce evidence and subpena witnesses. A complete record of all testimony would be kept.

Within 30 days after the close of testimony and argument, the board of review would be required to file with the head of the administrative agency written findings of fact and a decision on them. The duty of the agency head would then be to approve, disapprove, or modify the decision of the three-member board, and to notify the complaining citizen of his action.

That would give the citizen a final decision from the agency, with which he would be required to comply unless, still dissatisfied, he elected to appeal to the courts.

The procedure under agencies headed by boards or commissions of three or more members would be similar, except that trial examiners could be designated to hear evidence and make preliminary decisions, with the complaining citizen having the right of prompt appeal and public hearing before three members of the agency concerned.

Opponents of the Logan-Walter bill contend that the proposal is too sweeping; that a uniform system of internal appeals could not properly serve all the different administrative agencies; that some agencies already have satisfactory review systems; that, since the bill does not limit appeals to quasi-judicial matters, the reviewing boards or officials would be swamped by demands for consideration of trivial controversies, thus clogging and slowing up the whole Government service.

The bill's advocates argue that if some agencies have satisfactory review systems, all should and can have; that the plan would fix responsibility for executive action and enable citizens to get prompt action from responsible executive officers; that subordinates will handle controversies with greater care, thus providing fewer reasons for dissatisfaction; that the entire administrative service would be improved, and that the number of controversies reaching the heads of agencies and the courts would eventually be greatly decreased.

UNIFORM JUDICIAL CHECK-AND-BALANCE SYSTEM PROPOSED FOR DECISIONS BY FEDERAL AGENCIES

(By E. A. Evans)

WASHINGTON, April 15.—Government by bureaucracy inevitably tends to become government in the interest of the bureaucrats.

This generally accepted fact is responsible for that portion of the Logan-Walter bill, now before Congress, which deals with review by the Federal courts of the decisions or orders of the multitude of Government administrative agencies.

Other sections of the bill, as explained in previous articles, are intended (1) to provide a uniform and safeguarded system for exercise of the agencies' quasi-legislative power to make rules which, in effect, are laws; and (2) to provide a prompt and uniform system for exercise of their quasi-judicial power to make decisions.

Supporters of the bill contend that these sections will automatically insure sounder administrative laws and fairer administrative decisions.

But the agencies, especially those which administer statutes relating to social and economic problems, are headed and largely staffed by enthusiasts—by people sincerely, earnestly, and properly zealous to make the statutes accomplish what Congress intended, or what they think Congress intended or should have intended.

The bureaucrat who abuses his power for his own benefit is, perhaps, the exception. Abuse of bureaucratic power results more commonly from the zeal of administrators to get results for, as they see it, the benefit of the people they are supposed to serve. But the consequences, in damage to the personal and property rights of citizens, are no less evil than if the interests of the bureaucrats were entirely selfish.

So, it is argued, the decisions made by quasi-judicial administrators—often actuated by partisan feelings—need to be checked and balanced by wholly judicial officials in much the same way as the decisions of trial judges are checked and balanced by courts of appeal.

A third section of the Logan-Walter bill, therefore, proposes to provide a uniform procedure of judicial review for the decisions and orders of administrative agencies.

A party to a proceeding before any agency, if aggrieved by the agency's final decision, could appeal within 30 days to the District of Columbia Court of Appeals or to the United States Circuit Court within whose jurisdiction he lives or has his principal place of business or in which the controversy arose.

This is intended to decentralize judicial reviews, since there are 10 circuit courts throughout the country, instead of centralizing them in Washington at great expense in time and money to citizens with appeals.

The court to which an appeal is taken would be required to base its decision on the record of proceedings before the agency. But that record would have to be "full and accurate," and the court might require the agency to submit further evidence. This provision is aimed at what has been described as "scandalous abuses by prejudiced trial examiners of some agencies in permitting to go into the record only what suits their purposes."

Having considered the appeal, the court could affirm the administrative agency's decision, or set it aside, or direct the agency to modify it. The court would be required to set the decision aside if satisfied that the agency's findings of fact are "clearly erroneous" or are not supported by "substantial evidence," or that the decision is not supported by the findings of fact, or that the decision is beyond the agency's jurisdiction, or that the decision infringes the Constitution or the statutes of Congress, or that it was not issued by the processes required by law.

To meet the objection that appeals to 11 different courts of review might result in many disagreements among these courts, the bill provides that any court finding itself in disagreement with a previous decision of another court having the same jurisdiction shall immediately certify the matter to the United States Supreme Court. This, it is contended, would enable the prompt adjustment of diverse views among the lower courts.

Dissatisfied litigants would, of course, retain their present rights to seek Supreme Court review of the decisions of the appellate courts.

Opponents of the Logan-Walter bill maintain—but its supporters deny—that existing law is amply sufficient to secure judicial review of administrative decisions. The opponents also say that in this respect, as in others, the bill is too sweeping; that it would flood the circuit courts with petty appeals; that it would transfer control of the executive branch to the courts, making for vast and costly executive confusion; that judges would substitute their opinions as to "substantial evidence" and as to whether findings of fact are "clearly erroneous" for the opinions of administrative officers.

The bill's advocates reply that the circuit courts would not be required to hear petty or frivolous appeals; that the courts would merely check and balance, not control, the administrative agencies; and that judges could not go into the merits of issues before them, but would have authority only to make sure that the administrative proceeding had given adequate consideration to the merits.

Finally, supporters of the bill argue that responsibility for incompetent, biased, and illegal actions would be clearly fixed on the administrative officers and employees concerned. This, they say, would give the agencies every incentive to avoid such actions. The result would be better, fairer decisions by the agencies, a great improvement in the executive service, and consequently a great decrease in the number of administrative decisions that would be appealed to the courts.

Opposition Grows to Proposed Change in Federal Aviation Set-Up

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

Mr. RANDOLPH. Mr. Speaker, it is my opinion that the recent order which would abolish the present Air Safety Board and place in the Department of Commerce the Civil Aeronautics Authority is going to increasingly face opposition from the Congress and the American people.

Editorial comment in the newspapers of the United States has been practically unanimous in opposing the move which would seriously, I believe, cripple the splendid regulatory work now being done throughout the aviation industry in all its phases.

Indicative of the newspaper comment, I quote from the following representative editorials. Writing in the Washington Times-Herald of Sunday, April 14, Frank C. Waldrop clearly and emphatically says:

INDEPENDENT AIR SAFETY BOARD HAS PROVED ITS VALUE

The true value of anything is demonstrated not by showing how it fits so neatly into a blueprint of authority but in the record of its works.

It is not the form, but the substance, that counts.

There used to be an agency of Government here known as the Bureau of Air Commerce. It had a nice location on the blueprint of authority under the command of the Secretary of Commerce. It had the assignment to make and enforce regulations for civil aviation.

It was a flop, a terrible, deadly flop.

You remember how it worked. It made regulations. It checked to see whether the air lines were living up to those regulations. And when the charred ruins of an airplane were scraped off a mountainside, as they so regularly were, it rushed its investigators to the scene to determine whether it was responsible for the horror.

The Bureau of Air Commerce was prosecutor, judge, and jury. And it was a terrible, deadly flop. Under its administration the national confidence in civil aviation disintegrated. And civil aviation came near to doing the same. Only slathering governmental subsidy kept it out of bankruptcy.

Even so, it was on the very edge of collapse when, on August 22, 1938, there went into effect a law setting up the Civil Aeronautics Authority, an agency independent of all elements of Government except the Congress, which created it, and the President, who appointed its members.

A specific response to public demand was the establishment, within the Authority, of an Air Safety Board.

The members of this Board were appointed by the President and were wholly independent of the Civil Aeronautic Authority. They were not even joined to it for budgetary purposes, but got their funds directly and separately from Congress. Their personnel was of their own choice. Their function was to "investigate * * * and report to the Authority the facts, conditions, and circumstances relating to each accident—involving aircraft—and the probable cause thereof."

This meant the Board was to act as the public's independent agent to see whether an accident involving aircraft was caused by error or negligence of a plane maker, an air line, a pilot, or the Civil Aeronautics Authority, or whoever might be the responsible party.

The public had demanded that independent agent because experience had proved, in sorrow and in full, that the same Bureau which was making aviation regulations and enforcing them was unable to bring itself to self-condemnation when it was at fault. As it so often was.

Such inability to render impartial judgments was only human on the part of the Bureau of Air Commerce. But that was no excuse for the toll in life and property that piled up.

Well, how has the independent Civil Aeronautics Authority acquitted itself? It has brought American aviation to the highest level of efficiency and safety in world history. It made the airways secure against disaster for 12 full months and it did that without destroying technical progress.

The counterbalance of the Air Safety Board, free to criticize and to report facts impartially and fully, was a paramount factor in that success.

You have only to look at the facts. In the pre-Safety Board days there were crashes and scandals. Since the Board's establishment, the same companies, same pilots, and same type planes have given safe and greatly improved service.

In the Baltimore Evening Sun of April 13 we find a strong editorial on the subject, as follows:

MESSING IT UP

Commercial flying used to be under the direction of the Bureau of Air Commerce of the Department of Commerce. And then it was the football of politics. There were scandals over the air-mail contracts. There was an indifferent policy which many persons interested in flying held responsible for the lagging course of the industry in the United States. In fact, so much dissatisfaction was aroused by the Bureau of Air Commerce that the President relieved it of its duties and turned them over to the newly created Civil Aeronautics Authority.

The C. A. A. set up shop in August 1928. Its administrator, board of five, and safety council of three members were approved by the Senate in February of last year. A few days ago the National Safety Council over in Washington celebrated with a dinner the completing of a whole year of commercial flying in the United States without the loss of a single life, either of a passenger or an employee of the air lines. President Roosevelt sent a letter of congratulation to the dinner on the industry's remarkable achievement.

Moreover, from a financial and operations standpoint the commercial flying industry had the best year in its history. In the same period private flying increased some 125 percent, and is still increasing by leaps and bounds. A major part of this advance is attributed to the efficient work of the C. A. A. It is true, there have been some criticisms of the C. A. A., but they have been of a minor nature. Now, in spite of the record made by commercial flying under the existing organization, the President has submitted to the Senate a proposal to return the supervision of the industry to the Department of Commerce. In the face of a year without an accident, he proposes to abolish the safety council and hand its work over to the board of the C. A. A.

The President's proposal, including not only the transfer of the C. A. A. but several other bureaus, is expected to effect an administrative saving of $300,000. Why mess up the C. A. A. to save a fraction of $300,000? It looks more like politics than economy.

The Washington Star in its issue of April 15 says:

A BACKWARD STEP

The numerous expressions of alarm and dismay which have greeted the President's Executive order transferring the independent Civil Aeronautics Authority to the Commerce Department and abolishing the Air Safety Board indicate a strong belief throughout the aviation industry that such a transfer would be a disastrous step backward.

Fresh in the minds of those connected with American aviation is that period from 1933 to 1938 when the Civil Aeronautics Act went into effect. During those 5 years the predecessor of the Civil Aeronautics Authority, the Bureau of Air Commerce, was a branch of the Commerce Department, subject to departmental politics. The results were most unhappy; the whole period is considered one of the blackest in the history of air transportation and civil aeronautics generally.

One congressional investigation followed another. The lack of a general Federal policy for handling civil aviation development and a lack of confidence in a politics-ridden Federal agency prevented proper air-line development. All of the air lines were operating at deficits and many suffered financial collapse.

The situation became so intolerable that Congress, with the support of virtually every responsible aviation organization, finally enacted the Civil Aeronautics Act, intended primarily to take aviation out of the Commerce Department, to free it from politics and political pressure, to give a continuing policy of Federal regulation, and to build up an expert "career" personnel to handle civil aeronautics development.

The results were successful beyond the most sanguine expectations of supporters of the legislation. Assured of a sound, nonpolitical, continuing policy of Federal control, the air lines confidently began expansion programs, and air transportation entered into a period of tremendous growth. Within a year most of them were out of the red, and recently the domestic air lines completed a year of operations without accident. A feeling of stability and complete confidence spread through the entire industry.

The effects were felt not only by the air-transport systems. Private flying began to increase to an unprecedented degree, even prior to the inauguration of the very successful civil-pilot-training program of the C. A. A., now in progress at more than 400 centers throughout the Nation.

In view of the great benefits which have followed the creation of an independent, nonpolitical agency to control civil aeronautics it is difficult to understand why the President now is proposing transfer of the Authority back to the Commerce Department. Announcement of the proposal has come as a bombshell to the aviation industry and, apparently, to officials of the C. A. A., who do not appear to have been consulted. The plan is widely denounced and there does not appear to be a voice raised in favor of the transfer, which, it is feared, was worked out along completely theoretical lines without any consideration of the real needs of aviation.

It is certain that a real fight against the proposed transfer will be made in the Senate, and it is to be hoped that approval will not be given to this change unless persuasive reasons for it can be advanced.

The Pan American Union

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

PRESIDENT ROOSEVELT'S ADDRESS BEFORE THE PAN AMERICAN UNION ON ITS FIFTIETH ANNIVERSARY

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the address of President Roosevelt, delivered Monday, April 15, before the Pan American Union in commemoration of the fiftieth anniversary of the formation of the Pan American Union:

In the year 1890, on April 14, and without fanfare of trumpets, an inter-American conference unanimously adopted a resolution providing that "there shall be formed by the countries represented in this conference an association under the title of the International Union of American Republics."

The tasks of the new organization were simple. They were to collect and distribute commercial information, to publish a bulletin, to provide trade information, and to carry forward the work of promoting sound business relations.

But behind these prosaic words there was the driving force of a great American conception which had been gathering headway for 60 years.

The ideal originated in the mind of Simon Bolivar; and a kindly history has preserved for us the draft he had written in 1825, sketching his purpose and objective.

His aim was peace for the Americas. His hope was that the American example might eventually give peace to the entire world. His plan was stated in a single, brilliant, sentence: "The New World takes shape in the form of independent nations, all joined by a common law which would control their foreign relations and would offer them the stabilizing force of a general and permanent congress." The result, as you know, was the calling of the conference of Panama in 1826.

CONGRESS OF PANAMA SET UP IDEAL OF COOPERATIVE PEACE

At that time it took bold minds even to dream of universal peace. And yet the Congress of Panama gave clear expression to precisely that aspiration. Before that time there had been but two systems of peace known to the world. One of them had been the peace of universal conquest, which Rome had achieved and lost, and which Napoleon had vainly endeavored to imitate. The other was the

dangerous and temporary peace of balance of power—which even in 1826 was plainly no permanent solution.

At the Congress of Panama, the American nations proclaimed the ideal of a cooperative peace; the peace of free equals, freely agreeing to settle whatever differences might arise among them by none but pacific means—determined to cooperate with each other for the greater good of all.

Never before had any group of nations been asked to renounce the splendors of indefinite conquest, and to achieve their true grandeur by peaceful cooperation. Yet that was precisely what the Americas were considering.

The dream of Bolivar was not realized at the Congress of Panama. But it did remain a hope, an inspiration. To the writers, the poets, the dreamers, who kept the ideal of cooperative peace alive through the imperialist nineteenth century, we owe an everlasting debt of gratitude.

INITIATIVE CAME FINALLY FROM THE UNITED STATES

In spite of several attempts to bring to a realization the ideal of inter-American unity, more than 6 decades went by before the seed began to grow. I am proud of the fact that on that occasion the initiative came from the United States. In 1888 President Cleveland approved an act of Congress authorizing him to call a conference of the American countries in order that there might be worked out a peaceful plan for the settling of disagreements and disputes and a means of encouraging such reciprocal relations as would benefit all.

It was that inter-American conference 50 years ago that set up the International Union of the American Republics, the anniversary of which we are observing today. In opening the conference, James G. Blaine expressed its high purpose in the following words: "We believe that a spirit of justice, of common and equal interest between the American states, will leave no room for an artificial balance of power like unto that which has led to wars abroad and drenched Europe in blood."

Fifty years of unremitting effort have brought our republics far along the road that leads to this goal. Today, as never before, our nations have reason to appreciate the fruits of that progress. For today we are again face to face with the old problem.

PEACE REIGNS IN AMERICAS BECAUSE FEAR IS GONE

Universal and stable peace remains a dream. War, more horrible and destructive than ever, has laid its blighting hand on many parts of the earth. Peace among our American nations remains secure because of the instruments we have succeeded in creating. They embody, in great measure, at least, the principles upon which, I believe, enduring peace must be based throughout the world.

Peace reigns today in the Western Hemisphere because our nations have liberated themselves from fear. No nation is truly at peace if it lives under the shadow of coercion or invasion. By the simple process of agreeing that each nation shall respect the integrity and independence of the others, the New World has freed itself of the greatest and simplest cause of war. Self-restraint and the acceptance of the equal rights of our neighbors as an act of effective will has given us the peace we have had, and will preserve that peace so long as we abide by this ultimate moral law.

Peace reigns among us today, because we have agreed, as neighbors should, to mind our own businesses. We have renounced, each and all of us, any right to intervene in each other's domestic affairs, recognizing that free and independent nations must shape their own destinies and find their own ways of life.

Peace reigns among us today because we have resolved to settle any dispute that should arise among us by friendly negotiation in accordance with justice and equity, rather than by force. We have created effective machinery for this purpose and we have demonstrated our willingness to have full recourse to that method.

A NEW ORDER FOUND, AND NOT BY VIOLENCE

Peace reigns among us because we have recognized the principle that only through vigorous and mutually beneficial international economic relations can each of us have adequate access to materials and opportunities necessary to a rising level of economic well-being for our peoples. In every practicable way we are seeking to bring this vital principle to its realization.

We of this hemisphere have no need to seek a new international order; we have already found it. This was not won by hysterical outcries, or violent movements of troops. We did not stamp out nations, capture governments, or uproot innocent people from the homes they had built. We did not invent absurd doctrines of race supremacy or claim dictatorship through universal revolution.

The inter-American order was not built by hatred and terror. It has been paved by the endless and effective work of men of good will. We have built a foundation for the lives of hundreds of millions. We have unified these lives by a common devotion to a moral order.

The cooperative peace in the Western Hemisphere was not created by wishing; and it will require more than words to maintain it. In this association of nations, whoever touches any one of us touches all of us. We have only asked that the world go with us in the path of peace. But we shall be able to keep that way open only if we are prepared to meet force with force if challenge is ever made.

Today we can have no illusions. Old dreams of universal empire are again rampant. We hear of races which claim the right of mastery. We learn of groups which insist they have the right to impose their way of life on other nations. We encounter economic compulsions shrewdly devised to force great areas into political spheres of influence.

VALUE OF LOVE STRONGER THAN THE VALUE OF HATE

All of this is not of mere academic interest. We know that what happens in the Old World directly and powerfully affects the peace and well-being of the New. It was for this very reason that we have adopted procedures that enable us to meet any eventuality. At Buenos Aires we agreed that we would consult should our peace be threatened. At Lima we agreed to stand together to defend and maintain the absolute integrity of every American nation from any attack, direct or indirect, from beyond the seas. At Panama we worked out ways and means for keeping war away from this hemisphere. I pray God that we shall not have to do more than that; but if it should be necessary, I am convinced that we should be wholly successful. The inner strength of a group of free people is irresistible when they are prepared to act.

In my conception the whole world now is struggling to find the basis of its life in coming centuries.

I affirm that that life must be based on positive values.

The value of love will always be stronger than the value of hate; since any nation or group of nations which employs hatred eventually is torn to pieces by hatred within itself.

The value of a belief in humanity and justice is always stronger than the value of belief in force, because force at last turns inward and if that occurs each man or group of men is finally compelled to measure his strength against his own brothers.

The value of truth and sincerity is always stronger than the value of lies and cynicism. No process has yet been invented which can permanently separate men from their hearts and consciences or can prevent them from seeing the results of their ideas as time rolls by. You cannot make men believe that a way of life is good when it spreads poverty, misery, disease, and death. Men cannot be everlastingly loyal unless they are free.

We acclaim today the symbol of 50 years of the American way. We are determined to continue on that way in friendship. We are determined that our mutual relations be built upon honor and good faith. We are determined to live in peace and to make that peace secure. We are determined to follow the path of free peoples to a civilization worthy of free men.

Capitalism, the Creator

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1940

LETTER FROM HON. ROBERT L. OWEN

Mr. CARTWRIGHT. Mr. Speaker, I ask unanimous consent to insert in the RECORD the following letter from Hon. Robert L. Owen, former United States Senator of Oklahoma, in regard to Carl Snyder's book, Capitalism, the Creator.

APRIL 5, 1940.

Hon. WILBURN CARTWRIGHT,
House of Representatives.

MY DEAR MR. CARTWRIGHT: Carl Snyder's book, Capitalism, the Creator, recently published by MacMillan, is an extraordinarily able defense of American capitalism and its potential power to bring abounding prosperity to the American people and to the world if we could only get rid of the periodic booms and depressions. The book shows how to control booms and depressions, in chapter 13.

It has received the most extraordinary praise from men of the highest standing, some of which I venture to quote, because I wish you to read this book and call it to the attention of your colleagues as of the greatest importance to their political service.

"This book is destined to become the Bible of American capitalism. It is the finest, most convincing volume ever written in defense of the system which is under attack from so many quarters."—John S. Piper, financial editor, San Francisco News.

"It is the first real book on the economics of business which has been produced in this twentieth century."—The American Banker.

"In so many ways is it exceptional that it challenges memory to recall something comparable. It resembles several classics in the gigantic research which its preparation occasioned, in the profundity of knowledge which it conveys, and the stupendous importance to the world and mankind, of the central idea which it presents with apparent irrefutability. It is surely a 'big' book. It is probably a 'great' book, destined to be epochal because of the influence it will exercise on the entire economic structure which

surrounds us. It is difficult to speak about it with restraint."—The Commercial and Financial Chronicle.

"It is my sincere belief that this book will prove to be the most revolutionary work published during the last half-century. From it, I believe, will date a complete reexamination and dissipation of a whole complex mythology of economic, political, and social theory. It will lay, I believe, a whole legion of fallacies. * * * Carl Snyder is one of the few scientific economists the world has produced; one of the first actually to test theories by gathering data and subjecting them to scientific, mathematical examination. * * * This is a book of incalculable importance."—Burton Rascoe.

"It is a masterpiece and will be a monument to your invaluable work in this field."—Lionel D. Edie, economist.

"One of the outstanding books of the decade, which should be required reading for everyone of high-school age and beyond. * * * This book, we venture to say, will be one of the most-talked-of books of the year in its field."—John D. Van Becker, financial editor, San Francisco Call-Bulletin.

"You have created conviction not only by statistics but by a style that conveys completely the personality of the thought. * * * Great stuff—the heady wine of truth, served out with Gargantuan gusto."—Virgil Jordan, president, National Industrial Conference Board, New York.

Incidentally, of course, I am pleased with the book because it confirms the truth of what I have been urging upon Congress with regard to the prevention and control of booms and depressions in this country.

Yours respectfully,

ROBERT L. OWEN.

Necessity for Presence of Sleeping-Car Conductors on Trains Carrying Sleeping Cars

EXTENSION OF REMARKS

OF

HON. ROBERT CROSSER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

Mr. CROSSER. Mr. Speaker, today there was introduced by me a bill for the purpose of preventing the practice of substituting porter-in-charge service for both conductor and porter service on sleeping cars, or in other words for sleeping-car service with a conductor on each train and a porter on each car.

The cars operated without a conductor are of identically the same construction, accommodations, and appointments as are the cars operated under the service of both a conductor and porter. They are, as a general rule, the usual standard type, having upper and lower berths with a cloth curtain dropped in front of the berths, which furnishes the only partition between the berths and the aisles of the cars.

CHARACTER OF PATRONS

The people who travel in these cars are the same kind of people as those who use the cars under conductor supervision. All kinds of people utilize the one just as they do the other—people of both sexes, of all ages; the experienced and inexperienced; the strong and the infirm; the chaperoned and the unchaperoned; unattended women and inconsiderate men. All these are entitled to ride as passengers and from time to time are found in sleeping cars. They are assembled in the car without any power of choice as to relative location. They are all together in one large room with no separation from or protection against each other, so far as physical equipment is concerned, except the cloth curtain hanging in front of the berth.

They are thus assembled for transportation in the nighttime, through the hours when passengers are asleep and powerless to protect themselves or their property.

BEST POSSIBLE SERVICE DEMANDED

The bill is based on the proposition that the character of the service undertaken and the responsibilities assumed by the sleeping car company demand the best possible policing and supervision of all sleeping cars operated in overnight runs. No company should be permitted to assemble people of all kinds and characters in a large room shielded and protected in the dead hours of night by anything less than the best safeguards possible.

PUBLIC ENTITLED TO COMPLETE SERVICE

If we are right in our contention that the nature of the service and the responsibilities undertaken by the sleeping car company demand the highest possible order of policing and supervision, then it must follow that conductor and porter service under conductor supervision should be furnished. No one, I assume, would contend that the combined service is not superior to the porter-in-charge service or to the service of the conductor alone. The public is entitled to both.

STANDARD LONG ESTABLISHED

The fact that the public has had as a general rule the service of both porter and conductor through all the years did not occur by chance. It was due to the reasonable requirements of the traveling public and a recognition of them by the sleeping car company. By long practice, the company has set that standard of service, and should not now be permitted to substitute service that is inadequate.

PROPER SERVICE REQUIRES CONDUCTORS

A full and careful study of the services required on sleeping cars and of the duties imposed upon the conductor and the porter convinces any reasonable person that the standard set is reasonable and that anything less would be inadequate.

DUTIES AND RESPONSIBILITIES OF SLEEPING-CAR CONDUCTORS

Mr. Warfield, for many years an active sleeping-car conductor, and for the past 22 years president of the Order of Sleeping Car Conductors, has described the work of the sleeping-car conductor as follows:

The duties and responsibilities of sleeping-car conductors cover a wide field and require special training different from that of other train-service employees. Special schools of instruction are conducted periodically to keep conductors up-to-date and informed on all matters affecting the safety, comfort, and convenience of passengers. All types of cars and mechanical equipment, including heating and air conditioning, must be studied and their operation and maintenance en route understood.

Each conductor is given a book entitled "Instructions to Conductors." The first part contains instructions on matters pertaining to conductors' duties only.

The second part contains instructions to other car employees, who are under the supervision of conductor; he must, therefore, make himself familiar with their duties as well as his own. The index to subjects covers 14 pages. The manner in which these instructions are to be followed is stated as follows:

"The regulations contained herein are general in character and should be observed in a manner that will not defeat their purpose, which is to make the service popular.

"The most important feature of a conductor's duties at all times and under any conditions is to please and satisfy passengers. When passengers request privileges that cannot lawfully or properly be granted, they should be politely informed that the request is beyond his authority. Do not resort to the expression 'It is against the rules,' but explain the matter in such a way as to avoid giving offense.

"The reputation of the service depends as much upon the efficiency of employees as upon the facilities provided by the company for the comfort of its patrons; it is imperative, therefore, that employees in serving passengers be obliging and courteous at all times, alert to anticipate their wants and diligent and cheerful in executing orders.

"Conductors are the responsible agents of the company in carrying out all service requirements. Their presence gives passengers the assurance that an authorized representative of the company will supervise all service either requested or anticipated. Among the many and varied duties and responsibilities of conductors are the following:

"(a) See that cars are properly cooled or heated prior to the time they may be opened to receive passengers.

"(b) To require that all porters be in proper uniform.

"(c) To regulate the temperature both of the air-conditioning device and the heating equipment, which is a matter of grave concern to the health, comfort, and convenience of passengers; to regulate these devices and receive special instructions in other operations which are not given to any other train-service employees.

"(d) Give special attention and care to old people, children, sick persons, and college girls, as well as others who require personal service and who are committed to his special care; such attentions are often required by old women who are blind or otherwise unable to care for themselves, and who are placed on the train under the special care of the conductor, who must see that their every need is fulfilled, including serving their meals in their section, putting

them off at their proper destinations, providing them with wheel-chairs, and any other service that may be necessary. Likewise, children of tender years, who are unable to care for themselves and who are committed to the care of the conductor, will be carefully watched while en route and delivered safely to their relatives, friends, or proper authorities at the end of their trip. Give first-aid treatment to passengers who become ill, and when necessary summon a physician. Give special attention to passengers in case of wrecks. They must be removed to a place of safety and first aid administered to the injured, summoning medical assistance, and rendering any other service for their care, convenience, and comfort.

"(e) Furnish information about schedules of connecting lines and all other means of transportation, such as boats, airplanes, and busses.

"(f) Crippled or deformed persons, mental or physical, who are committed to the care of the conductor must be carefully attended and all their needs supplied.

"(g) Maintain proper decorum in the cars, handling all cases of disorderly conduct, excessive drinking, boisterous talking, and undesired attentions between passengers so that no complaint will arise.

"(h) When switching of cars is done and they are separated one from another, see that the tail-gates are erected in proper position at each end of the cars to prevent passengers from falling and becoming injured.

"(i) See that all passengers are assigned to their proper accommodations, that the cars are kept clean at all times and supervise the work of porters so that their duties will be properly carried out."

Constant policing of cars is a necessity. The presence of conductors is a deterrent to disorderly conduct. This condition exists on all trains irrespective of the numbers of cars, and nothing less than the services of both conductors and porters will suffice for adequate protection of passengers.

WITHDRAWAL OF CONDUCTORS UNFAIR TO PUBLIC, TO PORTERS, AND CONDUCTORS

To withdraw from the sleeping-car service the specially trained conductor and to impose upon the porter the manifold duties of the conductor in addition to his duties as a porter is unfair to the public, to the porters, and to the conductors.

(a) Unfair to public

Nothing more needs to be added to what has already been said to demonstrate the unfairness to the public of the practice of which complaint is made, except perhaps to add that the passenger in the porter-in-charge car pays the same fare as the passenger in the car with the complete service. His rights are the same and his needs are the same. That it is a palpable discrimination to deny him the same service is obvious.

(b) Unfair to porters

The porter-in-charge practice is unfair to the porters. When the company eliminates the conductor and places a porter in charge it does not promote the porter to the rank of conductor or pay him a conductor's wage. It keeps him in the porter's rank and pays him a small additional amount above the standard rate of porters' wages for discharging the conductor's duties.

STATEMENT OF A. PHILIP RANDOLPH

The very able president of the Brotherhood of Sleeping Car Porters, A. Philip Randolph, denounced the unfairness of this practice in an address, printed in the American Federationist for August 1939, from which the following is quoted:

Concretely speaking, Pullman porters may run in charge of one car at a small differential in wages above the standard rate, but they are not promoted to the rank of conductors. * * *

These in-charge jobs only serve to displace a Pullman conductor or dining-car steward, thereby bestowing an unfair economic advantage to the carriers. This does not mean that Pullman porters should not desire to be promoted to conductors or that dining-car waiters should not aspire to become dining-car stewards. This is their right. But it does mean that these hyphenated occupational honors and advantages are more apparent than real.

(c) Unfair to conductors

Mr. Randolph, in the language just quoted, points out the unfairness of this practice to conductors. He says—to quote again:

These in-charge jobs only serve to displace a Pullman conductor or dining-car steward, thereby bestowing an unfair economic advantage to the carrier.

NO CONTROVERSY BETWEEN CONDUCTORS AND PORTERS

Mr. Randolph recognizes that this is in no sense a controversy between the conductors and porters but between the sleeping-car company on the one side and the conductors and porters on the other; the conductors fighting for their economic lives and the porters protesting against being used by the company to destroy the conductors while receiving no real benefit themselves.

LOSS OF CONDUCTOR JOBS

If it be said that conductors protest against the loss of jobs, they will not deny it. Of course, they desire to keep their jobs if possible. They would be less than human if they did not wish to do so. We have not yet reached the point from which we can view with unconcern and indifference the thrusting into the ranks of the unemployed men who have invested their lives in honorable and useful service as sleeping-car conductors.

We should be proud to stand for a policy which both serves the public interest and gives employment to honorable and worthy men. I submit that this is the sort of business policy which the country needs at this hour.

TRAIN CONDUCTOR DOES NOT SUPERVISE SLEEPING CAR

It is no answer to the demand for sleeping-car supervision to claim that adequate policing and supervision are furnished by the train conductor for such is simply not the case.

The train conductor has general charge and direction of the train; but he does not and cannot, as a practical matter, furnish the constant, protective supervision necessary in sleeping cars. He is called upon when needed to straighten out some acute trouble after its occurrence. The public is entitled to preventive precautions, the kind afforded by the presence of the porter and sleeping-car conductor.

The sleeping car company obligates itself by contract with the several railroad companies carrying its cars to furnish the necessary employees to care for its own cars. The railroad companies are entitled to look to the sleeping car companies for the discharge of its obligations and do so rely upon it. The public must likewise look to it for adequate supervision of its cars.

SHORT-SIGHTED BUSINESS POLICY

The policy complained of is not only unfair to the public and to porters and conductors, but it is, I submit, unwise from the company's own standpoint.

The sleeping-car business depends on public favor and patronage. It no longer has a monopoly on passenger transportation. The percentage of passenger travel which the railroads and sleeping-car companies will enjoy depends on the kind of service rendered, and service requires not only physical equipment but human agencies. The best salesmen of the sleeping-car service are the men in charge of the cars. The discharge of conductors means the elimination of the company's best salesmen. This, of all times, is not the time for the sleeping-car company to be depriving itself of the supervisory and salesmanship services of sleeping-car conductors by discharging men, or to deprive itself of their highest loyalty and most efficient service by holding over the heads of those left in the service the constant threat of unemployment.

NEED FOR LEGISLATION

The representatives of the sleeping-car conductors have sought to correct the evil here complained of, by negotiation and agreement, but without success. Resort has been had to the National Railroad Adjustment Board, but its rulings have been disregarded.

Various State railroad commissions, on their own initiative, have made orders designed to correct the evil within the limits of their jurisdictions. These orders have been resisted.

The matter is now presented to the Congress, and properly so for two reasons:

First. The primary interest involved is the public interest.

Second. Congress alone has adequate power to act in the public interest.

Free Waterways Provide an Essential Yardstick for Low-Cost Transportation of Agricultural Products

---

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

Mr. CULKIN. Mr. Speaker, the railroads' driving to a "Garrison finish" in an attempt to take over and destroy water and truck transportation through the medium of the Wheeler-Lea bill (S. 2009) have endeavored to make the public believe that waterways play no important part in our economic system and in the transportation problems of the farmer and consumer. This propaganda of the railroads marshaled and stimulated by a disbursement of over $200,000,000 since 1920 has made some strange converts.

I was amazed last year by the attitude of some of the Repsentatives from the Western farm area who not only voted for this bill but spoke in defense of it. I agree with these gentlemen that the railroads have played and are playing an essential and important part in the development of America.

I have a great deal of admiration for the solid merits of these gentlemen and for their high integrity. Their attitude, however, ran counter to the viewpoint of the United States Army Engineers and to my own viewpoint. The engineers, be it said, are the greatest living economists on water transportation and are definitely imbued with the belief that unfettered water transportation is the only available yardstick by which oppressive and destructive railroad rates can be measured and reduced. Without claiming to be a technician in this field myself, I beg leave to state that for 12 long and weary years I have been a member of the Rivers and Harbors Committee of the House and have been fairly diligent in my work on said committee. During that time I have heard times without number that exorbitant railroad rates was one of the mortal diseases of the farmers. I heard farmers from the Western States give emphatic testimony to the fact that the high transportation rates was the thing that was destroying them. I will give three instances of this type of testimony which particularly impressed me.

HIGH RATES DESTROY BOTH PEOPLE AND LOCALITY

One project brought out the testimony of a farmer from the Snake River country in Idaho that it cost him as much to carry his wheat a hundred miles as the wheat brought in the open market. Another was the case of the farmer in the apple country of the State of Washington who said he went into that territory at the instance of railroad promotion. He stated that in the year in question he had a crop of apples in his orchard unpicked which he could sell in the eastern market for $20,000, but the freight on them to the eastern seaboard was $15,000—spraying his orchards, handling the crop, and barreling them would cost him an additional $8,000. It left him confronted with a total disbursement of $23,000 as against a $20,000 return. He told the committee with bitter emphasis that he and his sons had spent a great part of their lifetime bringing the orchard into bearing and that he was ruined by high transportation rates. He further said that when he went into that country the railroads had told him then that when the country was populated more thickly the rail rates would be reduced, but that they were now three times as high as when he had cast in his fortunes with that section. The reverse side of the economic tragedy was that there were plenty of consumers in the United States who wanted these apples.

I early came to the conclusion that without adequate low-cost transportation vast areas in the United States would in fact be marooned and that there would be no economic deliverance from these conditions, until such time as the unconscionably high railway rates, most of which were based on a fictitious capitalization, were materially reduced. The issue appealed to me as one that was part of the warp and woof of our economic system. It came to be my fixed belief that the transportation of bulk commodities here as abroad should be done by water transportation by which method it could generally be carried for one-tenth of the railroad rates.

FARM ORGANIZATIONS AGAINST BILL

I knew, of course, that the agriculture organizations of my colleagues' States and other national agricultural organizations did not agree with their conclusions. Corroborative of this, on April 2, 1940, I placed in the RECORD, at page 1827, the attitude of the various farm organizations on the Wheeler-Lea bill (S. 2009). I suggest that the Members of the House examine this compilation.

In fairness to my colleagues from the farm States who voted for the Wheeler-Lea bill, may I state the matter of actual benefits accruing from the development of water transportation is a somewhat involved matter. It is made highly complex and complicated by the crazy-quilt railroad rate structures, entirely lacking in rhyme or reason which the railroads had demanded and obtained from the Interstate Commerce Commission. However, a brief analysis of these benefits will convince the most skeptical that the savings to the farmer are very great and widely distributed, way beyond the area of the water transportation.

Geographically, it is a far cry from Kansas or Iowa to New York, yet the western farmers' grain is now carried by rail across New York State at one-quarter of the carrying charge per bushel that obtains in the State of Montana, the home State of Senator WHEELER, the distinguished proponent of this bill.

NEW YORK STATE SHOWS THE WAY

The House will be interested in knowing that in a recent discussion on this question before the Town Hall in New York City the participants were Senator Wheeler, Mr. Pelley, president of the Association of American Railroads, and Mr. Eastman, of the Interstate Commerce Commission. It is worthy of note that no representative of the waterways was present on the program. Queried from the floor, none of these gentlemen could tell why this rate was so low in New York and so high in Montana. The answer, of course, is simple. It is due to the fact that New York State maintains at its own cost an elaborate system of barge canals, toll free, which the people of the State of New York estimate saves them $50,000,000 a year in freight rates.

PROPOSED WATERWAYS LOWER RATES

A great hue and cry is raised by the railroads and their proponents that the improved waterways in the Mississippi and Missouri River areas have not developed the tonnage that would justify the cost. The answer to that is likewise simple. Beginning with the adoption of any such program by Congress and almost invariably before its completion, the railroads through its puppet instrumentality, the Interstate Commerce Commission, immediately inaugurated a series of rate reductions on all of the commodities which are actually adapted to economic transportation by water. Invariably, the normal rail rates, prior to the authorization of the building of the waterways, is so unjustifiably high that the mere threat of waterway transportation in the area results in greatly reduced rates. No figures are, of course, available as to this saving, but it runs into hundreds of millions of dollars a year, which saving is invariably reflected back to the farmer, consumer, and the shipping public.

I cite on this point the proposed waterway connecting Tombigbee and Tennessee Rivers in Alabama and Mississippi which was initiated and mistakingly rejected in the first session of this Congress. The engineers found that lack of low-cost transportation was holding this region back, and the development of this waterway would give impetus to the development of the rich natural resources of the section. The people of this area were living practically from hand to mouth, and the United States Army engineers diagnosed their economic disease as springing from high transportation

costs. The engineers made a favorable report on this waterway. After the project was initiated, and before the favorable report came in from the engineers, the railroads made a petition to the Interstate Commerce Commission to reduce their rates in this area 50 percent. Mr. J. Carter Fort, general solicitor for the Association of American Railroads, claimed they could do this without burdening other traffic or subsidizing the line, and the half rates petitioned for would be compensatory to the railroads. I trust the House will get the force of my reasoning. Here is a great region, populated by fine Americans, with great natural resources, that has been marooned for 50 years by reason of oppressive and unjust rail rates. The mere approach of a water improvement in this section was sufficient to make the railroad acknowledge these facts.

FARMERS HELPED IN MIDDLE WEST

An excellent example of the influence of water transportation is found in the reduction of the rail rate on grain from St. Louis to New Orleans for export. The old rail rate was 18 cents per 100 pounds. In 1929, to meet water competition, the railroads published a rate of 11 cents per 100 pounds—increased last year to 11½ cents. This reduction from 18 cents to 11 cents caused an immediate corresponding reduction in the rates from Kansas City and Omaha, and automatically from all interior Nebraska, Kansas, Dakotas, and Iowa producing points, amounting to 7 cents per 100 pounds. Thus, the Omaha-New Orleans rate, which was 31½ cents, became 24½ cents, and is now 25 cents. Rates from interior Nebraska and Kansas points, such as Wichita and Hutchinson, to other Gulf ports, such as Houston and Galveston, were at the same time reduced 7 cents per 100 pounds.

The rail rate on corn from Kansas, Nebraska, and South Dakota points to the Pacific coast was 65 cents per hundred pounds until corn began to move from Illinois and Iowa via the Mississippi River to New Orleans and thence via the Panama Canal to the Pacific coast. The rail rate from points west of the Missouri River to the Pacific coast was thereupon reduced to 50 cents per hundred pounds. When the ocean lines increased their rates the rail rate was correspondingly increased to 55 cents and is now 58 cents—still 7 cents per hundred pounds under the old rate. On the other hand, the rate on wheat to the Pacific coast was not affected by this competition and remained at 68 cents from points west of the Missouri River to the Pacific coast. The Missouri River itself is now being improved by the Army engineers and will undoubtedly, if not hamstrung by restrictive legislation, result in further sharp reductions.

Barge and steamer competition, actual or potential, has resulted in many other drastic cuts in rail rates. The rate on grain from St. Louis to Miami was reduced from 52 cents to 38 cents per hundred pounds—from Memphis to Miami the reduction was from 45 cents to 34½ cents per hundred pounds. In 1938 the southeastern railroads made general reductions from all Ohio River and Mississippi River crossings to the entire Southeast, in order to meet competition of grain moving by water to Gulf and South Atlantic ports and thence inland. These reductions automatically applied from all of the producing territory north and west of the Ohio and Mississippi Rivers.

From Kansas City to New York the rate in 1920 was 55 cents per hundred pounds on domestic traffic, 53½ cents for export. These rates have been reduced until in 1938 they were placed at 42 cents and 33½ cents, respectively. Again is seen the influence of the barge canal.

Last year the railroads reduced the rate on wheat, ex-lake, from Buffalo to New York to meet barge competition on the New York State Barge Canal from 18 cents per hundred pounds to 8.33 cents per hundred pounds.

Just last month the Interstate Commerce Commission allowed the Illinois Central to reduce rates on grain from Illinois points to New Orleans, an average of about 6 cents per hundred pounds, in order to meet large competition (I. & S. docket, 4689).

It is, therefore, clear that those who contend that the farmer has not received and does not now receive a large share of the benefits of water transportation has failed to investigate the facts and have leaned too heavily upon the false propaganda of those interests which would force upward the water rates and allow the railroads to return to a universal application of the practice of charging exorbitant noncompetitive rates.

In 1922 the railways established sugar rates from Atlantic and Gulf ports into the territory embracing Chicago, St. Louis, Dubuque, Milwaukee, Indianapolis, Cincinnati, Louisville, and so forth, ranging from 50 cents to 54 cents per hundred pounds. In 1933, because of inland waterway competition, the railroads applied to the Interstate Commerce Commission for permission to reduce these rates to 32 cents and 34 cents per hundred pounds, which latter rates they acknowledged were fully compensatory.

SAVINGS GO TO FARMER

It has been further loudly contended that in those cases where water transportation is actually used the savings are pocketed by the middleman and not passed on to the producer or consumer. That statement has been so often refuted by unimpeachable evidence that it should seem unnecessary to go into the matter here—that those who have undertaken to propagandize in favor of strangulation of water services seem to be proceeding on the theory that if an untruth is repeated often enough, regardless of the facts, it will eventually be accepted as a truth. Let us, therefore, review that situation a little. Corn moves from Muscatine, Iowa, by barge down the Mississippi River. The records of the McKee Feed & Grain Co. of that city, which handles a large part of this corn, show that they paid producers in that vicinity from 3 cents to 6 cents per bushel more than they could have possibly received if it had been shipped by rail. W. W. Dewey & Sons, Inc., are grain dealers in Peoria, Ill., and have elevators located both on and off the river. A comparison of the prices which they paid at their elevator at Henry—which has no water connection—with those paid by them at Pekin—which has a water connection—during the month of June 1939, taken from their records, is as follows:

	No. 2 corn		No. 2 wheat	
	Henry	Pekin	Henry	Pekin
	Cts. per bu.	*Cts. per bu.*	*Cts. per bu.*	*Cts. per bu.*
June 1	44	46	68	69
June 2	44	46	68	69½
June 3	44	45½	68	69

Percentage price increase to farmer on grain carried by water	*Percent*	*Percent* 4.2	*Percent*	*Percent* 3.7

The Lone Tree Farmers' Exchange, a farmers' cooperative located at Lone Tree, Iowa, recently stated that during 1938 it moved over a million bushels of corn by river and paid the producers from 3 to 6 cents per bushel more for it than it could have paid had it used the railroads. This cooperative further stated that it estimated an increased profit of 30 percent on corn which it moved by river, which was included in the profits distributed to its participating members.

At a recent hearing before the Interstate Commerce Commission, Mr. J. O. McClintock, manager of the Chicago division of the Farmers National Grange Corporation, testified that competition compels all dealers to pass savings in transportation costs back to the producer and on to the consumer. At the same hearing, Mr. C. L. Kienzle, traffic manager of S. Zorn & Co., of Louisville, Ky., testified that grain transported by barge sells in the Southeast for from 1 to 2½ cents cheaper than grain shipped by rail. Another interesting bit of testimony at the same hearing was given by Mr. Bert Collins, manager of the Checker Board Elevator Co., as follows:

Question. When you say you can't meet the competition of the man who uses the barge line, you mean he pays the producer more than you can afford to pay him?

Answer. Yes, sir.

Question. And, when selling in the South, they can sell it cheaper than you can, and you can't meet the competition there?

Answer. Yes, sir.

Question. So the producer and the consumer both get better bargains in the South, where it is handled by the barge lines, than you can give on account of your rail transportation being higher?

Answer. I assume that is the case.

COAL A NECESSITY TO COMMON MAN

Coal is a commodity well adapted to water transportation and the savings accruing when all or a part of the movement can be made by water are very large. For instance, the rail rate on bituminous coal from Belleville, Ill., to Minneapolis is $3.61 a ton. The rail rate from Belleville to East St. Louis or Alton is 85 cents a ton. The barge rate from East St. Louis or Alton to Minneapolis is $1.85 a ton. There is, therefore, a saving of 91 cents a ton on coal shipped by rail to the river and thence by barge to Minneapolis. That these savings are passed on to the consumer was strikingly illustrated by the recent testimony of Mr. Earl C. Peterson representing the Midland Cooperative of Minneapolis at a hearing before the Bituminous Coal Division of the Interior Department. Mr. Peterson testified that coal moving to upper Mississippi River cities by barge was delivered to ultimate consumers at savings ranging up to $1.30 a ton under the prices charged for coal moving all-rail.

HIGH RAIL RATES DESTROYING COAL MINES AND MINERS

The anthracite and bituminous coal associations have times without number made application to the Interstate Commerce Commission for reductions in the cost of transportation of coal, but without result. In the northern latitudes coal is an essential item of disbursement for the very poor. It is an item of first importance in our industrial set-up. Today the coal business is a sick industry due to the fact that high railroad rates have made hydroelectro power and petroleum products competitive. Petroleum products are carried up the coast at a cost of five-eighths of a mill per ton-mile. Railroad rates on coal have been skyrocketed beyond all conscience and decency. The high cost of rail transportation is the cancer that is taking the life out of the coal industry, and destroying the miners and operators alike.

In a decision just handed down by the Interstate Commerce Commission in case No. 27669, a reduction in rates was denied to the petitioner, the Commission standing 6 to 5 on the question. I wish to commend the vision and intelligence of the dissenting Commissioners. The majority of the Commission, however, remained true to its ancient allegiance. They are destroying the miners and the operators, and this indicates they are completely without vision or conscience. If a majority of the Commission is unwilling and unable to give relief in a situation such as this, what will happen to the waterways when they get jurisdiction? The American people—farmer, consumer, and industrialist alike—will pay through the nose for any and all types of transportation.

Savings from water transportation are invariably reflected back to the consumer and the public. This is inevitable.

During the debates on the Wheeler-Lea bill at pages 9733 to 9742 of the RECORD of July 22, 1939, I placed therein affidavits and certificates from 87 dealers in petroleum products showing that the savings in transportation costs were reflected back to the people. Savings during recent years in the cost of transporting petroleum products, great quantities of which are moved by water by specialized carriers, have been a large factor in the general reduction of the cost of gasoline throughout the entire country as evidenced by the following table presented by the American Petroleum Institute:

Average annual price per gallon of gasoline, 50 representative cities, 1920–38

Year	Service station (exclusive of tax)	State gasoline tax	Service station (including tax)
1920	$0.2974	$0.0009	$0.2983
1921	.2611	.0020	.2631
1922	.2482	.0038	.2520
1923	.2106	.0091	.2197
1924	.1947	.0148	.2095
1925	.2009	.0211	.2220
1926	.2097	.0241	.2338
1927	.1829	.0280	.2109
1928	.1790	.0304	.2094
1929	.1792	.0350	.2142
1930	.1617	.0378	.1995
1931	.1300	.0400	.1700

All of the foregoing gives irrefutable evidence of the great part which water transportation is now playing in bettering the conditions of producers and consumers throughout the United States. Competitors of the water carriers have expended large sums and great energy in partially successful attempts, in which they were aided and abetted by the Interstate Commerce Commission, to prevent large areas and many shippers from having access to a proper participation in these savings. They have in numerable instances slashed rates to noncompensatory levels on traffic moving by water—while maintaining their rates at high levels on traffic not adapted to water movement. They have refused to enter into joint-rate and through-route arrangements with water carriers, as well as with motor carriers. The railroads' activities in connection with prevention of development of joint rail and motor services being the cause of their recent indictment for violation of the antitrust laws.

COMMISSION DEFIES CONGRESS

In 1928 the Congress sought to provide for the establishment of rail and water through-route arrangements by the enactment of the Dennison Act which provides in part that when a common carrier by water made application to the Interstate Commerce Commission and was granted a certificate as such the Commission "shall, thereupon, by order, direct all connecting common carriers and their connections to join with such water carrier in through routes and joint rates," and shall in such order "fix reasonable minimum differentials between all-rail rates and joint rates in connection with said water service," and so forth. That would seem to be sufficiently clear—and to be a distinct statement of the rights of shippers to have access to through movements at proper rates reflecting the savings accruing from the water portion of the movement. The result of the holdings by the Commission, however, has been something else. The maximum differential of which I can find any record is 20 percent under the all-rail rate—which does not begin to show the full savings. In many cases this has been narrowed to 10 percent, 5 percent, or denied entirely. In 1934 the Commission entered into a general investigation of all such rates which had been established and threw the whole business into confusion and chaos.

The railroads, well staffed with lawyers and "experts," joined wholeheartedly and assisted in building a record so huge and so involved that it is doubtful if even they can understand it.

RUTHLESS PROCEDURES

The water carriers, unequipped for such a tremendous undertaking, were at a considerable disadvantage, and the shipper was practically out in the cold. For 5 years hearings were held—15,000 pages of testimony and over 1,300 exhibits. By

the time briefs were called for, a large proportion of the evidence was out of date and no longer represented the true situation. The case is still pending before the Commission, nearly 6 years after it was started, and no one can yet say what the rates will be, on what basis they will be built, nor even if there will be any which can be economically used. This is the Commission unto whom the railroads would deliver the water carrier, lock, stock, and barrel. This is bureaucracy at a new antisocial and criminal low. This is the sort of proceeding it is intended to impose on every little water carrier and every shipper who desires to avail himself of water transportation. It is no wonder that the farmers, as well as the other shippers of the country, are alarmed, are cautioning Congress to proceed with care and deliberation, are demanding a chance to study this legislation, and are in increasing numbers insisting that the waterways be left free for the use of all.

The founding fathers had no illusions about the importance of water transportation. Before the birth of the Constitution and the Colonies were still under the Articles of Confederation, the Continental Congress, on July 13, 1787, passed the Northwest Ordinance. Writing into the law the theory of free transportation, the founding fathers said in article IV of the Northwest Ordinance:

> The navigable waters leading into the Mississippi and St. Lawrence, and the carrying places between the same, shall be common highways, and forever free, as well to the inhabitants of the said territory as to the citizens of the United States, and those of any other States that may be admitted into the Confederacy, without any tax, impost, or duty therefor.

This pending legislation will undo the spirit and letter of that great document which I am advised is still the law today in many of the Western and Mississippi Valley States.

I desire to cite one more eminent authority on this question. Theodore Roosevelt, one of the greatest of American Liberals, while still President of the United States, made an address in Memphis, Tenn., on October 4, 1907. In this speech he reiterates the declaration contained in the Northwest Ordinance, and declared for free waterways, unfettered by bureaucratic or monopolistic control. He summarizes most effectively the argument I have attempted to make in the foregoing discussion. I quote him verbatim:

> Such being the case, this valley being literally the heart of the United States, all that concerns its welfare likewise concerns the whole country. Therefore the Mississippi River and its tributaries ought by all means to be utilized to their utmost possibility. Facility of cheap transportation is an essential of our modern civilization, and we cannot afford any longer to neglect the great highways which Nature has provided for us. These natural highways, the waterways, can never be monopolized by any corporation; they belong to all the people, and it is in the power of no one to take them away. Wherever a navigable river runs by railroads, the problem of regulating the rates on the railroads becomes far easier because river regulation is rate regulation. When the water rate sinks the land rate cannot be kept at its excessive height. Therefore, it is of a national importance to develop these streams as highways to the fullest extent which is genuinely possible.

Political Neutrality of the Civil Service

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16 (legislative day of Monday, April 8), 1940

ARTICLE BY H. ELIOT KAPLAN

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by H. Eliot Kaplan, entitled "Political Neutrality of the Civil Service," appearing in the Public Personnel Review of April 1940, the quarterly journal of the Civil Service Assembly of the United States and Canada.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Public Personnel Review for April 1940]

POLITICAL NEUTRALITY OF THE CIVIL SERVICE

(By H. Eliot Kaplan)

As the rapid expansion of Government service brings with it new responsibilities toward industry and potential impingement on individual liberties, the problem of neutralization of our public service becomes a subject of grave consideration. In 1939 the Hatch Act, prohibiting political activity of Federal employees, was adopted. Legislation to apply the Hatch Act to State and local agencies receiving Federal grants-in-aid has been introduced, and there is a demand for State laws curbing political activity of State and municipal employees. These facts prompt a reexamination and appraisal of the question of how far, if at all, the political privileges of civil-service employees should be abridged under a democratic form of government.

Many who oppose restrictions on political privileges of public employees argue that such stringent prohibition against civil liberties of a great class of our citizens is a great and ominous departure from our traditional democratic principles. It is claimed that such denial of equality under the democratic concept is unheard of in a true democracy, and that it strikes at our fundamental rights of free speech and free assembly available to all citizens alike.

Is the trend definitely in the direction of stringent neutrality of the public service in the United States? Is this trend only a passing fancy born of current political expediency? Or is this the beginning of a positive movement deliberately designed to curb the potential danger of a politicalized bureaucracy? If the latter is the real purpose, how far should restriction on political activity of public employees go? Where should the line be drawn between necessary political education by those best informed through actual practice with government administration, and uncontrolled political dominance by officeholders uniquely situated to propagandize for the "ins" against the "outs," and virtually controlling the balance of political power in our National and State governments?

VIEWS OF THE EARLY PRESIDENTS

Before examining the philosophy of political privileges of public employees in a democracy such as the United States, let us briefly review the history of political restrictions on public employees in this country.

In Washington's day our Government service was naturally not very extensive. The number of Federal employees was relatively small. The desires of the first President of the United States and the essential need for competence in public office in a newly formed republic were potent safeguards against the patronage system. The imperative concern of the leaders of the first administration for impartial administration of Federal affairs in an experimental period prompted the employment of persons of recognized ability for the particular tasks assigned to them. Nonpartisanship was not only recognized as politically expedient but was a policy actually practiced during the first political administration in the United States.

President Washington was not unaware of the problem of neutrality of the civil service as a practical problem of governmental administration even in his day. While not indebted to any political party or faction for his election, he was nevertheless subjected to more than a little pressure from both personal and political advisers. He was of course partial to the Federalists. Undoubtedly with the gradual rise of party politics during his second administration, Washington gave more than a little consideration to the political assets of some of his later appointees. Washington was probably as concerned as any Chief Executive with the selection of subordinates in sympathy with his policies. That he considered this element as an important and necessary qualification for appointment to Federal office is indicated by his letter to Timothy Pickering (September 1795) in which he stated:

"I shall not, while I have the honor of administering the government, bring men into office of consequence knowingly whose political tenets are adverse to the measures the general government is pursuing; for this, in my opinion, would be a sort of political suicide."

There is little evidence, however, that any pressure had been brought to bear on the rank and file of officeholders to engage actively in partisan political activity during the administration of our first President. There was undoubtedly little need for it.

With the campaign of President John Adams more distinct party lines were drawn. Our two-party system showed definite signs of development and potential exploitation. Adams, although following in large measure the policies laid down by Washington, nevertheless found it politically desirable to remove some of the earlier appointees who appeared to have been "politically disrespectful" to his new administration. It is doubtful whether John Adams was really desirous of requiring his subordinates to engage in partisan politics in administering affairs of his Government, but the pressure from the rising political organizations was probably too great for Adams to withstand. After he left the Presidency, Adams complained to a friend that "The President had not influence enough and is not independent enough. Parties will not allow him to act for himself." He summed up his view of the Presidential responsibility with regard to appointments thus:

"The President has, or ought to have, the whole Nation before him, and he ought to select the men best qualified and most meritorious for offices at his own responsibility, without being shackled by any check of law, Constitution, or institution. Without this unrestrained liberty he is not a check upon the legislative power nor

neither branch of it. Indeed, he must be the slave of the party that brought him in. He never can be independent or impartial."[1]

Nevertheless it plainly appears that John Adams removed some subordinate officers for partisan political activity. For example, he ousted the collector at Portsmouth and the commissioner of loans of New Hampshire upon recommendation of some of his local political mentors. The complaint was that "their political conduct has been disrespectful to the Government and offensive to good men in the extreme." It was admitted that their work otherwise was quite satisfactory. Their removal was placed on the lofty plane that "justice to the public requires the removal of these men. They surely cannot complain if that Government which is the object of their execrations should weaken their means of injuring it and abusing it."[2]

The first really bitter political campaign developed with the election of Thomas Jefferson. The Jeffersonian Republicans clamored for the ousting of the Federalists who had been swept out of power. Jefferson found that practically all the Federal offices were filled with adherents of the opposing political party. The relatively small number of removals made by Adams was magnified and used as a pretext for urging the ouster of the Federalists. Although Jefferson firmly believed that "fitness for the position and respectable and unexceptionable character" should be required for appointment to the public service, and that removals should not be made because of differing political principles, the temper of the victorious Republicans was much too great for him to resist and overcome. Jefferson, however, moved cautiously. He sought to make removals only where some evidence appeared that the incumbent was guilty of undue political activity against the administration. Slowly, over a period of 2 years, Jefferson removed many of his political opponents from the service.

Under Jefferson the Republican Party was not yet quite united. Realizing this situation, Jefferson, 3 days after his inauguration, wrote to James Monroe:

"I have firmly refused to follow the counsels of those who have advised the giving of offices to some of their leaders in order to reconcile. I have given, and will give, only to Republicans under existing circumstances. But I believe with others that deprivations of office, if made on the ground of political principles alone, would revolt our new converts and give a body to leaders who now stand alone. Some, I know, must be made. They must be as few as possible, done gradually, and bottomed on some malversation or inherent disqualification. Where we shall draw a line between retaining all and none is not yet settled, and will not be until we get our administration together, and perhaps even then we shall proceed a talons, balancing our measures according to the impression we perceive them to make."[3]

Based, no doubt, on his experience with the political activity of Federal officeholders during the Presidential campaign in which he was involved, Jefferson in 1802, in attempting to stop electioneering by governmental employees, had the following order proclaimed by the heads of the Federal departments:

"The President of the United States has seen with dissatisfaction officers of the General Government taking, on various occasions, active part in elections of the public functionaries, whether of the General or of the State governments. Freedom of election being essential to the mutual independence of governments * * * so vitally cherished by most of our constitutions, it is deemed improper for officers depending on the Executive of the Union to attempt to control or influence the free exercise of the elective right. * * * The right of any officer to give his vote at elections as a qualified citizen is not meant to be restrained, nor, however given, shall it have any effect to his prejudice; but it is expected that he will not attempt to influence the votes of others, nor take any part in the business of electioneering, that being deemed inconsistent with the spirit of the Constitution and his duties to it."

With the advent of Andrew Jackson, the system of removals for political reasons was at its height. Political partisanship had grown to almost a religion. The demand to "turn the rascals out" transcended all other considerations. Economical and efficient administration of governmental affairs was given only casual consideration. But even in this seemingly unwholesome atmosphere of political barter and chicanery, Andrew Jackson appreciated the patent need for nonpartisanship in government. As early as 1812, in a more sober moment and in a more detached mood, Jackson wrote to President-elect James Monroe:

"The chief magistrate of a great and powerful nation should never indulge in party feelings. His conduct should be liberal and disinterested, always bearing in mind that he acts for the whole and not a part of the community."

FIRST RULES AGAINST POLITICAL ACTIVITY

Restrictions on the political activities of public-office holders are not new or even recent. Such restrictions were applied to certain public officials, such as judges, court clerks, and police officers, long before the civil-service laws were adopted. These inhibitions were invoked either by statute, administrative rule, or as a part of a code of ethics in actual practice.

[1] The Works of John Adams, ed. Charles Francis Adams IX, 634.

[2] The Doctrine of Civil Service Neutrality in Party Conflicts in the United States and Great Britain, by Wei-Kiung Chen, University of Chicago, June 1937.

[3] The Writings of Thomas Jefferson, VIII, 10.

The earlier civil-service laws prohibited political considerations in appointments and promotions, and prohibited political assessments of employees in the competitive (classified) service. Beyond these inhibitions the earlier laws did not go. But even before civil-service laws were considered, political statesmen appreciated the necessity for keeping the political activity of public employees within reasonable bounds. In 1841 Daniel Webster, then Secretary of State, issued at the direction of President Harrison an order prohibiting political activity by Federal employees. President Hayes in 1877 issued an order against political activity of Federal employees and prohibiting political assessment. Within 4 years after the adoption of the present Federal Civil Service Act, President Cleveland, on July 14, 1886, issued an Executive order forbidding political activity of employees in the Federal civil service; but lacking statutory authority, its application to employees outside of the competitive civil service became difficult to enforce. Cleveland's order read as follows:

"I deem this a proper time to especially warn all subordinates in the several departments and all officeholders under the General Government against the use of their official positions in attempts to control political movements in their localities.

"Officeholders are the agents of the people, not their masters. Not only is their time and labor due to the Government, but they should scrupulously avoid in their political action, as well as in the discharge of their official duty, offending by display of obtrusive partisanship, their neighbors who have relations with them as public officials.

"They should also constantly remember that their party friends, from whom they have received preferment, have not invested them with the power of arbitrarily managing their political affairs. They have no right as officeholders to dictate the political action of their party associates, or to throttle freedom of action within party lines by methods and practices which pervert every useful and justifiable purpose of party organization.

"The influence of Federal officeholders should not be felt in the manipulation of political primary meetings and nominating conventions. The use by these officials of their positions to compass their selection as delegates to political conventions is indecent and unfair; and proper regard for the proprieties and requirements of official place will also prevent their assuming the active conduct of political campaigns.

"Individual interest and activity in political affairs are by no means condemned. Officeholders are neither disfranchised nor forbidden the exercise of political privileges; but their privileges are not enlarged nor is their duty to party increased to pernicious activity by office holding.

"A just discrimination in this regard between the things a citizen may properly do and the purposes for which a public office should not be used is easy in the light of a correct appreciation of the relation between the people and those entrusted with official place, and a consideration of the necessity, under our form of government, of political action free from official coercion."

Later President Theodore Roosevelt, augmenting the executive order of President Cleveland, sought to differentiate between classified (competitive) and unclassified employees. He required a much stricter compliance on the part of the classified employees, but believed that for most employees in the unclassified service, who were viewed as political appointees, the restriction should be modified so as to preclude the unclassified employees from engaging only in offensive or pernicious political activity, and to prevent the unclassified employees from coercing the political action of the classified employees. President Theodore Roosevelt's order (June 3, 1907) provided:

"Persons who by the provisions of these rules are in the competitive classified service, while retaining the right to vote as they pleased and to express their opinions on all political subjects, shall take no active part in political management or in political campaigns."

Under the June 24, 1938, Executive order of President Franklin D. Roosevelt, active participation of a classified employee of the Federal Government in political management or in political campaigns is specified as one of the causes for which the Civil Service Commission may request the Comptroller General to withhold payment of salary. The pertinent provisions of this Executive order are as follows:

"For the proper supervision and enforcement of its functions, the Commission shall, if it finds that any person has been appointed to or is holding any position, whether by original appointment, promotion, assignment, transfer, or reinstatement, in violation of the Civil Service Act or of the rules promulgated in accordance therewith, or in violation of any Executive order or any regulations of the Commission, or that any employee subject to such act, rules, orders, or regulations is taking active part in political management or political campaigns, after notice to the person affected and opportunity for explanation, certify the facts to the proper appointing officer with specific recommendation for discipline or dismissal; and such appointing officer shall carry out the recommendation. In the event of any continued violation for 10 days after such recommendation, the Commission shall certify the facts to the proper disbursing and auditing officers, and such officers shall not pay or allow the salary or wages of such person thereafter accruing."

The Federal Civil Service Rules have long prohibited political activity on the part of Federal employees whose positions were in the competitive classified service. Rule I now provides that:

"No person in the executive civil service shall use his official authority or influence for the purpose of interfering with an election or affecting the results thereof. Persons who by the provisions

of these rules are in the competitive classified service, while retaining the right to vote as they please and to express privately their opinions on all political subjects, shall take no active part in political management or in political campaigns."

ADOPTION OF HATCH ACT

Implementing this civil-service rule which has been enforced with relative indifference and only casually applied, the Congress last year adopted the proposal sponsored by Senator CARL A. HATCH, of New Mexico, seeking to restrict pernicious political activity of all officers and employees of the executive branch of the Federal Government other than those holding major policy-determining positions. The important provisions of the Hatch Act, signed by President Franklin D. Roosevelt on August 2, 1939, are included in sections 1, 3, and 9, which read as follows:

"SECTION 1. * * * it shall be unlawful for any person to intimidate, threaten, or coerce, or to attempt to intimidate, threaten, or coerce, any other person for the purpose of interfering with the right of such other person to vote or to vote as he may choose, or of causing such other person to vote for, or not to vote for, any candidate for the office of President, Vice President, Presidential elector, Member of the Senate, or Member of the House of Representatives at any election held solely or in part for the purpose of selecting a President, a Vice President, a Presidential elector, or any Member of the Senate or any Member of the House of Representatives, Delegates or Commissioners from the Territories and insular possessions.

* * * * * * *

"SEC. 3. It shall be unlawful for any person, directly or indirectly, to promise any employment, position, work, compensation, or other benefit, provided for or made possible in whole or in part by any act of Congress, to any person as consideration, favor, or reward for any political activity or for the support of or opposition to any candidate or any political party in any election.

* * * * * * *

"SEC. 9. (a) It shall be unlawful for any person employed in the executive branch of the Federal Government, or any agency or department thereof, to use his official authority or influence for the purpose of interfering with an election or affecting the result thereof. No officer or employee in the executive branch of the Federal Government, or any agency or department thereof, shall take any active part in political management or in political campaigns. All such persons shall retain the right to vote as they may choose and to express their opinions on all political subjects. For the purposes of this section the term 'officer' or 'employee' shall not be construed to include (1) the President and Vice President of the United States; (2) persons whose compensation is paid from the appropriation for the office of the President; (3) heads and assistant heads of executive departments; (4) officers who are appointed by the President, by and with the advice and consent of the Senate, and who determine policies to be pursued by the United States in its relations with foreign powers or in the Nation-wide administration of Federal laws.

(b) Any person violating the provisions of this section shall be immediately removed from the position or office held by him, and thereafter no part of the funds appropriated by any act of Congress for such position or office shall be used to pay the compensation of such person."

The complete provisions of the Hatch Act were analyzed by the president of the National Civil Service Reform League in a letter addressed to Members of the House of Representatives in July 1939, when the legislation was under consideration. From this analysis, it is clear that the foregoing sections of the act and other sections not herein quoted forbid:

"1. Intimidation or coercion of others for the purpose of interfering with their votes in national elections.

"2. The promise of employment, compensation, or other benefit as a reward or consideration for political activity or the support of or opposition to any candidate or party; and the deprivation of such employment, compensation or benefit (including work relief) on account of refusal to give such support.

"3. Solicitation of political assessments or contributions from persons paid from relief funds.

"4. Disclosure of the names of persons receiving employment or benefits from relief funds to any political candidate, committee, or campaign manager.

"5. Use of funds appropriated for relief or for public works for purpose of interfering with the right of any individual to vote as he chooses at any election.

"6. Use of official authority or influence by any administrative or supervisory officer to interfere with an election or influence its results.

"7. Activity in political management or political campaigns on the part of any person employed in an administrative or supervisory capacity."

The enactment of the Hatch Act has led to considerable discussion in political circles, among political scientists, students of government, and public employees all over the Nation. With more words than charity, leaders of employees' organizations, statesmen, politicians, legislators, and editors have expressed their views about the implications and construction of the new law. So far as employees in the Federal executive civil service are concerned, all that the Hatch Act does is to extend to the entire Federal civil service the prohibitions against political activity, political coercion, and solicitation of campaign funds which, under the civil-service law, have long been applied to persons in the competitive service. Indeed, these prohibitions would have been applied to more than 90 percent of the employees excepted from the civil-service rules since 1939 had these employees not been kept out of the competitive service by acts of Congress under the plea of emergency.

The provisions of section 9 (a) of the Hatch Act have caused spirited debate. This section deals with the restrictions of Federal employees' political privileges. It has been construed by the Attorney General[4] as applying to the following officers and employees, among others, in the executive branch of the Federal Government:

"1. United States attorneys and marshals, their assistants and deputies.

"2. Special attorneys of the Department of Justice and special assistants to the Attorney General.

"3. Temporary employees, substitute employees, and per diem employees, during the period of their active employment.

"4. Reserve officers of the United States Army, Navy, and Marine Corps during the period of their active duty.

"5. Furloughed employees and employees on leave, whether with or without pay.

"6. Officers and employees of governmental agencies such as the Home Owners Loan Corporation, the Reconstruction Finance Corporation, and the Public Works Administration.

"7. Officers and employees occupying administrative and supervisory positions in the Work Projects Administration, the National Youth Administration, and the Civilian Conservation Corps."

According to the Attorney General, section 9 of the Hatch Act does not apply to the following:

"1. Officers and employees of the legislative branch of the Federal Government, including secretaries and clerks to Members of Congress and congressional committees.

"2. Officers and employees of the judicial branch of the Federal Government, including United States Commissioners, clerks of United States courts, referees in bankruptcy, and their secretaries, deputies, and clerks.

"3. Officers and employees of State and local governments, even though their employment involves the expenditure of Federal funds.

"4. Persons who are retained from time to time to perform special services on a fee basis and who take no oath of office, such as fee attorneys, inspectors, appraisers, and management brokers for the Home Owners Loan Corporation and special fee attorneys for the Reconstruction Finance Corporation.

"5. Persons who receive benefit payments, such as old-age assistance and unemployment compensation under the Social Security Act, rural rehabilitation grants, and payments under the Agricultural Conservation Program.

"6. Retired employees."

It has been ruled by the Attorney General that the following acts constitute taking an "active part in political management or in political campaigns" within the meaning of section 9 of the Hatch Act:

"1. Holding office in a political party or a political club.

"2. Attending political conventions as a delegate or alternate.

"3. Serving on committees of a political party or a political club.

"4. Distributing buttons or printed matter in support of any candidate or party.

"5. Serving at party headquarters or as watchers at the polls, or otherwise assisting a party or candidate in any primary or election campaign, whether or not Federal officers are involved.

"6. Being a candidate for elective office—Federal, State, or local.

"7. Soliciting funds for a political organization or campaign fund."

The following activities are not considered to be prohibited by the act:

"1. Holding membership in a political organization and attending its meetings otherwise than as an officer or delegate.

"2. Participating in the activities of civil associations and educational groups, provided the activities in question are divorced from the campaigns of particular candidates or parties.

"3. Holding a State or local office (but see (6) above)."

It is likely that the provisions of the Hatch Act will eventually be somewhat more broadly construed to correspond with interpretations of the existing civil-service rule prohibiting political activities on the part of Federal employees in the competitive service.[5] However, it is significant that in interpreting provisions of section 9 of the Hatch Act the Attorney General[6] has pointed out that—

"Civil-service employees are required by the civil-service rules to confine their opinions on political subjects to private expression. From the corresponding provision of the Hatch law, on the other hand, the word 'privately' was omitted. Accordingly, as stated by the President in his message to the Congress approving the Hatch bill, non-civil-service employees would not violate the act 'if they should merely express their opinion or preference publicly—orally, by radio, or in writing—without doing so as part of an organized political campaign."

[4] Circular No. 3301 issued October 26, 1939.

[5] A detailed statement regarding interpretations that have been placed upon Federal laws and the civil service rules in this matter has been prepared by the United States Civil Service Commission and is known as Political Activity and Political Assessments of Federal Officeholders and Employees (Form 1236).

[6] Circular No. 3285 issued August 10, 1939.

EXTENSION OF RESTRICTIONS SUGGESTED

It is proposed by many to extend the Hatch Act to prohibit political activities of State and local government employees paid in whole or in part from, or participating in the expenditure of, grants-in-aid from the Federal Treasury. Legislation of this character has already been passed by the United States Senate. The Social Security Board has already insisted that employees in the State and local employment security and public assistance agencies under the Board's supervision shall refrain from engaging in political affairs. As a correlative provision in the merit-system plan for State agencies as evolved by the Board under recent Federal legislation requiring such agencies to adhere to merit-system standards in appointments, the general prohibitions contemplated in the Hatch Act have been invoked by the Board to cover employees in these agencies.

In about one-fourth of the States prohibitions against one or another form of political activity already exist. Agitation for additional State and local legislation similar to the Hatch Act to affect State and local employees has been started in many States and municipalities. Bills to compel neutrality of civil-service employees have already been introduced in many legislatures throughout the country. These efforts will undoubtedly result in needed legislation to control the extent and character of political activities in which State and local government workers may engage. This legislation may prove to be one important factor encouraging the extention of merit systems to those areas not now covered by appropriate civil-service provisions.

USE OF POLITICAL COERCION

The use of public employees for political purposes is not always confined to the patronage-mongers and the unscrupulous politicians. The spoilsmen's device of coercing civil-service employees to engage in pernicious partisan political activity, from securing names on nomination papers to packing the political meeting places or acting as convention delegates or making partisan campaign speeches, is often used by the "reformers" as well. Gov. Gifford Pinchot, "purest of the pure," was accused in the primary fight of 1933 in Pennsylvania of having coerced the State employees to take a strong stand politically in his behalf, and of having "milked the State employees to help the cause of virtue." [7]

Even the lofty Farmer-Labor Party of Minnesota is accused of having assessed public employees 1 to 3 percent of their pay for the political war chest, and of having persuaded the State employees to help get out the vote.[8]

What the statesmen of lesser stature are wont to do in assessing civil-service employees for political contributions and coercing partisan political activity is only too well known. A few reminders might be of interest. A former chairman of the Republican County Committee of Cuyahoga County, Ohio, was actually moved to bring suit to test the legality of restrictions on political activity of provisional and temporary employees in the State civil service. Why? The status of committeeman was particularly important to the Republican organization because of the understanding that only committeemen and ward leaders would be recommended and retained for State jobs.[9]

Assessments against State employees in Illinois by the Democratic organization, known as The Illinoisans, became so widespread that the Union League Club of Chicago and some of the civic organizations were forced to bring suit against the offenders. The practice of "pay up, get out and work, or else," according to the Chicago Tribune (January 17, 1940), was applied equally to the exempt and competitive class employees.[10] The Loyalty Club of Michigan officeholders in Detroit served notice on its followers in the club to "get out the vote for the party or lose their jobs." Employees were coerced into the most pernicious kind of political activity, including driving trucks and cars around town at night with campaign placards and tacking up political posters, all at the employees' own expense. In another State public employees were required to ring doorbells, make political speeches, and distribute petitions in lieu of making cash contributions. Later, when an investigation ensued, the employees testified their political work was "voluntary."

Political assessments continue to exist largely because of the difficulty of securing evidence against the offenders. Those who are generally involved in the transaction are either protected by their political friends in power on whose behalf they have acted, or the victims are importuned or intimidated. As a result unscrupulous politicians are emboldened to extend the sphere of exploitation. The step from financial compulsion to requiring political service by employees is a relatively short one. Often the temptation to an employee to contribute in terms of political service instead of cash is too inviting to resist. Threats and intimidation against those unable to meet the financial obligation makes resistance to temptation very weak.

ENCROACHMENT ON CIVIL LIBERTIES?

It is argued by some political scientists that by restricting the political privileges of public employees we are not only interfering with their civil liberties, but are eliminating from our public forums an entire class of citizens who are in the most advantageous positions to bring the facts of governmental affairs to public attention. They contend that public employees are best equipped to help the public interpret political issues affecting our Government and appraise and evaluate the interest and competence of candidates for political office in the light of these political issues. There is undoubtedly much to be said for this point of view. The partial disfranchisement that restrictions on political privileges of public employees entails if extended to all public employees today would affect approximately 3,700,000 persons throughout the Nation. In another generation continued expansion of governmental activities might possibly extend such restrictions to a public service considerably larger than that of today. How seriously would such partial disfranchisement affect our political and social lives?

Many leaders of the civil-service employee groups are genuinely of the opinion that the Hatch Act seriously abridges the inherent citizen rights of civil employees. Others pretend to be greatly offended by this denial of equal rights of ctizenship because it interferes with their own game of exploitation of the civil service for selfish purposes. It is doubtful, however, whether the rank and file of public employees have any serious objection to such restraints. Most of them welcome the law privately, although for strategic reasons they appear publicly to be against such restrictions. Take, for example, the experience in New York City with the new law against employee contributions to political campaigns. When the provision was first proposed in the new charter a few years ago the employees were alarmed at the intrusion upon their political rights as citizens. In reality the employees supported the law at the polls largely because of the new freedom the new charter held out to them. Today none of the employees in New York City sheds tears over his legal inability to make campaign contributions to political war chests. The same reaction will undoubtedly follow the application of the Hatch Act.

It is significant that neither the National Federation of Federal Employees nor the American Federation of Government Employees opposed the Hatch Act. Luther C. Steward, president of the former organization, testified some years ago before the Commission of Inquiry on Public Service Personnel:

"I am not in favor of unrestricted political activity. I don't think that people who are permitted to enter on a life career as public employees should get right out actively and take leading parts in purely political matters. But here is the sort of situation that we have. We have restrictive statutes prohibiting political activities of Federal employees within the competitive classified services. In other words, they cannot defend themselves, and nobody has defended them except their own organization."

"All through the public service, not only policy-making positions but comparatively minor positions are political. It is possible to find right in the same office people doing very much the same work; one, a political appointee, can and does very freely indulge in political activity, and when the party for which he is working is in power he moves forward much more rapidly than the person right across the table who is in the competitive classified service and hence restricted."

Not a few idealists and theorists argue that we have long ago passed from the "police state" to the "service state"; that with the virtual elimination of the patronage system in the United States, the new concept of governmental responsibility under our democracy, and the high educational standing of our present citizenry with its keen, intelligent interest in governmental affairs, we no longer need have any concern over neutrality of our civil service. They point out that in a "service state" the merit system becomes a natural and compelling influence in administration of government; ergo, there is impelling need for those in the "service state" to inform and educate the public as to the evaluation of political and economic issues and appraise our political candidates for responsible public management. In time this theory may prove itself, but judged in the cold light of long experience, fortified by recent developments, this sophomoric philosophy appears to be no more than wishful thinking.

It is pointed out by some that in Sweden we have an excellent example of the proper relationship between the state and its employees, a "democratic" government where its employees are unrestricted in their political privileges, and where the experiment has proved eminently successful. There civil-service employees are permitted to hold other public offices, national and local, and even hold seats in the national legislature. This was also the practice for some time under the late German Republic where a considerable number of seats in the Reichstag was held by civil-service employees. In France also the civil-service employees are unrestricted in their political activity; but there the experiment has not been an overwhelming success.

In comparing the situation in Sweden with the conditions in the United States, we must not overlook the inherent dissimilarities of our political party system of government; nor should we lose sight of the absence of any spoils system in Sweden comparable to ours. Unfortunately our particular two-party system has encouraged the patronage system as a necessary concomitant of our political organizations. That in itself has militated against granting the right to unrestricted political activity to our public employees. Even the Weimar constitution of Germany, possibly anticipating the inevitable rise of the patronage system in the new republic, in spite of absence of restrictions against political activity of public employees,

found it necessary to proclaim that "civil servants are the servants of the whole community, not of a party." (Article 130.)[11]

The urgent necessity for political neutrality of the civil service in a democracy such as ours where changes in our political complexion are often kaleidoscopic and result in a "procession of casuals," has been well expressed by Dr. Herman Finer in his Theory and Practice of Modern Government, where he states:

"Whatever the changes in the political constellation, however violent its revolutions, the State, which is certainly regularity, order, must continue. It must not cease; cessation is mortal. The instrument of continuity of services, which ex hypothesi are vital, is the civil service. Conceive the social and economic loss in modern England or Germany or the United States of America if the administrative services were the sport of political parties; the waste of organization, technique, expertness, professional zeal, and the adaptation which comes of years of regular and uninterrupted devotion to duties. All parties in the State must be sure of a highly efficient instrument, however diverse their policies, for no policy is worth the paper it is written on unless there is an executive force behind it. Parties may differ on all things, but one thing is their common desire—power when they are in office, and such power is executive power. Our chief hope that political ministers and a helpless public will be prepared to learn from real science, resides in the flawless impartiality of their experts; and only the fact will create the confidence.[12]

Prof. Harold J. Laski believes that "the surest road to maximizing the neutrality of the civil service" is to debar civil servants from a political career, for "the knowledge that this road is debarred to them is vital not only to the esprit de corps of the service but also to the freedom from political influence on its habits." [13]

One interesting question that came before the Royal Commission on the Civil Service in England in 1910 was the necessity or desirability of placing any restriction upon the political activity of members of the civil service. The commission had no hesitancy in expressing the view that complete liberty of political action for civil-service employees "would inevitably result in frequent conflicts between the desires and interests of the officer as a citizen and his duty as an official, and that such conflicts could not fail to have disastrous effect on the morale of the public service." The commission was fearful that removal of restrictions against such political activity might result in the public's loss of confidence in the impartiality of the civil service, and ministers might cease to believe that their subordinates were really giving them faithful support in carrying out their political policies. The commission summed up its beliefs in the following manner:

"If this were so, the system of recruitment by open competition would prove but a frail barrier against ministerial patronage in all but the earlier years of service; the civil service would cease to be in fact an impartial nonpolitical body, capable of loyal service to all ministers and parties alike; the change would soon affect the public estimation of the service, and the result would be destructive of what undoubtedly is at present one of the greatest advantages of our administrative system and one of the most honorable traditions of our public life." [14]

We need not go to England for practical observations on the inherent difficulties of permitting uncontrolled participation on the part of those engaged in the public service. The writings of American scholars, officials, and publicists are replete with remarks on this subject. Some of these have been included in previous paragraphs. Space does not permit recounting them in detail. The argument against permitting political activity among public employees was cogently expressed in the following words by Theodore Roosevelt when he was a member of the United States Civil Service Commission:

"A man in the classified service has an entire right to vote as he pleases, and to express privately his opinions on all political subjects, but he should not take any active part in political management or in political campaigns, for precisely the same reasons that a judge, an Army officer, a Regular soldier, or a policeman is barred from taking such active part."

Only recently one of our most prominent publicists and political observers, William Allen White, in commenting on the extension of the Hatch Act, wrote:

"Any law that curtails the power of men in office to hold them in their jobs by political manipulation is a good law for taxpayers. Also it is a good law for fundamental democracy. * * * It is a bill to make a law long overdue. It is a righteous principle and it should have the support of all good citizens." [15]

Senator MORRIS SHEPPARD, of Texas, chairman of the Senate Campaign Expenditures Committee, was reported [16] as having made the following terse statement as the result of an investigation in which he participated in 1938:

"Government employees are working for the whole people, whom they are supposed to serve impartially. If they are politically active, they are taking time from the efficient performance of their job."

The right of public employees to engage in partisan political activity on the same basis as is accorded to all other citizens is a matter that may not be dismissed too lightly. As has been stated, many sincerely believe that it would be a serious mistake to exclude from participation in our "democratic system" such "a large percentage of our best-informed voting population." Others fear that it may be an infringement upon the civil liberties of the civil-service employees. Indeed, the Civil Liberties Union was reported to have threatened to institute proceedings in the courts to test the constitutionality of the Hatch Act as violating the civil rights of public employees. One disingenuous State attorney general has held that any ban on political activity by State employees would violate a provision in the State constitution, which prohibits an employee from being discharged "for religious or political reasons."

But the more serious-minded and better informed have posed the question as to just how far we ought to go in sanctioning prohibitory measures against employee participation in politics. One prominent political scientist, E. A. Cottrell, of Stanford University, stated the problem briefly:

"We have not been able to draw a proper line between what we might call the employee's individual activity as a citizen and his activity for superiors or for those in office whom he would like to favor, or those running for office. When we think of the tremendous percentage of persons in this country who are now on some form of public salary or grant or pension, and see the tremendous power which they may exercise at the polls, I think we have to consider whether some measure cannot be taken to limit the so-called political activities of this group."

PROBLEM OF INTERPRETATION

In seeking to abridge the political activity of public employees, some legislatures undoubtedly will go to extremes. Little distinction, it is feared, will be made between the right of employee groups to support or oppose issues in which they may be directly and vitally concerned and their support of or opposition to a particular candidate deliberately opposing or favoring their cause. The issue may not directly, or even indirectly, involve the political party itself. How is the distinction to be made?

Equally difficult will be the problem of distinguishing between public expression of employee attitudes on nonpartisan policies by responsible representatives of the employee organizations and prohibited political activity. Where does the former end and the latter begin?

Like all general restrictive laws, statutory restraints against political activity require for their proper enforcement intelligent interpretation and application. Here even more so than usual, for involved in the administration of the law are the possible infringements on the personal liberties of the civil-service employees. One must ever bear in mind the real intent and purpose of these restrictive laws. Essentially they are designed to curb offensive, obnoxious, and pernicious activities of employees so as to make our civil service as neutral, nonpartisan, and impartial as possible under a democracy. These laws were never intended to place the employees in a political strait jacket. The tendency has sometimes been to attempt to restrain the activities of employees beyond reasonable bounds, overlooking the real purpose of the law. Realism and practical sense must be injected into the administration of these laws. The difficulty arises, of course, in attempting to draw the line between permissible activities and what constitutes offensive partisan activities. A few general principles would need to be observed, however, if these restrictive laws are to be properly applied.

There should be clear distinction made of the right of employees to participate in political activities which are patently nonpartisan in character, and which do not directly affect or influence the election of any particular party candidate. Active participation in discussions relating to public issues referred to the electorate, such as proportional representation, the city-manager plan, the merit-system laws, bond issues, and constitutional amendments generally, should not be included in such restraints. While some of these issues might be indirectly involved in the election of a political candidate, nevertheless it is better that the employees be permitted to exercise their political privileges in connection with these public issues which affect them in the same manner as all other citizens, than to preclude them for fear of some abuse. In rare instances will we be running the risk of such participation on the part of the employees tending toward really offensive partisan political activity. In any event, the importance of having their intelligent participation is worth the minor risk involved.

Certainly these prohibitory laws should not be so literally construed as to lead to absurdity.

One might appreciate the literal interpretation by the courts of these restrictive laws, but hardly the perspicacity of some courts in straining the intent and primary purposes of these laws. An illustration in point is the late ruling of an Ohio common pleas court (July 25, 1939) wherein the court ruled that classified civil-service employees may not take part in a campaign for or against any issue to be determined by a vote of the people. The Cleveland law department had ruled that city employees could take part in a campaign for tax levies, bond issues, charter amendments involving the raising of tax funds, but could not, however, take part in a campaign for a charter amendment involving the civil-service or

pension issues. The case grew out of protests by the Civil Service Employees' Association against the practice of coercing employees in the city departments to obtain signatures on pledge cards for the tax-levy referendum. The action was instituted by the Citizens League of Cleveland, which for long had contended against employee participation in any form of political activity. In a declaratory judgment denying the right of public employees to participate in the tax-levy campaign in any form whatever, the court resorted to literal interpretation of the words "political" and "campaign." The court stated:

"Political campaigns may involve issues other than that of the election of public officials and political organizations are frequently formed in the interest of issues and not office seekers. The words are not used in any unusual sense but have ascribed to them their ordinary meaning."

The court then discusses with meticulous care and at considerable length the dictionary meaning of the words "political" and "campaign," including Webster and Bouvier, and then proceeds as follows:

"From these definitions there can be but one result in giving the correct interpretation to the words 'political campaign.' A political campaign is any concerted effort to influence citizens to act in the exercise of their right of franchise in favor or against a candidate for public office or a person seeking public office, or for or against any public question which by law is to be determined by a vote of the people.

"Whether or not one in the classified service is engaged in a political campaign is to be determined with respect to what he does in supporting or attempting to defeat any candidate for public office or a political issue as herein defined. A classified service employee does not by accepting such employment waive his right of franchise or the right in a proper manner to express his views upon candidates or issues, but he does among other things waive the right to take part in, or conduct a political campaign. It would be impossible to set forth every set of facts that would constitute the conduct thus prohibited. All that can be done is to set forth the rule by which his conduct will be determined as follows:

" 'One is engaged in a political campaign when he either by himself or by joining with others makes a concerted or systematic effort to influence others in their exercise of the right of franchise in favor of or against either a candidate for public office or any issue to be determined by a vote of the people.' "

This strict interpretation of the political-activity-restriction law may be edifying, but it does not view the problem with realism or practicality in the light of the real intent and purpose of these restraining laws which have as their ultimate motive the prohibition of pernicious partisan activity against party candidates.

A more practical viewpoint is that expressed by the California State Personnel Board in construing the California law prohibiting political activity of State employees. The opinion was handed down as the result of a question raised by the California State Employees' Association prior to the special election of November 7, 1939. The board's opinion, which appeared in the form of a resolution, related only to measures or issues to be submitted at the special election, and did not refer to any of the candidates. The resolution read in part:

"It is the opinion of this board that all State civil-service employees have the right to participate in the campaigns for and against the measures to be voted on at the November 7, 1939, special election, and such participation is not in violation of the State Civil Service Act, and in particular that part relating to 'improper political activity,' nor any other provision of the State constitution or State statutes: *Provided, however,* That such participation shall not involve State time, the prestige and power of the employee's position, or the use of State facilities."

Secretary of the Treasury Henry Morgenthau, Jr., in 1934 issued a new regulation forbidding Treasury workers to engage in partisan political activity, which would seem to go as far as practicality permits. Employees of the Treasury were denied the right—

"1. To hold any other public or political office.

"2. To become a candidate for a political office.

"3. To be a member or officer of any official committee of a political party, or of any other committee that solicits funds for political purposes.

"4. To own, edit, or manage a political publication.

"5. To display such obtrusive partisanship as to cause public scandal.

"6. To attempt to manipulate party primaries or conventions.

"7. To use his position to bring about his selection as a delegate to conventions.

"8. To act as chairman of a political convention.

"9. To assume the active conduct of a political campaign."

If these restrictive laws are not to fall into public disfavor and become inoperative and unenforceable, they must be administered with common sense and sound discretion. They must be applied with as little impingement on the civil rights of public employees as the spirit of these laws will permit. These problems are not easy of solution, and the line may be difficult to draw. It would seem, however, that both prudence and practicality will largely contribute to and determine the solution. So long as the actions of the employees or their representatives are not offensive to the public; so long as employees can justify concerted action because the issue involved peculiarly and directly affects their interest; so long as their participation does not become pernicious and obtrusive, the public will probably pay little attention to them. But like most disciplinary laws, the extent to which the Hatch Act will be enforced will in the long run depend on the attitude of the public. This, in turn, will depend on the attitude and conduct of the employees as well as the sagacity and good faith of the politicians.

In discussions of this whole subject much attention has been given to the inherent political rights and privileges of employees. Unfortunately little attention has been given to the rights and welfare of the public. The public is obviously interested in having the employee do his work well; in having the employee give his time and energies to the public service, not to tasks designed solely to benefit political organizations. Our taxpayers can hardly be expected to be enthusiastic over paying employees for political service, rather than for public faithfulness. Nor would the public be enthralled by the spectacle of officers and employees in the public service wrangling among themselves in political factional fights, party conventions controlled by public officeholders, and political clubhouses run by public employees. Moreover, from the public employee's point of view, undue political activity invites political reprisals and results in friction and hardship to the employee himself.

It is difficult to see how legitimate activities of public employees will suffer under laws such as the Hatch Act. Such laws will hardly be construed or applied as prohibiting organized employees from protecting their rights or interests in matters directly affecting their own working conditions, grievances, and general welfare. If this may be viewed as wishful thinking or implied winking at strict and rigid legalistic interpretation and construction of the Hatch Act, let us be reminded that even in application of law there is still practicality and wisdom.

The validity of laws restricting public employees from engaging in undue political activity or making contributions to political-party campaign funds has often been attacked by the uninformed. They fail to appreciate that the rules against political activity are not discriminatory in a legal sense; that they affect equally all persons within the classification of public employees. These laws do not deprive the employees of "fundamental" rights. They leave the employee free to vote as he pleases and to express his views privately. They do, however, prevent persons while in the service of the Government from using their official positions and money contributed by the public for the benefit of any political party.

ATTITUDE OF THE COURTS

There can be little doubt of the validity of legislation prohibiting political activity or political contributions on the part of public employees, whether elected, appointed politically, or serving as a result of competitive tests. The right of the Congress or the State legislatures to provide any reasonable restrictions on the activities of public employees, including prohibitions against political activity, has long been recognized by the courts. The United States Supreme Court has sustained the power of the Congress to prescribe rules of conduct for officials and employees of the Federal Government (*United States* v. *Wurzbach,* 280 U. S. 396). As long ago as *Ex parte Curtis* (106 U. S. 371) the power of the Congress to provide any reasonable conditions for public employment was clearly recognized by the Court. The right of the State legislatures similarly to prescribe conditions for employment by the State has been upheld (*Atkins* v. *The State of Kansas,* 191 U. S. 207; *People* v. *McCullough,* 254 Ill. 1, 98 N. E. 156; *McAuliffe* v. *Mayor of New Bedford,* 155 Mass. 116, 29 N. E. 517; *Gianatasio* v. *Kaplan,* 257 N. Y. 531).

The issue of prohibiting political activity of employees of the State was squarely decided by the Supreme Court of Oregon in 1931 in the case of *Stowe* v. *Ryan* (296 Pac. 857), where the court upheld the action of the civil-service commission of Multnomah County (Portland) in removing an employee from office for violating the State law prohibiting employees from engaging in political activity. It was urged upon the court that such prohibitory statute was unconstitutional, as it deprived the employee of certain rights as a citizen of the State. It was attacked also as invalid class legislation, and repugnant to the Bill of Rights provisions of the Federal Constitution. The Oregon court sustained the power of the State to prescribe the conditions of service and the rules of conduct for its officers and employees to the extent that it may become necessary to promote efficiency and integrity in the discharge of their duties and proper discipline in the public service.

Many politicians would rather play politics than serve the public. This is amply demonstrated by the action of so many public employees who, since the enactment of the Hatch Act, have been willing to sacrifice their regular governmental positions to serve their political organizations. Such martyrdom is inspiring and significant. Such undying loyalty is almost to be admired. But is not this blind loyalty to partisanship the gravest danger to a democracy when imparted to the rank and file of the civil service, either through political coercion or misguided zeal for a political cause? Loyalty in the civil employee should mean allegiance solely to the Government of the day, and not to a partisan political organization. What we need most of all in our democracy is an impartial, disinterested, and detached public service—one that represents the people's civil service, not the service of the political party in power. Indeed, the very nature of the Government service today, with the new social agencies created under the

welfare and economic programs during the last decade, calls more than ever for impartial administration of these agencies. The elimination of undue political activity on the part of public employees has now become imperative.

Unemployment

EXTENSION OF REMARKS

OF

HON. CHARLES F. RISK

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

ADDRESS BY HON. HARRY SANDAGER, OF RHODE ISLAND

Mr. RISK. Mr. Speaker, under leave to extend my remarks I include an address delivered by my colleague the gentleman from Rhode Island [Mr. SANDAGER] on April 2, before the Rotary Club of Providence, at the Biltmore Hotel in that city, as follows:

Unemployment is generally recognized as the Nation's No. 1 economic problem. Its seriousness is augmented with every school graduation in June, when about 600,000 young job hunters pour into the labor market. With the deepening and widening of the depression has come a realization on the part of leaders in education, Government, and industry that some practical steps must be taken, not only to attempt to provide occupational careers for the youth of America, but to check and control the general jobless tide.

That is why vocational guidance and a practical system of apprenticeship is attracting such widespread attention; that is why the employers, the trades-unions, and the schools are joining hands with the States and the Federal Government in practical application of remedies to meet the situation.

When one realizes that, according to the last available figures (Unemployment Census of November 1937), there were 3,900,000 young people between the ages of 19 to 24 out of school and out of work, the enormity of the task of getting jobs for them becomes apparent. That young unemployed army, which does not include part-time workers, is bigger than the standing armies of France rated at 3,750,000; of Germany, with 3,500,000; larger than the combined armies of the British Empire, 1,707,000; and Italy, 1,448,000; and more than six times the Regular Army of the United States. It is more than one-third the number of the total unemployed in this country today.

But, strictly speaking, one should not refer to these youngsters as an army, for this might indicate that they possess some training. As a matter of fact, the big handicap before those experts who are battling the unemployed problem is that only an infinitesimally small number of our youth have had any practical manual training whatsoever.

For one of many reasons, whether it be because they prefer a "white collar" job, or have been taught to fear the seasonal slack periods in the trades, or seemingly have no aptitude for precision work, most of these young job hunters are the type, who, when asked what they can do, vaguely reply "anything." What they really mean is, anything that does not require a high degree of skill or training. Salesmen, clerks, truck drivers, helpers—their number is legion, but when an employer seeks a skilled worker he literally is forced to comb the country.

According to the Federal unemployment census of November 1937, right here in our own Rhode Island, which we are wont to regard as well supplied with trained workers, out of 20,862 youths between the ages of 15 to 24 who registered as out of work, only 810, or 4 percent, were skilled workers, and only 7,587, or 36 percent, claimed to be semiskilled workers.

It is one of the ironies of the whole unemployment picture that at a time when more than 10,000,000 people are out of work certain types of industries are at this minute crying for craftsmen. When the European war started last September and certain factories experienced a rush of orders, some concerns actually started to outbid rival firms for artisans and even steal workers from each other.

In the face of such conditions it is small wonder that vocational guidance has increased in scope and popularity within the past few years. It is everybody's gain. The youth himself, tiring of hanging around the corners and wearing out his shoes looking for work, realizes now that a steady job in the shop, where his own expertness is protection against sudden dismissal, is a great deal safer than a job that anybody else can do as well if not better than himself.

Labor, which for a time looked askance at vocational training, is keenly interested now in setting up standards of apprenticeship and properly safeguarding the skilled worker. Industry, which pays out 85 percent of its net earnings for wages, naturally has an intense interest in the finest possible labor available; and the Government, under present world conditions, is taking serious note of the country's potentialities from a standpoint of efficient reserves of trained workmen behind our Army and Navy.

The necessity of developing and maintaining an adequate force of skilled labor is constantly becoming more apparent. It is an open secret that, whereas from 1912 to 1936 a total of 1,214,291 skilled workers came to America, we are now losing them at the rate of 250,000 a year to the warring countries of Europe. Back to England, Germany, and Italy have many of them gone, not so much discouraged by the continued depression here as enticed to return to the homeland by the high wages offered them.

Modern warfare, with its aircraft, motorcraft, tanks, machine guns, and explosives, needs more than ever precision tools and workmen who know how to make them and use them. This was true as far back as the Civil War, when superior manpower was not the only advantage the North possessed. The dashing cavaliers of the South could make brilliant and striking forays into Northern-held territory, tear up miles of track, blow up bridges, damage locomotives, and derail freight cars, only to have the plodding and efficient artisans of the North steadily repair the damage and move further into the South.

How much manual dexterity plays in the game of warfare was revealed only the first part of this year, when plucky Finland, although hopelessly outnumbered, was able to offer such stubborn resistance to the mighty hordes of Russia. So vocational guidance and apprentice training serves another objective besides helping solve unemployment.

New England, because of her supremacy for more than a century in textiles, machine tools, jewelry, and other industries, now more than ever feels the need of an adequate supply of skilled labor to provide for the diversified businesses which have replaced the vanishing textile industries in so many of our cities, conspicuous examples of which are the one-time spinning centers like Fall River, Mass., and Manchester, N. H.

It is worthy to note here that Rhode Island has pioneered in vocational training and apprenticeship long before the Federal Government bestirred itself. Dr. Richard D. Allen, assistant superintendent of schools of Providence, was one of the first educators to interest himself in vocational education, and in Washington right this minute his opinions, because of his long experience, are sought and listened to with great respect. Brown & Sharpe for years has maintained what Government experts today regard as a modern school for apprentices.

Curiously enough, however, although individuals and private concerns in this State have enjoyed priority in this field of endeavor, it was not until last year that the State of Rhode Island officially bestirred itself along these lines. During the summer of 1939, when it became evident that there was a shortage of skilled labor in many of our industries, Governor Vanderbilt called upon a committee comprising representatives of the departments of labor, education, the Rhode Island Unemployment Compensation Board, and industry and labor to investigate the situation. That committee published in December of last year a most informative survey containing valuable data as to the needs of specific industries and suggesting plans for a trade-school program for Rhode Island.

A bill now pending in the general assembly provides for an appropriation of $5,000 for continuing and amplifying this study, and it is safe to assume, as a result of the information which has been and will be obtained, that it is only a question of time before Rhode Island will follow in the footsteps of Connecticut, Massachusetts, and Vermont in establishing a full-fledged apprenticeship council.

The Government's fight for the lessening of youth unemployment has been conducted, roughly, on four different fronts, the divisions being the Civilian Conservation Corps, the National Youth Administration, the Occupational Information and Guidance Service in the Office of Education, and the Division of Apprenticeship in the Department of Labor.

Briefly outlined, the C. C. C. serves as a reservoir of unskilled youth, keeping them off the streets and out of the labor market and feeding them back into industry as fast as business can accommodate them. The N. Y. A. acts as a sort of juvenile W. P. A., sponsoring work projects for young workers and also has an extensive program of student aid.

The Occupational Information and Guidance Service, headed, it is interesting to note, by a former Providence man, Harry A. Jager, began its activities about 2 years ago and has already made rapid strides along the path of teacher training in guidance fields. Last year this agency went into 26 States for the purpose of equipping teacher personnel to act as counselors for students endeavoring to map out their occupational future and encouraging the initiative of the individual in fitting himself for some particular sphere of activity. In other words, as Mr. Jager puts it, the object this agency seeks is to "fit children into the world as they find it."

The Division of Labor Standards of the Department of Labor began in 1934 to make a study of apprenticeship and in this sphere of activity New England is again represented, for on November 15, 1939, Secretary of Labor Perkins appointed Ralph E. Flanders,

long active in New England council, to serve as one of two representatives of management on the Federal Committee on Apprenticeship.

This agency concerns itself with the immediate objective of replenishing the ranks of apprenticeships in various trades and is making rapid headway with the increasingly hearty cooperation of both industry and labor. In Rhode Island, Connecticut, and other States, unions have gone on record favoring this endeavor and have appointed committees for the promotion of sound apprenticeship standards. Employers in New England recognize that an agency of this sort can serve not only to provide a steady stream of beginners for trades, but can extend its activities to guard against both shortage and surplus in the supply of skilled labor.

To the feeble complaint that apprenticeship training is not important because it provides employment for only 10 percent of the available youth is the ready answer that this skilled 10 percent, because of its work in the field of precision, can make the tools and the machines that will provide jobs for a large portion of the other 90 percent in the field of assembling, packing, shipping, delivery, selling, and in all kinds of paper work.

Capital is only too willing to take into its shop boys who give promise of qualifying as skilled workers. Particularly are the new industries eager to find able recruits. A single example that might be cited is the American Air Lines, which at present has over 100 apprentices at LaGuardia Field in New York.

I think that the most encouraging thing about this youth-job picture as I have briefly sketched it is because it is all so new. You may have noticed the dates; 1934 is ancient history in this movement. Even 1938 seems a long time past. The whole proposition is moving, pushing, and shoving forward right this very minute, and all the forces that count are in it—the States, the Federal Government, the schools, labor, capital, and even service clubs such as the Rotary, which has supported this kind of a program from the start.

This business of teaching the youngsters the three R's, dressing it up with a spice of Latin, French, German, or Spanish, a drop or two of grammar, a jigger of chemistry, and a dash of ancient history, and then sending them out to do battle with the cold, tough, old world may have been all right in the good old days, but in these times is it not merely a question of the survival of the fittest; it is the survival of the specialist.

The "white collar" job has lost its lure because it is so hard to find and so hard to keep. The youth of today is commencing to believe that it is more practical to sit at a bench where both his brains and fingers are kept busy than to push a pencil one month and a wheelbarrow the next. In free America the ambitious boy is not doomed to the bench. He can rise, and he has risen to the very top.

Statistics show that only one-third of the "white collar" jobs really pay good money and, when you look at it, what manner of men are these "white collar" fellows, anyway? The "white collar" man more often than not is the chap who nervously lies awake listening to a tap in the bathroom he can't fix, who sits and swelters because he can't open a window which sticks in the frame, who rides home on the rim of his wheel because he can't fix a flat tire. He can't use his hands except in bridge or poker.

A trained youth in America means a more capable and self-sustaining United States, a country with a real future in the constantly increasing new industries, a nation as self-reliant in war as in peace.

There is only one bugbear behind the whole setting of apprenticeship and youth occupational guidance. That is the politician. But the very forces which have made this whole program possible are mighty enough in themselves to crush him if he attempts to exploit the youth of the country for his own or his party's advantage. The politician does not belong in this program and if he can corkscrew his way in, he should be cut out as quickly as a schoolboy would cut a worm out of his apple. This problem is not political. It is economic. There is no better service that the Rotary and similar organizations can do the cause than maintain constant vigil to see that the entire campaign of guidance is carried to fruition without the interference from the meddlesome paw of self-seeking individualists who can contribute nothing toward its progress. Its success is vital to the industrial future of our country.

Wheeler-Lea Transportation Bill

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

Mr. BLAND. Mr. Speaker, regulation of water transportation in conformity with railroad regulations means the destruction of waterway transportation.

Congress should stop, look, and listen before proceeding further.

We are facing a new epoch in water transportation. Legislation has reached an advanced stage to place all water carriers under strict regulation. If the philosophy underlying this legislation is sound, which I deny, yet it would be sound only in part. The claim is made that it is not logical to have one type of common carrier free from regulation while its competitors are regulated. The proponents contend that it is desirable to round out the national transportation scheme and to effect a uniform national policy. Even if the legislation should be passed, yet because of the essential difference between water lines and railroads, and because of the fundamental differences between different kinds of water carriers, it is vitally necessary that legislation, if any, recognize these differences and provide adequate safeguards to protect the public interest. It must further be recognized that coastwise and intercoastal water carriers are already subjected to regulation and that the proposed legislation is in large part simply a shift in regulation from one Government agency to another.

A study of the history of the legislation shows clearly where its shortcomings originated. It is public knowledge that it was proposed by the railroads, which have constantly kept before the public an appeal for it. The Association of American Railroads' recommendations in regard to the legislation reads as follows:

> First and fundamental, there should be a square deal in transportation—a public transportation policy providing for fair, impartial treatment of all forms of transportation, so administered as to preserve the inherent advantage of each. The establishment of such a policy would include the following action, State or national.

Under this head the third and fourth specific recommendations read as follows:

> (3) Equal regulation, administered by the same public body or bodies, should be applied to all forms of transportation.
>
> (4) The rate-making rule of the Interstate Commerce Act, applying only to railroads, should be replaced with a rule applying to all forms of transportation alike, etc.

A careful study of the above shows that the railroads claim to advocate a square deal to preserve the inherent advantages of each form of transportation while coincidentally, by individual and collective action, by resolutions of the board of directors of the association and by various actions of such association, the railroads pursue an opposite course.

As will be later indicated herein, the differences between rail transportation and water transportation are so basic and so vital, that any attempt to apply the same statutory rules of regulation to both must necessarily produce inequality instead of equality. The "equality" about which the railroads talk, therefore, is equality in theory only, and in practical effect would operate to the serious if not fatal disadvantage of the water carriers.

The Wheeler bill is a codification of the Interstate Commerce Act applying to all carriers. Thus all forms of water carriers would be regulated under rules designated for railroad regulation. The Lea bill attaches a part III to the Interstate Commerce Act, in which all types of water carriers are to be regulated, but the rules of part III were patterned in large measure upon the rules of part I, namely, those governing rail transportation. Hence, both the Wheeler and the Lea bills have the same fundamental defect. These bills fit the specifications of the Association of American Railroads in regulating each carrier equally by applying the same rules, but the attempt to cut a steamship cloak from a railroad pattern is apt to prove disastrous to some types of water carriers. It is like trying to employ rules and instructions for regulation of aircraft engines for the regulation of clocks and watches. It is not to be assumed that an expert aviation mechanic could regulate clocks and watches without some experience, even with an instruction book on the regulation of clocks and watches. No matter how carefully legislation is drawn covering the regulation of each of the various types of water carriers, it must be expected that any new governmental agency taking over such

regulation will for a period of time be inefficient and cause a certain amount of damage. To vest in the Interstate Commerce Commission, with mainly railroad regulatory experience, powers to regulate all types of water carriers in accordance with the rules devised for railroad regulations may well spell the doom of the water carriers, and, in turn, will have a very adverse effect on many rail carriers. Furthermore, to apply the same rules of regulation to a barge line on the Mississippi River as to a coastwise or intercoastal line is just as bad as to attempt to regulate the coastwise and intercoastal water lines in accordance with the railroad rule book. The economic principles involved in various types of carriers, including the various types of water carriers, are so vastly different that any regulation which does not recognize the fundamental differences between them is bound to be a failure.

Take, for example, the approach to a simple problem—the delay of a year or more in settling a discriminations case or a rate case. Such delay for a water line with its limited capital and limited service may literally bankrupt such line; whereas the railroads' interest are so diversified that one or two cases of discrimination or of unfair rates do not result in bankruptcy. What is more, even in the case of bankruptcy, a railroad continues to run, whereas a bankrupt water line usually has no alternative but to go out of business. Most of the railroads' investment is in a fixed right-of-way and in facilities which from their very nature can be used only in serving certain territories, whereas the investment of steamship lines is mainly ships which can adapt their routes and their service to the needs of the public. When ships fail to pay their way on a particular route they can be shifted overnight to some other route, or the investment can be liquidated by selling the vessels in the world market. The public interest is much more vitally affected when a steamship line is put out of business than it is when a railroad goes into bankruptcy. In the first case the public is deprived of the service, and unless there are other lines with ships or with the ability to charter ships so as to replace the service immediately, the public suffers irreparable damage. But with a bankrupt railroad, the receivers take over and the public is not directly affected in the least.

The Wheeler and Lea bills provide for certificates of convenience and necessity for water carriers. It will be found in time, if such clauses become law, that one of the great public advantages of water transportation, namely, its flexibility, has been destroyed, because the time and expense involved in obtaining a certificate for a new service would be so great as to make it difficult or impossible for a steamship line to inaugurate it. There may be a serious disadvantage to the public either because no other water line serves the port or ports affected or because existing lines have insufficient capacity.

Where there is a public demand for water service, and a water carrier is able to meet the need, it should be permitted to do so without the serious delay and expense entailed in obtaining a certificate of public convenience and necessity. Such certificates are required for railroads because of the great capital expense involved when a railroad is projected into a new territory, with heavy outlays for right-of-way and for construction of tracks and terminals. But a water line has no right-of-way to purchase, and can shift its vessels about at will. This elasticity of service is of tremendous benefit to the shipping public. Why place this service in a railroad strait jacket of regulation and thus deprive the shipping public of the benefit of elastic and efficient water service?

Not only is it essential that the statutory rules be fitted to each type of carrier, but the procedural methods of regulation must likewise be designed and applied so as to fit the needs of the different carriers of the governmental agency. For example, the delay of a year or more in reaching a decision affecting the rights of a water line may literally bankrupt it, while the same delay in a decision affecting the railroads may not have a serious effect. The danger lurking in the theory of "equal regulation" is that these fundamental differences may be overlooked.

Much has been said about the "railroad-mindedness" of the Interstate Commerce Commission, the implication being that the Commission is partial to the railroads, and that it would have an unfair bias in their favor. This, as I see it, is a real, but not the only, danger. Serious danger is to be found in that in spite of the honesty and integrity of the Commission, which I do not doubt, the many years' experience of the Commission in dealing with railroads will lead the Commission to apply the same technique to the regulation of the water carriers as to the regulation of rail carriers, with disastrous results to the water lines. If the Commission frequently takes more than a year to decide a railroad case, the presumption is that it will take more than a year to decide a water-line case.

If a water line is required to wait 1 or 2 years for a decision, it may die in the meantime. There is grave danger, I think, that such things will occur; in fact, the experience of water carriers to date in their dealings with the Commission on railroad water rates and divisions shows that these dangers are facts.

Of outstanding importance to all water carriers is the question of discriminatory treatment of water lines by railroads. Obviously, it is possible for a group of railroads, by favoring one water line, to ruin a competing water line. If the burden is upon the latter water line to prove the discrimination, and if it takes the Interstate Commerce Commission 1 or more years to decide the question, it may very well be that the injured water line will be literally ruined before relief is afforded. There should be a positive burden on the railroads to avoid discrimination of this character, and some legal process should be available, similar to a mandatory injunction, that would prevent a railroad from treating one water carrier differently from its competing water carrier unless the railroad could show justification therefor.

A water line against which the railroads have discriminated in the matter of through traffic and through rates has heretofore been able to protect itself in part by reducing its port-to-port rates. To a considerable extent the United States Maritime Commission has been sympathetic with water lines in this matter because it has realized the comparative helplessness of water carriers in attempting to compete with the railroads. If, as now proposed in S. 2009, the power to prescribe minimum rates is to be vested in the Interstate Commerce Commission, the water lines may no longer be able to use the strategy of reducing their port-to-port rates but will be at the complete mercy of the railroads until the Commission acts.

A large portion of the traffic handled by the water lines originates in or is destined to interior points reached by rail. On such traffic joint through rail-and-water rates have been made effective in a majority of instances, such rates being lower than the sum of the so-called combination of local rates applicable for separate movements to and from the ports over the same route. Hence, if water line A has a joint through rate with the railroads, such joint through rate will generally be lower than the combination rates applicable via water line B which does not enjoy or cannot obtain joint through rates with the railroads. If, under such circumstances, water line B asks the railroads to join it in the same rates as are effective in connection with water line A and the railroads refuse, water line B must bring a discrimination complaint before the Interstate Commerce Commission, waiting for a year or more for a decision from that Commission, meanwhile foregoing much valuable traffic; in the meantime it may cut its port-to-port rates so as to make some of the through combination rates equal to the joint through rail-and-water rates maintained in connection with its competitor or it can attempt to cover the same territory by specific proportional rates if some railroads will work equally with it. This latter remedy is of doubtful value because of the almost insuperable difficulty of establishing proportional rates which will equalize the through rates from every possible origin to every possible destination.

What is a water line to do in the meantime? Must it lay up its ships until the discrimination is removed? Is it to

continue the operation of its ship at a loss because of the heavy loss of traffic caused by the discrimination? In what manner is the law to protect a water carrier in such a situation, and what assurance is there that the Interstate Commerce Commission will be inclined to find ways of helping water lines out of these difficulties? Experience shows not only that the Interstate Commerce Commission does not seek to find ways, but rather that it insists upon applying to water carriers the same technique of regulation and the same technicalities of regulation as applied to rail carriers, completely ignoring the fact that the difficulties and delays entailed may ruin the water carrier.

Let us assume that the water carrier decides to file a formal complaint against the railroads alleging discrimination. Under the customary rules of procedure of the Commission the railroads must be given 20 days to reply, hearings must be held which often are dragged out over a period of several months, after which briefs are submitted and the examiner prepares his proposed report. The preparation of the report alone usually requires several months. Exceptions are then filed to the report and replies are filed to the exceptions. Still later oral argument is permitted. I do not criticize these steps in the procedure, each one of which is important in finally obtaining adequate adjudication. But the point is that a steamship line may die while this procedure is in process. Such costly procedure could be avoided if the burden of justifying discrimination could be placed where it belongs, on the railroads.

If the bill is favorably acted on then it is important to guard against this discrimination. The law not only should place a mandatory duty on the railroads to avoid discrimination, but it should vest in the Commission summary power, similar to that enjoyed by courts of equity, to order a railroad to show cause why such discrimination should not be terminated, with burden on the railroads to justify the difference in treatment, instead of placing the burden on the steamship line of establishing the discrimination and putting an end to it. In other words, the fact that a water line is denied the same treatment accorded to its rivals ought to establish a strong prima facie case of discrimination. A national policy which declares that water transportation shall be fostered and maintained in full vigor should not be permitted to tolerate a discrimination which kills a water line. Nor should procedural methods be tolerated which result in a delay of several years in getting the question of discrimination adjudicated.

Equally important is the question of divisions. Even though joint through rates may exist between railroads and a water line, this fact does not save the water line from ruin. The railroads are in a position to collect the freight charges in a majority of instances and pocket them or pay what they please to the steamship line as its proportion. Unfortunately, an examination of divisions cases adjudicated by the Interstate Commerce Commission shows that the Commission often pursues the policy of establishing joint through rates and leaving the question of divisions to subsequent determination. It takes many, many months for a steamship line to obtain an order from the Commission requiring the establishment of joint through rates, and then it may require 2 years or more to get the divisions fixed, with the result that the line may be literally brought to bankruptcy because of its inability to collect a fair proportion of the through charges during the several-year period that the matter is under review. The least that should be done to correct this evil is to provide by law that the divisions shall be fixed in the proceeding in which the joint through rates are established and contemporaneously therewith. It would be much fairer to require the railroads to grant equal divisions unless and until the railroads could show cause why equal divisions should not be maintained with competing water carriers.

A further difficulty in connection with divisions is a ruling by the United States Supreme Court that the Commission has no power to fix divisions retroactively. In other words, where joint through rates have been established voluntarily and the water carrier's proportion of the through charges is inadequate or unreasonably low, the water carrier may file a formal complaint asking that the divisions be fixed, but the Commission may not award reparation prior to the effective date of its order. It necessarily follows that any water line which interchanges traffic with railroads under joint through rates which have not been prescribed by the Interstate Commerce Commission runs the danger of encountering a terrific financial loss, and this actually happened in a recent case. The Interstate Commerce Commission is powerless under present law to protect the water lines or even railroads in such a situation. Quite obviously the law should vest in the Commission power to fix divisions as of the date of the complaint whether the level of the rates has been prescribed by the Commission or determined voluntarily by the carriers.

In a proceeding involving the establishment of through routes and joint rates which the railroads are unwilling to establish the water line is at a serious disadvantage. It may find itself up against an association of railroads or other combination of railroads represented by expert lawyers and well prepared for the battle. They may contend that the water service is superior and should be handicapped by high rates, or they may contend that the water line gives inferior service and should not be recognized as operating in the public interest. The latter argument may lose some of its force under S. 2009, which provides for the granting of certificates to water lines in bona fide operation on or prior to a specific date.

Another danger to water lines that are efficiently operated is the defense sometimes made by the railroads that joint through rates in connection with efficient carriers should be higher than corresponding rates in connection with inefficient carriers. The argument advanced is that where a water carrier provides a superior service, with better terminals, more frequent service, faster ships, or better handling, a rate differential should be provided so as to make the rates of the efficient carrier higher by fixed amounts than the corresponding rates of its less-efficient competitors. This is a highly dangerous argument. It would encourage inefficiency by placing a handicap on efficiency. Like the golf-handicap theory, under which a good golfer is penalized by adding several strokes to his score, this vicious theory would require the efficient water line, even if its service were of less cost, to charge the shipping public higher rates because of the efficiency with which its operations are conducted. The tendency would be, of course, to divert traffic to the inefficient lines because of the lower rates enjoyed by them.

Clearly it is in the public interest to encourage efficient transportation. Especially important is protecting the rights of the public to efficient water transportation at low rates but productive of cost. It is a matter of common knowledge that water transportation is usually of lower cost than either rail or truck transportation. Since many of our water highways were created by God and since they are owned by the public in perpetuity, the public interest obviously requires that transportation service be made available over them at the lowest practicable cost. If the rates of an efficient carrier are to be jacked up to a higher level merely because the carrier is efficient and regardless of its cost of operation, not only is a premium placed on inefficiency but the public is discouraged from using the best and cheapest form of transportation. Transportation is an art and it can be improved only by encouraging efficiency and progress. To place a heavy handicap on the efficient carrier is to discourage the art and to prevent improvement.

Railroads can discriminate against water carriers and do discriminate against them, not only in the matter of joint through rates but in the equally important matter of terminal service rendered within a port area. Obviously the water carriers will be at the mercy of the railroads if they are permitted to determine the method by which they will make delivery to or take receipt from a particular water carrier. It should constitute a violation of law for any railroad to refuse to provide the same terminal facilities or services for one water carrier which it contemporaneously provides for another water carrier of the same class, common, contract, or private, within the same port area.

There would seem to be no doubt that provisions of existing law are inadequate if applied generally to water carriers.

The statute does not with sufficient definiteness prevent discrimination, nor does it provide relief to a water carrier within a reasonable period of time. Even where a water carrier is definitely injured, even to the point of death, provision is not made for full recovery of damages. The solution would seem to lie in tightening up the discrimination clauses so that discrimination will be in fact and effectually prevented; to vest in the regulatory body equitable power that will insure prompt adjudication to prevent discrimination; and to provide more adequate and full recovery of damages and for prompt decision on involving joint through rates and divisions.

It must be admitted that there is a very real danger in the proposed legislation in that the rules and technique of railroad regulation will be made applicable to water-line cases and as a result that the development of water transportation will be discouraged, if not prevented, by using the rule book for railroad regulation for the regulation of different types of carriers, even where the regulatory body administers the statute in the best of faith after sufficient training in regulation of such different types of carriers whose fundamental economic principles are so vastly different from one another. The examples above mentioned prove the case that equal regulation cannot be obtained by using the same rules and regulatory technique for all carriers.

Regulation of water carriers should be left where it is now, and coordination accomplished as proposed in H. R. 4307 now pending on the House calendar. The general objectives of that bill to extend the regulatory jurisdiction of the Maritime Commission to apply to common carriers by water engaged in interstate transportation on inland waters and, with the systems for the regulation of water carriers thus rounded out and made national in scope, to provide a plan and means to effect coordination in the regulation of carriers subject to the Maritime Commission and the Interstate Commerce Commission where there is competition between such carriers.

The history of regulation under the shipping acts has been one of gradual and steady development with opportunity to make sound progress in meeting the problems involved in the water-transportation industry. The extension of regulation to inland water carriers should be undertaken in a similar way with like opportunity for sound progress. The extension proposed in H. R. 4307 provides a tested and workable plan of regulation and one that is not unduly restrictive or burdensome.

Most of the questions in connection with the competition between the different types of transportation can be solved by voluntary arrangements and cooperation between the Commissions, and the small remainder of cases which cannot be thus handled can be properly disposed of by the joint board proposed to be established by the bill and to be composed of two members from each of the said Commissions with a chairman to be appointed by the President by and with the advice and consent of the Senate.

The main provisions of the bill are as follows:

First, to make the provisions of the Shipping Act, 1916, and the Intercoastal Shipping Act of 1933 applicable to common carriers operating on inland waters and to terminal facilities furnished in connection with such common carriers;

Second, to declare a congressional policy as to water transportation;

Third, to declare a congressional policy as to cooperation and coordination in the development and maintenance of the Nation's transportation system; and

Fourth, to establish a joint board to secure coordination in the regulation and in the operations of carriers subject to regulation by the Maritime Commission and the Interstate Commission in matters concerning which the said Commissions cannot arrive at coordinated determinations or action by voluntary means.

Tideland Oil Suit Faces California

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

ARTICLE FROM THE LOS ANGELES TIMES

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Los Angeles Times of April 12, 1940, written by Lorania K. Francis, Washington staff correspondent, reporting that the Government intends to file suit to establish Federal title in the oil deposits under the tidelands of the State of California:

[From the Los Angeles Times of April 12, 1940]

UNITED STATES MAY SUE STATE TO GAIN TIDELAND OIL—JUSTICE DEPARTMENT'S PROPOSAL GIVEN PRESIDENT, BUT NO DECISION ANNOUNCED

(By Lorania K. Francis, Times Staff Correspondent)

WASHINGTON, April 11.—Instigation of a suit against the State of California in an effort to establish Federal title to billions of dollars' worth of submerged oil deposits, harbor improvements, and built-up lands located off the shores of southern California has been proposed to President Roosevelt, it was learned today.

While Government officials would neither confirm nor deny the report, it was reliably ascertained that the Department of Justice has sent to the White House a memorandum suggesting a suit by the United States Government for "declaratory judgment" in the long-disputed question of who owns the offshore land. The suit, which would involve the State of California and possibly the city and county of Los Angeles and numerous private interests, probably would be brought before the United States Supreme Court.

TWO COURSES

Two alternative courses were suggested in the Justice Department memorandum, it was said. One of them would involve the filing of a similar suit in the southern California Federal district ccurt, and the other would call upon Congress to direct the Justice Department to bring suit against the State to determine ownership of the lands.

Choice of the latter alternative, it was believed, would indicate that the Justice Department is not prepared to go ahead with the suit on the basis of information which it has gathered during a year and a half of investigation.

NEW ATTACK ANGLE

A new angle in the Government's attack upon ownership of the property was indicated in the report that the United States might bring suit not only against the State of California, but against the city of Los Angeles, Los Angeles County, the city of Long Beach, and such interests as the Standard Oil Co. of California, the Southern Pacific Railroad Co., the Southern California Edison Co., the Ford Motor Co., the Union Pacific Railroad, and other corporations having a substantial interest in built-up lands located within the tidelands.

Some sources predicted that the United States might challenge title to Reeves Field—a portion of Terminal Island which the Navy Department is anxious to convert to a permanent naval base—as a "smoke screen" covering the real intent to seize approximately $2,000,000,000 worth of undersea Southern California oil deposits which the Navy wants for a reserve.

SAME ISSUE

The difference between a suit against the State of California, over title to the oil deposits, and a suit against the city of Los Angeles, over title to Reeves Field, would be purely a question of nomenclature, it was pointed out, since the common question of title to the tidelands is involved in each.

The action might be instituted as a suit against the State of California, involving original jurisdiction in the United States Supreme Court without any previous trial in a lower court, it was explained. This method of attack would permit the naming of the other interested parties, although jurisdiction of the highest tribunal might not extend beyond the State itself. At all events, it was said, an originating suit, authorized under the Constitution, would represent the strongest action yet taken in a case involving a dispute over Federal versus State ownership of lands.

JEOPARDIZE PROPERTY

A widespread reaction against any move involving seizure of the tidelands is expected both from Congress and from private interests affected. Even though the case is limited to the State of Cali-

fornia, or even to Reeves Field alone, an affirmatory decision from the Supreme Court would jeopardize all property lying between the low-water tide mark and the maritime 3-mile limit on both coasts of the United States, it was pointed out.

Port authorities from all the coastal States, as well as State officials, were concerned over a congressional measure seeking Federal ownership of submerged oil deposits last year, and a concerted fight has been predicted in the event that California is singled out as a "test case" which might establish a precedent through which the Federal Government could extend its powers over the entire American seaboard.

Take Second-Class Mail Off the Dole

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

EDITORIAL FROM THE PHILADELPHIA INQUIRER

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the article Take Second-Class Mail Off the Dole, from the Philadelphia Inquirer, as follows:

[From the Philadelphia Inquirer of February 1, 1940]

TAKE SECOND-CLASS MAIL OFF THE DOLE

It's about time American taxpayers were relieved of footing the stupendous postage bills of magazines and newspapers.

The publishing business, generally speaking, isn't a charitable institution. Its object is to make money. It can stand on its own feet and pay its own way.

But in Uncle Sam's mails it is on the dole—and has been there for 89 years.

The Inquirer believes newspapers and magazines have been on the postal relief rolls entirely too long and that they ought to get off.

Publishers would get sore if it were suggested that they ask the Federal Treasury for a straight hand-out of public cash to meet their pay rolls.

But they don't grow hot with indignation when the Post Office Department carries their thousands of tons of second-class mail on what amounts to a gigantic Government subsidy.

They publish self-righteous denunciations of tax-financed bounties for farmers, bounties for shippers, bounties for industrialists, bounties for this, that, and the other.

But all the time they are accepting, as a matter of course, a whopping bounty for themselves.

The brutal fact is that in the fiscal year ending last June 30 the United States Government had to pay out $87,264,126.47 more than it received to transport and deliver the second-class mail, in considerable part magazines and newspapers.

That the Post Office Department, according to Postmaster General Farley's annual report, wound up with a deficit of only $38,691,862.90 was no credit to the publishers. Postal revenue from first-class mail cut down the losses on the newspapers, magazines, and other matter.

If the publishers had paid their own way in the mails, not only would there have been no postal deficit; there would have been money left over to defray the cost of the Congressmen's free mailing privilege, free mail for the blind, and the postage of official Government agencies.

Of the more than $87,000,000 worth of red ink in second-class mail delivery, daily newspapers contributed $27,000,000; newspapers other than daily, $14,000,000; magazines of all kinds, $26,000,000; publications put out by religious, educational, and scientific organizations, $13,000,000; county newspapers delivered free within the county, $7,600,000.

It is an impressive list of postage chiselers.

Why don't they hold up their end of postal costs? Technically the reason is amazingly simple. The average postal rate on second-class matter that costs the Government approximately 8.41 cents a pound to carry and deliver is only about 1.8 cents, or a deficiency of 6.6 cents per pound.

When it is remembered that this second-class mail runs to more than 1,300,000,000 pounds a year, it can readily be understood that a loss of 6.6 cents a pound piles up an astronomical deficit.

And why isn't the newspaper and magazine per-pound postage rate high enough to let the mails break even? Because every time there is an attempt to raise the rates the publishers yell bloody murder and go on the warpath for the Congressmen who would dare wipe out this second-class-mail racket.

It all started back in 1851, in the days of President Fillmore, when Congress got the idea that a wider distribution of printed matter would be a good thing for the country. So the postal rate on newspapers and magazines was set attractively low.

The principle was excellent, at that time, and resulted in relatively huge national circulations of papers and magazines.

But now, with Congress trying to cut costs and the people weighed down by taxes, deficit-producing postal rates are a costly and discriminatory burden.

The postage loss on second-class mail, figured down to a Philadelphia basis, means that Uncle Sam went in the hole to the extent of almost $8,500,000 on the more than 128,000,000 pounds of papers, magazines, and other publications that passed out of this city last year.

But Jim Farley's Department takes it on the chin in more ways than this. Some publishers, not content with the already starvation rates on second-class mail, pack their papers, magazines, or what have you in mail bags and ship them by freight to distant focal points for distribution.

This is cheaper than mailing the publications from Philadelphia, or wherever they originate, to remote destinations. It makes possible a considerable saving in the case of magazines having large and far-flung circulations.

But the mail bags, loaned by the Government to publishers for sending second-class matter by freight, wear out. New ones cost money—from 80 cents to around $1 apiece. And who stands this loss? Uncle Sam, of course.

Why should the Government lend mail bags to publishers in order to gyp itself out of money both going and coming? That is only one more puzzle growing out of this second-class mail hocus-pocus.

If permitting the use of mail bags for the freight transport of publications is good business on the part of the Post Office Department, harassed by postal deficits, the fact is not easily perceptible. As for the ethics of it, there may be cause for eyebrow lifting.

The Inquirer believes that magazines and newspapers have no right whatsoever to foist their second-class postage costs upon the taxpayers and the users of first-class mail.

Publishers are not in business for their health. If they are making a profit, or trying to make a profit, they ought to show enough gumption to pay their own way to prevent the Treasury from sinking deeper in the red ink than it is now.

The Inquirer proposes that Congress, closing its ears to the yaps that are sure to arise, courageously set about boosting the rates on second-class mail to the point where magazines and newspapers will not be putting the Government and the taxpayers in the hole.

There has been too much of this craven failure of publishers to pay for the service the Post Office Department gives them. Let's have an end to it.

Speaking Mexico's Language

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

EDITORIAL FROM THE WASHINGTON TIMES-HERALD

Mr. HENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of April 4, 1940:

[From the Washington Times-Herald of April 4, 1940]

SPEAKING MEXICO'S LANGUAGE

If there are any Mexicans left who can understand that their country's success depends on decent, peaceful relations with the United States, they had better read and take seriously House Resolutions 454 and 455, introduced Wednesday by Representative THOMAS C. HENNINGS, Jr., of St. Louis, Mo.

These provide for a congressional investigation to determine whether it is true, as charged, that Mexico has been violating international law and denying justice to American citizens by seizing American property, and if these charges are true (the resolution reads):

"The Congress may take any and all means available under the Constitution to the end that commensurate justice be obtained."

Mr. HENNINGS' idea of "commensurate justice," the Mexicans may be interested to know, is to exercise the powers granted Congress in article I, section 8, of the Constitution, specified as follows:

"Congress shall have the power to * * * declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water."

He is very frankly working to convince Congress that the only way the people of the United States will ever get justice in their claims

for damages in Mexico is by congressional letters of marque and reprisal.

WE'VE BEEN THE GOAT SINCE 1905

Intelligent Mexicans ought to be grateful to learn that the number of Senators and Representatives who are about done listening to the President and the State Department on how to deal with Mexico is rapidly growing. They are eager to take their exclusive, direct action.

It is not mere impatience with the run-around we have been getting on both silver and oil that has them aroused. It is resentment at the abuse we have been taking ever since the Mexicans went crazy in 1905 and began to seize foreigners' property right and left. They haven't stopped since but have only got worse.

Now, this Hennings resolution could be just the thing to tip Congress into independent action. And don't think that the phrase "letters of marque and reprisal" is a mere quaint relic of 1776 power politics. As late as 1895 the British exercised the right of reprisal to collect claims against Nicaragua; the Dutch smacked Venezuela the same way in 1908; and we did it to Mexico ourselves in 1914, when the marines landed at Vera Cruz. The Villa expedition of 1916 was also a form of reprisal.

These are touchy times in the world and Congress is in a black mood with Mexico anyhow. It wouldn't take much to get this Hennings investigation going. And if it ever does reprisal in some form is certain.

Biggest Spending Yet

EXTENSION OF REMARKS

OF

HON. CLIFTON A. WOODRUM

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

ARTICLE BY DAVID LAWRENCE

Mr. WOODRUM of Virginia. Mr. Speaker, under leave granted me I herewith insert an article by David Lawrence entitled "Biggest Spending Yet," which appears in the United States News of April 19, 1940:

[From the United States News of April 19, 1940]

BIGGEST SPENDING YET

(By David Lawrence)

All peacetime spending records will be broken by the Federal Government in the last 6 months of this year. Vast outlays of money—$5,000,000,000 in cash—are scheduled for the second half of 1940. Great Britain is not yet spending at that rate to fight her war against Germany.

The record-breaking flow of cash out of Washington will coincide with the approach of national elections. It is encouraged in part by the urge at the White House and in Congress to speed up national defense now that war is gaining headway in Europe. It is encouraged also by the urge in Congress to give continued support to business, following the setback that has occurred since December.

All idea of economy is shattered. The urge to satisfy those home folks who look, directly and indirectly, for a check from the Government overcame the urge in Congress to satisfy those taxpayers who complain about the future tax bill. As a result, checks will be flowing later this year to nearly 2,000,000 W. P. A. workers, to 1,500,000 old people, to 4,000,000 or more farmers, to large and growing groups of businessmen.

EXCEEDING THE 1936 OUTLAYS

The total of these checks will be much more than in the year of the last Presidential election. In the second half of that year—with a big chunk of cash for the soldiers' bonus included—total outlays were barely $4,400,000,000. Few officials were bold enough to guess that Government spending in peacetime ever again would exceed that figure. Yet, 4 years later, it is to be far exceeded.

Facts show that Government is building great new vested interests. Communities get C. C. C. camps and, like communities that once were given Army posts, battle with all their political power against giving them up. Farmers get checks and relief workers get checks and Members of Congress soon are impressed with the fact that, if there is any cutting to be done, it has to be at the expense of other groups. Business is bolstered by Government cash and, when business slips, the remedy that comes to mind is more cash.

One man in Congress, this year, tried to buck the new vested interests, and thought he had succeeded.

CLIFTON A. WOODRUM, leader of the economy bloc in the House of Representatives, set out at the start of this year to sell the idea of lower expenditures. Mr. WOODRUM is a prominent Member of that group of Virginia Senators and Representatives who believe that the Federal Government must put its finances in order. After great effort, he induced the House to trim $256,000,000 out of President Roosevelt's paper Budget of $8,000,000,000. The Senate quickly restored that amount, and $166,000,000 besides. Then the House changed its mind—in the light of pressure from back home—and voted $50,000,000 above the Budget for C. C. C. camps, and $15,000,000 additional for the National Youth Administration.

The lid now is off again. Representatives of city districts want more money than the President has recommended for W. P. A. They have let Representatives from farming districts know that their support can be had for larger farm subsidies if farm support can be had for larger relief subsidies. The result will be larger monthly outlays than planned by Mr. Roosevelt for W. P. A. during the last half of this year. War developments are creating an urge to be generous with the Army and the Navy after the original urge had been cut down.

Complained Mr. WOODRUM after the House had increased funds for C. C. C. camps:

"This action has shown a reversal of the spirit which the Congress adopted in the beginning to try to live within the Budget estimates, to try to hold down appropriations, and to try to assist the President in keeping the deficit down in order to avoid taxes or raising the debt limit."

But this is a year in which Congress cannot afford to offend groups of voters and a year when it is imperative from the point of view of the party in power to make sure that business is good. Experience reveals that in years of bad business the tendency of voters is to change parties, while in years of good business the tendency of voters is to return to office the party in power.

The contribution that the Federal Government will make to business in the form of cash outlays, consequently, is to be enormous.

SPENDING $28,000,000 A DAY

Cash spending—different from the paper total of budgeted expenditures because the Federal Budget has undergone many shifts—is going to average about $28,000,000 for each day between July 1 and January 1. The British say that they now are spending barely $25,000,000 a day on the war. Back in 1936, the last year of a Presidential election, the cash outgo amounted to about $24,000,000 a day for the final 6 months of the year. The coming half year's expenditures, in other words, will average nearly $850,000,000 a month where, in 1936, they had averaged about $750,000,000.

The volume of cash spending, figures show, has consistently been upward in the last half of election years ever since the pump-priming theory of recovery has been accepted by the Government.

NEEDS INCREASE IN AUTUMN

Increases in past election years have tended to be concentrated in relief and in farm subsidies. The facts reveal that in 1936 outlays on W. P. A. that had been running under $150,000,000 a month at midyear rose to $190,000,000 in November and December. In 1938, when W. P. A. had been leveled off at around $100,000,000 at midyear, the outlay rose to $200,000,000 by the year end. In the present year W. P. A. spending now is headed downhill at about $110,000,000. It is scheduled to rise to $160,000,000 late in the year.

This tendency for relief rolls to rise in the autumn is defended on the ground that needs increase at that time of year. The point is made that Congress cannot be held responsible for an obvious trend that may coincide with an election period. The further point is made by officials that the Government can hardly be blamed for increased spending if private business shows a tendency to lag and shows a need for support.

Business recently has sagged badly. The decline in production from December to the present is among the most drastic and the swiftest on record. This decline is influencing Congress to vote in favor of the largest cash outlays on peacetime record. It is a major factor in easing the congressional conscience over a break with economy promises.

The result is that business will in the months ahead receive a flood of cash dollars from the Federal Government. Those dollars will be divided about as follows:

National defense: Nearly $1,000,000,000 will flow out during the last 6 months of this year to support and build up the Army and the Navy. A large part of this money will be poured into the heavy industries for armor plate and airplanes and guns and military and naval equipment. Four years ago barely half this amount was paid out to support the Nation's Military and Naval Establishments. The trend is toward a rapid acceleration of spending in this field.

Relief and social security: More than $1,800,000,000 will flow into W. P. A., C. C. C., N. Y. A., Farm Security, old-age assistance, old-age insurance, and the Federal portion of unemployment insurance. More than 3,500.000 families will participate in the distribution of checks from this fund during the last half of the year. Nearly as much money now flows out to pay for this one phase of Government activity as flowed out to pay the entire cost of governmental activity prior to 1933. If State payments for unemployment insurance and old-age assistance are added, the total is larger than the cost of the Federal Government in the years before the New Deal.

Agriculture: Checks to farmers and expenditures to maintain services for farmers will amount to more than $700,000,000 in the final 6 months of the year. A large proportion of the farmers of the country are cooperating under the Government program and are receiving payments from the Treasury.

Construction: The Government will pay out more than $500,000,000 for P. W. A. and flood-control, and river and harbor work and low-cost housing in the second half of 1940. This money will go in large part to private contractors, who will in turn pay for labor and buy materials.

Then, to top it off, the Federal Government is going to pay out another billion for its operating expenses, for its debt service, and for the other less well defined of its activities.

Altogether: More than $5,000,000,000 in 6 months, or, for the entire year, more than $9,600,000,000—within gunshot of $10,000,000,000 a year. Within another year, allowing for a continuance of present trends in national-defense spending, the cost of government will pass ten billions.

Most immediate importance attaches to the effect of this volume of spending upon business.

There is no single industry—not automobiles, nor steel, nor even agriculture—that pays out $5,000,000,000 in 6 months. This volume of spending is counted upon to provide a heavy cushion against further decline in business. The rising flow of dollars in the last half of the year will be expected to produce a strong support for industry by maintaining the level of consumer income.

When to that vast support is added the prospect of large-scale exports, owing to rising war demands, there is almost positive assurance of a rising business trend. This rising trend, in turn, will be expected to play a part in the outcome of the November elections.

But then the question rises concerning the source of funds to pay for the vast Government expenditures.

Part will come from taxes; part from borrowing. The part that comes from taxes is larger than the President had figured. In the calendar year tax receipts will be about $300,000,000 more than had been counted upon. As a result there will be less pressure for new taxes in this year and less prospect that Congress will do anything about the Nation's present debt limit.

The fact is, however, that after the large outpouring of cash in the last half of this year the United States Treasury will bump against the present legal ceiling of $45,000,000,000 in debt. After the ceiling is touched, the Secretary of the Treasury will have to pay out the cash he has on hand and then stop writing checks unless he is willing to draw on his currency-issuing powers or unless Congress fixes a new debt limit.

RAISING THE DEBT LIMIT

The settled view of the best-informed Government officials is that the debt limit will have to be raised far above $45,000,000,000 if it is to take care of the future borrowing needs of this Government. The reason is that almost no informed official expects that Congress either will be ready to check spending in the period ahead—particularly if war continues—or that Congress will be willing to vote taxes high enough to provide tax revenue of $10,000,000,000 a year. Present taxes might yield that amount if the national income could be raised to $100,000,000,000 a year from the present $70,000,000,000.

Millions of voters, nearly one-third of them, now have a stake in Government spending. Those voters—as a general proposition—favor economy. Individually, however, the voters want to retain the check or the contract or the trade that flows directly to them from the Treasury of the United States.

Year by year, as a consequence, the trend of expenditures is upward. In election years, that trend is accelerated. Where the cash expenditure plateau had been about $8,000,000,000 in 1936, it is nearly $10,000,000,000 a year in 1940. Nobody is willing to chance a guess as to where it will be by 1944.

One point stands out.

Present increases in spending center in national defense. Businessmen who have objected to spending on relief and housing and public works do not object, publicly, to spending for armament.

The First World War

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

EDITORIAL FROM THE ST. LOUIS POST-DISPATCH

Mr. HENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of March 31, 1940.

[From the St. Louis Post-Dispatch of March 31, 1940]

THE FIRST WORLD WAR

In any classroom quiz, a question as to the origin and date of the first World War would be promptly and confidently answered. The shot at Sarajevo would rip the languor of a peaceful June morning, and August 1914 would again be shaking to the tread of marching armies.

Historians tell it differently. They say the first World War was fought 2,300 years ago. They fix the date at 432 B. C. And, instead of a dramatic assassination, they agree that the unjust tariff levied on Megara by Athens was a true cause, though only one of many inciting conditions. Perhaps that old world had become to small for Athens and Sparta, for democracy and monarchical regimentation, to exist in neighborly relations.

And the analogist may wonder whether Europe is large enough to accommodate the rival ideologies gripped in a struggle for survival—democracy as embodied in France and England, regimentation as vociferated by nazi-ism.

They clashed—democratic Athens, like Great Britain, the maritime power, and rule-ridden Sparta, like Germany, the land empire. And voices prohphetic were predicting disaster and ultimate ruin as the inescapable end.

Whether Europe is to go the way of that ancient Greek civilization may still be debatable, though the learned consensus entertains little doubt that the present war, if prosecuted to a decisive finish, will leave all the belligerents, victor and vanquished, prostrate, impoverished—socially, politically, industrially destroyed. The Cassandras always have the privilege of the floor, but without rejecting or accepting their messages of despair, it may be ventured that Europe is following a path parallel in many respects to that of suicidal Greece.

Just as Europe is now having its second World War, so were there two Peloponnesian wars. As Europe had its Versailles Treaty, so Athens and Sparta had their Peace of Nicas. That earlier truce was of briefer duration than our modern armistice. The first Peloponnesian War, begun in 432, ended in 421. Three years later, in 418, they were at it again, and down to destruction they swept, through all the excesses of tyranny and terrorism, through plunder, confiscation, execution, starvation, with epidemics drenching the land with death.

Was Cleon the Hitler of that far-off day, whose ferocity, seemingly, might have made "to rise and mutiny" the musing hosts of marble that still glorified the memory of Pericles?

There were philosophers then, even as the Woodrow Wilsons and Briands of our own time, who were visioning a fairer world. Plato and Protagoras could still dream. There were practical men of affairs—Hippodamus might fancifully, in our twentieth century, have been the German industrialist Rathenau, done to death by Berlin thugs. Somewhere beyond a beckoning peace was preparing a lovely city where rich and poor, man and woman, Athenian and Spartan would dwell in the equality of brotherhood.

The second Peloponnesian War ended in 404 B. C. It ended not in the wonder city of material abundance and spiritual joy. It ended "in Plato's Laws, as one little hard-living asylum of the righteous on a remote Cretan hilltop. Even in that form it was not fulfilled." The great hope had died.

Perhaps Aristophanes was prophet as well as poet, and perhaps Macaulay was, too. In the Greek playwright's comedy, The Knights, the tyrant is not mentioned by name until the last word of the last line when Cleon is deposed and borne off "to pursue his true vocation of selling cat's meat at the city gates and exchanging billingsgate with the fish sellers and prostitutes." In the conceivable historical repetition of today, the scene, in movie imagination, might be dimly backgrounded by that New Zealander of gloomy forecast painting the ruins of London Bridge.

Flood Protection in the Greater Endicott Area

EXTENSION OF REMARKS

OF

HON. EDWIN A. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

EDITORIALS FROM THE ENDICOTT (N. Y.) DAILY BULLETIN

Mr. EDWIN A. HALL. Mr. Speaker, under leave to extend my remarks, I include the following editorials from the Endicott Bulletin, Endicott, N. Y., for April 2, 3, and 4, 1940:

[From the Endicott (N. Y.) Daily Bulletin of April 2, 1940]

MORAL OF THE 1940 FLOOD IS "ACT"

Moral of the 1940 flood in the Greater Endicott area is the same as the moral of the 1936 deluge: "Act! Do something about dredging out the Susquehanna from Binghamton on down to Endicott and below here and build retaining walls to keep the river where it belongs."

While there was no loss of life in the Greater Endicott area, there have been hundreds of dollars of property damage. Just how much no one knows, but, when the water finally recedes and those who have been forced to leave their homes get in again, it is a safe guess that they will find considerable damage in their basements, foundations, and in some cases higher up in their dwellings.

Since the 1936 flood there has been talk, talk, and more talk about preventing a duplication of this disaster, and the only reason that damage was not much greater this year than 4 years ago is that the river did not rise as high.

In short, if the flood had been as bad as the one in 1936, resulting damage would have been the same or worse.

We discussed the need of action to combat the flood danger in an editorial Monday; we're discussing it again tonight; and we're going to keep on pointing out the need for action until something concrete is done to get the Army engineers, or whoever is responsible, into action to do something about the Susquehanna from Binghamton on down to Endwell, Vestal, Endicott, and below here until we all learn once and for all whether the Federal Government is going to act or not.

As soon as the present floodwaters recede there will be a tendency to gradually forget what happened in 1940 until another year rolls around when we are flooded again with the same devastating results.

This should not be allowed to happen, and we believe it will not be permitted to occur, considering the present feelings of residents in Greater Endicott who have been affected by the flood.

There has been a great deal of unselfish work done by disaster committees in Endwell, Vestal, and Endicott, and residents of the area should take off their hats to those who toiled day and night to move belongings of residents whose homes were flooded.

The community was not caught napping; that is certain. Had the flood been worse than it was (we hope we can talk about it in the past tense), they would have been right on the job, preventing loss of life and providing a real humanitarian service to their fellow men.

Let's not forget the flood of 1940. It should serve as a constant reminder that Greater Endicott is vulnerable to high water and that something must be done to protect the area before another flood descends upon us.

[From the Endicott Daily Bulletin of April 3, 1940]

HALL BACKS FLOOD PROTECTION FOR GREATER ENDICOTT

Congressman EDWIN A. HALL is a man of quick action as a telegram we received from him late yesterday afternoon indicates.

Wired the Congressman representing Greater Endicott at Washington:

"Have read your impressive editorial on the flood situation in Endicott and want you to know that I will take the appeal for adequate flood control on the floor of the House Wednesday [today]."

Congressman HALL referred to our editorial of Monday, April 1, in which we suggested that citizens of Endwell, Vestal, and Endicott should petition Congressman HALL and Senators WAGNER and MEAD for definite action on flood-protection measures for the Greater Endicott area.

As the Monday Daily Bulletin arrived in Washington only yesterday, Congressman HALL certainly lost no time in taking action on the suggestion in our editorial, and, for the sake of those who had their homes flooded the past week and for the protection of residents from future floods, we hope that he is successful in initiating action in regard to dredging the Susequehanna River from Binghamton on down here as well as erecting retaining walls along the river where needed.

We urge local residents to support Congressman HALL in his appeal for adequate flood control, and the best evidence that the Greater Endicott area is with him is to have letters directed to him supporting the project.

Flood prevention is like fire protection in many respects. The village of Endicott spends thousands of dollars each year for fire protection in the form of a paid fire department, yet this personnel and equipment is not put into use too often.

In fact the fire-loss record in Endicott is exceptionally low, which is a tribute to our fire department.

It is becoming increasingly evident that the Greater Endicott area is going to be subjected to floods each year that there is an unusual accumulation of snow in the watershed or when there are excessive rains in the spring.

Since this flood protection appears to fall in the province of the Federal Government, we certainly need action on this—not 4 years hence when we have another flood but this year while the subject is still fresh on our minds.

The danger exists that future floods may grow in intensity and, if nothing is done to protect the Greater Endicott area, we may suffer a real disaster with high damage and loss of life as well.

Congratulations to Congressman HALL. He's on his toes. Let's hope that he gets some reaction at Washington.

Send him a letter indicating you're with him. Do it now.

[From the Endicott Daily Bulletin of April 4, 1940]

GREATER ENDICOTT SEEKS FLOOD PROTECTION

First step toward obtaining flood protection for the Greater Endicott area was taken last night at a meeting at the greater chamber of commerce office, attended by representatives from Endicott, Endwell, Vestal, and Westover.

We are definitely in favor of the formation of such a central committee, representative of these four communities, that can go to bat for flood protection at Washington with the aid of Congressman EDWIN A. HALL.

We suggested editorially 2 weeks ago that such a committee could carry on the campaign most effectively, and, needless to say, we are pleased that such a group has been formed. Efforts by each community individually might cause confusion, while unified action should definitely bring results.

We received a letter from a Daily Bulletin reader several days ago who suggested that we keep on hand the page and a half of flood pictures that we published earlier in the month so that we can publish them periodically to remind local residents that unless protection is provided greater Endicott lowlands will be flooded again.

The point made is well taken. Too often meetings are held to act on such a proposition, but, after the meeting the idea is forgotten, and nothing happens.

Formation of a central committee should avoid this pitfall, and we are confident that the group representing the four communities will follow the subject at hand until action is taken.

In any event, as we suggested last week, we are going to keep calling to the attention of Greater Endicott residents the need for flood protection until the Federal Government takes action.

The Greater Endicott commission should be a great help to Congressman HALL in his campaign for aid to this area, and, jointly, we are confident that the needed protection can be secured.

This Question of Relief

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

ADDRESS BY HON. W. ARTHUR SIMPSON

Mr. PLUMLEY. Mr. Speaker, under permission granted me to extend my remarks in the RECORD, I wish to insert a speech delivered at the Vermont School of Agriculture, Randolph Center, Vt., by Hon. W. Arthur Simpson, chairman, Old Age Assistance Commission of Vermont, and a nationally recognized authority on questions in this field.

Relief and near relief inaugurated on a vast Federal scale in 1933 as an emergency has become a permanent institution in America. The cost of these colossal programs constitute a grave menace to the financial stability of the Nation and to the continuation of democracy. Unquestionably, we have achieved certain desirable social goals in our more humane methods through which society has met its obligation to care for our citizens who are in need. From the standpoint of a more equitable division of financial responsibility the partnership of the Federal, State, and local Governments in the public-assistance programs of the Social Security Act constitutes a progressive accomplishment. The insurance policies of the act are also an attempt on the part of the Government to erect barriers against some of the hazards and vicissitudes of life. It has yet to be determined that the business and industry of the Nation can support the heavy tax burden to continue these insurance programs on the scale and scope now contemplated. It is a well-known fact that old-age and survivors' insurance is not yet financed on a sound actuarial basis and that increased taxes will be necessary. The reserves, now being established for the benefit of the workers of America, offer a most ingenious method of temporarily meeting part of the cost of governmental extravagance and has inherent possibilities for great financial disaster.

The fact that we have achieved certain important and desirable social goals should be a challenge to keep our programs workable and sound instead of stimulating increased demands for greater governmental services. Visionary Utopian schemes are still being advocated in many States and in Congress. An extension of insurance benefits is being proposed while the present program is still in the experimental stage.

Those who administer public-assistance programs may be pardoned for expressing concern over the future of those who are genuinely in need. We can be actuated by the most humanitarian motives and recognize our responsibility, but we can go so far as to destroy our national credit and in the end the condition of those most needy and deserving and of those whom we most desire to help is worse than when we started because in a bankrupt government, or under dictatorship, human life becomes of very little account, and the poor, the dependent, and the underprivileged suffer first and suffer most.

There is currently being expended in the United States about $275,000,000 each month for relief and work relief. There are in round numbers 1,600,000 persons who are recipients of general relief. One million nine hundred thousand individuals receive old-age assistance. Seven hundred and fifty thousand children receive aid under the policy of aid to dependent children. Two hundred and ninety thousand young men are recipients of help through enlistment in the Civilian Conservation Corps. Seven hundred thousand young men and young women are receiving aid through the National Youth Administration. Sixty-five thousand farmers are receiving subsistence payments from the Farm Security Administration. Seventy thousand individuals are beneficiaries of the blind-aid program. Nearly 2,000,000 persons are on W. P. A. and work projects of other Federal agencies, and 450,000 more are employed on Federal work-construction projects. About

8,000,000 persons are therefore the direct beneficiaries of these programs. With their families, they probably constitute nearly one-quarter of the entire population of the country.

We are taxed for these expenditures by direct levies or what is more deplorable, public borrowing, which must be paid by new taxes. Not all of these payments are included under the social-security categories, but they constitute a social and economic problem with which society must cope.

Business, industry, agriculture, and the whole of the Nation have a tremendous stake in meeting these problems objectively. Otherwise, the financial stability of government will be wrecked and the social fabric of the Nation destroyed. These problems must enlist the active interest and action of the people of America. We realize that we cannot measure present-day problems by predepression standards, but the fundamental principles of existence and growth through private enterprise still hold good. Industry is, and always must be, the economic fountain and lifeblood of the community and the Nation. Industry is not something added or injected into the life of the people. To be successful, it must operate in harmony with the hopes, the aspirations, and the ideals of the people it serves, but the people themselves have the greatest stake in its success and the uttermost responsibility for its survival and well-being.

This country was built up by the constant establishment of new business and the expansion of old business. In every city and every village throughout the country men were constantly starting out on their own initiative to improve on the enterprises of others or develop a new product. They put a few men to work. If successful, they expanded to employ ten or a hundred or thousands. If unsuccessful, they passed from the picture without need of Government subsidy. New methods of production were found and small industries expanded into large industries. Men were willing to spend their time and their money in order that they might provide more completely for themselves and their families in their old age, in order that they might rise above the average standard of living and enjoy a little more luxury or a little more power. In the last 6 years this process has come to an end.

America was largely a self-sustaining country for over 200 years. A majority of its cititzens lived off the land or in relatively small, self-sustaining communities supplying their own needs. The Nation had tremendous room for expansion. Life was not easy, sacrifice and hard work were essential to existence, but opportunity was virtually unlimited. Less than 100 years ago our great industrial developments were in their infancy. With approximately every 20 years new and specialized great industries came into operation in the Nation. The employment of persons in industry was progressively increased in an expanding ratio for two generations.

For many years in this country we went on the theory that any man who wanted a job could get it, and if he worked hard he could support himself without the help of the Government. Private initiative and enterprise and our policy of encouraging industry and thrift resulted in the American system under which a reasonable economic prosperity was more nearly universal than in any other country in the world. Our living was more expensive and more enjoyable than any developed elsewhere at any time in human history. It required 300 years of sacrifice, hard work, careful planning, and prudent saving to build this Nation into the high position it occupied among the nations of the world.

The depression which began in 1929 brought home to everyone that even America was no Utopia, that many people could not secure work, that many hard workers were unable to provide for their old age, and that savings had been wiped out or exhausted and earnings from investments had been greatly reduced. The uncertainties of jobs, wages, and of returns from efforts put into farming and other producing occupations have been ever-increasing factors in the great social problem of the Nation.

In our most prosperous year, 1929, there were gainfully employed 36,000,000 workers. A decade later we had gainfully employed only 33,000,000 workers, in spite of the fact that about 10,000,000 new workers had grown up and become available in the Nation. It has been asserted that our production in 1939 was equal to the 1929 level.

Our greatest and most profound social problem lies in the fact that the young men and women of America who are coming into active citizenship during the next decade are children of the depression. The new voters of 1940 have passed nearly all their formative years in the shadow of the great national emergency. Their lives, their thoughts, and their outlook on life have been profoundly affected by the unsound and the unstable way of living during this period. What will be their attitude toward a generation that has saddled them with a debt which they can never pay and one that they had no voice in creating? Shall we more and more abandon our system of private initiative, industry, and thrift, continually clamor for governmental subsidy, forming more self-seeking groups, until we sink the ship of state by a burden of debt, and embark on the inevitable course of inflation and repudiation. Certainly the youth of tomorrow will owe little allegiance to a political system which has failed to solve these great problems.

It is not the cost of relief which alone menaces the future of the Nation, it is the increasing burden of near relief in the form of subsidies to every minority group strong enough to maintain a lobby or exert political pressure in Washington. We have been teaching all classes of our population to come to Government for subsidies and hand-outs. Many of them may be justified in an emergency, but not as a continuous function of Government. We cannot even maintain humanitarian measures through a policy of taxation and borrowing which will completely bog down our industrial machine. A continued Federal deficit not only menaces those in need of aid, but the future of salaries, Government bonds, bank savings, and life insurance.

We have developed a fantastic and dangerous type of financial morality when it is asserted that there is no danger in a huge public debt because we owe it to ourselves. We are about to raise the statutory debt limit in this country from $45,000,0000,000 to $50,000,000,000 with every indication that as soon as the new limit is reached it will have to be lifted again. Any sound-thinking man or woman knows we have wandered far from the dictates of common honesty and common sense when we try to fool ourselves into thinking we can spend ourselves rich. It is just as futile as for a man to think he can drink himself sober.

Americans like to talk about common sense in Government, but few, at present time, are very much interested in logical schemes of Government if they require individual or community sacrifice. Adherents of both political parties profess interest and support of principles of economy, and then rush to write or telegraph their Representatives in Congress the minute it is proposed to curtail the expenditures for their pet projects or policies.

In this great country of ours, with a growing and dispersed population, proven principles of sound government require that people be encouraged to undertake and assume more of its responsibilities and duties. The fact that a certain school of thought in control of our Government has succeeded in centralizing more and more authority in the Nation's Capital indicates that we have departed from the fundamental principles upon which this Republic was established and developed. We pay dearly for bureaucracy. The practical, the inexpensive, and the efficient have no place in the lexicon of the bureaucrat. He thrives and prospers on public spending. Domination by a centralized autocracy creeps in on us, slowly breaking down our morale, deadening our faculties, and bribing our intelligence. It has been the predominating factor in the steady erosion of the American fiber of unlimited self-responsibility.

The new weakness of democracy is in the unheeded growth of one thing—debt. Under the American system no political party has been able to impose a serious increase in general taxation and hope to remain in office after the next election. It is easier for any party in power to borrow money than to raise taxes. Consequently we are busily mortgaging the future ambitions, abilities, and thrift of the younger generation and generations yet unborn. The very existence of every institution and privilege attained under our democratic system of government is imperiled by this situation. National despair under the immense load of debt has brought about the tremendous changes in the governments of the Old World and endangered civilization. The Republic is threatened not by the public enemy but by the public debt.

The ease with which public servants surrender to political expediency appears to be intensified in an election year. The steadily increasing army of independent voters in this country will soon, however, establish its great political power. The success of fusion and coalition tickets in the field of good government will eventually make themselves felt in the field of national politics. The apathy with which the American voter has viewed the coming elections is predicated on the fact that the Nation is sick of partisan politics and the realization that party platforms are no longer a covenant with the people.

America needs to do some serious thinking, for we can no longer live in an imaginary financial paradise where you can borrow money and not have to raise taxes. The Nation needs a leader not to promise more things to more people, but one to catch the vision and sell the people on careful spending, prudent saving, hard work, cooperation, and sacrifice, all of which are essential to the safety and preservation of the United States of America.

The Trade-Agreements Program

EXTENSION OF REMARKS

OF

HON. ROBERT L. DOUGHTON

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

STATEMENTS BY THE PRESIDENT AND THE SECRETARY OF STATE

Mr. DOUGHTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statements of the President and the Secretary of State:

STATEMENT MADE BY THE PRESIDENT AFTER SIGNING THE JOINT RESOLUTION PASSED BY THE CONGRESS FOR THE PURPOSE OF EXTENDING THE AUTHORITY OF THE PRESIDENT UNDER SECTION 350 OF THE TARIFF ACT OF 1930, AS AMENDED

The action of the Congress in continuing the operation of the trade-agreements program is expressive of the determination on the part of our people to retain unimpaired for the next 3 years this

powerful instrument for promoting our national economic well-being and for strengthening the foundations of stable peace.

I was very glad that, in the course of extended hearings and exhaustive debate, the Congress subjected to a most thorough examination the objectives and the underlying principles of the program, the results of its operation over nearly 6 years, and the procedures used to achieve these results. The facts brought out by that searching scrutiny should leave no room for doubt in the mind of any fair-minded person that the trade-agreements program has brought demonstrable benefits to our Nation as a whole and to every interest directly concerned, and has not inflicted injury on any group of producers.

What was particularly striking was that, in the absence of any proof of actual injury, much of the opposition seemed to be based on unwarranted fears as to what might happen in the future. There is nothing more destructive of public welfare than the conjuring up of groundless fears for the sole purpose of discrediting a constructive policy which is invulnerable to attack on any legitimate basis.

The record of the trade-agreements program is in large measure the result of the procedure which has been employed. It cannot be too strongly emphasized that the formulation and negotiation of the agreements, down to the smallest details, involves the cooperative effort of the Secretaries of State, Agriculture, Commerce, and the Treasury and of responsible officials of their respective Departments, as well as of the United States Tariff Commission and, as occasion warrants, of other appropriate agencies of the Government. Each of these agencies contributes its specialized knowledge and judgment to the work. For example, all questions relating to agriculture are passed upon by the Department of Agriculture. Hearings before the Committee for Reciprocity Information afford an opportunity for all interested parties to present their views, which are given the most careful consideration.

Under this procedure all recommendations made to me with regard to trade agreements represent the collective judgment of all agencies of the Government concerned with any phase of the matter, based upon most painstaking study of all pertinent information. I have never known an example of more effective collaboration among the various divisions of the Government and between the Government and the general public for the good of the entire Nation.

Needless to say, this procedure which has worked so well in the past should be continued in the future.

STATEMENT BY THE SECRETARY OF STATE

The passage through Congress of the act continuing the trade-agreements program in force for the next 3 years will afford profound satisfaction to all those who have been observing and appraising the operation of the program from the standpoint of our best national interest. They know that the three high objectives of the trade-agreements policy and of the principles which underlie it are: (1) To promote the fullest practicable development of both our domestic and foreign markets, thereby achieving increased production and employment; (2) to help in creating a solid foundation for any stable peace structure to follow the war; and (3) to safeguard free enterprise in this country against ever-expanding regimentation which would be the inescapable result of extreme foreign-trade controls of the kind that would be rendered necessary by a reversion to the Hawley-Smoot embargo doctrine.

The progress toward attaining these objectives, made in the last 6 years under conditions of unprecedented difficulty, has brought marked benefits alike to our agriculture, our industry, and our labor—without injury to anyone. The policy embodied in the 22 trade agreements already negotiated is an assurance that in the future operation of the program the interests of all sections of the country—West and East, South and North—and of all groups of the population will be as vigorously promoted and as scrupulously safeguarded as heretofore.

This country and all other countries interested in the three great objectives of the trade-agreements program are giving increased support to the program and to the principles which underlie it. These principles must prevail in economic relations among nations at the end of present hostilities if our Nation and other nations are to have stable peace and satisfactory economic progress.

Bureaucratic Law and the Census

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 16, 1940

RADIO ADDRESS BY HON. DANIEL A. REED OF NEW YORK

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address which I made over the Blue Network of the National Broadcasting Co. from Radio City, New York, on March 27, 1940:

Ladies and gentlemen of the radio audience, I wish to discuss with you for a few minutes the 1940 census as it relates to you and your liberties.

On January 24 I addressed the House of Representatives, pointing out to the Members of that body that the income questions in this census are without authority of law.

Furthermore, I questioned the propriety of asking the questions prepared and propounded by Secretary Harry Hopkins under the Census of Housing Act. These proposed questions were such a flagrant violation of private rights that I introduced a bill to repeal the particular part of the census which seeks to pry into every nook and corner of your household from the bathtub and toilet facilities to the monthly payments on your mortgage. The Census Committee of the House of Representatives refused to hold public hearings on my bill. We attempted to strike from the appropriation bill the millions of dollars required to carry on this snooping program. We were outvoted by the Democratic Party—and the taxpayers will bear the burden, as well as the annoyance of this inquisition. Unless the Congress acts with decision and dispatch, you will be confronted with obnoxious questions never heretofore asked by your Government under penalty of fine or imprisonment, or both, for a refusal to answer.

I invite your attention to a resolution introduced in the Senate by Hon. CHARLES W. TOBEY to strike the income questions from the population schedule. The Senate has refused to consider this resolution up to the present moment.

I respectfully call your attention to the Census Act of 1929, which provides that this census "shall be restricted to inquiries relating to population, to agriculture, to irrigation, to drainage, to distribution, to unemployment, and to mines."

It is perfectly obvious that the Congress provided with meticulous care that the census powers granted to the Secretary of Commerce delegated no more power than was specifically set forth in the act. Instead, Congress restricted the extent of the inquiries which he might pursue.

I am amazed at the effrontery of the Commerce Department when it contends that under the 1929 Census Act it has the power to make any and every inquiry into the personal status of an individual. The Department further contends that income is akin to population. We can all think of many other questions that are akin to population, but common decency shrinks at the thought of pursuing inquiries to such a point.

Remember that the census of 10 years ago was taken under the authority of this very same act, and the suggestions then made to do this sort of thing were refused. Sociologists, mail-order houses, and other pressure groups urged that these same prying, snooping questions be included in the census of 1930, but the Republican administration, then in power, refused to permit these invasions into the privacy of the citizen.

I say to you—and the records of the Census Committee support my assertion—that it was not the intention of Congress that the citizens of this country should be subjected to any such inquisition.

I would remind you that when the Census Act of 1929 was passed there was no doubt whatever in the minds of the people that they could rely upon the Supreme Court of the United States to forbid any attempted abuses of delegated power. Public confidence in the Court was justified in the early days of the New Deal, when the N. R. A. was held unconstitutional because of an illegal delegation of power, as in the "hot oil" case. You may also recall the case of *Jones v. Securities and Exchange Commission*, where it was held that the procedure amounted to an unconstitutional search and seizure.

The situation has changed now, and particularly since the Court-packing bill. Perhaps much of the uneasiness in the minds of the people was caused by the unlawful seizure and publication of private correspondence by former Senator Hugo Black and the issuance of Executive orders by President Roosevelt making public the information gathered by the Government on a confidential basis.

The time has come for free men and women to awaken to the grandeur of their inheritance—and the threats to it. It is not an inheritance of servitude, but one of liberty—a free government under which every citizen is a sovereign ruler in his own right; a republic, not a democracy, "a Government of the people, by the people, for the people," within constitutional limitations. We are the legatees of liberties bequeathed to us in trust to use, coupled, however, with a duty to transmit these liberties to our posterity as a priceless and unimpaired heritage.

These liberties are now threatened. The Census Act of 1929 and the Census of Housing Act of 1939 have been distorted into two companion snooping measures. They are typical examples of bureaucratic usurpation of power. If these attempted invasions of personal privacy are suffered to pass without a determined public protest, the logical consequences of such indifference will be to lend encouragement to further and more drastic regimentation by bureaucratic edict. I maintain that Secretary of Commerce Harry Hopkins, acting contrary to the letter and spirit of the law, has tortured and twisted the 1929 Census Act into a despotic inquisition.

In the Bureau of Census Instructions to Enumerators, the enumerators are advised that "you have the right of admission to all dwellings (including institutions) within your territory for the

purpose of obtaining information required by the Bureau of the Census * * *.

While there are penalties provided for refusal to answer questions within the purview of the statute, under no possible construction of the Census Act of 1929 is there the "right of admission" to your house, occupied by you as your home.

A serious question arises as to the integrity and validity of the results of the census when we note that instruction No. 20 of the Census Bureau's Instructions to Enumerators says:

"You have a right not only to an answer but to a truthful answer.

"Do not accept any statement you believe to be false. Where you know the answer is incorrect, enter upon the schedule the correct answer as nearly as you can ascertain it."

Quite clearly under this instruction the census enumerator is advised to set himself up as the judge of the truth and veracity of the citizen's statements, and if he, the enumerator, "believes" any answer to be false or incorrect, he, the enumerator, is himself to supply the answer.

The obvious result of a census taken under these conditions and instructions will not be the information given by the citizens, necessarily, but information culled out of the answers given by the citizen, which the enumerators may believe to be correct, together with such other information as the enumerators may see fit to supply on their own responsibility.

Just how far shall we permit the arbitrary and dictatorial bureaucrats to drive us down the path toward totalitarian despotism? Why should a petty Government employee, paid for his services by the taxpayers, acting as a mere tool of his political party or of some pressure group, invade the liberties of the citizen and heap such indignity upon free men and women?

The questions, even aside from income and mortgages, are such as to pry into the most intimate family secrets. There are inquiries relating to marriage, divorce, and the age of women that would furnish the local gossipmongers bases for stories of children born out of wedlock, incidents long forgotten and lived down, which, for the good of all, should not be resurrected. For example, I quote:

"Has this woman been married more than once?

"Age at first marriage?

"Number of children ever born?"

No good purpose can be served by these insolent and prying questions; on the contrary, it is obvious much harm can be done to the reputation of many law-abiding loyal citizens. This Government should not become a scandalmonger. Yet the Secretary of Commerce, Harry Hopkins, proposes to put the power of his office to such an un-American and dictatorial use.

We hear much these days from high official sources about the sanctity of law and the duty of citizens to obey the law. Of course, it is conceded by all good citizens that they—and this includes all upright officials and all bureaucrats as well—should respect and obey the law; but must a citizen be compelled to bow down in abject submission to departmental decrees or rulings contrary to law?

If it is to be regarded as the duty of the citizens to submit to such bureaucratic decrees, then it is time for us to remember "that where law ends tyranny begins."

If we accept the principle that a bureaucrat who has never submitted himself to the approval or disapproval of the voters can by edict prescribe these questions which the citizen must answer in the census, and if the bureaucrat can take advantage of penalties provided for refusal or neglect to answer proper questions, then we have taken another long step down the road toward dictatorship.

If a bureaucrat can compel answers to questions, such as these under discussion, under penalty of punishment for failure to do so, he or some other bureaucrat can later compel citizens to reveal what secret orders they belong to; the secret work of fraternal orders, such as the Masons, or the Knights of Pythias, or the Elks, or the Knights of Columbus, or the Holy Name Society, or the Friendly Sons of St. Patrick, or the Ancient Order of Hibernians, or any other organization—fraternal, social, or business.

It has happened abroad, and every American citizen can well profit by the experience of those unhappy peoples who failed to protest in time against the invasion of their fundamental rights.

The record shows that in the last 7 years regulations have been established in ever-increasing number, imposing restraints on citizens in matters in which their acts were formerly free of bureaucratic domination. The individual citizen, under these decrees, Executive orders, and departmental regulations, has been forced to submit to regimentation or face severe penalties, and often ruin, for the violation of them.

If the citizens shall submit to these bureaucratic encroachments upon their fundamental rights without protest, then step by step, here as in foreign dictatorial nations, decrees and edicts of men will displace government by law. When this happens, then it can truly be said that this is not a "people's government, made for the people, made by the people, and answerable to the people." But you know and I know that Americans have not lost those qualities which for 150 years have given splendor, vigor, and grandeur to the principle of self-government.

You, whose sturdy forebears gave us self-government, have not become incapable of self-government.

In conclusion, what are your remedies? Our form of government provides recourse for the injured citizen by the right of petition to Congress, or by action in the courts, and, lastly, by the sovereign power of the ballot.

The choice is yours.

Accomplishments of the Work Projects Administration in Wyoming

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Wednesday, April 17 (legislative day of Monday, April 8), 1940

REPORT BY THE WORK PROJECTS ADMINISTRATION

Mr. SCHWARTZ. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an official summary of the work performed by the Federal Works Agency, Work Projects Administration, in Wyoming, cumulative through December 31, 1939.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

REPORT OF ACCOMPLISHMENT ON PROJECTS OF THE DIVISION OF OPERATIONS, WORK PROJECTS ADMINISTRATION, FEDERAL WORKS AGENCY IN THE STATE OF WYOMING, CUMULATIVE THROUGH DEC. 31, 1939

SEC. 1.—*Highways, roads, streets, and related items*

Item	Unit of measurement	Number or amount
Highways, roads, and streets, total	Miles	3,228.54
Rural roads, total	Miles	2,985.44
Paved, total	Miles	6.59
New construction	Miles	6.50
Reconstruction or improvement	Miles	.09
Unpaved	Miles	2,978.85
Urban streets and alleys, total	Miles	212.32
Paved, total	Miles	31.94
New construction	Miles	31.09
Reconstruction or improvement	Miles	.85
Unpaved	Miles	180.38
Other roads (in parks, etc.), total	Miles	30.78
Paved, total	Miles	.15
New construction	Miles	.15
Unpaved	Miles	30.63

Item	Unit of measurement	Number or amount	
		New construction	Reconstruction or improvement
Bridges and viaducts, total	Number	787	265
Do	Length in feet	21,751	9,137
Wood bridges and viaducts	Number	772	258
Do	Length in feet	20,788	7,970
Steel bridges and viaducts	Number	9	7
Do	Length in feet	619	1,167
Masonry bridges and viaducts	Number	6	----------
Do	Length in feet	344	----------
Culverts	Number	2,739	83
Do	Length in feet	68,610	1,814
Roadside drainage, total	Miles of ditch and pipe.	13.45	8.00
Roadside drainage ditch	Miles	12.69	8.00
Roadside drainage pipe	Miles	.76	----------
Sidewalks and paths, total	Miles	18.89	.57
Paved	Miles	17.46	.02
Unpaved	Miles	1.43	.55
Curbs	Miles	29.91	----------
Gutters	Miles	.72	----------
Guardrails and guardwalls	Miles	2.27	.06
Road and street lighting	Number of light standards.	82	12
Do	Miles of road equipped.	.90	1
Traffic signs erected	Number	105	----------
Roadside landscaping	Miles of road	----------	7.66
Removal of car and railroad track	Miles of single-line track removed.	----------	2.86

SEC. 2.—*Public buildings, excluding utility plants and buildings at airports*

Item	New construction	Reconstruction or improvement	Additions
	Number	*Number*	*Number*
Public buildings, total	158	232	15
Educational buildings, total	17	80	1
Libraries	1		
Schools	[1] 16	80	1
Recreational buildings, total	39	18	5
Gymnasiums	2	1	1
Recreational buildings N. E. C.	37	17	4
Offices and administrative buildings	4	12	
Hospitals		1	[2] 1
Penal institutions	1	1	
Fire houses		1	
Garages	10	3	2
Storage buildings	11	6	
Armories		4	3
Public buildings, N. E. C.	76	106	3
Number of buildings demolished		8	

[1] Of this number, 1 is a scientific building erected on the campus of the University of Wyoming, while an additional 5 are log buildings used as temporary classrooms at the Geological Summer Camp of the University of Wyoming.
[2] Works Progress Administration constructed the basement only.

SEC. 3.—*Outdoor recreational facilities*

Item	Unit of measurement	Number or amount	
		New construction	Reconstruction or improvement
Stadiums, grandstands, and bleachers	Number	15	10
Do	Seating capacity	13,029	17,770
Fairgrounds and rodeo grounds	Number	1	5
Do	Area in acres	6	234
Parks	Number	5	23
Do	Area in acres	28.6	1,188
Playgrounds, total	Number	8	30
School playgrounds	Number	7	30
Other playgrounds	Number	1	
Athletic fields	Number	8	7
Do	Area in acres	82	34
Handball courts	Number	2	
Horseshoe courts	Number	23	
Tennis courts	Number	33	2
Swimming pools	Number	12	
Do	Surface area in square feet.	169,150	
Wading pools	Number	6	
Do	Surface area in square feet.	6,606	
Ice-skating areas	Number	8	1
Do	Surface area in square feet.	168,878	23,400
Bandshells	Number	1	1
Golf courses	Number	3	4
Do	Number of holes	27	45
Do	Area in acres	280	409

SEC. 4.—*Public utilities and sanitation*

Item	Unit of measurement	Number or amount	
		New construction	Reconstruction or improvement
Utility plants, total	Number	11	5
Electric power plants	Number	4	2
Do	Capacity in kilowatts.	[1] 25.5	305
Pumping stations	Number	6	3
Do	Capacity in thousands of gallons per day.	1,740	892
Sewage-treatment plants	Number	1	
Do	Capacity in thousands of gallons per day.	125	
Water mains, aqueducts, and distribution lines.	Miles	54.37	15.83
Water consumer connections	Number	856	255
Water wells	Number	32	
Storage tanks, standpipes, cisterns, and reservoirs.	Number	30	3
Do	Capacity in thousands of gallons.	2,076	2,940

[1] Small light plants installed at fish hatcheries, summer camps, etc., account for small kilowatt capacity.

SEC. 4.—*Public utilities and sanitation*—Continued

Item	Unit of measurement	Number or amount	
		New construction	Reconstruction or improvement
Reservoirs impounded by dams (storage dams).	Number	35	5
Do	Capacity in acre-feet.	111,217	99,732
Storm and sanitary sewers	Miles	33.91	1.08
Sewerage service connections	Number	772	
Manholes and catch basins	Number	747	82
Sanitary privies	Number	5,380	5
Abandoned mine sealing	Number of openings sealed.		
Mosquito control	Acres drained	12	
Do	Miles of ditch and pipe.	0.05	
Do	Gallons of spray used.		
Telephone and telegraph lines	Miles	47.83	
Electric power lines	Miles	5.42	
Flood-lighting athletic fields, parking lots, etc.	Number lighted	1	
Do	Acres lighted	3	

SEC. 5.—*Flood and erosion control—Irrigation—Conservation*

Item	Unit of measurement	Number or amount		
		New construction	Reconstruction or improvement	Additions
Fish hatcheries	Number	3		[1] 24
Do	Annual capacity in thousands of fingerlings.	8,750		1,157
Reforestation	Acres		150	
Do	Thousands of trees planted.		10	
Rodent extermination [2]	Thousands killed.	9		
Jetties and breakwaters	Linear feet	300		
Retaining walls and revetments	Linear feet	26,709	2,361	
Riprap	Square yards of surface.	285,467		
River bank and shore improvement	Miles		14.60	
Streambed improvement	Miles		5.77	
Conservation, flood, and erosion control dams.	Number	4		
Irrigation system	Acres	147	640	
Do	Miles of ditch, canal, pipe, or flume.	7.57	0.56	

[1] Consist mainly of rearing ponds located at selected sites, not, in all cases, immediately adjacent to hatchery.
[2] Predatory animals.

SEC. 6.—*Airports and airways*

Item	Unit of measurement	Number or amount		
		New construction	Reconstruction or improvement	Surfacing
Landing areas, total	Number	2	3	
Commercial airports	Number		2	
Do	Area in acres		716	
Intermediate (Civil Aeronautics Authority) landing areas.	Number	1		
Do	Area in acres	621		
Landing areas, N. E. C. (emergency, etc.).	Number	1	1	
Do	Area in acres	181	40	
Landing fields	Number	3	2	
Do	Area in acres	666	203	
Runways, total	Length in feet	9,900		12,200
Paved runways	Length in feet	3,500		12,200
Unpaved runways	Length in feet	6,400		
Airport buildings, total	Number		3	
Administrative and terminal buildings.	Number		2	
Airport buildings, N. E. C.	Number		1	
Boundary lights	Number of light standards.	130		
Airway markers	Number	269	16	
Airway beacons	Number		1	

SEC. 8.—*Miscellaneous items*

Item	Unit of measurement	Number or amount		
		New construction	Reconstruction or improvement	Additions
Cemeteries	Number		4	1
Do	Area in acres		108.5	52
Landscaping and beautification, N. E. C.	Acres		282.26	
Ornamental pools and fountains	Number	2		
Monuments and historic markers	Number	157		
Drainage, N. E. C	Acres	1,422	2,540	
Do	Miles of ditch	4.38	6.06	
Do	Miles of pipe	1.11	0.32	
Fencing	Miles	218.90	43.51	
Tunnels, N. E. C., total	Number	2		
Do	Length in feet	745		
Artificial channels, N. E. C	Miles	0.19		

Foreign Policy

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 17 (legislative day of Monday, April 8), 1940

ARTICLE BY JOSEPH A. CONRY

Mr. LODGE. Mr. President, I have had called to my attention for insertion in the RECORD an illuminating letter to the editor of the Springfield Republican written by Mr. Joseph A. Conry, formerly a Member of the House of Representatives from Boston, who was also for 25 years Russian consul in Boston. While this letter is not one which expresses my views completely, it is so interesting that I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Springfield (Mass.) Republican of April 16, 1940]

FOREIGN POLICY—NOT OUR PART TO INTERFERE WITH THE "PLAY OR PROFIT" OF THE CHRONIC WARRIORS

To the EDITOR OF THE REPUBLICAN:

Through the editorial page of the New York Times comes an academic challenge to the Republican Party, and particularly Thomas Dewey, to tell where they stand on the question of American foreign policy. In 1916 President Wilson was reelected on the slogan "He kept us out of war." Yet there was a decided fatalistic tendency at that time that we must enter the war to "make the world safe for democracy." Today American feeling is decidedly opposite. Without recalling the sordid actions of our Allies in repudiating their debts as reasons for our belief, it is safe to say that 90 percent of our people are determined that America should keep out of the war, while it is equally true that the same percentage of our sympathy is with the Allies, not because of affection but based on aversion for Hitlerism.

It is well to recall that war is the normal condition of Europe. The continent is overpopulated and underfed. Once more we are reminded of the conditions confronting Abraham and Lot on leaving Egypt. Each possessed great wealth, with vast herds of cattle and servants. When their servants began to quarrel, Abraham, a conservative, said to Lot, "Let us avoid quarrels; you go to the left and I will go right." So, we are told in Genesis, Lot entered into the lovely lands bordering the Jordan while Abraham went into the land approaching Canaan. Thus war was temporarily avoided, but only for a short time. A dozen years later Lot was taken prisoner by some neighboring tribes, being subsequently released through the military support of Abraham.

From that time, during the whole history of Europe and Asia, war has been the constant occupation of a large and important body of its people. The aristocracy provided the gaudily uniformed officers and the well-paid contractors, with their constantly increasing multitudes of retainers. War was their occupation, their glory, their whole life. If they persist in continuing the barbarous system, why should we interfere with their play or profit? We did have a curious idea 20 years ago that a demand for peace existed in Europe. History shows we were in error.

Whether or not foreign policy may be made a party issue is open to question. Our wisest men said that party politics ended at the water's edge. At the opening of the present war Congress enacted the neutrality bill which seems to express American opinion. The Johnson Act, forbidding loans to nations defaulted in their indebtedness to us, is almost unanimously approved. Both pieces of legislation were passed to prevent us becoming involved in war through our pocketbook. The Monroe Doctrine has been asserted and approved, not scrapped.

We are unfortunate in our neighbors in Mexico, where our citizens entered into business under the belief that their property would be protected. When the Mexican Government expropriated the property of American citizens, it was generally hoped payment, prompt and adequate, would be made for the property taken. Now Mexico refuses arbitration of the matter. Are we going to war to collect these debts? If so, we shall have several wars on our hands. Soviet Russia confiscated American property and refuses to pay. The cost of a war would be greatly in excess of the total debts owed us.

Why do we go on loaning money to foreign countries in order to enable them to carry on war? We have just loaned $40,000,000 to China, ostensibly to buy American goods, agricultural implements, etc. Yet that help gives China $40,000,000 with which to buy war materials and carry on a war. We ought to know that war has been the sport of rulers in Asia from the days of Genghis Khan down to the hours of Joseph Stalin.

Why should we become involved in such communistic controversies? Are they going to stop just to please America or to pay what they owe to America? The writer has no authority to speak for Mr. Dewey and less to make any suggestions to him either in his personal or party candidacy for the Presidency. One observation is ventured; namely, that Mr. Dewey will advise keeping out of war and guarding carefully against every temptation either of sentiment or squalid propaganda having for its purpose allying ourselves with men who prefer the brutality of war to the glory of peace.

Paul spoke with real eloquence to the Galatians when he said, "For the whole law is fulfilled in one word, Thou shalt love thy neighbor as thyself. But if ye bite and devour one another, take heed that ye be not consumed one by the other."

JOSEPH A. CONRY.

BOSTON, *April 13, 1940.*

Involvement in War

EXTENSION OF REMARKS

OF

HON. PAT McCARRAN

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 17 (legislative day of Monday, April 8), 1940

EDITORIAL FROM THE NEW ULM (MINN.) DAILY JOURNAL

Mr. McCARRAN. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial from the New Ulm (Minn.) Daily Journal of recent date, which, to my mind, is exceedingly cogent on the subject which it covers, namely, how we go to war.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New Ulm (Minn.) Daily Journal]

HOW WE GO TO WAR

Many people seem to think our getting into the last World War was the result of a sudden uprising of the people and their statesmen and a broad leap and jump into the war. Nothing is further from the truth.

The American people walked into the last war step by step just as we are walking into this one. We are following the same war pattern this time as though it is a fever.

Back in 1914 we started out by being neutral, but we were not neutral very long. Soon we began to ship supplies to the Allies. Then we loaned them money. Eventually we were sending over men and we were in the war with full force.

The greatest factor in getting us into the war was not the international bankers, although they played an important part. It was not the English propagandists, although they contributed mightily to the final result. It was not Woodrow Wilson and his group of internationalists down in Washington. They merely led and hastened the final decision.

America went into the World War when the people were convinced a German victory imperiled the peace of the world, and when they felt certain that a German victory was a danger to the American people. Of course, the international bankers down in Wall Street, the internationalists in Washington, the English propagandists all united in creating the conviction which resulted in the decision to go to war.

They did this over a period of nearly 3 years and led the people step by step. Even at the time war was declared in 1917 they softened the decision for us. We were told then that America

would not be expected to furnish men. We would send food products and loan the Allies money. Then Woodrow Wilson made his "force to the utmost" speech pledging all the forces of America to a vigorous prosecution of the war. Conscription followed and soon we were sending over billions of dollars and four millions of men.

We are treading today the same path to war and we are being drawn to the vortex of war step by step. First we started on the road by frankly trying to play the war game by methods which were "stronger than words but short of war." Next we repealed the arms embargo and began to sell to the Allies. This tied us up with an allied victory. Now comes the campaign to repeal the Johnson Act to loan money to the Allies. This is followed by speakers who become bolder and franker in their appeals that the United States get into the war "in defense of their fellow democracies." Our diplomats are playing a more unneutral game than they ever played up to 1917. We are doing everything possible to help the Allies win short of going to war.

Soon the propaganda will start flowing. Speakers now tell us the democracies of Europe are in a death struggle with the dictatorships. England and France are fighting our fight they claim. If the Allies lose, America will face great consequences we are told. Hitler will take over England and France, seize the English Navy, move in on South America and then force America to spend ten or fifteen billions on a bigger Army and Navy in self-defense. A victory by Hitler will cut off our foreign markets, they claim, and upset our economy. Then this country will be forced to fight the dictators alone whereas now they could do it with less cost in men and money.

Of course, this presupposes two things. First that this is a war for democracies; and secondly, that we can save democracy by fighting a war. The struggle in Europe today is a fight for raw products, supplies, and commercial trade. Democracy, unfortunately, has little to do with it one way or another. The chance to save democracy in Europe passed when the Weimar Republic in Germany was strangled to death. France and England did little to save that.

No matter who wins over in Europe in this war, they are going to be so exhausted that they will have great difficulty in saving themselves, to say nothing of sending men 3,000 miles to fight a war over on this side. By the time they are able to dig out and reorganize their countries on a peace basis most of the present leaders will be dead or out of office.

The last war taught us that we can destroy democracy by war but we cannot save it by war. The two great enemies of democracy are war and debt, and war increases the debt and impoverishes the people to a point where they cannot afford the luxury of self-government. Then comes the man on horseback to force people to work long hours for little pay to pay the cost of war.

If the United States cannot save itself and democracy by staying out of this war in Europe it is not likely that democracy can be saved anywhere in this world.

One thing is certain. If we go into a long, expensive European war, we may be able to knock Hitler from his throne in Germany, but we will see dictatorships arise in England, France, and perhaps even in this country following such a war. We and the Allied countries then will have such a heavy debt structure that only a military dictator with full powers to regiment the people will ever be able to keep this country functioning.

An Adequate National Defense

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

ADDRESS BY COL. FRANK KNOX

Mr. VAN ZANDT. Mr. Speaker, on Saturday, April 13, 1940, the National Association Legions of Honor composed of World War veterans, members of the Shrine, had as their guest speaker at their convention in Cleveland, Ohio, Col. Frank Knox, of Chicago, Ill. His address on the subject of an adequate national defense evoked much commendation, and it is herewith submitted for the information of the Members of the House of Representatives.

It is impossible to exaggerate the gravity of the world situation at the present time. Certainly not in the last 500 years has civilization, as we know it and live it, been so threatened. The struggle now in progress is not merely a renewed attempt at conquest of the weak by the strong, although that is a part of it. It is not solely a fresh attempt to change or correct the balance of power in Europe, although that, too, is not absent. It is not primarily a contest over control of trade routes and the possession of colonies, although this frequent cause of war has played its part. Fundamentally it is a clash between two irreconcilable systems of living and governing, which apparently cannot exist in the same world peaceably. This is what makes this a different kind of war than most wars that history deals with. And this is why it will be fought to a conclusion without compromise. It is as impossible to end the war in Europe by negotiation as it was to end our War between the States—and for the same reason. The world, now so closely knit together, cannot continue to be half slave and half free. It will either become all slave or all free. This can only mean a long war, a war of fearful costs and fearful suffering, a war of exhaustion, leaving in its wake economic bankruptcy for the victors and indescribable chaos for the vanquished.

And while more than 90 percent of our people sympathize with the democratic powers in their fight against the dictator nations and hope for their success, there is in the present situation little upon which to build confidence in allied victory. Thus far the advantage has all been to the dictator. Austria, Czechoslovakia, Poland, and now Denmark have fallen successively to German might. Finland has yielded to Russia's legions. Japan has overrun North China. The dictators have done all the scoring. In Europe, Germany still maintains supremacy in the air and has a greater capacity for the production of airplanes than Britain and France combined. The allied blockade has been thus far only partially effective, and German engineers are swiftly reorganizing Russia's methods of production and transport as an aid to Germany's economic resistance. It is fair to say that no sure prediction of the outcome can be made with safety today. It is actually giving the Allies the best of it to say that, on the basis of operations to date, they have a 50–50 chance of winning.

It is when we here in America contemplate the possibility of a totalitarian victory that alarm blazes up over our state of preparedness against such a contingency. A very simple statement suffices to illuminate the reasons for our fears. Suppose Germany conquers Britain and France, could we contemplate German control of British and French possessions in the Caribbean area, commanding approach to the Panama Canal? Merely to state the question is to deny it.

We cannot shut our eyes to the brutal fact that we live, at the present time, in a world where force, and force alone, reigns and where safety is only found in a sufficient state of defense to veto aggression at our expense. This is why I come to you tonight to talk about our Nation's defenses in a war-mad and war-torn world.

But before we can intelligently discuss a satisfactory defense policy, we must define in general outline what our policies with respect of other nations are. We have long lacked a realistic definition of just what we want to promote in international relations, but it seems to me that one is slowly emerging under the stress of world-wide conflict—both military and ideological.

Nearly a hundred years ago we enunciated the doctrine which bears the name of President Monroe. We have successfully enforced acceptance of this policy by the rest of the world. Since its promulgation no overseas power has acquired territory or political dominance in the Western Hemisphere. The Monroe Doctrine then constitutes a specific plank in our foreign policy. As we shall see later its enforcement has very real implications for those who seek an adequate national defense.

As a matter of national policy we covet no additional possessions anywhere. We have no aspirations for territory beyond our present boundaries. This definite attitude on territorial expansion also affects our defense program since it means that our military policy is one of true defense, since it is nonaggressive with respect of other nations. We will never fight an aggressive war. We will act on the offensive only when that serves as our best defense against aggression initiated by others.

These two features of an American foreign policy may be regarded as well established. There is yet another policy which may be said to be now in process of incubation. It has the support of an unquestioned majority of our people, regardless of party lines, but can hardly be regarded yet as an acknowledged part of our foreign policy. This is the policy of reciprocity in trade relations. It contemplates the lowering of trade barriers, and the promotion, progressively and aggressively, of international exchange of goods and services. We steadily tend toward acceptance of this doctrine because, as a people, we are peace-minded, and we believe international trade promotes peaceful relations. Also since we have become a creditor nation we have been compelled to reorient our attitude toward tariffs and trade outside our own borders. Pursuit of this policy also has a direct bearing on national defense. Now I am frankly indulging in a forecast of future foreign policy which I believe is by way of speedily becoming a part of our international attitude and, as such, will play an important part in determining the character of our defense policy. The most casual observer can see that the world is torn in conflict between two types of government, and two schools of economy. Broadly speaking, one kind of government is totalitarian and autocratic, and the opposing sort is individual and democratic. One school of economy is that of state socialism and the other is that of the full enterprise system.

In this struggle there cannot be a vestige of doubt as to where both our interests and our sympathies lie. In our thinking and in our personal attitudes, we are overwhelmingly on the side of those who fight for freedom from dictatorship, and for the preservation of free enterprise. There is already in evidence, in official quarters in the United States, a disposition to aline this country, in its relations with others, with those who may be said to be devoted to the promotion of four freedoms. Freedom of speech. Freedom of the press. Freedom of religious belief. Freedom from fear.

You may say these are generalities, more applicable to domestic than to foreign policies. But don't overlook the fact that the world is at war, basically, upon the question of the destruction

or the perpetuation of these principles which underlie all human liberty. If that is true, then, incontestably, these four freedoms are involved deeply in the relations between nations. We will instinctively cooperate with those who fight for them and as instinctively oppose those who would destroy them. In the not distant future an American spokesman, to the applause of the whole American people, will enunciate a doctrine expressive of our views on these fundamentals, and thereafter there will remain no doubt as to where we stand as between human slavery and human freedom, wherever the issue is drawn.

Here we have, then, the outlines of an American foreign policy: (a) The Monroe Doctrine; (b) no conquest of other countries by force of arms; (c) promotion of reciprocity between nations in trade relations; (d) cooperation with those who defend human freedoms and opposition for those who would destroy them. Around such a definition of American foreign policy let us turn to the particulars of a defense program that would effectually implement it.

In any realistic appraisal of the future security of the United States two factors must be given first consideration: The insular geographic position of this country, and the swift development of modern sea and air power. Beyond all others these two things must have weight in planning our national defense. Reduced to its simplest terms, this means that we must take full advantage of our wide separation by intervening oceans from any possible enemy or combination of enemies, and provide against successful attack by sea or air. Any land attack upon us is impossible so long as mastery of sea or air routes to our shores remains in our hands. This fundamental of effective security, obviously, puts the emphasis of a system of national defense first upon a high-seas fleet that can by its fire power, its strength of armor, and its speed meet and destroy any enemy; and, second, the creation and maintenance of an air force that will intercept and destroy air raiders whether launched from transoceanic bases or from the decks of enemy carriers. This rationalization of our defense plans excludes the need of creating a huge army for the purposes of protection.

After our experience in the last World War it is simply unthinkable that we will ever again send overseas a great expeditionary force of armed men. Consequently, all grandiose plans for a whole nation making war, with millions of soldiers in the field and other millions engaged in production of arms and supplies for these great armies, can be dismissed as unnecessary for our defense. A program for an adequate Army against any aggression aimed at our peace and security would envisage a regular professional army of not more than 300,000 officers and men and a National Guard of raising 400,000 officers and men, both of which are provided for in our present National Defense Act.

Clear definition of our directives in providing national security can be summarized thus:

1. Taking maximum advantage of our insular position.
2. The swift construction of a high-seas fleet big enough and powerful enough to bar approach to our shores by any enemy or combination of enemies.
3. The creation of a reasonable air force made up of the latest and best models of all classes of aircraft; but of even greater importance than this, the expansion of the aircraft industry to enable it to turn out ships of the very latest models in large numbers when danger threatens.
4. The expansion of the Regular Army and the National Guard to the full quota for each under the present law, and the swift equipment of both regulars and guardsmen with modern fighting and mechanized matériel.

This constitutes a program of national defense that will keep us safe from attack, that will not involve expenditures that will cripple our efforts to reduce taxes and encourage a return of prosperity, and it does not invite any disruption in domestic production or the complete regimentation of the lives of our people.

I have given priority in my outline for a national-defense program to the immense advantage which we enjoy because of our insular position. England, many years ago, achieved security from attack by her enemies by building sea power sufficiently strong to prevent possible invasion. It was only after the invention of the airplane that this insular security of Great Britain was impaired. England, however, was separated from possible enemies in Europe only by the English Channel, easily spanned in force by air power. We, on the contrary, enjoy a security on both sides that wide oceans alone can give. The only attack by airplanes of sufficient significance to be considered must come from planes launched from the deck of naval airplane carriers. This means that an enemy attacking us from either Europe or Asia could not deliver an attack of serious dimensions unless he at first established control of the sea. Sea power then must be our principal bulwark for security. With a high seas fleet strong enough to meet and defeat any possible enemy, an attack upon us will be so unpromising as to be scarcely attempted.

Of course, we must supplement the high seas fleet with an adequate air force as an auxiliary to the fleet and for the protection of our coasts against possible air raids. With these two arms of our defense—a Navy and an air force—ready for any emergency, we can count ourselves safe, without the necessity of a huge standing Army. Under such circumstances as I have just described, our land force could be, with safety, confined to a small Regular Establishment of professional soldiers of the size authorized in the present National Defense Act, supplemented with a National Guard at its authorized strength of 420,000 officers and men. If these two components of the land forces are supplied with modern, mechanized equipment and organized for high mobility as well as great fire power, we shall have supplied all of our needs so far as land armed forces are concerned.

There are vital details about all of these proposals which must not be overlooked. First, we cannot regard our insular position as giving us security unless we recognize, as a unit for common defense, the entire western world—the Western Hemisphere as a whole. It would be futile and fatal to content ourselves with preventing the approach of a potential enemy to the actual shores of the United States, and leave him free to establish bases in Canada, Mexico, and Central or South America. Under modern conditions of warfare, the existence of nearby bases for the maintenance in a state of fighting efficiency of warships, including submarines and airplanes, is absolutely vital. This consideration compels us, whether we wish to do so or not, to include in our plans for defense the entire region of North and South America. This means a close collaboration in a military way with all of the independent nations that make up the Western Hemisphere. With substantially all of them we already have a military alliance for the purposes of common defense.

Another physical feature which has a tremendous bearing upon the efficiency of our high-seas fleet is the Panama Canal and its continuous uninterrupted operation. The existence of this Canal, which cuts through the narrow waist of the Western Hemisphere, literally makes possible the functioning of one grand fleet of overwhelming power, no matter from whence danger may come, instead of two fleets in widely separated oceans. It is the accepted strategy of the American Navy to customarily station that fleet at San Diego on the California coast. From that point the fleet may move toward the point of danger, whether it comes from the West or from the East, and arrive before the enemy. If it comes from the East, the fleet can cross the Isthmus through the Canal and meet it in full strength before the enemy is half way across the Atlantic. If it comes from the West, the fleet can steam from San Diego to Hawaii and arrive there long before the enemy can reach that outpost of American naval power. It will be seen, therefore, how vital the Canal is to our safety. Its continuous operation is of such critical character that we cannot afford to leave anything to chance.

The Canal, hemmed in on either side by an impenetrable jungle, is immune from any serious attack by land forces. Its coast defenses are so powerful and have so long a range that an attack on the Canal by a surface navy is out of the question. The sole danger to the continuous operation of the Canal will come from the air. To achieve complete safety from air attack at the Canal we need air bases many miles distant from the Canal approaches. On the Atlantic side we are establishing such bases on islands in the Caribbean. We lack similar measures of safety on the Pacific side, and we should waste no time in acquiring possession, peacefully, from Ecuador and Costa Rica of the Galapagos and Cocos Islands, from which both airplanes and submarines may operate against any enemy approaching the Canal from that direction. We have already taken every precaution on the Canal itself that military skill can devise. These additional safeguards should be provided without delay.

We already have a magnificent fleet, the equal of any in the world. We are now adding to it additional units which, when completed, will give us the greatest fleet on the high seas. Such preeminence in sea power must be maintained in the future if we are to keep the western world secure.

Let us turn now to the question of air protection. For us air power is second only to sea power as a means of safety from attack. If the types of fighting planes had been stabilized to the degree which is true of surface ships, we could proceed with our present productive capacity to turn out an air fleet in sufficient numbers to maintain air supremacy over any possible enemy that might attack us in the air, but it is not as simple as that. Aeronautics is a new science and the methods of war in the air are constantly changing.

We could readily turn out thousands of ships of an accepted model today, only to find when attack came, the whole fleet was helpless before a much smaller number of superior ships. It seems to me that a wise program of air defense would provide for a moderate number of war planes of the various types of the very latest present models, and the prompt establishment and expansion of research laboratories and experimental flying fields which would constantly add to our knowledge and skill in air warfare. Along with this, by every legitimate means, we should do as we are doing—encourage the manufacture and sale of airplanes to other nations to the end that our productive capacity for planes would be increased rapidly and steadily. Under these circumstances, under the threat of possible danger, our entire productive capacity in airplane manufacture could be turned to production in large numbers of the very latest models of airships. Today, we excel all other nations in the quality and efficiency of our airships. We have no reason to doubt that we could maintain this supremacy. We are rapidly developing the productive capacity to turn out ships in great numbers, and the swift growth of private aviation insures that these plants will be kept busy, even if war should cease.

The ideal then, with respect to air defense, is the maintenance of an air fleet of reasonable proportions, the constant training of pilots, and the encouragement of increased capacity for production by airplane factories. If we do this we shall be safe against any foe from the sky.

With respect to land forces, our safety requires the maintenance of large garrisons of picked troops at Hawaii in the Pacific, and at the Panama Canal. That portion of the Regular Army stationed in the United States should be concentrated in a small number of

strategic points, for two reasons: First, for training purposes to enable high-ranking officers to be trained in the command of large bodies of troops, and second, in order to provide for swift mobilization and prompt transfer to any point of danger. A very considerable portion of the Continental Army of the United States should be organized into a highly mobile army of sufficient size to cooperate fully with the Navy in its mission of protecting any portion of the entire Western Hemisphere from enemy occupation. The present system of small garrisons scattered over the entire country should be abandoned and the troops concentrated, for the reasons that I have assigned above. The Indian wars which produced this curious dispersion of the Army ended long ago, and only local politics has prevented its correction. Politics must yield to national safety.

Let me at this point destroy a popular bogeyman. In order to provide us with security against attack, it is not necessary to create a military force of great size requiring large numbers of men. Such a Navy as I have described, adequately manned, would not require a personnel—commissioned and enlisted—of more than 300,000 men, including the air forces of the Navy. A Regular Army of 300,000 men would also include the officers and men, of an adequate Army air force. Thus, there would be withdrawn permanently from productive activities the meager total of only 600,000 men, out of something like 50,000,000 wage earners. About 1 percent of our manpower. The National Guard, of 420,000 men, are not properly soldiers at all. They are patriotic civilians who devote their leisure time to training as soldiers. They are only withdrawn from active civilian life when war actually threatens. There is then, no possible reason for the assumption of a need of vast armies comprising millions of men, in the field, and other millions of men and women engaged in providing the munitions and the supplies for the soldiers. Even less necessary would be the proposed arrangement for a complete regimentation of business and people in a time of emergency. The business of protecting our country against military attack from abroad need not conjure up visions of an entire Nation under arms. We can be safe without it. Providence has given us the means to keep our enemies at arm's length. If we will exercise common prudence and common sense, and never be deluded by pacifist clamor into weakening our sea power, or emasculating our air force, or failing to provide our small, professional Army with the very latest and best equipment to be had, we can always be safe and we can live our own lives, under our own pattern, practicing those freedoms for which our scheme of Government was devised, and maintaining the integrity of our institutions in the face of any powerful enemy that may challenge us.

I give you a United States devoted to peace, not covetous of any other Nation's possessions, enjoying the liberties God meant man to enjoy, but withal, strong enough, in a world where might rules, to make our rights respected.

Costs of Registration and Issuance of Securities of Smaller Corporations

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

LETTER FROM JEROME N. FRANK, CHAIRMAN OF THE SECURITIES AND EXCHANGE COMMISSION

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

SECURITIES AND EXCHANGE COMMISSION,
Washington, April 10, 1940.

The Honorable JOHN W. McCORMACK,
House of Representatives.

DEAR CONGRESSMAN McCORMACK: Your recent letter to me raises the familiar question as to whether the Securities and Exchange Commission has been a deterrent to the financing of small business. On behalf of the Commission, and with its approval, I shall discuss at some length, as follows, the problem you raise, because it is one to which the Commission has given a considerable amount of attention not only recently but practically since its inception. You state:

"There is also a strong feeling existing among businessmen, particularly among that group known as the 'small-business man,' complying with the regulations and rules that the expense of such compliance has been a deterrent. I feel that if this situation exists it should be remedied in order that money could be quickly invested in productive enterprise, thereby increasing opportunities for employment."

The Commission has been aware that such an impression exists among certain groups of the business community. While the Commission is convinced on the basis of its studies, some results of which will be summarized immediately, that registration under the Securities Act of 1933 is at most only a very minor factor in the high cost of flotation of small issues of securities, it has taken whatever steps are possible to reduce that part of those costs over which it has influence to the lowest level compatible with the basic aims of the Securities Act. A description of the measures taken by the Commission to reduce the expense and inconvenience to small enterprises in registering new securities may be found on pages 32 to 34 of our fifth annual report, copy of which is attached as exhibit I.

The details of that study need not be repeated here. But it should be emphasized that various exemptions from registration have been provided with respect to issues below $100,000 in amount. Furthermore, for the larger issues of small-business enterprises (for which a full registration statement must be filed under the terms of the Securities Act) special concessions have been worked out. All these measures have reduced the amount of information required from small-business enterprises wishing to register securities and were specifically designed to reduce the cost of registration.

The Commission, however, has gone further and has created a special unit within its Registration Division to aid prospective registrants and to advise them and their representatives on any problems which may arise in connection with their registration statements. The services of this unit are, of course, utilized mainly by smaller registrants. The Commission is convinced that the work of this unit has not only reduced the actual expenses of the registrants of small issues of securities, but also has considerably shortened the time required for the preparation of their registration statements and for the examination of such statements after filing.

The high cost of flotation of small issues (over and above the cost of registration) has always been a major point of concern to the Commission. Our statistics show that among registered issues with expected proceeds of less than $1,000,000, such costs of flotation are estimated by the issuers to amount to around 20 percent of proceeds for common stocks, about 16 percent for preferred stocks, and around 7 percent for bonds. These averages have fluctuated but little since 1936, when such statistics were first compiled. A set of statistical releases, attached as exhibit II, will give you further details.

The significant fact, however, which is often overlooked in discussions of this problem lies in the preponderance of the compensation paid to underwriters and other distributors of securities among total costs of flotation. Our figures indicate that between 80 and 90 percent of the total costs of flotation of stock issues of less than $1,000,000 and about 70 percent for bond issues of similar size have consisted of the compensation to security distributors.

A considerable part of the remaining expenses, of course, is in no way connected with registration under the Securities Act of 1933; listing fees, revenue stamps, State qualification fees, and the fees of transfer agents and trustees, for instance, must be paid whether or not an issue is registered. Other expenses, particularly legal and accounting fees and the expenses of printing, are attributable only in part to registration. It thus seems obvious that only a small part of the total high cost of flotation of small issues can be traced to the requirement of registration under the Securities Act.

It is, of course, difficult to estimate precisely the additional cost of selling small issues which may be due to registration under the Securities Act; but it is clearly demonstrable that that extra cost is not in excess of about 1 percent of gross proceeds, not a large item compared to the high level of other costs of flotation of small issues. There is some reason to believe that the extra cost is nearer one-half of 1 percent.

In our desire to determine as closely as possible the reasons for high cost of flotation of small issues, we have recently had our Research and Statistics Section make a comparison between the costs of flotation of small issues in the years 1935–38, when the Securities Act was in effect, and in the years 1925–29. We have not yet made the results of this study available to the public but are preparing to do so at the present time. Our statisticians have found that the total cost of flotation of bond issues of less than $1,000,000 averaged about 7 percent of gross proceeds for both periods, but that it rose for preferred-stock issues from about 8 percent to nearly 15 percent. It is, however, mainly the expenses other than compensation to underwriters and distributors which interest us here. These other expenses rose only from 1.2 to 2 percent for bonds and from 0.8 to 1.8 percent for preferred stocks. Thus the average increase is less than 1 percent of total proceeds, and only part of that increase is attributable to registration under the Securities Act. We were unable to collect sufficient material on small issues of common stock to form precise estimates, but there is no reason to assume that the increase in expenses which may be caused by registration under the Securities Act is larger than in the case of small issues of preferred stocks and bonds.

We have additional evidence, however, that it is not the alleged cost and delay of registration under the Securities Act of 1933 which are mainly responsible for the relatively low level of flotation of small equity issues. This evidence is provided by the fate of the issues of unseasoned and mostly small registrants filing on forms A–1 and A–O–1, which we have been studying since the Securities Act went into effect. We have now analyzed nearly 700 returns covering issues of this type and believe that the results are representative of this category of securities. We find that over one-third

of the registrants have not sold within a year any of the securities included in the registration statements. In other words, over 200 of these small issues—all fully registered and ready for market—could not find a single buyer. The remaining registrants actually sold within a year not much over one-third of the amount registered. You will find a somewhat fuller discussion of this subject in an earlier study covering nearly 600 cases which was presented in pages 34 to 37 of the attached report on selected statistics on securities and on exchange markets made last year to the Commission by its Research and Statistics Section. The fact that less than one-quarter of the proposed amount offered of these issues (which, you will remember, had been effectively registered) actually was purchased by investors, would seem to indicate that the obstacles standing in the way of the successful flotation of issues of small and particularly of unseasoned enterprises are to be found in places other than the requirements of the Securities Act.

In reviewing the statistical and factual material which comes before it, the Commission has been particularly impressed by the fact that the flotation of small issues appears to have been a costly procedure at all times, and that the very great majority of those costs consists of the commissions and fees paid to underwriters and agents distributing these issues. The origin of the high cost of flotation of small issues thus obviously lies in the investment banking machinery itself. That machinery is geared mainly to the handling of larger issues. The minimum of expenses, be it ever so small, involved in the investigation and preparation of every individual issue and the difficulty of acquainting prospective purchasers with the security offering of a company which may not be known to the investing public, combined, force the security distributor to charge a commission on small issues which is very high in proportion to the proceeds. This emphasis on the high cost of investment bankers' services in distributing small issues should not be taken as a criticism of the investment bankers, but merely as a statement of conditions which have prevailed for a great many years, and which, unfortunately, are often lost sight of, when the obstacles to the flotation of small issues are discussed.

As a result of looking at the problem from the point of view of the security distributor, the small issuer, and the regulatory agency, we have come to the conclusion that the remedy for the high cost of flotation of small issues cannot lie, or certainly cannot consist predominantly, in a reduction of investment bankers' fees to anything like the level now prevailing on larger issues. Nor can it consist in practically doing away with the safeguards set up by the Securities Act. If we want to reduce the cost of flotation of small issues significantly, and, what may be more important, if we want to create a fairly large and reliable market for such issues, we shall have to construct new machinery expressly designed to meet the needs of small-business enterprises for long-term capital, particularly in equity form. This may be done by private initiative alone.

Perhaps the aid of the Federal Government may be necessary, at least in the beginning. Mr. Justice Douglas, when he was chairman, and I, subsequently, have suggested some form of regional capital-credit banks or finance companies which might supply funds to successful small businesses having a justifiable need for further capital. Such proposals contemplate that the Government would give some aid in financing such regional banks or finance companies, which, in turn, would aid in supplying capital to deserving and prosperous small-business enterprises. I have, however, been much concerned to safeguard any such plan so that it will not lead to the Government owning the voting stock of, or otherwise controlling, American corporations or businesses. Such a result, as I said in my testimony before the House Appropriations Committee on December 14, 1939, should surely be avoided. I then suggested that the Government might aid such regional banks or finance companies by buying their nonvoting preferred stocks, having a low dividend rate, while their common stocks would be purchased by private persons who would thus own, control, and operate the regional banks or finance companies. I think that any plan which did not insure against Government operation or domination of such institutions would be unwise. I do feel strongly, however, that there are many small businesses which have a justifiable need for capital, but which, because of the limitations of our existing financial mechanism, are unable to obtain it.

It may be that a certain form of investment trust might perform this service to some extent. In this connection I call your attention to a portion of the testimony by Floyd B. Odlum, president of the Atlas Corporation, before the Securities and Exchange Commission in connection with its study of investment trusts:

"There is a field of finance never yet adequately served in America and which, I believe, can only be well served by large companies and with benefit both to industry as a whole and to the stockholders. I refer to the many industrial and other companies that have a sound place in the scheme of things, but have fallen on evil days because of lack of working capital, dry rot in the management or inability to carry through some temporary period. Sometimes their capital structure must be adjusted, sometimes new blood must be injected into the administrative department. Their affairs are in such shape that a short-term bank loan will not suffice or would not be justified from the bankers' standpoint. These securities, although sound, are unseasoned and should not be distributed to the general public until proven. It is no place for the stockbrokers' services and the investment banker must promptly resell what he buys. Much unnecessary loss has been caused untold investors in such companies, because in this country there have been no organized groups of capital for such situations. Such capital must be semimobile and must be backed by guiding hands ready to temporarily take hold, diagnose, and help solve corporate situation. This is a field in which the investment trusts in England engage to considerable degree, and also the English so-called finance companies. It is a field in which Atlas Corporation has interested itself. No legislation or regulation should be adopted that would cut off development of service in this field or cause companies so operating to be bound by like rules of capitalization, investment, operation, or relation to other companies as apply to companies referred to above as 'investment trusts.'"

The investment-trust measure just introduced by Senator WAGNER and Congressman LEA makes provision for just the kind of activity that Mr. Odlum mentions. I hasten to add that that bill does not contemplate that this should be the only kind of investment trust. In fact it recognizes the type of mechanism proposed by Mr. Odlum as frankly speculative and proposes to surround it with substantial safeguards.

Although this discussion of capital-credit banks and investment pools may seem to be something of a digression, I believe it bears on the point that the difficulties of flotation of securities for deserving small business enterprises lie not in burdens imposed by the registration requirements of the Securities Act but almost exclusively in the gaps in our present financial mechanism.

Sincerely yours,

JEROME N. FRANK, *Chairman.*

America Must Keep Out of War

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 28, 1940

Mr. WOODRUFF of Michigan. Mr. Speaker, slowly but surely the propaganda pattern for luring the United States into the European war is becoming more clear. First was the secret mission of Under Secretary of State Sumner Welles to Europe; next came the performance of our Minister to Canada, James Cromwell; then followed the open assertions of responsible Canadian officials that America "must be enticed into the war as soon as possible." Following this were the outbursts by political leaders in England bitterly denouncing the United States as "Uncle Shylock," and asserting that it is our duty to bring our money and our men into the war and to help England and France fight "the battles of the United States."

The next development in this pattern followed hard on the heels of the Nazi invasion of Norway and Denmark. President Roosevelt has, through his Secretary of State, Cordell Hull, moved to establish direct diplomatic relations with Iceland under a declaration that Iceland falls within the zone of influence of the Monroe Doctrine. Concurrently with this significant move on the part of the administration, President Roosevelt, at the Pan American meeting, issued his declaration that the Americas—meaning to say the United States, principally—will "meet force with force."

Now the talk is rising in administration circles that if the Nazis attack the Netherlands the United States must get into the war on both oceans in order to protect the West Indies on the one front and the East Indies on the other.

There can be no question in the mind of any well-informed person, least of all President Roosevelt and Secretary of State Hull, as to the overwhelming desire of the American people to stay out of war. It becomes increasingly apparent, however, from the day-by-day developments, that the desires of the American people are having little influence on the plans of the administration and of the rulers of the war-torn countries. The question seems to be not whether the American people want to go to war or do not want to go to war. Instead the main consideration seems to be how quickly the administration will dare move toward taking us into war without creating too much outcry on the part of the people, who have to do the fighting and the dying and the paying.

The danger signs are unmistakable, and it is up to the American people themselves to safeguard their own security by protesting through their Representatives in the Congress so vehemently against these apparent plans to take us into

war that the administration will not dare to try to force or persuade the Congress to agree to such alterations in our neutrality status as will be sure to further involve us in these foreign conflicts.

America must be kept out of war.

The only conditions under which we should consider fighting at all should be when foreign aggressors attempt to invade the zone of the Monroe Doctrine for the purpose of building up bases from which to launch some future attack on us. In this connection, just why is the administration now taking steps which obviously will lead to including Iceland in the zone of the Monroe Doctrine? Will an attack upon this little country by Germany provide at some later date an excuse to plunge us completely into the maelstrom of the developing World War?

The people must not, they dare not, lose sight of the fact that the moment we declare an emergency due to the imminence of war this Nation will pass under a military dictatorship more arbitrary and complete than any dictatorship abroad.

The so-called industrial mobilization plan, which is in reality a national mobilization plan to mobilize every man, woman, and child in and out of industry, is designed necessarily to set aside the Constitution and all liberties and privileges embraced in the Bill of Rights, in order to meet the necessities of modern warfare. Nevertheless it is a fact that our first act in going into any so-called save democracy war is to sacrifice democracy in America. Our very first act in going to war to preserve the liberties of other people will be to give up all our own liberties.

The trends of the last 7 years are too significant and too unmistakable for us to be blind to the fact that if we turn this Nation over to the tender mercies of a military dictator, there will quickly rally around such a ruler a group of bureaucrats who will resist to the very point of bloodshed any attempt, after a war is over, to deprive them of their vast powers and perquisites.

The only safe course for America is to stay out of foreign wars; to build up a national defense adequate to protect us against all contingencies; and then to let the rest of the world understand that those who would disturb us will fare badly.

America must be kept out of war.

Statement by Col. Vincent A. Carroll

EXTENSION OF REMARKS

OF

HON. FRED C. GARTNER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

ARTICLE FROM THE PHILADELPHIA INQUIRER OF APRIL 8, 1940

Mr. GARTNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the statement by Col. Vincent A. Carroll, Three Hundred and Fifth Cavalry, which appeared in the Philadelphia Inquirer, Monday, April 8, 1940. Colonel Carroll was a major, Field Artillery, in France during the World War; past national vice commander, American Legion; past national executive committeeman from Pennsylvania, American Legion; Special Assistant Attorney General of the United States; and is now assistant district attorney, Philadelphia County.

The article follows:

[From the Philadelphia Inquirer of April 8, 1940]

CARROLL DEFENDS DIES RAIDERS, HITS ARREST OF AGENTS AS PLAN FOR "ANOTHER SOAPBOX"

In a bristling denouncement of communistic activities, First Assistant District Attorney Vincent A. Carroll came to the defense yesterday of the raiders who were arrested for seizing records at the Communist and International Workers Order headquarters last Tuesday.

"It is apparent," he said, "that the only purpose of the arrest of public officials, because they performed their full duty, is to construct another soapbox from which to shout to the unlearned and untutored the specious plea of civil rights and make further attack on the sedition laws of this Commonwealth, which so far they have been unable to destroy."

DOGOLE TO SEE DIES

At the same time, Magistrate Jacob Dogole, who issued the warrant which made possible the raid and ultimate placing of the records with the Dies House Committee, announced he would confer with Representative MARTIN DIES (Democrat, of Texas), committee chairman, at 2:30 today in Washington.

The purpose of the conference, he said, was to "look over what was found" in the raid, which subsequently brought the order to arrest Detective Lt. Albert A. Granitz and George F. Hurley and Chester Howe, Dies committee agents, by Federal Judge George A. Welsh.

MAYOR PLEDGES AID

Both DIES and city authorities have thrown their full support behind the raiders, Mayor Lamberton and Director of Public Safety Malone, issuing a public commendation for the detective "for doing his plain duty" and promising him legal services.

"The action of the Dies committee," Carroll said, "was directed against the subversive Communist organization, which, by its agents and members, is in open defiance and contempt of the constituted agency of the American people—a committee of Congress.

ENFORCED ONLY FEEBLY

"The action was taken in accordance with existing penal statutes of the Commonwealth of Pennsylvania, which have been enforced only feebly since they were enacted. * * *

"Employing and enjoying the broad privileges which our form of government affords to all its citizens, these Communists are openly engaged in the work of destroying these privileges. They advocate intolerance, all the while demanding tolerance of themselves, to the end that we permit them to establish a revolutionary and alien form of government here in America.

ASSEMBLING FOR YEARS

"Under the guise of liberty, they have been assembling force for years to destroy liberty itself. And they have declared again and again that they will not defend the very liberty which, in the past, has permitted them unlimited freedom of action.

"It is interesting to observe that they did not lay their complaints before the United States attorney in the usual manner, but rushed into court with the arousing cry of civil liberties. Whose civil liberties are they talking about? The civil liberties of contemptuous revolutionists and their organization or those of the American citizen?

OBJECT ACCOMPLISHED

"It is also interesting to note that the United States attorney has fairly and properly refused to sign any information against the Dies agents or the police of this city.

"While their object of propaganda has been accomplished, the entire incident should provide some interesting facts for the American people when exposed by the Dies committee, including the methods of raising defense and other funds and the use of these funds.

SHOULD BE EXPOSED

"Even if this whole revolutionary movement is only a racket, as some believe it is, nevertheless it should be exposed and destroyed."

Carroll added that there was no police law setting forth where evidence should be kept as long as it was returned on the return day set in the search warrant.

Communist Party leaders had charged that the raid was illegal because it was executed on a local search-and-seizure warrant, and that a dozen filing cases of material had been taken out of the State and to Washington.

The Wheeler-Lea Bill (S. 2009)

EXTENSION OF REMARKS

OF

HON. JOSEPH J. MANSFIELD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

Mr. MANSFIELD. Mr. Speaker, in the Appendix of the RECORD, page 1941, in the speech of the gentleman from Pennsylvania [Mr. VAN ZANDT] favoring the Wheeler-Lea bill, appears the following language:

Since mention was made of the Santa Claus activities of the Wallace-Woodring-Land combine, it is not difficult to recognize their reasons for opposing S. 2009.

Let us consider Secretary of Agriculture Wallace, who during the past year handed out more than $1,000,000,000 in Government subsidies; then Secretary of War Woodring is revealed by the records to have disbursed for rivers and harbors $723,006,637; and Admiral Land in the past 2 years expended $155,364,000.

I am not advised as to the expenditures made by Secretary Wallace and Admiral Land, but the Chief of Engineers, who made the disbursements for the War Department, reports that only $117,702,066.54 were expended for river and harbor improvement and maintenance work last year. It will be observed that the figures of the Chief of Engineers are more than $600,000,000 under the figures appearing in the speech of the gentleman from Pennsylvania.

No doubt President Roosevelt thought that Secretaries Wallace and Woodring and Admiral Land were honest men when he appointed them to their present positions. Personally, I still have confidence in their integrity.

The moneys spent by these officials on matters pertaining to transportation are of little consequence in comparison with the billions expected to be controlled by the I. C. C. under the provisions of the Wheeler-Lea bill. Can it be reasonably contended that Wallace, Woodring, and Land are subject to improper influences and that the members of the I. C. C. are above reproach?

FIGURES FOR THE YEARS 1938 AND 1939

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am including a table showing the increase of competitive imports in the year 1939 over 1938. This table is given to further show the workingman and the farmer the ever-increasing strangulation of the present reciprocal trade policy. It is indeed discouraging to note that the farmers and the workingman are forced to compete with foreign countries.

United States imports on products for calendar years 1938 and 1939

U. S. DEPARTMENT OF COMMERCE FIGURES

Import items	Unit	1938	1939
Cattle	Head	424,022	753,570
Canned beef	Pound	78,597,000	85,863,000
Mutton, fresh	Pound	43	105,000
Hides and skins (total)	Pound	181,951,000	323,446,000
Cattle hides	Pound	59,650,000	134,107,000
Sheep and lamb skins	Pound	32,649,000	63,776,000
Silver-fox fur skins	Number	16,468	133,251
Barley	Bushel	126,000	776,000
Oats	Bushel	7,183	4,293,000
Wheat (all)	Bushel	3,829,000	10,747,000
Wheat flour	Pound	14,289,000	17,279,000
Potatoes, white or Irish	Pound	45,820,000	93,859,000
Peas, canned	Pound	450,000	1,159,000
Wool, unmanufactured	Pound	104,274,000	245,970,000
Wool noils, wastes, and rags	Pound	3,803,000	18,343,000
Cheese	Pound	54,432,000	59,071,000

LIBRARY OF CONGRESS FIGURES

Import items	Unit	1938		1939	
		Quantity	Value	Quantity	Value
China and porcelainware	Dozen	3,510,492	$3,681,940	3,583,670	$3,539,774
Earthenware, crockery, and stoneware	Dozen	3,731,940	2,842,265	4,490,437	3,208,166
Glass and glass products	Pound	25,556,490	5,847,924	28,102,937	4,711,517

One Man's Opinion

EXTENSION OF REMARKS

OF

HON. NOBLE J. JOHNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

ARTICLE BY GEN. HUGH S. JOHNSON

Mr. JOHNSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Gen. Hugh S. Johnson which appeared in the Washington Daily News on April 12, 1940:

[From the Washington Daily News of April 12, 1940]

ONE MAN'S OPINION

(By Hugh S. Johnson)

"Never swap horses while crossing a stream." "In the case of a continued serious international situation we would have to keep F. D. R." These are typical of the sort of capsuled wisdom that passes for thinking and carries conviction to many people.

The "horse-swapping" precedent was popularized in Lincoln's second campaign, but that election did not hinge on that. It turned on the simple issue of whether or not to stop the Civil War without a complete Federal conquest. Carl Sandburg calls August 1864 the darkest month of the war. Washington itself had been threatened. The conscripive draft mess was at its malodorous worst. Many in the North were weary of the war. Lincoln himself expected defeat.

Then the tide turned. Sheridan licked Early and gutted the Shenandoah in our first example of war "frightfulness." Sherman took the same attitude before Atlanta. Grant was threatening Richmond. Fears of foreign intervention faded. The North began to favor Lincoln, who stood for victory, and not McClelland, who represented the earlier overwhelming sentiment for a negotiated peace.

The question was not "Lincoln or McClelland," or anything about a horse. It was "victory or compromise," and victory was becoming more clearly visible every day.

We began to hear again about that horse in 1916. But the question was not nearly so much of the choice between Wilson and Hughes as of a policy now called "isolationist." Mr. Wilson won by the skin of his teeth and beyond a shadow of doubt because of the slogan, "He kept us out of war."

The stream-crossing slogan is silly on its face anyway. Why shouldn't you swap horses while crossing a stream—especially if you get a better horse for stream-crossing purposes?

If Mr. Roosevelt's election is to be taken as certain if the war continues to spread and flare, it must be either because of some definite policy toward it that will be placed in issue in the election or because he has convinced the country that he would be the best war President because of skill and experience.

Mr. Roosevelt has as yet announced no definite war policy, but this much it is fair to say: Everything he has said or done is consistent with a policy of participation in this war on the side of the Allies; nothing that he has said or done is inconsistent therewith.

He can't enter the 1940 campaign without revealing some glimpse of his policy. If, as seems quite clear from the circumstances, it is outright intervention, he is going to get licked. His fourth New Deal associates are largely interventionists. Many, if not most, of Washington and New York press, editorial and columnist comment trends that way—just as it did in 1917. But also, as in 1917, a great majority of popular opinion, at least west of the Alleghenies, is the reverse of that.

Mr. Wilson fooled them in 1916, or at least disappointed them in 1917, but Mr. Roosevelt can't do it in 1940. He is too far out on an interventionist limb.

There remains what is taken for granted by many commentators—that he is best qualified to handle international war relations and our domestic problems. But where are the supporting facts? Almost all of his principal policies regarding our domestic problems are proved and ruinous failures—in agriculture, labor, and recovery. It is astonishing that a man could fail so far and so consistently and still maintain that myth.

As for foreign policy and performance, it has been one of ever-increasing involvement, of an army wholly unprepared, although full authority and funds to prepare it were given 7 years ago, of greatly impaired financial strength and of continuing failure to get our industrial defensive machinery back into gear. All this is not to mention the recent performance of our amateur playboy diplomats and the inherent weakness of a third-term President as a leader of either Congress or the country. These slogans may make sense to some, but they sound like schmuss to me.

Failure After 7 Long Years

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

EXCERPTS FROM LEADING NEWSPAPERS

Mr. MASON. Mr. Speaker, after 7 years of the New Deal it is time to take stock, time to strike a balance between the assets of the New Deal and the liabilities of the New Deal. The following is a series of short statements taken from the "Record," as printed in the editorial columns of the Nation's newspapers, as well as a few quotations from some of America's leading columnists, all of which must needs lead one to the definite conclusion—failure after 7 long years.

KANSAS CITY STAR

After 7 years of panaceas to end unemployment and to bring recovery; after all the billions of expenditure both for relief and pump priming; after all the taxation in an unsuccessful effort to finance the expenditures; after deficits, debts, labor reforms, wage and hour reforms, business restrictions and what not, we still have 9,296,000 idle workers in the country.

LOS ANGELES TIMES

Franklin D. Roosevelt entered the White House 7 years ago under his own and his party's pledge to cut national expenses 25 percent, reduce taxation, maintain sound money at any cost, solve the farm problem, deflate the unwieldy Federal bureaucracy, and generally put the Nation's house in order. * * * After 7 years industry is still largely in the dumps, unemployment maintains its 9,000,000 average, and crippled agriculture is still on crutches. Summing up 7 years of the Roosevelt administration, it may be said that he has left unsolved virtually all of the problems that he promised to solve, and created a host of new ones, particularly connected with the national finances. These are in a mess it will take a generation to clean up.

ENID (OKLA.) MORNING NEWS

After 7 years, has the New Deal solved the farm problem? That is the question that must be answered today. However much credit may be accorded Mr. Roosevelt for trying, what has he accomplished? Admitting that agriculture needed help badly when he took office, where has it come to after 7 years, and after billions of expenditure? "By their fruits ye shall know them," asserts the Good Book. By the fruits of the Roosevelt farm program, it should be known. And however good its objectives, it can only be known as a failure. It has not produced the promised fruits.

CLEVELAND PLAIN DEALER

That the President has gone too far in several directions we believe a majority of Americans will agree. His wild spending for recovery, his deficit financing year after year, his indifference to a national debt risen to an all-time high, his coddling of the radical elements of labor, his creation of a top-heavy, dangerous bureaucracy, his attempt to bring the judiciary into subservience to the Executive, his attempted purge of Democrats who did not agree with him, all these things are remembered, along with his establishment of unemployment insurance, old-age benefits, and a minimum wage and a maximum workweek.

SOUTH BEND TRIBUNE

After 7 years of the promised New Deal reform the record shows the most fantastic and fruitless Government spending in the history of this or any other country. No wonder the new dealers are hoping that the European war will divert American attention from the record of this reform administration.

CHARLESTON NEWS AND COURIER

The New Deal set out to spend the American people into prosperity. It failed. It set out to benefit the American cotton farmer. It succeeded in causing the South to lose control of the world cotton market. It meddled with the supply of cattle and of swine. The result was that a shortage ensued, the New Deal placing the blame on a severe drought in the West. The New Deal, which is the Roosevelt administration, achieved a notable record for failures. Congress had its part in these costly failures, for House and Senate approved the measures and gave the President power over the spendings.

GEORGE ROTHWELL BROWN

Franklin D. Roosevelt comes to the seventh anniversary of his inauguration as President of the United States with nearly all the hopes he raised so high in 1933 gone with the well-known wind. For 3 months from that fateful March the 4th which saw him take the oath of office on the wind-swept portico of the Capitol these hopes seemed justified. Then things began to happen. The new President gave ear to the radicals of the New Deal left wing, and they still swarm about him in the White House, and are now urging him to break a tradition which is one of the bulwarks of the Constitution he so solemnly swore to defend.

PHELPS ADAMS (NEW YORK SUN)

As new dealers prepare to celebrate the seventh anniversary of President Roosevelt's inauguration, and to cheer for a third term * * * the consumer, the farmer, the laborer, the businessman, and old John Public in general will have little occasion to participate in the festivities. They have in most cases less money, fewer opportunities, and more burdens than they had in those normal, pleasant years of 1925 and 1926 that nestled peacefully between the war hysteria of 1919 and the exploded bubble of 1929.

GEORGE VAN SLYKE (NEW YORK SUN)

Concealed under the broad and generous label of "liberals," radical groups of every color and description have built up in the last 6 years a solid front in the New Deal administration in Washington until they have come to exercise a dominant influence in the executive branch of the Government. That left-wing element has been encouraged and its operations promoted to an extent never before known in this country. In that "red" front are mild and extreme Socialists, moderate Communists, and the motley crowd of agitators who are against the American system and seek to overthrow capitalism and set up a totalitarian state. They are intrenched in every department and bureau over which Mr. Roosevelt exercises patronage control. They have been for years burrowing from within and it has been testified before the Dies committee that some extremists have been acting in unison, with perfect understanding, and in cooperation with Stalin and his Russian Government in spreading their propaganda.

SENATOR CHARLES L. M'NARY, OF OREGON

Senator CHARLES L. MCNARY, of Oregon, says that—

Because the Federal Budget is still unbalanced and 9,000,000 people are still unemployed and labor is still divided and farm income is still low and industry is stifled, the performances of the New Deal add up to "abject failure."

Greenland and Iceland, the Sentinels of the North—the Western Hemisphere

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

Mr. SHANLEY. Mr. Speaker, in Norse mythology, one comes abruptly upon such expressions as "bottomless deep," "a world of mist," "choosers of the slain," all typical of the fierce character of those heroic times. Stern, unrelenting prophecies of triple winters with snow falling from the four corners of the earth, severe frosts, piercing winds, and a complete absence of any warmth in the sun—the day of doom—are rampant.

Inhabitants of Iceland knew those legends, but greater than such knowledge was real experience in encountering Nature's fury. Man's inhumanity from without and Nature's attack from within have both combined to torment this northern outpost with its Iliad of Woes. But she survived—dauntless, courageous, and inspiring.

Today, in spite of pirates, earthquakes, volcanoes, disease, famine, and social oppression, there has emerged a truly representative government with unbelievable modern attributes of democracy. Nowhere is the strength of a national conscience so strong. Socrates, beseeching mankind to bring all things to the test of conscience and not to abide by the verdict of "majorities, authorities, or custom, to judge of right and wrong not by the will or sentiment of others but by the light of which God has set in each other man's reason and conscience," might well say that these people fulfill his ideals.

A distinguished writer, Elizabeth Yates, says this about Iceland:

Still bound to Denmark by an elastic "Act of Union," Iceland has the opportunity of becoming wholly free in 1940, if it so desires.

Today, Iceland abounds in relative phrases. There are proportionately more artists and poets than in any other country of the world, and both are thought of as highly honorable and worthy of subsidy by the state. In proportion to the population, Iceland has

more bookshops and publishes more books than any other country, it is averred.

That is the key, for in Iceland the whole population counts. There are no very rich and no very poor. There are no fine schools for a privileged few and second-rate schools for others; all have the same educational opportunities. There are no mansions and no slums. And because there has never been militarism, there are no war memorials or veterans' homes.

Icelandic women were among the first in Europe to gain the franchise. * * *

Iceland's climate is rendered moderate by the Gulf Stream and its prevailing colors are the bright greens of fertility and the blues of mountain ranges. It is so far north that its period of daylight falls into sharp divisions—all light in midsummer and no light in midwinter, but even the period of darkness is illumined by frequent and splendid shows of the aurora borealis.

When the weather is good, it is wholly delightful—warm sun and crisp air. It rains often and is so quickly variable that a clear day can change to a wet one in a few minutes. Every week or so a strong, cold wind, straight from the North Pole blows across the island. There is little foliage; no trees to speak of save scattered birch thickets some 3 feet high and generously termed "forests."

* * * A country that abolished duelling in 1006 and has come close to abolishing poverty by 1940, while consistently guarding its mental life, comes near to setting an example which the world may follow—even though that country be a glacier-crowned island on the edge of the Arctic Circle.

It is submitted that the political status of Denmark unlike that of Greenland is one of virtual independence with full possession of sovereign rights, Iceland will be found to have complete possession of all its political faculties and thoroughly independent of Denmark. There are opinions at odds with this belief but I submit that there is an independent political entity in Iceland. I do, however, suggest that every effort should be made by the Executive to clarify the status. It might mean an invitation to join us in the Western Hemisphere.

As a matter of fact, I am thoroughly convinced that our entire Monroe Doctrine should be streamlined in the light of modern, up-to-date events. I would not surrender one vestige of our historic position, but simply revive and make corrections resultant from modern conditions.

I certainly believe that another study such as that of the J. Reuben Clark Memorandum on the Monroe Doctrine would be helpful. That book was issued under the aegis of the Department of State and published, says the title page, December 17, 1928. The new study would consider Greenland, Iceland, South Pacific Islands, the Antarctic and every other sphere relatively connected with the doctrine and its modern implications. It might also suggest changes consonant with the good-neighbor doctrine. It certainly would sound out opinion.

It might be pertinent to point out that the President of the United States delivered the following all-important thoughts to the Congress of the United States:

We no more than other nations can afford to be surrounded by the enemies of our faith and our humanity. Fortunate it is, therefore, that in this Western Hemisphere we have, under a common ideal of democratic government, a rich diversity of resources and of peoples functioning together in mutual respect and peace.

That hemisphere, that peace, and that ideal we propose to do our share in protecting against storms from any quarter. Our people and our resources are pledged to secure that protection.

Iceland fulfills these ideals, but let us check her relation to us, the Monroe Doctrine, and the Western Hemisphere, in a formal way, if necessary, by invitation, I repeat.

The President has also asked that we Americans should study these lands to the north. For that reason I submit the following extracts and observations:

"ICELAND THE FIRST AMERICAN REPUBLIC"—VILHJALMUR STEFANSSON

In Iceland, a 1939 publication by Vilhjalmur Stefansson, I take the opening paragraphs for that noted man's studies of the democracy of Iceland as well as his definite placement of it—vis à vis—the Western and Eastern Hemispheres:

There is much in common, though perhaps more in contrast, between the first American democracy and the greatest American democracy.

The Republic of Iceland is dated from 930, the year in which sectional governments were replaced by a national parliament. We date the United States either from 1776 or 1789—from the Declaration or from the Constitution—so Iceland became a republic either 846 or 859 years ahead of the United States.

It has been contended that Iceland is part neither of Europe nor of America but a midway house between them; or, to use a figure with truer and more picturesque historical meaning, that Iceland is a stepping stone between the Old and the New Worlds.

By the convention of Eastern and Western Hemispheres, Iceland comes near being a halfway mark; for the line between them is usually drawn through Iceland. That line, however, cuts east of the middle of the island, and there are textbooks which show part of Iceland on the map of the Eastern Hemisphere but all of it on the map of the Western.

To reach Iceland from Europe you must cross a wide sea, long out of sight of land—the distance is more than 500 miles from southeastern Iceland to the nearest large European island, Scotland. But from northwestern Iceland children at play see Greenland when they scramble up the mountains that are only 180 miles from the still higher mountains of the Blosseville coast. In northwestern Greenland you do not have to climb a hill to see the next island west, which is Ellesmere—you do not even have to sail to it, but can walk across, as many Europeans and Americans have done the last hundred years, and as the Eskimos have been doing for one or more thousands of years.

The geographers, then, according to Stefansson, have Iceland "American."

It has been said that, although geographically a part of America, Iceland is culturally a part of Europe and should be classed as a European republic, the first north of the Alps. But if culture is to be the standard, what republic is American? Not the United States, for even Will Rogers spoke English, a European language, and dressed, except on rare occasions, much more like an Englishman than like a Cherokee.

* * * * * * *

As we were saying, there would have been fair agreement around 1900 that the Irish discovered the New World about 795 A. D. Today we discuss the following probabilities, among others:

The Irish had been visiting Iceland for centuries before 795. We now incline toward thinking probable that the Venerable Bede (674–735) has at least one reference showing that Iceland was known in his day; a few years ago we though this improbable. We feel similarly about the probabilities where Adamnan (679–704) tells us in his Life of St. Columba (521–597) that Cormac visited an uninhabited island in the sea beyond Ireland. We are now predisposed to think not merely that Pytheas visited Iceland about 325 B. C. but also that the implication of his statement is correct—that he was informed about Iceland before he visited it, therefore by the people of the British Isles, who may have been familiar with it a few or even many centuries before.

It may be interesting to add some more pertinent extracts from this last-minute history.

In the chapter entitled "Iceland Today" we find:

The Icelanders are of mixed Scandinavian and Irish descent, with other strains figuring little. One estimate has it that Norwegians, whether they came direct or by way of the British Isles, would account for 60 percent of the blood; that settlers from Ireland who had little or no recent Scandinavian admixture would be 30 percent; and that Scotland, England, Denmark, and Sweden would account for the remaining 10 percent.

The debate on the Celtic element has been hot and at times emotional; so the estimates vary greatly. However, few, if any, scholars of standing place the Celts lower than 10 percent and only one has suggested their percentage may be as high as 50.

In the chapter on agriculture we learn about the climate in these paragraphs:

Speaking generally, Iceland has a moist, insular climate with comparatively mild winters and cool summers. The average annual temperature in Reykjavik in the southwest is, as said, 39° F., and that of Modruvellir in the north is 36.5° F. The mean temperature of the warmer summer months exceeds 52° F. in few or no places. (July in San Francisco averages 58°.)

The Icelandic climate is particularly variable. During midwinter the temperature may be several degrees above the freezing point with fine weather, while in summer there may be cold spells with snowfall. Precipitation varies greatly with season and locality. In the southeast the annual rate is only 4 inches. These uncertain conditions, especially in spring and summer, make agriculture difficult.

Later we read these statements:

The scientists tell that once upon a time there was a land bridge connecting the American and European mainlands by way of Greenland and Iceland. This is now represented by a submerged ridge from which project Iceland and the Faroes, Iceland rising nearly 6,000 feet above sea level.

There is another connection between the New and the Old Worlds, the Gulf Stream; from one branch of this stream, the Irminger Current, it results that the country is nearly surrounded by warmish water, 33° to 57° F., as well as that the climate is milder than would be expected from geographical position.

Most of the sailings from Iceland to neighbor countries during the republic were in the early summer, when European vessels came to trade and domestic vessels called at foreign ports for the same purpose. It is interesting to remember, then, that the first definitely recorded voyagers to Iceland left Ireland in February A. D. 795 and returned to Ireland in August.

What has interested me more than anything else about Iceland's strategic advantages is this series of extracts on the possibilities of air transportation and defense:

The obvious strategic position of Iceland for the operation of a line across the northerly Atlantic has been discounted hitherto by foreign lands and even by the aeronautically little-informed Icelanders themselves, on the supposition that the Icelandic climate was hostile to flying. Now, particularly under the stress of mercy flights, Iceland has seen this stock-model American plane operating in some of their worst weather, always with greater success than could have been attained by any other transport and never with harm to itself, to passenger, or to pilot. This gives renewed confidence that aviation will eventually utilize the strategic position of Iceland just as completely as if it were a tropical or subtropical island, like the Hawaiis or the Azores.

Icelanders like to think of the airways of the future in relation to the seaways of the past. The country was a stepping stone in the European discovery of America. They were themselves a seafaring nation of consequence and took the lead in westward discovery and colonization a thousand years ago. Things are now on such a different scale that Icelanders cannot be leaders where vast aviation capital is required, but they can nevertheless feel satisfaction in that they are to be a link in that prospective air commerce which, for them at least, takes the place of the Viking navigations between the continents a thousand years ago.

There have been many flights across the North Atlantic by way of Iceland and Greenland, exploring tentatively this intercontinental highway of the future. There was a first-flight interest in the visit of the United States Army round-the-world planes in 1924. There was, perhaps, greatest significance in the flight of Col. and Mrs. Charles A. Lindbergh in 1933. For the Lindberghs came prospecting a route for an American company that has broad geographic scope, that operates scheduled services throughout the year not only in South America and Alaska but across the Pacific and (as planned for 1939) across the Middle Atlantic—Pan American Airways. Like most of their predecessors and successors, the Lindberghs navigated easily the portions of the route which had been considered most dangerous, those over Greenland and Iceland.

The Lindberghs differed from some other flyers who have visited Iceland in being successful in their whole circuit (from New York by way of Labrador, Baffin Island, Greenland, Iceland, and the Scandinavian countries to the Soviet Union, and then back by way of Spain, North Africa and South America). So there have been no misunderstandings resulting from their air voyage. Other flights by way of Iceland have been misunderstood; through those misunderstandings they have created the feeling that the vicinity of Iceland had been shown to be dangerous. An example was the flight of the American, Parker Cramer, and the Canadian, Oliver Pacquette, in 1931.

It is impossible to include in the RECORD any maps. It would be well for those who would study this subject further to look at a map with the North Pole in the center and then the rest of the Arctic and northern-temperate lands extending out from the pole on all sides in both hemispheres. If this is done you can obtain a more thrilling and accurate inspection of the focal importance of Iceland in the matter of air flight.

Geographically, I find on a map, The World, in the possession of the Cartographic Section of the Library of Congress, a division of the world into the two spheres. That map is published by the Weber Costello Co., of Chicago, Ill.

The Western Hemisphere is bracketed between 20° west longitude and 160° east longitude in the Pacific Ocean. The 20° limit cuts the tip of Iceland as well as the whole of the Azores and the Cape Verde Islands in the Western Hemisphere. Although these islands have been generally regarded by geographers as parts of the Eastern Hemisphere, the distinguished Chief of the Maps Division, Col. Lawrence Martin, whose map scholarship is highly regarded by Professor Bemis and other great authorities, has this to say about it in two letters to me:

FEBRUARY 3, 1940.

The attached map, as printed, shows the conventional mathematical limits of the Western Hemisphere on the meridians of 20° west longitude and 160° east longitude. Most American, British, German, and Italian maps represent it this way.

The red-pencil lines upon this map present a defendable representation of the actual limits of the Western Hemisphere with relation to political geography. It will be observed that the use of the international date line as the western limit of the Western Hemisphere solves the problem concerning Siberia, New Zealand, etc., and that the four departures from the meridian of 20° west longitude take care of the situation with respect to the Cape Verde Islands, the Azores, and northeastern Greenland as well as the view of Stefansson with respect to Iceland. A large proportion of the part of Antarctica in the Western Hemisphere was discovered and explored by Americans. Wilkes Land, however, lies entirely in the Eastern Hemisphere.

LAWRENCE MARTIN,
Chief, Division of Maps.

FEBRUARY 2, 1940.

In considering what part of the continent of Antarctica belongs to the Western Hemisphere, I suggest that he keep it in mind that the conventional map usage respecting the limits of this hemisphere farther north are the meridians of 20° west and 160° east longitude.

In the Atlantic Ocean, however, the meridian of 20° puts the western tip of Iceland, as well as the whole of the Azores and the Cape Verde Islands, in the Western Hemisphere, although these islands have been generally regarded by geographers as parts of the Eastern Hemisphere. In the Pacific it puts eastern Russia (Siberia), as well as New Zealand and adjacent islands, in the Western Hemisphere, although they are generally regarded as parts of the Eastern Hemisphere.

Nevertheless no other meridians can be chosen as limits of the hemispheres without similar minor departures upon the basis of political geography.

LAWRENCE MARTIN,
Chief, Division of Maps.

Lippincott's Gazetteer of the World contains the following about Iceland:

The climate is variable. The temperature is more elevated than that of any other country in the same latitude; mean of year at Reykjavik, 40° F.; of the summer, 56°, Gulf Stream drift, are much milder than the north and generally free from ice. Forests formerly abounded, but the island is now almost destitute of trees. Clumps of small woods or stunted beech and mountain-ash occur. The want of fuel is severely felt, although the Gulf Stream and the polar currents occasionally float driftwood to these shores, and a fine white turf is used. Except a few oats, and a kind of wild grass whose seeds are carefully garnered for food, or grain can be raised; but potatoes and garden vegetables are cultured. There are fine natural pastures, and rich grass fields surround the farms. The most important domestic animal is the sheep, which, with the goat, cow, horse, ox, and dog, was introduced from Norway. Reindeer, introduced in 1770, now exist in large herds, but are not domesticated. The polar bear is sometimes cast on the shores from the northern icefields. The fox is one of the commonest of the land animals. Fish (cod, herring, flounder) are very abundant on all the coasts and form an important part of the support of the inhabitants. Birds are very numerous, the most valuable of which is the eider duck. No reptiles of any kind exist in the island. There are practically no manufactures, and most of the inhabitants live by breeding cattle and sheep. Until recently there were no roads in the island, and transport was effected almost exclusively over bridle paths by horses. Good roads are now being constructed, together with bridges over the numerous streams.

Population in 1703, 50,444; in 1843, 57,180; in 1880, 72,445; in 1890, 70,927; in 1901, 78,489.

Iceland (called Island, ces'land, by the natives; L. islandia), an island subject to the Crown of Denmark and situated between the North Atlantic and the Arctic Oceans, 155 miles southeast of the nearest point of Greenland and 570 miles from the coast of Norway, extending between latitude 63°24′ and 66°33′ N. and longitude 13°31′ and 24°30′ W. Greatest length, from east to west, 290 miles. Area, about 40,450 square miles.

I repeat the thought of the President and ask if Iceland does not fulfill these high principles:

We, no more than other nations, can afford to be surrounded by the enemies of our faith and our humanity. Fortunate it is, therefore, that in this Western Hemisphere we have, under a common ideal of democratic government, a rich diversity of resources and of peoples functioning together in mutual respect and peace.

That hemisphere, that peace, and that ideal we propose to do our share in protecting against storms from any quarter. Our people and our resources are pledged to secure that protection.

Our course should be one of prudence and caution. It is likely therefore that Iceland may take the first step.

The Reapportionment Bill

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KENNEDY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1940

Mr. MICHAEL J. KENNEDY. Mr. Speaker, as a member of the Committee on the Census, I wish to avail myself of

this occasion to clarify my position on the reapportionment bill. I voted in favor of reporting this bill in committee and in the House for its enactment, because it is strictly in accordance with the mandate of the Constitution to pass such a bill concurrent with the census now in progress. However, I wish to state also that I voted in opposition to the so-called alien amendment, as a member of the committee and on the floor of the House, because conversely this provision was strictly in violation of our Constitution, and should the House see fit to take such action, however unfair it might be, its only proper recourse would be by constitutional amendment. I shall state further that were I not faced with the constitutional objection to this provision, I should still have been constrained to vote against it, proceeding on the simple premise that I regard it as unhumane, undemocratic, and un-American. We are solely a legislative body—the vocal organ of the people. Every alien who is legally within our shores is entitled to all of the rights endowed by our Government upon one of his particular status. It is not within our province to strip him of a single one of those rights, by any legislative act, in violation of our Constitution.

I am equally concerned, however, with the humane aspects of the alien amendment. The State of New York has contributed many outstanding public figures to the progress of our country and its government, many of whom have been aliens. We have a "favorite son" serving with distinction in the upper body at this time from our State who was an alien, the Honorable ROBERT F. WAGNER, whose progressive and social legislation has made him a national figure. In addition, we have had distinguished prosecutors, jurists, and innumerable other public figures who came to this country as aliens, or whose parents came here as aliens. Many of them, it is true, became naturalized citizens, but in my opinion the unfairness of this amendment which would exclude the aliens in the reapportionment of the House is illustrated by the fact that many who are aliens today may become the pioneers and leading citizens of our Nation tomorrow.

I do not hestitate to denounce, either publicly or privately, any alien in my city, or any other city, who is affiliated with the Communist Party, or any organization whose principles and activities are in opposition to the American form of government. I am concerned only with the defense of those aliens who have resided in our country for many years and who are citizens in spirit, although unable to attain technical status because of their inability to qualify, in many cases. Many of them reside in my district and have reared splendid, strong, healthy children and educated them to be creditable American citizens today, proud of their heritage, proud of their citizenship, and proud of their democratic form of government.

I commend the House for its action in voting to strike the so-called alien amendment out of this reapportionment bill.

Gold and Its Power—Part 8

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1940

Mr. THORKELSON. Mr. Speaker, in this, the eighth speech on gold and its power, I shall discuss the legal-tender money which we, the American people, have been satisfied to use since Congress in 1934 took gold and sound money from us and gave it to the international bankers.

The legal-tender or plebeian money which we are now using expresses the contempt in which we, the people, are held by the internationalist and his cohorts. Our commodity money or legal tender is a purely inflated dollar with a zero background. This dollar is an emblem of servitude. Russia, with a 95 percent internationalist government under Lenin, issued credit cards to the people, which they used in the purchase of commodities. In the United States, internationalists under Mr. Roosevelt have issued legal tender, blue and yellow chips, for the purchase of commodities. Our legal-tender money has no greater standard value than the Russian credit slips, as both currencies have only purchasing power or value. We are even cheated when we buy foreign credit or traveler's checks, for we take a dollar with the same purchasing power or hour-labor value today as it had in 1926, when it was worth 100 cents in gold and 100 cents in purchasing or labor value, and exchange it for the present 59-cent international dollar.

In the following discussion, let us assume that $1 represents 1 hour of labor.

In 1926 and 1932 an automobile cost 100 ounces of gold, or $2,067. This money represented 2,067 hours of labor, at $1 per hour. We still pay the same price for the automobile in legal-tender dollars and in hours of labor.

Today, and since 1934, when the Gold Reserve Act was adopted, a foreign government with 100 ounces of gold may buy one automobile for $2,067 and will receive in change $1,433. This represents the difference between $3,500, which is the inflated price for 100 ounces of gold, and $2,067, which was the old price and is still the standard price for 100 ounces of gold.

Let us now subtract the $1,433 from the $2,067 and the result will be $634, which is the price a foreign government pays for that automobile. This appears unbelievable, but I challenge contradiction from anyone who feels disposed to question this statement. This is in accord with the statement that I have made before, namely, that we furnish approximately 69 percent or more free merchandise for every 25.8 grains gold dollar nine-tenths fine, spent by foreign governments in the United States.

These statements may appear preposterous, but here are the facts: The international standard price of 1 ounce of gold is still $20.67. We pay $35 for it. The difference, $14.33, represents profit to the foreign governments. Fourteen dollars and thirty-three cents is a mere 69 percent of $20.67 and is the administration's gift to foreign governments at the expense of the taxpayers of the United States.

This is a financial transaction—or, let me say, a financial trickery—in which our Government connives with foreign powers in cheating or stealing from our own people $1,433 for every 100 ounces of gold which have come and are coming into the United States Treasury. This is, of course, premeditated and willful fraud which must be charged against those who asked for the legislation and against those who passed the Gold Reserve Act.

Fraud is evident as we recall that domestic business is carried on with dollars and, since 1934, with the purely inflated dollar, devoid of all standard value.

I charge, furthermore, that the President, the Secretary of the Treasury, and the Secretary of State are now knowingly engaged in defrauding the United States, first, by paying $35 for 1 ounce of gold. Second, by manipulating and keeping prices down so that foreign governments may buy the same amount for $20.67 as we buy for $35. Third, that reciprocal-trade pacts and treaties are employed to keep prices down, or at the same price level as they were before the Gold Reserve Act was adopted.

This price "pegging" is necessary from the standpoint of the defrauders; first, to fool the people into believing that the present legal-tender dollar is sound money, when the actual fact is that the money we now use is a worthless and inflated currency. Second, price pegging as manipulated by the administration is an aid to foreign governments and particularly to England and France, for it is those nations that ship most of the gold into the United States. Russia, of course, has benefited to some extent, but much of her gold has been shipped through England.

This should be clear, particularly to Members of Congress, as they recall that we have loaned gold to South America and other nations, the same nations that are now in default on interest as well as principal.

I have tried to warn the people of this and other dangers, through the medium of the CONGRESSIONAL RECORD, in the hope that in spite of its restricted circulation, this information may serve some good.

I shall now make a statement which I challenge the President, the Secretary of the Treasury, and the Secretary of State to prove wrong, and here it is:

Since the Gold Reserve Act was passed, foreign governments today buy as much with 31 cents of the 1932 dollar as we buy with 100 cents of the new legal-tender dollar. In other words we donate 69 percent of all merchandise bought by foreign nations. The loss we sustain in this transaction is in reality one of the major causes for unemployment and for the chaotic state in which we find our industrial and business structure today.

This can only be looked upon as malicious and willful fraud, and is in my opinion a bona fide cause for impeachment of those who proposed the legislation and of those who upheld the Gold Reserve Act.

The Constitution makes it obligatory upon Congress to remove all public officials who violate their oath of obligation, and all judges who transcend constitutional authority, for the Justices of the Supreme Court are public servants and occupy the same position in regard to their obligated duty as all other public officials.

Congress has also the power to remove any of its own Members for just cause so we may assume that these provisions were made for the sole purpose of keeping the Government clean.

After having delegated this power to Congress the people have reserved the right to themselves to remove or impeach their Representatives every 2 years, and the Senators, since adoption of the seventeenth amendment, every 6 years. It is therefore clear that the people are the supreme power in this Government, a power, if you please, that can demand impeachment of all public officials and remove its own representatives by not reelecting them to office. The people can protect themselves only by protecting the Constitution, and the Constitution can be protected only by electing to office men who will preserve, protect, and defend the document in the literal meaning of the words. Liberal interpretation of the Constitution is death to the document, for no liberties may be taken by Congress or anyone else with those rights which the people have reserved to themselves.

LEGAL TENDER WITHOUT GOLD RESERVE

Legal-tender money which is not secured by gold is of no greater value than the inflated German marks that wrecked the currency system of Germany.

The legal-tender or commodity money we are now using is a purely inflated currency which is bound to collapse and end in national bankruptcy. When that happens, everyone will be broke except the international bankers or those who are now holding gold certificates and their foreign representatives who are holding industrial bonds and stocks. It is well to bear in mind that all foreign obligations are payable in gold, and this even includes our present inflated currency. While speaking of this, let me say that our own people were deprived of this security when the Gold Reserve Act was adopted in 1934.

GOLD

Gold is in the United States today for three major purposes: First, for safekeeping; second, to provide gold credit to finance the present war in Europe for England and France; third, to be available so that the international financiers may dominate foreign nations as well as the United States.

It is of interest to note that the international financiers are working in close cooperation to protect the gold, for approximately $150,000,000 was moved secretly from Norway to England in anticipation of invasion. This little news item might have escaped many people's attention, but it was in one of our local papers. This shows, if nothing else, the importance of gold, and be assured that it is for the control of this metal that the internationalist is gambling with human lives on the battlefields of Europe.

War in Europe is promoted by the financial internationalists to reestablish the power of gold in those nations which are now trying to establish their independence and freedom from such control. This is very important to the internationalist, for should he fail to establish himself so as to wield the power of gold in Japan, Italy, and Germany, he will lose the dominating influence which he has had over many nations for a number of years.

The international financiers are now wielding a pernicious influence over all nations except the three to which I have referred, and they are solidly entrenched in Great Britain, France, and the United States. It is these financial interests which are now seeking to involve us in a war that is for no other purpose except to establish themselves as world rulers in a much advertised and discussed world government. Should we foolishly permit the United States to become involved in the European war, we will in such procedure jeopardize the rights and liberties which we have enjoyed, and for which the founders of our country fought and died in the Revolutionary War.

International agents are now swarming through the country to promote a favorable reception for a "world government," which is supposed to be set up as an international union to end war. This is the same "buncombe" that was peddled 23 years ago, when we were told that the World War was to stop all future wars.

The present well-advertised "world union" or "super world government" is an internationalist dream, in which he hopes to establish an international government based upon the same ideas as the League of Nations. This international government, like the League of Nations, will be rejected by all people who cherish independent government and self-determination. Strange to say, "world union" is an American conception which is promoted by those who favor socialism, communism, and totalitarian "democracy." Those who are now touring the country speaking in favor of world government will no doubt, if the records are investigated, be found to be socialists, communists, or internationalists.

It is not my intention to be unnecessarily harsh in my criticism, yet I cannot refrain from denouncing those who have deliberately and willfully ignored their obligated duty to our people. Each Member is sent to Congress upon some promise he or his party makes to the people. I, like others, came to Congress upon a platform in which I dedicated myself to honor my sworn obligation "to preserve, to protect, and to defend the Constitution of the United States." I denounced those who ignored the Constitution and the people's rights, as expressed in the document, and in this I have not changed because I still maintain that the people in this Nation are the supreme power who will eventually set this Republic back upon that document which came out of the Convention in Philadelphia on September 17, 1787. I still maintain that all public officials, Members of Congress, the President, and the Justices of the Supreme Court, are the elected or appointed servants of the people, and these officials must, in order to remain loyal to the Nation, remain true to their obligation.

I furthermore maintain that it is the duty of Congress, as the direct representatives of the people, to preserve, to protect, and defend the people's rights by removing from office those who have transcended the authority granted to them in the Constitution of the United States. It is only in this manner that the Republic can be protected, so that sound government may prevail.

It is with this responsibility in mind that I now say the Federal Government and the New Deal administration have engaged in high crimes and misdemeanors for nearly 8 years, and I charge the present administration with full responsibility for the chaotic state in which we find our Nation today.

I have called attention to this delinquency from the very first day I addressed the House, and I still maintain that Congress has failed to conform to the tenets of the Constitution. I do not believe any administration has committed more crimes against the United States, or condoned fraud and usurpation more than this administration. It is not only

disgraceful but I am sure that liberties taken with the Constitution will, when the facts are known, forever remain a black page in the history of Congress.

The attitude which congressional committees have pursued in investigating and prosecuting our Nation's industries may well be compared to an organization of train robbers, investigating and prosecuting the railroads which they have robbed, for both are adding insult to injury.

I think the business people of this Nation are most extraordinarily tolerant when they allow themselves to be dominated, prosecuted, and persecuted by men whom they elect to office, "to preserve, to protect, and defend their rights." It is, if nothing else, a most astonishing situation. I furthermore maintain that the people of this Nation are extremely tolerant and jeopardize their own liberties and rights when they permit their own representatives to deprive them of sound-standard money and when they permit alien people to control the Nation's currencies and use such money to entrench themselves in our Nation's industries. This is particularly pertinent when we bear in mind that the money used for this purpose is the property of the people which has been placed in banks for safekeeping.

The people should demand that this Congress restore the rights to the people, by repeal of the Gold Reserve Act and other unconstitutional legislation which has made a king of the Executive, and a knave of Congress. Congress should repeal the silly emergency power granted to the President, for there is no provision in the Constitution for the delegation of such power to the Chief Executive. This power, while not particularly dangerous, is tempting when in the hands of a person who is biased and prejudiced in thought and action.

Efforts are constantly made to involve us in the present European war, and the administration's policy, if expressed correctly in the press, is not averse to such participation. It is apparent that little or no consideration is given to the wishes of the people, for they have clearly said: We do not want war.

It is now the duty of the people to express themselves fully and clearly upon this subject so that there will be no misunderstanding now or in the future. As a neutral, I say let us remain neutral and impartial in our actions toward all belligerents. It is only so that justice will prevail. We have much to do at home in order to care for our own people, and to aid recovery let us restore our own home markets to the American producers so that our idle people may again be employed.

War in Europe should be none of our concern. We have nothing but sad memories from the last war, for we were not only used, but we were also abused by those to whom we gave aid. War in Europe might have been averted had we taken a firm stand on neutrality. This we did not do, but it is not too late to remind Europe that we are not going to take sides in this war. We must use all our resources to rebuild our industries at home, and this can best be done when the American people take charge of their own Government.

South Again Speaks for the Anti-Poll-Tax Bill

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

Mr. GEYER of California. Mr. Speaker, many letters are coming to my office pledging support in the fight to remove the un-American practice of requiring the payment of a head tax before the citizen is permitted to exercise his democratic right of casting his ballot.

Most of these letters come from these eight States: Alabama, Arkansas, Mississippi, Tennessee, Texas, South Carolina, Georgia, and Virginia, for these are the offenders. These people are looking to the Federal Government for relief, for the provision is frozen upon them by their State constitutions, and to expect the "economic overlords" to vote themselves out of power is too much. The voices of the voteless 90 percent in these States have now risen from a whisper to a mighty chorus and the tide is still rising, for the people all over the country are realizing that before we condemn autocratic rule abroad we had better set our own house in order. The only way to preserve democracy is to broaden its base.

In some sections of these States the farm income of many families is less than $100 per year per family. The average number of voters per family is three. To ask these three to pay $2 each for voting is asking the impossible. If, my colleagues, we paid the same percentage of our incomes in order to vote, we would pay $600.

Even the crews of our steamships as well as labor groups are protesting.

I insert two letters in the RECORD:

NORFOLK, VA., *April 12, 1940.*

Representative LEE E. GEYER,
House of Representatives, Washington, D. C.

DEAR SIR: At a meeting of the crew of the steamship *Jason*, we unanimously agreed to support your bill to eliminate the poll tax in Federal elections in those States in which this obsolete and undemocratic law still exists. In these trying times, with labor being seriously threatened at home, and with war raging abroad, with the danger of our direct involvement in this war growing daily, it is especially important that the people be in a position to express their desires in a legal, democratic way. Nearly 80 percent of the people of the Southern States do not vote, most of them because they cannot pay the poll tax. A situation such as this is a tremendous blot on our democratic processes. It should be remedied at once. Therefore we say good luck, and may the voice of the people be strong enough to have the law passed.

Yours very truly,

CREW, STEAMSHIP "JASON,"
J. P. SMITH, *Chairman,*
RICHARD B. PUETTE,
Recording Secretary.

LYNCHBURG CENTRAL LABOR UNION,
Lynchburg, Va., April 15, 1940.

Mr. LEE E. GEYER,
Representative, Washington, D. C.

DEAR SIR: The Lynchburg Central Labor Union at the last regular meeting went on record as endorsing the bill you are sponsoring to do away with poll tax as a prerequisite to voting. We have fought for this in Virginia for a number of years but so far have been unable to accomplish anything. We are not adverse to paying the poll tax, but feel that it should not be used as a means of disfranchising the poorer class of people. They may be able to pay other taxes, yet not able to pay poll tax in order to vote.

Yours sincerely,

MRS. GRACE M. DIERGUID,
Recording Secretary, Lynchburg Central Labor Union.

A Realistic View of Pan American Idealism

EXTENSION OF REMARKS

OF

HON. T. V. SMITH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

Mr. SMITH of Illinois. Mr. Speaker, under leave to extend my remarks, I insert an address I gave Sunday, April 14, at Chicago in joint celebration of the fiftieth anniversary of the Pan American Union and the one hundred and ninety-seventh birthday of Thomas Jefferson. The address was given under the auspices of the Pan American Council of Chicago. The inventiveness of Jefferson in the social field raises hope for continued efforts to discover new forms of amity with our all-American neighbors and to implement these forms through dynamic institutions.

Now that we have converted national isolation into Pan American insulation through the Panama agreement, we must inquire as to the nature of our new bonds throughout the Americas and improve if possible the prospects of their

continuance. One is tempted to put the best possible light on all things social when he views them through high windows of Gothic loveliness. But life is no mere succession of Sundays, and even Gothic windows are not bombproof. After the most peaceful Sunday there comes blue Monday trooping along with other days in tow, trailing moods, hesitant if not malevolent.

There are three general types of cooperation upon which we may more or less depend to make the American unity of idea a working thing in fact. In international arrangements, only those who sleep on the floor of mutual self-interest do not fall out of bed. So, starting with a 50-year old Pan American dream, let us count ourselves as hardy adventurers in realism.

As means to all-American amity, there is, first and finest of all, cooperation cordial. This form flowers as friendship and glorifies life with a radiant afterglow like the sunset of some superb summer day. But, life carries on without such radiance. Love lost, not all is lost between nations. We certainly do not have to kiss across our boundaries in order to cooperate with our neighbors.

There comes, second, cooperation competitive. This type of cooperation makes up in hardness of fiber what it lacks of ideal dimension; and States are fortunate when they can attain and maintain a continuous peace through forms competitive. Even this condescension from cordiality to competition does not exhaust the descent toward international accord.

For there is, third, cooperation disdainful. Of this inferior but commoner type is internationalism mostly made today. Let us not grieve too much that it is so, but rather rejoice if it can be kept from becoming worse.

As Paul Laurence Dunbar, the Negro poet, has said:

> There is a heaven forever, day by day,
> The upward longing of my soul doth tell me so.
> There is a hell, I am quite as sure; for pray,
> If there were not, where would my neighbors go?

To live peaceably with those whom we deprecate, to tolerate them for the sake of something yet in common—this is the first test of the democratic way of life. Democracy welcomes chance associations and then transforms them through tolerance into something mildly spiritual. To hate urbanely is a magnificent advance indeed over hating savagely, that is, to hate and forbear action rather than to hate and desolate. It is this difference between hating urbanely and hating savagely that nations forget who prostitute the spirit of man with the ancient heresy that to act regardless is more important than to understand and to dominate is more important than to suffer this human comedy, to which we all contribute our share of folly.

While the whole world is menaced by nations that forget, we Americans—South, Central, and North—had best hang together, lest we hang separately. Of such humble realism must pan-Americanism be made, if made it is or is to be. This much indeed self-respect as well as self-preservation does require of all American States: That they stand with one another rather than with those whose coy embrace is but the kiss of death to all that is gentle in our common western way of life.

If we cannot be good neighbors—and it is much continuously to expect of mere men—then let us be neighbors nevertheless, mere neighbors. Whom geography hath so gracefully joined together let not foolish pride or provincial patriotism ever wholly put asunder. Going on courageously from what little 50 years of idealistic effort have bequeathed us, though at times that legacy hardly rises above hate, we may in the spirit of civilized men grow at length from toleration of variety into appreciation of variety as the major meaning of this gallant human show.

A half-grown phoenix, that fabled bird of the century cycle, has of late whistled in my ear this Pilgrim's Progress of the pan-American spirit:

> I first lived in a little house and lived there very well,
> I thought the world was small and round and made of pale blue shell.
> I next lived in a little nest nor needed any other,
> I thought the world was made of straw and brooded to my mother.
> One day I flew beyond the nest to see what I could find,
> I said the world is made of leaves; I have been very blind.
> At length I flew beyond the tree, quite fit for grown-up labors;
> I don't know how the world is made, and neither do my neighbors.

It was this genial mood of skeptical hope that brought Columbus to these American shores so many years ago. When he left Spain he did not know where he was going; when he got here he did not know where he was; when he returned he did not know where he had been. And yet, and yet—he discovered a world, a new world, our new world of the Americas, South, Central, and North. Every nation is today a Columbus adventuring on strange and turbulent international seas. We are adventurers all from chaos toward a cosmos of amity, with only this pole-star to guide us—the pole-star that where wealth accumulates through aggression, men decay; men and women, and children decay.

We need not close, however, on a note quite so pessimistic—not on a week-end that for us North Americans marks the one hundred and ninety-seventh anniversary of Thomas Jefferson's birthday. In the spirit of that inventive man's whole life we seek under forms conventional and through lowly hope for new ways of carrying forward the American impulses to unity. Those impulses are not killed by war, not even in war-torn nations. Alfred Noyes has of late sung immortally of Finland's triumph through defeat. Of the whole of Scandinavia also let the song now ring true.

> Far off between the mountains and the sea
> In ancient days this word was sped—
> "Tell them at home we held Thermopylae
> According to their word and lie here dead."
>
> Now from the North there comes a mightier cry—
> "We fought and failed against titanic powers,
> But ask mankind whose is the victory
> When every unchained heart on earth is ours?"

Now the world, my friends, is by no means emptied of "unchained hearts." But of all hands, American hands almost alone remained unshackled for constructive furtherance of fellow feeling. While others work their will to peace through the enforced tragedies of war, it remains for us at peace to further throughout the Americas the fruits of peace. What the Pan American Union has done in half a century may be more than doubled in a century. The cause of pan-American progress we cannot suffer to fail; for if unshackled hands cannot honor unchained hearts with house and home, the dearest spirits on earth must roam the limbos of the lost unhoused and without the respite of any homeland at all. Celebrating, then, the spirit of social inventiveness justly associated with our founding fathers and the Federal Union which they founded in North America, let us fortify our spirits for new creativeness throughout the Americas with the ringing words of Jefferson:

> As members, therefore, of the universal society of mankind, and standing in high and responsible relation with them, it is our sacred duty to suppress passions among ourselves, and not to blast the confidence we have inspired of proof that a government of reason is better than one of force.

A. F. of L. Unions Oppose Expansion of W. P. A. in Construction Field

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

LETTER FROM C. J. HAGGERTY

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from Mr. C. J. Haggerty, secretary of the Los Angeles Building and Construction Trade Council, transmitting a resolution by that

body setting forth their position concerning the building construction activities of the W. P. A. and appropriations to be made therefor.

LOS ANGELES BUILDING TRADES COUNCIL,
Los Angeles, Calif., April 6, 1940.

Hon. CARL HINSHAW,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN HINSHAW: Enclosed you will find a resolution, adopted by the Los Angeles Building and Construction Trades Council, which I believe in a measure is self-explanatory.

This council is composed of 20,000 construction workers who are being deprived every day of the chance to make a living because of the great inroads into the construction industry being made by the W. P. A. workers.

At the present time more than $36,000,000 have been pledged and allocated to W. P. A. construction for the balance of 1940. Not a dollar of this money will go to independent workers who have been good citizens and have maintained themselves, in some manner or other, without applying to relief agencies and are entitled to work at their trade without being forced, by governmental activities and the diversion of funds from the normal channels of the industry, to relief labor.

Thousands of independent construction workers have been and are still being gradually forced to apply for relief because of the enlarged activities of W. P. A. in the construction field. It has come to the point in southern California particularly and possibly many other places in the Nation that various political subdivisions, State, county, and city and the city subdivisions, are themselves on relief, so that at the present time all construction projects are being diverted to W. P. A. because of the fallacious idea that this money is cheap and not so expensive to the governmental agencies.

The Los Angeles Building and Construction Trades Council is very much alarmed over conditions wherein, not alone thousands of men who never worked in the construction industry are now being supported by it, but also the political subdivisions are themselves on relief in company with these thousands of construction workers.

We respectfully petition your immediate assistance in this matter so that the conditions complained of will be eliminated and that our people will again be permitted to work at their trade without being forced to become relief clients and that you will assist to remove political subdivisions from relief status and restore them to their former status.

Trusting this will receive your immediate attention and cooperation, I am,

Sincerely yours,

C. J. HAGGERTY,
Secretary, Los Angeles Building and Construction Trades Council.

Whereas the members of the affiliated unions of the Los Angeles Building and Construction Trades Council have suffered the loss of employment through the use of W. P. A. relief labor on large construction projects; and

Whereas the W. P. A. is constantly enlarging its field of construction activities which tends toward the establishment of a permanent, national construction agency and is placing relief clients on a special basis for particular attention from the Federal Government to the exclusion of the free, independent construction worker; and

Whereas through the beneficence of the Works Progress Administration and their selling point of cheap money for State, county, and local administrations, which administrations are succumbing to the lure of obtaining so-called cheap construction projects and are diverting funds formerly used in the private contract and for the employment of independent labor; and

Whereas W. P. A. expenditures are a direct concern to all citizens and taxpayers and do not represent in the true sense of these terms any gift or donation from the Federal Government; and

Whereas the Los Angeles Building and Construction Trades Council believes that such constant enlargement of W. P. A. activities, which exclude the employment of free, independent mechanics and construction workers, is inimical to the welfare of the Nation and the best interest of its citizens and further believes that the continuation of such a policy in the construction industry will eventually force large numbers of free, independent building-trades men to accept relief from W. P. A. in order to obtain a livelihood: Therefore be it

Resolved, That the Los Angeles Building and Construction Trades Council petition the present relief administration and the Congress of the United States to take the following steps to correct the above abuses herein complained of:

1. Reenact the provisions of the 1939 appropriation act regulating wages, hours of employment, purchase of equipment, and limiting the size of building projects.

2. Limit all individual W. P. A. construction projects to a total cost not in excess of some reasonable sum, such reasonable sum to represent the total estimated cost of the project, including the sponsor's contribution.

3. Prohibit the division of large construction projects into smaller units, the size of which unit after such division being small enough to admit the smaller units into the W. P. A. program.

4. Prohibit the extension of any existing past or present project in violation of the specified limitations of cost.

5. Require that all relief projects estimated to cost more than $10,000 be constructed as far as practicable by private-contract methods so as to employ free, independent building and construction workmen at their prevailing scale and hours of employment.

6. Prohibit the W. P. A. from accepting funds as a contribution to a project which have been diverted from a fund or budget normally used in the employment of independent workmen for all construction projects.

Aircraft Landing Area Development Act

EXTENSION OF REMARKS
OF
HON. JOHN M. HOUSTON
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1940

Mr. HOUSTON. Mr. Speaker, in my speech before this body on June 15, 1938, I mentioned the necessity for a great network of civil airports for the safety of air navigation and national defense and for the proven transportation of the future. Since then notable progress in aviation has been made; however, the airport problem is still with us. Only a few days ago we celebrated a new achievement and a new milestone in the progress of air transportation—the impressive record of 87,000,000 miles of scheduled air transport operations without a single passenger fatality.

Two years ago Congress approved the Civil Aeronautics Act creating the Civil Aeronautics Authority. This act also recognized in principle the justification for Federal participation in the development of a national airport system. Recognition of the importance of this problem was also granted by the President of the United States in a letter to the National Aviation Forum, dated January 24, 1939, reading in part, as follows:

Civil aviation is clearly recognized as the backlog of national defense in the Civil Aeronautics Act which set up the effective machinery for a comprehensive national policy with respect to the air.

Underlying the statute is the principle that the country's welfare in time of peace and its safety in time of war rests upon the existence of a stabilized aircraft production—an economically and technically sound air-transportation system, both domestic and overseas—an adequate supply of well-trained civilian pilots and ground personnel.

In the Civil Aeronautics Act Congress directed that the Civil Aeronautics Authority make a national airport survey under section 302 (c) of the act, reading as follows:

The Authority shall, through the Administrator, make a field survey of the existing system of airports and shall present to the Congress not later than February 1, 1939, definite recommendations (1) as to whether the Federal Government should participate in the construction, improvement, development, operation, or maintenance of a national system of airports, and (2) if Federal participation is recommended, the extent to which, and the manner in which the Federal Government shall so participate.

Both the Air Commerce Act and the Civil Aeronautics Act treat airports as air navigation facilities. They are, therefore, recognized as necessary to make air navigation possible, as are other facilities such as beacon lights and radio beams. All told, these facilities are to flying exactly what navigable water areas are to marine transportation.

The report of the Civil Aeronautics Authority to Congress dated March 24, 1939, contains, in part, the following recommendations:

(1) Development and maintenance of an adequate system of airports and seaplane bases should be recognized in principle as a matter of national concern.

(2) Such a system should be regarded under certain conditions as a proper object of Federal expenditure.

(3) In passing upon applications for Federal expenditures on airport development or improvement, the highest preference should be given to airports which are important to the maintenance of safe and efficient operation of air transportation along the major trade routes of the Nation and to those rendering special service to national defense.

The report of the Civil Aeronautics Authority was referred to the Committee on Interstate and Foreign Commerce 2 years ago; however, no action has been taken on this report to date.

It must be recognized that there can be no flying without airports and that no airport can exist by itself. The usefulness of every airport depends upon the status and location of neighboring airports. Therefore, in dealing with this problem from the national aspect, we must concentrate on a system of airports. Needless to say, such a system of airports is essential to the Nation's welfare and national defense.

Quoting from the Civil Aeronautics Authority's report to Congress:

> There is one special interest in an airport system that touches every citizen. It is no more possible to operate an air arm in the national defense without suitable ground bases than it is to operate an air line without them. The Army Air Corps and naval aviation have many fields of their own, and those are substantially excluded from this survey, since they are open to civil use only in emergency and form no part of the regular civil airport equipment. But beyond the roster of Army and Navy fields there is a need for additional sites, to facilitate the easy and swift movement of large groups of military aircraft across country, and to permit of concentrating more aircraft in a limited area for a short period of intensive operation than the military and naval bases in that area could efficiently accommodate. Were there not a municipal airport in the United States, the Army and Navy would need many more auxiliary fields of their own than they now possess or plan; and when there is talk of a national airport system there must be ever clear in mind both the service that such a system can render to the armed services and the specifications that their potential needs should impose upon its style and development.
>
> All that leads on immediately to an arrangement, or a grouping, of airports in accordance with their respective nature or purposes; for it is not alone in size, location, type of runway, or surfacing used, and architectural magnificence of their buildings that airports differ from one another. They differ also in the purposes for which they are primarily planned.

It is based upon the strength of the quotations and statements just made and based upon the necessity for immediate action toward a stabilized program for a national airport system that I introduced, on March 25, H. R. 9049, which is intended to meet this urgent national necessity. This bill authorizes $125,000,000 to be expended by the Civil Aeronautics Authority for the development of landing areas in order to meet the needs of national defense, the Postal Service, and civil aeronautics; the sums appropriated to be apportioned among the States, Territories, and possessions, but allotments shall not be in excess of 80 percent of the cost of any project except in the case of a project found to be necessary or requisite for purposes of national defense.

The development of airports in the United States has lagged seriously behind the development of air transportation and air defense. A great deal has been accomplished by the expenditures of relief appropriations in the construction of airports. But we have reached an era where the emergency-work programs do no longer lend themselves to meet with a reasonable degree of efficiency what can be termed a national emergency.

As an example, I quote the experience of the city of Wichita, Kans., which already has spent more than $500,000 of city funds on its airport. The limitations placed on material purchases and equipment rental make it impossible for a city such as Wichita to efficiently cooperate with the United States Government in the conduct of an emergency-work program. To a large extent the Wichita municipal airport serves as a Federal facility. It serves the United States Army as an important transcontinental fueling point. It serves the flying public who travel interstate in transport planes. It serves transient pilots who also fly from State to State, and it serves interstate commerce. Because of this Federal aspect, it is only reasonable to assume that such an airport located in an important place on a Federal airway should receive a larger allotment for material and equipment, under the existing Federal regulations governing the expenditures of the emergency-work program in contrast to projects of purely local character such as city parks, swimming pools, or other local improvements.

Wichita is not a large nor a wealthy city, and the expenditures incurred have placed a heavy burden on the Wichita taxpayers. But in spite of this huge expenditure, the city is now faced with the reality that unless additional improvement work is accomplished immediately, the Wichita Municipal Airport will no longer be considered adequate to safely accommodate the modern large transport ships now being placed into service. No doubt, there are many other cities in the United States finding themselves in this same situation as Wichita in the matter of airport improvements. In fact, resolutions urging that Federal funds be made available for airport construction have been adopted by the United States Conference of Mayors, the National Association of State Aviation Officials, the American Municipal Association, the American Road Builders' Association, the National Aeronautic Association, and numerous State and city governments and civic organizations.

And it is intended, as mentioned in my bill, that these facilities located on a Federal airway be granted a status of preference in considering the grant of Federal funds for airport development. It is only through a provision of this kind that the United States, its Territories and possessions, will be able to keep abreast of the rapidly growing needs of air commerce and national defense and to retain leadership in world aeronautical affairs.

In closing may I say that the time is ripe for action. The problem is national in scope and is a serious one. In looking up from the navigable waterways and the highways to the airways, the enactment of H. R. 9049 will be a step of extreme importance toward adequate national defense and the Nation's welfare.

Forestry Problems

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

ADDRESS BY HON. HAMPTON P. FULMER, OF SOUTH CAROLINA

Mr. FULMER. Mr. Speaker, under leave to extend my remarks, I am inserting herewith an address delivered by me at a luncheon at the Mayflower Hotel on Monday, April 15, to members of the D. A. R. representing the various States of the Union who are interested in and who are doing a splendid work in planting trees and in forest conservation.

The address follows:

> I can assure you that it is a real pleasure for me to be with you on this occasion, and I feel highly honored in being invited to speak to you on what I believe to be one of the most important problems confronting us today. I refer to our national forestry problem.
>
> In 1938 the President of the United States sent a message to the Congress requesting that a committee be appointed to make a thorough investigation of our forestry resources, with the hope of ascertaining the real facts and for the purpose of having this committee make a report and recommendation to the Congress as to what should be done in building up and preserving our great forest resources.
>
> I happen to be vice chairman of this committee.
>
> You know, it is very interesting to me, and it should be to you, to stop and think seriously of how beautifully and efficiently our Heavenly Father gave to us all of our natural resources at the time of the creation of the earth, just how these resources have been located in every section of the world, the type of these resources, and how useful and beneficial they are to humanity and to the welfare of our people, and it is my belief that these great resources, minerals, oils, coal, silver, gold, thousands of water-power sites scattered over the universe, and our forests were intended to be utilized by the people and in the interest of all the people.
>
> The sad story today, and the thing that is operating against normal prosperity, and a reasonable income for the people as a whole, is the fact that in practically every instance these resources are owned and operated by a few individuals and monopolistic groups, and for this reason millions of our people are not receiving

any of the benefits that should come to them, and, if so, in a great many instances, they are not receiving a proper price for that which they have, or they are paying extreme, unfair, high, fixed prices for that which some of them are able to secure.

We have had several hearings in the various sections of the United States, and I want to give you briefly, in part, a picture of the actual situation, as we found it in these various sections.

We found in the State of New York that those in charge of forest conservation and the people generally were doing more, from a State and community standpoint, than any other State in the Union.

The university at Syracuse, where we held our hearings, is also doing a great work in class work as well as in actual nursery and planting demonstration.

We held a meeting at Madison, Wis., and the situation in the North Lake States—Michigan, Minnesota, and Wisconsin—is as follows:

In an area half again as large as the New England States, a region of 57,000,000 acres, covering 86 counties, lies the so-called cut-over area of the North Lake States. There is a population in that area of about one and a half million people.

In 1890 these States produced about 35 percent of the Nation's total of lumber and wood products. Thirty years later it was but 8 percent. Today it is 4 percent.

Out of the 57,000,000 acres of timbered land at one time, we have in that section today about 3,000,000 acres of splendid forests, with millions of acres of cut-over lands.

The ruthless destruction has caused many of the industries to close down and move out, or they have to supply their plants with imported pulpwood or secure same over long haul. Unemployment is very large. Millions of acres of this land today are tax delinquent, and many farmers are forced into tenant farming and on W. P. A. rolls, at the expense of the Federal Government.

While at Madison we had the privilege of visiting the forest laboratories, which was most interesting. We found that those in charge were doing a wonderful work, stacking away numerous volumes of statistics, facts, but the serious trouble in connection with this line of work, which is very important, is that these facts or findings are not getting out to the people, and, if so, only in a limited way to these large, well-organized groups.

We found, for instance, that they had perfected the manufacture of newsprint paper. However, we are not using newsprint paper manufactured in the United States. Seventy-five percent of the newsprint is coming in from Canada, and coming in duty free. Something will have to be done to bring about some type of organization operating between these research laboratories and the people so as to get the benefit of the findings down to the people.

I want to pass on to the north Pacific coast. We had the privilege of holding a meeting in California and at Portland, Oreg. We drove many miles through beautiful scenery in both of these States.

One of the most impressive sights that I have ever seen was when we drove through the California redwood section. These redwood trees are the oldest living things in the country today.

When we walked through these tall and stately trees, many of them perhaps 16 feet in diameter, I felt constrained to remove my hat, feeling as though we were walking on hallowed ground.

These beautiful trees, standing from 2 to 10 feet apart, and, as stated, being tall and stately, together with the quietude and solemnity of the surroundings, give one the real assurance of a living God.

I find, however, that most of the area where these trees are located is in the possession of perhaps about seven large individual owners or corporation owners. Many of them are carrying out fairly good forestry practices.

When these trees will have eventually been destroyed because of the failure on our part to bring about proper forestry practices, it will be the last of the oldest living things in any part of the world. What an opportunity to preserve these for untold future generations.

In driving through Oregon I had the privilege of seeing the beautiful Douglas-fir trees. However, on all of this trip we saw thousands of acres of land where the forests had been ruthlessly destroyed.

I had the privilege of driving through a 35,000-acre tract of land owned by a corporation, with their railroad running through this land, cutting everything clean with millions of small size timber, short lengths, absolutely going to waste because of the lack of proper woodworking plants, which would mean giving employment to thousands of people, increasing income, and, in the meantime, nothing being done to reforest these lands.

The pitiful thing about it is when they have finished these lands will become tax delinquent.

While in Oregon it was called to my attention that one of the local county papers had to add 52 pages for the purpose of advertising tax-delinquent lands.

These lands did not belong to any of the large operators or nonresident owners. This land belonged to individuals.

When a great amount of land in any county becomes tax delinquent, the next step on the part of the county government is to increase the taxes of those who are still holding on to their lands. This eventually means that additional land will become tax delinquent, and the next move on the part of these people is to place these lands in the possession of the Forest Service or Federal Government, and, because of the lack of revenue, they are now coming to the Federal Government, requesting an increase in payment by the Forest Service to these counties to be used in helping to defray the expenses of the county government.

Let's take a look at the South. I can remember, as a boy, my father clearing up new land, the cutting of beautiful, long-leaf pine trees, and what a time we had burning these logs for the purpose, as stated, of clearing up farm lands. Today, in the South, we can find very little virgin long-leaf pine timber.

However, we have in the Southern States, perhaps, the second best timber supply to that of the North Pacific Coast, largely composed of second growth, most of which at this time is pulpwood size.

During the last three, four, or five years, we have had some forty-odd pulp-and-paper mills moving into the South. Many of them have moved there because of the possibiilty of securing plenty of pulpwood. They have either moved out of sections where all of the pulpwood has been destroyed; or they have refused to move into other sections because they knew they could not get a supply of pulpwood; and I want to state that it is pitiful to observe the ruthless destruction of one of the greatest resources that we have, under the operations of these pulp and paper mills, as well as under the operations of many sawmills in the South.

It is my belief that the years will not be many before this wonderful and important resource, which, if properly preserved, would mean employment and tremendous income to millions of our people, will be a thing of the past—will be a picture just like the one I painted for you in the North Lake States.

I could take many individual States and paint to you a sad picture—Mississippi, Missouri, etc. You remember reading about the Ozark tenant march down in Missouri. If you will go into northeast Missouri, you will find millions of acres of cut-over land, millions of acres tax delinquent, unemployment running rampant, prosperous landowners of years ago now operating as tenant farmers, many of the furniture factories and other plants closed down, or if they are still operating they have to secure their supplies from over long haul, all of which is an added cost to the consuming public.

It may be of interest to you to know that the serious problem at this time is unemployment and the tremendous increase in farm tenancy, all of which has been brought about because of the ruthless destruction of resources and because of unfair prices that farmers receive for these resources and their farm products.

Now, after all of this has happened, you will note that the present administration is spending millions of dollars to rehabilitate farmers, to take care of the unemployed, and in trying to make landowners out of tenants. I want to state to you frankly that these problems cannot be solved in such manner; and, in the next place, it is impossible to make landowners out of tenants until you stop the thing that is making tenants out of landowners.

It may be of interest to you to know that the pulp and paper mills of the South have a program of buying pulpwood through one or more agents located within special areas, and, in that farmers cannot sell direct to these pulp and paper mills, they are forced to sell their pulp products through these contractors and subcontractors; and, according to the information and evidence that we have in our printed hearings, the manner in which the buying of pulpwood is carried on is simply highway robbery, in that the farmers are not securing a sufficient price to pay them for the actual cost of replanting trees.

We all remember the courageous fight on the part of the Finns some months ago. It is my firm belief that this was because they had something to fight for.

Today we are spending millions to build up our defense in the way of building battleships, airplanes, etc.; but, to my way of thinking, if we would spend more time and money in building up and preserving our resources—our forest resources, if you please—we would be doing more toward building up our defense and placing our people in the attitude of defending our great Republic than anything that we could do.

Millions of our people today are living in poverty and ignorance; thousands of farmers are annually becoming tenant farmers; millions are unemployed—all of which is costing the Government millions annually at the expense of the taxpayers, all because of selfishness on the part of these well-organized and well-financed groups; and, in closing, may I state that this is doing more to create fertile ground for the growth of communism than anything that I know about; all of which, unless this situation is remedied, perhaps will lead to that in this country at some time, which we, as a liberty-loving people, would not like to see.

The Next President

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

ARTICLE BY GEORGE E. SOKOLSKY

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George

E. Sokolsky, which was published in the New York Herald Tribune for April 1, 1940:

[From the New York Herald Tribune of April 1, 1940]

THE NEXT PRESIDENT

(By George E. Sokolsky)

Suppose we drop personalities. Suppose we were to vote, not for a radio voice or a vote catcher but just for a President of the United States, what would we have in mind? Or, better still, what would we expect the candidate to have in his mind?

Surely, in these perilous times, we should be concerned with knowledge, experience, wisdom, capacity for work, compassion for humanity, a firm rooting in the traditions of the country.

I notice that no one seems to be talking about these qualities today. They ask, Can he lick Roosevelt if Roosevelt runs? Is it a prize fight or a beauty contest, or has the Presidential election reduced itself to a cock fight? Is mere licking sufficient? Suppose the licker is as objectionable as, or more so, than the lickee? Where do we go from there?

It seems to me that if Mr. Roosevelt runs for a third term that will be the sole issue. The people will have to decide whether they want to destroy American tradition, risk a dictatorship, and establish a one-party tyranny. If they do, they will. If they don't, the third-term attempt will fail. The name and personality of the opposition candidate will matter little, for the people will not vote for him but against a third term. On the other hand, if Mr. Roosevelt is not a candidate, the Republicans and Democrats will be nominating much the same kind of Americans. The probability is that in that event 2 of the 20 names now being mentioned will appear on the ballot, and we shall be selecting, even as ever before, what the party politicians have given to us in their bounty.

Well, what kind of man do we want? Do we want a glamorous or a dull man, a bald or a bemustachioed man, a great scholar or a wise politician? After 8 years of experience with a Presidential wife, shall we analyze the wives of the candidates and their children, if any? Shall we do this analyzing by a common procedure, or by Freudian obscurities or by Marxian criteria? Shall we wonder whether he knows how to fish or to sing Sweet Adeline? After all, some people vote for candidates because they wear dumpy clothing or even, it is said, because they're silent.

It seems to me that we cannot afford the luxury of taking this election that lightly. Too much is at stake. Let me suggest a few of the minimal qualifications of the next President:

1. He must be expert in international relations. The world is at war. Although we are not at war, we are in the war, because it encircles us. The next President will have to decide whether we actually go to war or stay where we are. He will have to know the characteristics, habits, ideas, and tricks of the various combatants. He ought to know how to read a map, and it would be a convenience if, at least once in his life, he visited some country other than his own. It would be better still if he had visited many countries. He ought to know something of the history, traditions, and politics of these various countries, and it might even be an advantage if he knew one or two statesmen personally. In a word, he ought to have a better working knowledge of international relations than comes from the headlines of newspapers, comments on the radio, or even the memoranda from his own State Department. He ought to have discernment and principle.

2. He must be an economist. Whether the next President is a Republican or a Democrat, he will have to clean out the New Deal Augean stables. It will be a job for any man. There is not only the question of industrial relations but the more difficult question of gold. Here we've been collecting gold and silver to every other country's heart's content, and we don't know what to do about it. The next President will have to know what to do about it or we shall have some very dangerous inflation.

3. As regards the problems which come under the single word "labor," there appears a complex of attitudes, ideas, traditions, bickerings, and hatreds with which only superb statesmanship can deal. We cannot afford to have another decade of continued madness in this field. American industrial relations need to be on a cooperative rather than a class-conflict basis. Few of the unemployed, few young men and women just out of school and out of jobs, have any realization of how great a part the conflicts of labor—that is, conflicts over policy—have played in their misfortunes. And there can be no question that "labor's charter," the Wagner Act, has proved to be a carelessly conceived and stupidly written document. Yet there ought to be a charter for labor, one to which the unions, the employers, the workers themselves, can subscribe. Is this utopian? Statesmanship can make it a practical reality.

4. Agriculture is, in American life, a shifting occupation. The number of farmers is decreasing; their relationship to the soil is changing. Crops which once were the gift of God to the American agriculturalist are now a drug on the market. This is not always due to the farmer or the Government or anyone in particular. The trade routes of the world change with wars, and changing trade routes alter the production balances of countries. Furthermore, and I might say even more so, we have been steadily altering our diets and apparel, and therefore our agricultural needs. Take the single item of women's undergarments, which once were largely a cotton product and today are made of spruce, cotton, and chemicals, with cotton on the decrease—that works havoc which no government can control. Nor is price fixing of the raw material a solution, for whenever the price of the raw material produces an unmarketable manufactured article the chemist will provide a substitute. The possibility is that the solution to our agricultural market lies in varying crops to meet needs and in expanding markets in countries having a lower standard of living.

Whatever the solution is, here is a problem that has been dealt with only politically. The farmer has been the sport of the politician. I should even say that he has been fooled, swindled, and tricked by the politician. The proof lies in the increase in tenant farmers—in farmers who do not own the farms they occupy. Tenancy on so wide a scale is an evil error in a democracy. It may ultimately produce some equivalent of feudal serfdom.

Surely this problem requires more adequate and honest treatment than it has received. And a statesman is needed in this field.

5. Let us shift for a moment from the tangible to the illusive. Let us consider the question of national morale and national morals. This is a hard generation to be born to. It is a pessimistic generation. It follows upon fierce shocks—the great war, prohibition, the shift in sex relationships, the inflations of production and currency, the jazz age, the flapper period, the debunking of tradition, progressive education, the depression, the New Deal, and now another war. Our generation has had to take those shocks in its stride, and it has been hard to do. Millions simply could not go on. Millions more are disheartened, disappointed, embittered.

It is not enough for statesmanship to feed them burdensome promises. Some of these promises are coming home to roost in terms of more burdensome and destructive taxes. It will be worse rather than better during the next 5 years. We need to face that inevitability.

Statesmanship calls for a great moral leader in the White House, one whose absolute honesty and humanity will reinstill a love of country, a faith of country in our people. We shall need to reach heights of self-sacrifice and devotion to country if we are not to fail as a democracy. We shall need to sacrifice hundreds of thousands of leeches who are now letting the blood of the Nation, if youth is not to be permanently impoverished by taxes. This is a moral question, not only an economic one. It needs moral handling.

Obviously in this small area I cannot explore more of the requirements of such a President as this country needs at this stage. Do I ask for too much? Is it possible to believe that among the one hundred and thirty millions of us there is no one competent to organize an administration which will provide such leadership? Are we so bankrupt in character and personality that all we can think of in terms of the Presidency is his thorax and diaphragm and their workings, or about the cut of his jib and his stance in golf?

And must we always limit our thinking to victory? Can he be elected, they ask? Could Lincoln have been a candidate had that question been asked? Is it not more important to assert a principle, to offer the Nation beauty of mind and character, than to base this contest on mere political invulnerability? And who is really invulnerable?

The next President needs to be a man—a good, an honest, a fine man. He needs human wisdom and experience. He needs character. He needs to love his fellow men.

What we need in a President comes from the soul of a mother, the training in home and church and school, from the struggles in the inner life of a man of capacity and experience.

Who is that man?

Where is that man?

The Relief Problem

EXTENSION OF REMARKS

OF

HON. EDWIN A. HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

EDITORIAL FROM THE ENDICOTT (N. Y.) TIMES

Mr. EDWIN A. HALL. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include the following editorial from the Endicott Times of April 11, 1940:

[From the Endicott (N. Y.) Times of April 11, 1940]

THE EDITOR WRITES A G. O. P. PLATFORM

(Article No. 2)

Last week I wrote one of my proposed planks for the Republican platform—long-termed, thorough flood control.

This week I want to deal with another type of flood, one even more menacing and expensive because its tides are rising and it is continuous; I speak of the relief problem. I have stated before, and I repeat it now, that this one major problem constitutes the

greatest threat to American free government on the national or international horizon today. All the "isms" put together are child's play beside the threatening implications of failure to solve our problem of relief. For an increasing number of our people are coming to regard relief as a career, are accepting relief as a permanent solution of their economic problems, and are interested in perpetuating and increasing this burden upon the taxpayers of America. A people dependent upon government for the means of existence cannot be a free people. Democracy falls down before a majority vote of either the unfortunate or the incompetent, or such a majority made up of a combination of both. Free institutions are maintained by a people who support their government, not by a subsidized citizenry supported by the government. And if we do not solve this problem in time to save our republican form of government, economic pressure will force us to solve it by a dictatorship that sacrifices freedom to the Moloch of efficiency.

Now, I am well aware that unemployment is a vital factor in this problem and that the attitude of government toward business and industry is directly reflected in business conditions and employment. But I shall leave that to a separate plank in my platform, devoted to the relationship of government and business. In the present plank, let us confine ourselves directly to the matter of relief.

It must be conceded at the beginning that we shall always have a burden of relief to shoulder. The poor, the incompetent, the handicapped, and the unfortunate are ever with us. But our present relief totals are not accounted for by these groups. We have the able-bodied, willing to work if given a chance, and the able-bodied, unwilling to work if he can avoid it, cluttering up the entrances to our relief bureaus, with the result that many of those who should have help do not get it, because the funds are spent on those who should not have it.

Before we can devise a policy for action we must have a planned objective. Now, I ask any sensible, fair citizen, who is willing to view this problem entirely apart from partisan politics, if he can tell me what the objective of present policies is? What hope, even in small quantity, exists in the present relief activities that any person on relief may be restored to economic independence? Are we not drifting along on a Micawber current, trusting that eventually something will "turn up," and in the meantime playing with the taxpayers' money and the tragic circumstances of the unfortunate, to achieve partisan political advantage?

I would write into the Republican platform, first of all, an objective for all governmental relief activities, and the objective would be the rehabilitation of those on Government subsidy. And any project which did not contribute to the achievement of that objective should be rejected.

Such Government works as are proposed should meet the tests of common sense—are they needed, have they permanent value, and are they needed sufficiently to meet the test of advisability in the light of the taxpayers' burden. Morever, all such projects should be carried out on a lower wage scale than that prevailing for similar work in private industry, in order to furnish an incentive to secure private employment. Any labor leader that would raise a question to that policy should be removed from circulation until he can be convinced that the welfare of all the people is of greater concern than the welfare of the minority for whom he presumes to act as a paid mouthpiece. (All the politicians will howl about that one, but I'm interested in good government, not in cornering votes at the cost of national freedom. Some party has to defy these greedy, selfish, unpatriotic pressure groups, and I'd like to see my party do it.)

I would propose a farm home purchase measure, which would provide for the establishment of dependent families on small "subsistence farms" under the supervision of the county farm bureaus, on loans without interest, to be amortized over a reasonable period. I would advocate Federal allocation of funds to assist States in such projects, provided the State devoted its entire motor-tax receipts to the maintenance and construction of highways, adding materially to the value of these farm homes by the construction of good roads, and giving the occupants of these farms preference in employment on the highway projects in order to provide a cash income by which to meet the payments on their loans. And as an added detail of that plan, I would advocate limiting the sale of products from the farm, in order to spare our legitimate farmers the damage of unfair competition. It will take time to work out our salvation by such a route. It will take more years to get us out of the dangerous rut in which we find ourselves, than was required to get us in. Downhill travel is usually speedier than uphill going. But the objective of restoration to normal citizenship, home ownership, and economic independence is in the idea, and by that much it is better than anything that is being done now.

It would be much more to the point to subsidize our families on subsistence farms in their own communities than to send them out to "pioneer" in Alaska.

It will cost us money, but it envisions a decrease in the golden tide that we are now pouring out to no purpose. It proposes lending without interest, but as a substitute for giving away the principal also. It goes without saying that some will not make good; but that is better than a program that guarantees that none can make good. It is a trail with rocks and thorns—but it goes some place, and therefore beats our present merry-go-round.

The Wheeler-Lea Bill

EXTENSION OF REMARKS
OF
HON. LINDSAY C. WARREN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 17, 1940

RESOLUTION OF THE ELIZABETH CITY (N. C.) CHAMBER OF COMMERCE

Mr. WARREN. Mr. Speaker, I herewith present a resolution from the Chamber of Commerce of Elizabeth City, N. C., expressing its vigorous opposition to the Wheeler-Lea bill.

Hon. LINDSAY C. WARREN,
House of Representatives, Washington, D. C.:

Whereas the board of directors of the Elizabeth City Chamber of Commerce, meeting in regular session on Wednesday, April 10, 1940, in discussing the effects of the proposed Wheeler-Lea bill; and

Whereas the board was familiar with your fight against the measure on the floor of the House; and

Whereas it was unanimously agreed that this bill which would put the water transportation under the Interstate Commerce Commission would stifle competition between railways and waterways and cause freight rates to soar to a parity with rail rates; and

Whereas it would seriously affect improvements in the waterways that mean so much to the fishing industry and destroy the livelihood of those interested in this industry; and

Whereas it would throw thousands of people out of employment: Therefore, be it

Resolved, That we, the board of directors of the Elizabeth City Chamber of Commerce, petition you to let our wishes be known to the proper authorities as against the aforementioned Wheeler-Lea bill, which is against public interest and is unnecessary and grossly unfair; and be it further

Resolved, That a copy of these resolutions be spread upon the minutes of this meeting.

This 15th day of April 1940.

ELIZABETH CITY CHAMBER OF COMMERCE,
By E. C. CONGER, *President.*

Attest:

G. C. MOODY, *Secretary.*

Air Safety Board

EXTENSION OF REMARKS
OF
HON. D. WORTH CLARK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Thursday, April 18 (legislative day of Monday, April 8), 1940

LETTER FROM DAVID L. BEHNCKE, EDITORIAL FROM THE CHRISTIAN SCIENCE MONITOR, AND TELEGRAMS

Mr. CLARK of Idaho. Mr. President, I ask unanimous consent to have inserted in the RECORD a letter to me from Mr. David L. Behncke, president of the Air Line Pilots Association, in connection with the recent reorganization order; also, an editorial from the Christian Science Monitor under date of April 15, 1940, entitled "Air Safety and Economy"; also, two telegrams addressed to the junior Senator from Nevada [Mr. MCCARRAN], all in connection with the same reorganization order of the President.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

AIR LINE PILOTS ASSOCIATION,
Chicago, April 16, 1940.

Hon. D. WORTH CLARK,
United States Senate, Washington, D. C.

DEAR SENATOR CLARK: Several days ago the pilots that fly America's airliners received news that was so abrupt, so far-reaching, and so shocking that it left them stunned. President Roosevelt

had announced his fourth reorganization plan to Congress, containing a proposal to abolish the new Civil Aeronautics Authority and the Air Safety Board and place the entire air regulatory and independent air accident investigation duties that they have been performing so commendably, back under the Department of Commerce which made such an amazingly deplorable and costly failure of the same duties prior to the time that the new act was passed. The why of this is indefinable. The history of civil air regulation and air accident investigation is a matter of record.

From the late twenties to the time that the Civil Aeronautics Act of 1938 was passed were black pages in the history of the country's air-transportation development. It is not a matter of suppositions, assumptions, or the preponderance of vaguely defined ideas, but what this amounts to is cold, hard, indisputable facts—facts established by stark realities, facts established by the loss of score upon score of human lives and the loss of millions upon millions of dollars.

On May 6, 1935, Senator Bronson Cutting lost his life in an air-liner crash. In sheer desperation, the pilots, with the backing of a friendly, public-spirited press, started to lead the fight to free America's air transportation from the entwining tentacles of death in the air, which was strangling it to ruin.

During the period that the Department of Commerce regulated the country's air-transportation network 473 persons lost their lives in air crashes, of whom over 146 were air-line pilots. The ranks of the air-line pilots were being thinned at the startling rate averaging one every 28 days; their passengers were meeting death averaging one every 15 days. The crash-scared public was afraid to ride, which resulted in unestimably large losses of revenue to the industry and progress was stymied.

Air-minded Congressmen and Senators became interested. A senatorial air investigating committee was appointed, namely, Senators Clark (Missouri), White (Maine), Donahey (Ohio), and the late Royal S. Copeland (New York). They did a good job. They listened patiently to everything that anyone had to suggest that might be the solution. The congressional record built up by this committee is truly a bible on air safety. The politically involved and obviously faulty regulatory and air-accident investigating procedure of the Department of Commerce is all written in the record of this senatorial air-safety investigating committee.

Congress, the line pilots, and everyone else that was really interested in doing something about increasing air safety worked tirelessly and relentlessly, until in 1938 the new Civil Aeronautics Act was passed. The pilots had repeatedly pointed out through these dark years that the solution to the problem was to remove the control of civil aeronautics from the Department of Commerce, and not only that, but to separate the functions of regulating civil aeronautics from the functions of investigating accidents and making recommendations as to what should be done to prevent recurrences. The pilots pointed out simply that no one agency could reasonably be expected to handle both functions efficiently and effectively, because no one agency can be expected to decide against itself when something happens.

The line pilots recommended the creation of an Air Safety Board which was to be completely independent of the regulation-making divisions of the Authority, the sole duty of this Board being, without influence of any kind, to investigate accidents with the view of preventing recurrences and to make recommendations to the Authority which would, in the opinion of this Board, tend to prevent accidents.

Congress listened, and the Air Safety Board and the new Air Authority was created.

Now, let's look at the record since the Air Safety Board took over. Accidents have been cut to a minimum, and there has not been a pilot death on our country's air lines in the past 16 months, nor a passenger fatality in more than 12 months—a world air safety record. During this 12-month period the pilots that are making this appeal to you now not to permit the abolishment of the Air Safety Board flew 87,325,145 miles and carried 2,028,817 passengers without a fatality. Contrast this to 1 pilot being killed every 28 days and 1 passenger every 15 days for the entire period that the Department of Commerce regulated civil aeronautics and investigated accidents numbering a total of 473 pilots and passengers killed.

Certainly no one wishes to go back to that. The pilots are not quarreling with anybody. All they are trying to do is a good job, so that American air transportation may continue to be No. 1 in world flying.

When Congress created the Civil Aeronautics Act bringing into being the Air Safety Board, it won with one stroke the confidence of the American people, and they took to the air. Real air safety has been established by the Air Safety Board with the cooperation of the new Authority. This combination is paying dividends in lives saved and thousands upon thousands of dollars saved because of not having to pay the cost of crashes, and millions earned due to increased patronage resulting from the no-fatality safety record that has just been established, and we have only just started. It is only plain common sense to want to leave well enough alone. Your support to set aside the President's proposal to abolish the Air Safety Board and to strip the new Air Authority of its identity and independence is earnestly and respectfully solicited by the country's air-line pilots who fly our air liners on the most extensive civil air network in the world.

Respectfully yours,

AIR LINE PILOTS ASSOCIATION,
DAVID L. BEHNCKE, *President.*

[From the Christian Science Monitor of April 15, 1940]

AIR SAFETY AND ECONOMY

President Roosevelt's reorganization order proposing to do away with the Air Safety Board and leave its functions to the Civil Aeronautics Authority seems to have stirred up a small hornets' nest. Actually it presents one of the questions which reduction of Federal bureaucracy often presents.

Assistance to areonautics and regulation of air transport are among the more recently added functions of the Federal Government, and the agencies charged with these duties have expanded rapidly in personnel and expenditures. If economy can be achieved by consolidating bureaus and centralizing responsibility, this mushrooming field would seem a place to apply the precepts. This apparently is what the President has done, saving a couple of top salaries.

But is that all there is to it? A few weeks ago Senator ROBERT A. TAFT posed a query as to whether the National Advisory Council on Aeronautics, among a number of other Federal agencies, was a necessary institution. Mr. Roosevelt immediately came to the defense of the Council by saying that it fosters research which contributes enormously to the development and safety of air travel.

If this is true of the Council, it seems just as strikingly true of the Air Safety Board. Some years ago when the Aeronautics Division of the Department of Commerce was its own investigation agency a rather bad situation arose, represented in a series of crashes. The Air Safety Board was set up with independent authority to investigate such occurrences and to place the responsibility where it might belong, whether on the operating company, the plane manufacturer, the pilot, or on the Government units supposed to maintain airway aids, to test airworthiness of planes, or to make flying regulations.

On these various points the Board has made some significant reports. Men who fly the ships believe its presence has had something to do with the magnificent safety record of air lines in the United States during the last year. Once more economy presents the question, How far do Americans wish the Government to curtail new functions?

CHICAGO, ILL., *April 17, 1940.*

Hon. PAT MCCARRAN,
United States Senate, Washington, D. C.:

May I plead for your aid to prevent the adoption of the plan for placing the C. A. A. under the Department of Commerce and the abolition of the Air Safety Board. Their record of the past year during which there were no fatalities in air transportation speaks for itself of the splendid job each of these organizations is doing. I cannot protest too vigorously this proposed move when human lives are at stake.

Pilot KENNETH R. CASE,
American Air Lines.

NEW YORK, N. Y., *April 17, 1940.*

United States Senator MCCARRAN:

Having by necessity to avail myself of air transportation almost constantly, I am advised through the mediums of the press that an administrative order of the President is discontinuing the Safety Board of C. A. A. Take this opportunity as an air traveler to enter my protest against any such action. The functions of the Safety Board have been a matter of the greatest degree of caution administered by competent, intelligent, and capable staffs and have to a great degree eliminated the fear of individual air travelers and their families. To revert this authority to a politically responsible bureau is a step backward. For my own security and for the mental appeasement of my family I am entering this protest.

F. T. MURRAY,
Manager, Branch Operations, Universal Pictures Corporation.

Freight Rates in the South

EXTENSION OF REMARKS

OF

HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, April 18 (legislative day of Monday, April 8), 1940

ADDRESS BY HON. TOM STEWART, OF TENNESSEE

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject of transportation rates, with special reference to rate discriminations as affecting the South, which I delivered last evening over the Columbia Broadcasting System.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I wish to talk for a few minutes on a question in which I am vitally interested because it vitally affects the South, and, I believe, has much to do with the industrial growth of the South and Tennessee.

For many years class-rate freight charges have been higher in the South and West than in the East.

The United States is divided into territories or zones and freight-carrying charges are different in each zone. The zone or territory known as the eastern or official enjoys better class rates than any other territory.

I live in the State of Tennessee and that State is in the southern territory where class rates, as a whole, are higher than in the eastern territory by about 30 percent, according to estimates.

For a long time now, a consistent fight has been waged by those who live in southern and western territory against these artificial barriers of commerce which have hampered the industrial growth of these sections and which are, at most, relics of a punitive system.

I know that the people of the South and of Tennessee want manufacturing plants and pay rolls, but as long as manufactured articles from the South cannot be shipped to a market and sold as cheaply as kindred products from other sections of the country, just that long will factories and pay rolls continue to be a thing to be desired and never realized.

I know of many small towns in my State that want manufacturing plants and have tried to secure them, but because of these high freight rates have failed. Most towns have a large surplus of labor. They have many men and women who would like a chance to work and earn a livelihood, but it stands to reason that they cannot get this chance so long as manufacturers cannot make and sell goods on equal terms and in competition with others who enjoy cheaper shipping facilities. We have in the South freight rates on raw materials which are fairly low, but we want and need lower class rates on things that are made in factories. Our raw materials will not last forever. Every carload of coal or lumber that is shipped out of Tennessee depletes our natural wealth just that much.

It has been only a few months since the South was called the Nation's economic problem No. 1. We can help to solve that problem if we can have an equal chance with the industrial East and be allowed to make and sell manufactured goods on an equal competitive basis with them, and it is to this end that we propose to fight. We do not ask any advantage over the East, merely an equal opportunity.

We have seen some small improvement in our condition within the last few months. The South's victory in the "Governor's case" is a help to us, but not enough. We want to fight this thing intelligently, see that the people are told the truth about the situation and are not deceived and misled and kept in bondage until all our natural resources are gone.

I have recently written to all the civic luncheon clubs in Tennessee, asking if they will join in helping to effect an organization of businessmen and merchants who pay the freight, to the end that we might more effectively make this fight and see that the people are truthfully advised. I hope like organizations can be set up in the Southern and Western States.

Concerning a solution of this problem, it is stated in a message from the President of the United States transmitting a survey of the freight-rate problem of the United States to the Congress in 1937, that "This is a form of discrimination for which no adequate corrective has heretofore been applied. The application of a corrective manifestly is the responsibility of the Federal Government. Congress has sought for nearly 50 years, through the regulation of rates, charges, and practices of railroads, to prevent discrimination which has been deemed to be unjust and unreasonable, and contrary to the public interest. Legislation has been passed from time to time in furtherance of this policy. As to whether the present law contains authority for the removal of the particular form of discrimination discussed herein is a question upon which there is a difference of opinion."

Again in the concluding part of this report we find these words, "Such a solution of the problem might be attained through the voluntary action of the carriers concerned, if all of them could reach an agreement to that effect or, in course of time, a regulatory policy might be developed, even without specific statutory direction, which would ultimately solve the problem. There is no present indication that either of these alternatives will be adopted."

I would like to call to your attention that there is now being considered by the Congress certain legislation which, if finally passed, will be of great help, we think, in bringing about a correction of this matter. I refer to a bill which passed the Senate as S. 2009. This bill was amended in the House and is now being considered by a joint conference committee. As it passed both Houses there was, and is yet, a provision which declares it to be unlawful for any carrier to make or give any "undue or unreasonable preference or advantage * * * to any particular person * * * locality," etc. This provision of the bill is followed by a provision which directs the Interstate Commerce Commission to immediately correct any unlawful or unreasonable conditions such as above stated. If the bill passes in this form, we believe we will at last have secured legislation which will bring about, at least in part, a correction of this evil of discrimination.

So, again we are making some progress, but the fight must be kept up. We have every appeal for our side of the question and with right on our side we will eventually win out.

I hope to be able to make more talks along this line and, from time to time, give figures and other information showing the gross inequities that are imposed upon the less-favored sections.

We in the South will not be able to obtain free and equal opportunity without a fight. That is already apparent from the activities of certain large, absentee-owned interests operating in the South, which fear that they may lose their present freight rate advantage. These shippers are shippers of raw materials and so-called heavy goods—not high-priced commodities which we of the South should and want to manufacture. The rates under which their low-grade products are exported to the North are low and equitable at the present, but they say that a reduction of the general level of rates will result in an increase in the rates under which these commodities move. Of course, I do not believe that this will be the result of a general reduction of the rate level. I feel that their fears are unduly exaggerated and unjustifiably aroused. The reason why their rates will not be increased is because the North wants our low-grade commodities, and the southern producers of the commodities are owned and controlled in the North.

I mention this opposition for two reasons: First, to put the average shipper and citizen in the South and West on guard as to what may be expected in the way of opposition from this source; and, secondly, to refute one of their arguments against rate reductions.

I do not have the time tonight to give many figures and comparisons, but as an example I quote from the above-mentioned 1937 message of the President to the Congress, one instance of discrimination among the many thousands that exist. On page 18 of the printed report to which I refer there appears a table which gives comparisons of typical first-class freight rates from the southern territory to eastern territory with corresponding rates within the eastern territory for approximately equal distances. The rate quoted is on 100 pounds of first-class freight. From Chattanooga, Tenn., to Chicago, Ill., it is 592 miles by rail and from Philadelphia, Pa., to Toledo, Ohio, it is 595 miles—only 3 miles difference, yet the freight charge from Chattanooga to Chicago is 47 cents more for each 100 pounds of first-class freight than from Philadelphia to Toledo. This makes a difference of $9.40 per ton. So you can see in figures what I'm talking about. No man can sell merchandise and compete with another when he is required to pay such a large difference in freight charges when shipping the same distance.

Here in America we want to live peacefully—keep out of foreign wars which are always fought over questions we are not concerned with and which never seem to settle anything. We want to turn our full attention to our internal, peaceful development and build up our country, not for the benefit of one section but for the benefit of all America and Americans. We want to give to our people equal chance in their desire to work, educate their children, build up their churches, schools, and homes, and live at peace with the world and their neighbors.

"One, If By Land, and Two, If By Sea"

EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

RADIO ADDRESS BY HON. J. WILLIAM DITTER, OF PENNSYLVANIA

Mr. DITTER. Mr. Speaker, under leave to extend my remarks I insert an address which I delivered over the Columbia Broadcasting System, Wednesday, April 17, 1940, as follows:

Tonight, as Europe rides to its dreadful destiny on a powder cart, there are hundreds of boys and girls in the peaceful quiet of our American homes studying Longfellow's recital of the ride of Paul Revere. Tomorrow marks the one hundred and sixty-fifth anniversary of that memorable event which aroused New England to imminent danger and which challenged the patriots of all the colonies with the courage that gave America its independence.

As long as Americans love liberty that poem of Longfellow's will be immortal. You and I learned it and came to love it years ago. It was a part of our hero worship in the same way that Lincoln's log cabin and Washington's Valley Forge were. We cherish it in the same sense today. It still inspires devotion. It still fires the imagination. The thought of it brings to our mind's eye the whole

dramatic scene—the belfry of the old North Church—the lanterns aloft as a signal—"one, if by land, and two, if by sea"—and Revere waiting on the opposite shore—"ready to ride and spread the alarm through every Middlesex village and farm."

More than a century and a half has passed since that "cry of defiance and not of fear" was sounded. Danger signals are again flashing their warnings—warnings we dare not ignore—warnings which are so manifestly plain that we cannot deny their meaning. There are lanterns warning us of danger abroad and difficulties at home, as a philosophy of force seeks the destruction of Europe and a philosophy of futility threatens the deadening of America.

Tonight we are confronted with both problems—both of them require clear thinking, deliberative consideration, and an honest judgment if they are to be solved. The one involves our international relations—our foreign affairs—our contacts with other nations. The other, the more intimate problem, is nearer at hand. It affects directly our day-by-day living with each other—our rights and our duties—our hopes for our children and the future of the Nation. All of us sense the seriousness of these problems.

There is scarcely anyone who fails to realize the far-reaching consequences of the policies adopted by our Government in the foreign field. On the other hand, the greater importance of a speedy and satisfactory solution of our domestic difficulties should be apparent to everyone as it becomes clearer day by day that self-government can only survive as it puts its own house in order. That can and must be done. It will be done if we do not content ourselves by being so blind as not to see, or so complacent as not to be concerned, or so indifferent as not to care. It will be done by clear thinking, not by wishful dreaming. It will be done by the soundness of principles and not by the popularity of a man.

For the last 7 months much of the time and thought of the President appears to have been directed to the problems abroad. Each incident in Europe has been seized upon to emphasize the importance of our relations with other nations. An idealism has been advocated, not altogether unlike the idealism which started a crusade to make the world "safe for democracy." With our attention riveted on our dealings with other nations, only secondary consideration has been given to the kind of deal carried on at home. The records seem to indicate that we're thinking about war instead of planning for work. The size of armies at war on the battlefields abroad rather than the effectiveness of armies at work in the business fields at home has been of primary concern. With war interest going up, work interest has gone down.

Despite the increasing importance which the administration has attached to our international relations, little, if anything, is known at the present time by the American people about our plans and purposes in the foreign field. Just what our policy is, or how it is to be carried out, remains for the most part a carefully and closely guarded secret. Whether a policy of "quarantine," as the President called it in 1937, is to be attempted has not been disclosed. Whether we shall resort to "measures short of war," as suggested by the President at another time, remains to be seen. But one thing is crystal clear, and that is the American people, irrespective of the tactics of those who have a part in secret diplomatic conversations—I say the American people—intend to avoid involvement in the present carnage of destruction in Europe. The warning against involvement has been seen as the lanterns in the belfries of America flash their signals.

While the seriousness of conditions in Europe dare not be underestimated, while the assertion of the philosophy of force by ruthless aggressors should not be approved, and while our relationship to world movements cannot be ignored, nevertheless, I believe our first duty is not to emphasize war but to make a continued drive to put America back to work. Obviously, if this is so, and I am convinced you think it is so, then domestic problems must once again receive the emphasis which is so urgently needed because of the present administration's failures.

For more than 7 years now the New Deal has tried its hand at recovery with little to show for its efforts except a burdensome debt and a disheartened people. Real recovery has been as hard to locate as an echo. A patient hope has been turned into a fearful despair. From the beginning high hopes were held out by the administration that the problem of unemployment would be solved and that a sustained recovery would be realized. Those hopes have been shattered. The rainbow promises of 1932 are hidden by heavy clouds of 1940 disappointments.

The failure of the present administration to create a sustained recovery—to put men back to work at real jobs—is a tragedy. No one will deny that the new dealers have tried. Frantic efforts have been made by a series of experiments to push, pump, or pound life into the Nation's business. Unfortunately, most of the experiments have been of the hothouse variety—very expensive, extremely hard to grow, and too frail to weather a real storm.

As we look at the results of these last 7 years; when we think of the high hopes that were held out; when we think of the bold promises that were made; when we think of the extraordinary authority that was exercised, and when we think of the lavish hand with which funds were distributed, I repeat, when we see the results of all these efforts, it is hard to avoid the conclusion that the plan itself is wrong. Time, money, and effort have been put into the plan without limitation or restraint, and yet, the disheartening fact faces us that millions of men are still looking for a chance to work and millions of women are still waiting for a share of the wages

Excuses of all kinds have been offered to account for the failures. But the explanation given by Mr. Milo Perkins, President of the Federal Surplus Commodities Corporation, challenges attention. Last June in discussing the subject of unemployment, Mr. Perkins said, I quote, "No one is to blame for our unemployment problem. It is the kind of economic awkwardness that comes at the point when we are too old for knee breeches and too young for long pants." For sheer originality that explanation is certainly a prize winner. The more I have thought of that statement the more convinced I am that it's not economic awkwardness that is bothering us nearly as much as political awkwardness. Our national affairs have been as disjointed as a marionette with broken strings and we certainly have had a very generous supply of knee breeches in high places here in Washington during the past 7 years. In fact it would seem that long pants as well as long skirts have gone out of style completely. The trouble is we've been doing entirely too much custom tailoring of our whole lives—planning, measuring, fitting, standing before mirrors to admire ourselves and the new garments that some have tried to drape around us. What we need are a few ready-to-wear garments—garments that fit our pocketbooks, our style, and our habits. And by the way, a few homespuns and home-mades would not go amiss either.

Despite what the President of the Federal Surplus Commodities Corporation has said about awkwardness, knee breeches, and long pants, I believe, and I think you believe, that someone, or at least something, is to blame for our present unemployment. We have ended a 7-year period in which stagnation has taken the place of progress and dynamic growth has given way to arrested development. Verily, in the midst of life we are in debt. We cannot go on for another 4 years the way we have been going for the last 7 years and expect anything better in the future than that which has disappointed us so completely up to this time. When the New Deal started most of us were as hopeful as a baseball rookie at a spring training camp, but the weeding-out process brings a lot of men to their senses.

As I look at the record since 1933, look at it in the light of real accomplishments rather than in the light of highly tinted phrases, I recall an old teakettle we had at home years ago. It had a lid that didn't fit. My, and what a lot of racket it made bumping around when the kettle had steam in it, but it would have been worth much more if it had made less noise and retained more heat.

What is needed today is less noise and more heat—not a sputtering engine of political experiments but the driving, pulling, tugging force which private enterprise and private capital and private citizens at work with each other, and with confidence in each other, and in their Government can provide.

Such a program will be a reaffirmation of our faith in democracy—a reestablishment of our confidence that it can survive the present-day assaults of force and dictatorships and a reassertion of our rights as free men to self-determination and self-government.

"Meanwhile, impatient to mount and ride,
Booted and spurred, with a heavy stride
On the opposite shore walked Paul Revere.
* * * *
And lo! as he looks, on the belfry's height
A glimmer, and then a gleam of light!
* * * *
That was all! And yet, through the gloom and the light,
The fate of a nation was riding that night."

Thank God the spirit of Paul Revere still lives.

Rigid Economy Nationally Versus Generous Federal Expenditures Locally

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

EDITORIAL FROM THE LAKEWOOD LOG

Mr. COFFEE of Washington. Mr. Speaker, I herewith attach a copy of an editorial from a weekly newspaper from my home county, the Lakewood Log, published at Steilacoom, Wash. Its editor is a very original and clever publicist, C. F. A. Mann. His weekly periodical is replete with audaciously novel and unusual articles and editorials. Mr. Mann is a Republican by affiliation and inclination, yet he is possessed of that broad tolerance and human understanding which makes for sound and intelligent citizenship.

In his March 29, 1940, issue he wrote an interesting editorial entitled "Political Tantrum Season Due Next," a reading of which I commend to all those interested in public affairs. It has always seemed to me remarkable that many citizens inveigh against Federal spending in general, while

insisting upon it in particular; by that I mean to say, certain conservatives are insisting upon drastic reductions and economies in the National Budget, yet urging their Congressmen and Senators to move heaven and earth to secure appropriations wherewith to supply the means for construction of needed improvements in the particular congressional district or State of residence of the supplicant. This is an anomaly which must have struck many of you. If economy is good for the Nation, it is good locally and vice versa.

The editorial is as follows:

[From the Lakewood Log of March 29, 1940]

POLITICAL TANTRUM SEASON DUE NEXT

We demand economy. We demand tax cuts. We demand you build the new Indian hospital in Tacoma. We demand flood control, Hylebos extension, the new Tideflats Airport (Mr. F. Walsh speaking). We demand an end to Federal spending. We demand the Wagner labor law be repealed. We demand that Senator BONE be scalped for upsetting the greatest peacetime naval-armament racket ever recorded in modern times. We demand Cordell Hull's scalp for trade dickers unfair and ruinous to Northwest industry. We demand Mr. Roosevelt keep his trap shut about war in Europe—same to Ambassador Jimmy. We demand you revalue gold and resume specie payments. We demand you let private industry alone. We demand you give private industry all the fat Government contracts you can possibly wriggle loose. We demand cheap electricity from Bonneville in Tacoma. We demand the Federal Government stay out of the power business. We demand the Government stay out of housing construction. We demand the F. H. A. continue to guarantee low-cost home loans. We demand old-age pensions. We demand there be no rise in sales tax. We demand a Government job—didn't we help elect Franklin? We demand that Government employees not be taxed like private citizens.

THE WHOLE D—— PUBLIC ATTITUDE IS COCKEYED

The same Republicans who advocated return to balanced Budget are demanding more and fatter and bigger Federal appropriations and Government contracts. The same crowd who lambastes JOHN COFFEE floods his office with letters pleading for Mud Mountain, McChord, Fort Lewis, Narrows Bridge, Indian hospital, custodial school, and Fort Stellacoom (via P. W. A.), Clover Park High School, Puyallup flood control, Tacoma Federal building, etc., far into eternity.

No wonder thousands of young, intelligent husbands, who are proud fathers and anxious to be successful in life and their business or profession, are fed up, disgusted, cynical, and, when out celebrating over a little rye, will confess they have nothing but contempt for both the G. O. P. and the New Deal.

The editor is proud to recall that in 1932, with the tide running swiftly in his face and Wesley Lloyd was laughing his bitterest cynical laugh of scorn and derision, that he and some 300 other Tacoma young men boldly flew the flag of Cincinnatus, whose righteous motto was, "For a less expensive, smaller, and more efficient government."

The day is almost here for Cincinnatus to take another fling.

Any young man in our audience who wants to steer clear of the present mess and do a little original thinking on his own?

The Logan-Walter Bill

EXTENSION OF REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

Mr. DISNEY. Mr. Speaker, I am in favor of the Walter bill, H. R. 6324, and some of my views are as follows:

This legislation exemplifies another phase of the struggle between the people and centralized government, between the legislative and executive branches of government, between the people and bureaucracies—a story as old as Anglo-Saxon civilization itself, even going back through the history of democracy at its very beginning and continuing to the present time.

It can be more properly described in its present aspect as a contest between the legalistic school of thought and the administrative, the legalistic laying down certain rules of conduct and the administrative contending for the unlimited right to the control of the people by the individuals and by the system in power at the time.

Centralization of government is the antithesis of democracy. Totalitarianism in any form contends that it is operating for the general good, according to its best judgment, without regard to the desires of the people, and it opposes representative government. The theory and practice of democracy take the opposite view.

Centralization of government is typified in communism, nazi-ism, fascism, and other schools of thought holding that the individual citizen is best benefited by the system that keeps him under control and regiments his conduct and activity. It is said that in Russia 1 percent of the population, the Communist Party, has control of the 170,000,000 people. Dispatches of yesterday show the final flowering of nazi-ism in the announcement of the confiscation of private property in Germany. In America we have nearly a million persons operating the executive department.

Civil rights—the right to contract, to reason, to speak, to worship, to own property—all fade as centralization of government overtakes the rights of the individual.

It is said the legalistic system, as compared to the administrative, is cumbersome, slow, and oppressive, in that the courts do not reflect the will of the people. It may be answered that the courts have responsibility and are beholden to the people and the elective and appointive power. The bureaucrat has no responsibility; rather, he exercises a lawless irresponsibility. The new tyranny of administrative bureaucracy, however much it makes for expediency, finally and inevitably results in the abhorrent conditions now found in Europe in the totalitarian states, where individual rights are completely subverted.

The Anglo-Saxon civilization was built on a legalistic school of thought. It is now attempted to supplant this by the administrative school. Anglo-Saxon civilization has been the pride of its builders and the envy of the rest of the world. Its system has been good to America and Americans. We cannot afford to abandon the American system—the American way of living. It is being attacked in the most insidious manner—evil operating under the guise of good; the people being lulled to sleep by suggestions that expediency by administrative government should take the place of principle; that the conduct of men instead of the operation of law should rule the people.

We find bureaucratic department heads acting as judge, jury, witness, prosecutor, and executioner, with authority in the executive department, arrogating to themselves powers never intended by their creator, the legislative department acting for the people.

The result has been a growing distrust, not alone of any current administration, but of government itself.

Too many Americans are consciously or unconsciously hating their Government. The American Revolution had its inception in the hatred by individual Americans, of the mother country's treatment of them, for the King's emissaries foisting on the citizens injustices, by taxes, delays, circumlocutions, petty annoyances, and unfair tactics, to the detriment of their individual rights. This hatred finally found expression in revolution against the oppression. Englishmen now look back at the absurdity of the conduct of their then government toward the American people. An unreasonable, bureaucratic, stubborn organization drove the Americans into a frenzied hatred. America cannot afford, after the brilliant accomplishments of the United States under her constitutional, representative form of government, to permit a political frankenstein to increase that hatred by the people of their own Government.

Our executive Frankenstein of bureaucracy has its ramifications into every walk of life of the individual citizen. It has had a mushroom growth, especially in the last three decades. Each individual in the Federal system constantly seeks more power, more authority, and more money for his activities. As a result, appropriations and taxes have grown inordinately in recent decades, resulting in a $45,000,000,000 debt, annual appropriations approaching ten billions, and a million people on the Federal pay roll, with taxes too burdensome for industry to absorb the unemployed.

The States have ceased to be a buffer against the inordinate enlargement of the strength and political financial power of the Federal system. They have been suborned by gifts and hand-outs of Federal aid, and have become supine, and their civil units have become supplicants for Federal assistance.

Headed by a right-thinking humanitarian, the Federal system seems to present no danger signal; but if the people could visualize a monster, a Caligula, as head of this all-powerful Federal system of bureaucracy, a terrific awakening would ensue, an awakening that might come too late, if first came the entrenchment in power of an individual skillful and unprincipled enough to make use of the tyranny possible under the enormously powerful system.

If this bill does nothing more than to set in motion an education of the people to their danger, its passage, even though it may be in imperfect form, is justifiable.

Amendment of Wage-Hour Law

EXTENSION OF REMARKS

OF

HON. MICHAEL J. BRADLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

ARTICLES AND EDITORIALS FROM LEADING NEWSPAPERS

Mr. BRADLEY of Pennsylvania. Mr. Speaker, the following four editorials attacking the Barden bill to amend the wage-hour law appeared in all Scripps-Howard newspapers throughout the country, the New York Post, Washington Post, and New York Times.

[From the Washington Daily News and other Scripps-Howard newspapers of April 16, 1940]

"HERE'S THAT BLOC AGAIN"

Remember the dime-an-hour bloc? It's back on the scene in Washington again, and stripped for action.

Last year the legislative servants of various low-wage industries got together behind the Barden bill, a bill to cut the heart out of the Wage and Hour Act by exempting these particular industries.

Friends of the act prevented a vote on the bill last year. But now the measure is scheduled for debate in the House within a few days.

The issue, stripped of sophistry, was summarized by Senator MURRAY, of Montana, on the American Forum of the Air. Mr. MURRAY said:

"The question is: Should any group of industrial workers in the United States be paid less than 30 cents an hour?"

Congress will decide.

In November, of course, ballots will decide whether the Congressmen who voted for the Barden bill spoke the sentiments of the people or only of a few articulate, organized, and well-heeled employers.

Thirty cents an hour. For a 42-hour week of manual labor, $12.60. Will such a wage wreck the American system? Is $655.20 for 52 weeks of work too much for industry to bear?

Or put it this way: Suppose we say that we don't give a tinker's damn how many of the necessities or comforts the lower one-third can purchase. Suppose we pretend for argument's sake that we don't care whether a cannery hand can save enough out of his pay to buy a radio on installments, or a fifth-hand flivver, or an overcoat, or a magazine, or a ticket to the movies.

O. K. It's nothing to us. We'll look the other way. But what about the radio manufacturer, the automobile manufacturer, the textile and garment manufacturers, the publishers, Hollywood? What happens to their markets?

We don't believe the dime-an-hour bloc has deliberately set out to destroy markets, to monkey wrench the national economy, or to fertilize a potential field for subversive agitation. But if these were its intentions, it could hardly find a better method than the Barden bill.

[From the New York Times of April 12, 1940]

AMENDING THE WAGE-HOUR LAW

Early next week leaders of the House expect to take up the Barden bill to amend the Federal Wage and Hour Act. The act is in serious need of amendment, but the Barden bill is not likely to prove very helpful in this regard. What it does chiefly is to extend the scope of the various operations in the handling and processing of farm products to which the wage-hour provisions are specifically not to apply. Such amendments seem primarily political in intent. The supposed purpose of a Federal minimum-wage law is to protect marginal labor. If we are to have such a law it ought to apply to all such labor to the greatest extent practicable. There is no excuse for exempting agricultural labor except the sheer administrative difficulty of covering some of it. But the exemptions provided for in the Barden amendments are based, in the main, not on administrative difficulties but on mere ability to label certain operations "agricultural" because they are concerned in the processing of agricultural products, even though that processing—in such cases, for example, as canning fresh fruits or shelling and packing nuts—might take place in large establishments. Amendments of this sort are derived from the political sacredness of the farmer rather than from any principle of equity. If the Federal Wage-Hour Act is bad in principle or in practice, it does not cure the central difficulty to grant discriminatory exemption for a few politically favored operations.

Any serious reconsideration of the Federal Wage-Hour Act would begin by raising the question whether minimum-wage legislation should not properly be left to the individual States. Such a solution would enormously simplify the administrative problem involved at the same time as it would abandon the effort to force a Procustean uniformity on wage rates throughout the Nation, regardless of great differences in local conditions. Even if it were decided to retain a Federal Wage-Hour Act, it would still be highly advisable to abandon fixed statutory rates and to follow the almost universal practice of good State minimum-wage acts, which do not attempt to fix definite minimum-wage rates in the law itself, but provide that such rates shall be fixed only on the recommendation of special committees of investigation for each industry after a careful study of actual conditions found in that industry. Finally, the present so-called hour provisions of the Federal law should be reexamined. In their present form they are really disguised wage provisions, which apply not merely to marginal or low-paid labor but to the overwhelming bulk of all labor. They have, moreover, been interpreted in such a way as, in effect, to set a different minimum wage for each employer.

On the eve of a Presidential campaign, however, it is unlikely that any changes will be considered except the kind of pressure-group amendments embodied in the Barden bill.

[From the New York Post of April 15, 1940]

TO DESTROY LABOR STANDARDS

The wage and hour law now faces a fight for its very existence. The opponents of the act do not try for its outright repeal; the principles incorporated in the law are far too popular for that. Instead, its opponents propose amendments cloaked in the attractive garb of protecting the farmer and clearing up certain ambiguities in the statute. The suggested changes may sound innocent and not unreasonable. But, as soon as their effects are understood, it is clear that the amendments would destroy the law by exempting from its provisions those who most need its protection.

The emasculatory changes are incorporated in a bill introduced by Representative BARDEN, of North Carolina, last July. The bill is tentatively scheduled for consideration by the House next week, along with the Logan-Walter bill which is also designed to hamstring New Deal activity, under the guise of minor improvement in administrative procedure.

The Barden bill has nothing to do with the farmers, who do not come under the wage and hour law. It is simply a device to take away the law's protection from 1,500,000 employees who perform industrial operations on agricultural, horticultural, and dairy products from the time they have left the farm until they have reached the ultimate retail distributors. In October 1939, when the 30-cent hourly wage and the 42-hour week went into effect, only 650,000 workers got raises, and only 2,400,000 were benefited by the minimum-hour provision. By depriving 1,500,000 workers in the most poorly paid industries of the law's protection, therefore, the Barden amendments would vitiate the greater part of the law's effectiveness.

The wage and hour law was designed to put a floor under wages in some of the most shockingly underpaid industries in the United States, and at the same time to fix a limit to impossibly long hours. In each case the minimum standards set were extremely modest—no more than a first step toward the conditions that would be socially desirable. After a year and a half the lobbyists for those who have maintained the lowest standards of employment are about to succeed in bringing their destructive amendments to a vote.

Congress should reply by treating the Barden amendments to a smashing defeat.

[From the Washington Post of April 18, 1940]

THE BARDEN BILL

The Barden bill scheduled to come before the House this week would extend the exemptions of the Wage and Hour Act to probably 1,000,000 workers engaged in the handling and processing of farm products. Workers in canneries, fruit- and vegetable-packing plants, and other processing establishments are among the lowest paid groups in the country. Opponents of the Barden bill persuasively contend that its passage would withdraw the protection of minimum-wage legislation from those most in need of it, lead to demands for further exemptions, and defeat the purpose of the law.

Certainly the Barden bill is highly discriminatory in according exemptions to agricultural processors and their employees while denying them to other groups. If it is bad for the farmer to have the cost of processing fruits and vegetables raised by compulsory increases in wages paid by canneries, it is also disadvantageous to have the price of the farmer's clothing raised by applying minimum-wage laws to textile workers. Furthermore, if we accept the thesis that an industry unable to pay decent wages has no right to survive, the effect of minimum-wage legislation upon the farmer is an irrelevant consideration.

The Fair Labor Standards Act unquestionably ought to be amended, but revision might profitably be delayed until the new Administrator has had more time to perfect his organization and show what can be accomplished under a decentralized administration. The enforcement task is immensely difficult and virtually certain to prove impossible without the whole-hearted cooperation of State officials.

Heretofore the Wage and Hour Division has been severely handicapped by lack of funds, and by the inevitable delays of developing a new regulatory mechanism. With more money to spend, and with more experience to draw upon, a better showing is to be expected. But under the best conditions, the Federal Government cannot effectively police thousands of establishments employing millions of workers unless community sentiment supports the laws and employers and employees do a good job of self-regulation.

The work of bringing violators of this act to book by investigating complaints is extremely arduous. Up to last December the Wage and Hour Division had received more than 32,000 complaints involving 25,000 establishments. It concluded that between 15,000 and 16,000 of these complaints were valid and should be looked into. But at the end of the year it had completed only 2,138 inpections, had 1,999 cases still under investigation, and 11,410 cases still unassigned.

This record constitutes no reflection upon the pitifully inadequate inspection force of the Division. But it does emphasize the folly of passing regulatory legislation of far-reaching character without stopping to consider the difficulties of enforcement.

A great mistake was made initially in providing for comprehensive coverage of industries in all parts of the country. The establishment of uniform minimum-wage rates and maximum-hour standards was likewise a blunder. What we need is a careful overhauling of the law to make it more workable and less rigid. Its inherent defects would only be increased by introducing discriminatory exemptions such as those carried in the Barden bill.

Farmers Educational and Cooperative Union

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, April 18 (legislative day of Monday, April 8), 1940

THE PROGRAM FOR 1940

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD the resolutions adopted by the Farmers Educational and Cooperative Union of America at the annual convention of that great national farm organization held in Omaha, Nebr. This farm organization, at whose head is a Kansas farmer well known to me—Mr. John Vesecky, of Salina, Kans.—has for years been a leader in the national agricultural field, and has pioneered in advancing the status of agriculture and of farmers along cooperative lines, as well as taking a leading part in the enactment of national farm legislation. I call the attention of the Senate especially to the legislative program for 1940 sponsored by the Farmers Union, as set forth in the resolutions which I send to the desk.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

THE 1940 PROGRAM OF FARMERS EDUCATIONAL AND COOPERATIVE UNION OF AMERICA, ANNUAL CONVENTION, OMAHA, NEBR.

We, representing organized farmers of the United States, banded together as the Farmers Educational and Cooperative Union of America, assembled in our thirty-fifth annual convention at Omaha, Nebr., November 20, 21, and 22, 1939, submit our program to guide us in the crucial year of 1940, clearly mindful of our grave responsibility in a world of crisis, where chaos threatens to engulf all civilization, and where no class, nation, or age can escape economic consequences of the turmoil abroad today.

We reaffirm the historic and basic principles of the Farmers Educational and Cooperative Union to attain equity and justice through maintaining a democratic political system and building a cooperative economic system as the practical expression of the Christian idea of brotherhood, which alone can bring lasting peace and security; to permit no black-out of our objective to attain parity income for agriculture, sufficient to cover production costs, to provide a home, free from threat of dispossession, and a decent standard of living for ourselves and our families; to cooperate with other organized groups who genuinely seek to provide economic security, preserve democratic processes, provide distribution of abundance for all the people, and maintain our civil liberties.

In order to attain these objectives by doing together what we cannot do alone, we adopt the following program of educational, cooperative, and legislative activities for the coming year:

EDUCATION

Believing that education, which assures an understanding of cooperative economics, is basic to the development of unity which is needed to effectuate our cooperative and legislative programs, we pledge our organization to continue and expand the work carried on by the department of education of the National Union.

We also pledge our organization to continue its policy, through junior and adult education, to build an understanding of the problems facing farmer and industrial worker alike.

COOPERATION

Believing that a system of cooperative business, owned by producers and consumers, is the only means by which the potential abundance of this Nation may be made available to all its people and by which true democracy may be maintained and safeguarded, we urge that our membership continue to actively encourage and promote the development of cooperative business institutions.

We also urge a continuation of the cooperative conferences which have been held during the past 3 years.

LEGISLATION

SECTION I. Agriculture is not only the basic industry of the Nation—it is, under control and ownership of farm families, the only foundation upon which may be built and sustained our declared form of a democracy. Therefore, in an admitted legislated economy to assure a democracy, agriculture must be assured a parity position with the other important and essential groups.

Agricultural security is therefore the first required prerequisite for a well-fed, clothed, and housed democratic society.

Such legislation must first provide for a revaluation of the farm plant now under mortgage so that the debt, principal, and service charges may be related to the potential production of the plant and also provide conservation of the farm plant and farm family.

Production insurance and income assurance against drought, insect pests, speculative price changes, and other causes beyond the control of the farm operators must be provided as a matter of national policy. We must soon be done with Federal programs which rest upon perennial political caprice and which contribute to the continuing increase of the Federal deficit.

In keeping with these objectives we urge passage of the following national legislation:

1. The Farmers Union debt adjustment plan embodied in S. 2549 and section 21 of S. 2864, pending before the Rules Committee of the House of Representatives.
2. A Farm Tenancy Act as embodied in S. 1836.
3. The Farmers Union dairy bill, H. R. 6500.
4. The Farmers Union cotton-income certificate plan embodied in S. 2434.
5. The Farmers Union wheat-income certificate plan embodied in S. 2395.
6. Similar legislation for flax, rye, barley, rice, and other commodities.

Pending the enactment into law of the foregoing legislative proposals, we request that loans made by the Commodity Credit Corporation shall be at 75 percent of parity permitted under the present law.

SEC. II. We recognize that Federal agricultural programs up to this time have many weaknesses and that legislation has not, as yet, provided for American farmers either cost-of-production or parity price. However, we believe it would be a serious setback to American agriculture to lose any of the good parts of existing Federal programs. Therefore, we deal with this problem from the standpoint of maintaining the legislation which we presently have and seeking those changes and corrective amendments which, in our judgment, are necessary.

We propose the following:

1. Payments to cooperatives in the soil-conservation program should be made on the basis of needed soil conservation practices and should be separated from commodity-income programs.
2. Expansion of the program of the Farm Security Administration to meet the needs of our farmers with particular reference to farm tenancy, debt adjustment, land utilization, mortgage refinancing, rehabilitation, and emergency relief.
3. The transfer of the Farm Credit Administration to the Department of Agriculture, which has demonstrated through its administration of Farm Security Administration its capacity and intentions to deal sympathetically and intelligently with the problems besetting those farm people of the country, who, through drought, insect pests, low prices, and other causes, have been reduced to abject poverty.

The President of the United States, by Executive order last June, directed the transfer of the Farm Credit Administration to the Department of Agriculture. We sought this transfer because we

needed the more sympathetic administrative attitude as exemplified in the administration of the Farm Security Administration. For some reason the transfer was deferred, thus leaving the Farm Credit Administration in its former relatively autonomous position.

Believing the transfer would prove to be a contribution of immeasurable consequences, we respectfully urge the President to immediately effectuate his original order of June 1.

4. Use of cooperatives wherever available and serviceable and assurance that the Government stay out of the field of agricultural distribution.

In all the Federal laws dealing with warehousing and distribution of agricultural commodities, the Congress has provided directive language to use producers' cooperative associations when practicable. In too many instances Federal agencies have wantonly evaded the intent of Congress that producers' cooperative associations, when available, should be used.

The Commodity Credit Corporation is accumulating large supplies of cotton, corn, and wheat through loans to cooperators on a basis of a loan unit price above the current market price. The Commodity Credit Corporation is making use of the facilities and services of the producers' cooperative associations, yet is gradually building the Government into the field of commercial distribution to the detriment of all who have invested in the facilities and services of agricultural distribution.

During the last session of Congress the House of Representatives disapproved a required appropriation for $119,000,000, without which Commodity Credit Corporation could not have made cotton, wheat, and corn loans during the present year. Our organization expended a great deal of time and funds to gain approval of this $119,000,000 appropriation by the United States Senate. Subsequently, the House concurred in the action of the Senate.

It would prove to be a fatal policy in the long-time interest of producers for the Farmers' Union to continue to support appropriations for any agencies of the Federal Government which either fail to use existing facilities and services or would eventually force, by competition, existing cooperative marketing associations to liquidate their enterprises. We will henceforth support appropriations which at least do no harm to our cooperative associations; otherwise we will vigorously oppose such appropriations.

5. Continuation of the Federal Surplus Commodities Corporation and an expansion of the stamp plan as a method of distribution.

6. Usefulness of the Rural Electrification Administration should be expanded and accelerated.

7. Revision of the Crop Insurance Act, insuring the top 75 percent of the loss; providing that in determination of loss quality, as well as quantity, be considered; providing that indemnities paid be eligible to commodity loans and that the crop-insurance program be extended to other basic commodities at the earliest possible date.

8. Opposition to the assignment of any payment made under the various Federal farm programs, except for the purpose of paying crop-insurance premiums for which Congress has already made legislative provision.

Section III: We also reaffirm our position relative to the following:

1. Protection of the family-sized farm shall be a constant and primary policy and aim in the formulation, amendment, and administration of all farm legislation.

2. Administrative personnel of Federal farm programs should be farmers democratically elected insofar as legally possible; all other administrative personnel should be persons who understand, participate in, and are sympathetic to farm organizations and the cooperative movement.

3. Adequate and effective legislation which will make possible the rapid development of the cooperative movement and which will protect cooperatives in their infancy from large, established enterprises.

4. Protection of the domestic market for American agriculture.

5. Permanent adjustment of interest rates on Federal indebtedness of agriculture to those rates enjoyed by private industry.

6. Levy of all taxes on the basis of ability to pay. Continued ability to pay must be based on net income, and we are unalterably opposed to any system of taxation not based upon this principle. Since a sales tax has historically been the method used to extort revenue from those least able to pay, we reiterate our continued and consistent opposition to that tax.

7. Refinancing of farmers' indebtedness at low interest; amortized repayment plan; funds provided by Government issue of currency.

8. Restoration to Congress of the power to coin and regulate the value of money.

9. Abolition of the practices under which tax-exempt Government bonds are issued.

10. Conservation of all natural resources.

11. Opposition to regulation of truck and water transportation rates that tends to increase transportation costs. We also oppose repeal of section 4 of the Interstate Commerce Act, commonly known as the long-and-short-haul clause.

LABOR

The Farmers Union is distinguished, among farm organizations, for its friendly attitude toward organized labor.

We reaffirm our historic position, expressing a continued desire to cooperate with our brethren in the mills, mines, and factories.

We emphatically condemn those individuals and organizations, who seek to foster intolerance, strife, and misunderstanding between farmers and organized laborers.

PEACE

We submit that war is a natural attribute of an economic system based upon the profit motive. The seeds of hatred, intolerance, and international conflict take root and flourish in a world where frenzied economic rivalry creates the tragic contrast of growing poverty for the masses and overwhelming abundance for a few.

The brotherhood of man cannot be achieved in an environment distinguished by economic contrasts.

We believe that a secure and lasting peace can be achieved only through the establishment of an economic system based upon the principles of cooperation. We reaffirm our historic position that the cooperative movement offers a practical pattern for the creation of a warless world.

We stand unalterably opposed to the appropriation of huge sums of money for armaments made at the expense of appropriations which are necessary in the solution of our domestic problems, both rural and urban.

We refuse to become engulfed, through propaganda and a defeatist psychology, in the tide of hatred, intolerance, and war, out of which nothing can be secured except more hatred, more intolerance, more war, and the probable destruction of our freedom to continue building a just society.

The Nation's Migrant Problem

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 17, 1940

EDITORIAL COMMENT ON THE TOLAN RESOLUTION

Mr. GEARHART. Mr. Speaker, Representative JOHN H. TOLAN'S resolution, a resolution which, if enacted into law, will authorize a congressional investigation of the so-called migrant problem with which the people of California and nearby States are, at the moment, so sorely perplexed is now awaiting action by the House of Representatives Committee on Rules.

There is no measure now before the Congress which is of greater importance. But a hasty examination of the situation reveals the legislative problem as one demanding national attention, as one crying for a national solution. It is only through action of the Congress that an answer can be found. The Tolan resolution points the way.

Since the migration of peoples from place to place is as old as humanity itself, and since the problem is bound to occur and reoccur with greater or lesser severity as long as this Nation persists, the problem should receive the immediate consideration of the Congress with a view to the working out of a permanent, long-range solution.

From my own investigations I have become quite convinced that the social and economic problems which arise as a consequence of mass-movements of peoples from one State to another will never be solved until a thoroughgoing and official study of this subject is completed and the revealed facts and figures are made available to those who exercise legislative authority.

In this particular legislative endeavor, Congressman TOLAN is entitled to the support of the membership of the National Legislature. Not only is he entitled to our support but he is entitled as well to the congratulations of the membership of this body for having suggested an intelligent approach to the vexing problem which now engages our attention.

The arguments in support of the Tolan resolution are so many that it might be said that they are beyond numbering. Because of the apparent impossibility of treating them all at this time, I will conclude these instant remarks by calling attention to a most timely and strikingly interesting editorial which appeared on February 12 last in the Oakland, Calif., Post-Inquirer.

So important do I regard this particular editorial expression, so certain am I that its text should be laid before the membership of this body, I am constrained to ask the unanimous consent of the membership that it may be spread upon the pages of the CONGRESSIONAL RECORD of this day's proceedings.

Unanimous consent having been indicated, the editorial follows:

[From the Oakland (Calif.) Post-Enquirer of February 12, 1940]

JOBS, MIGRANTS—AND SPINACH

Public relief and semipublic charity organizations have been stirred the last few days by an incident that illustrates some of the abuses that have crept into the migratory-labor situation.

Down in the southern end of Alameda County there was a large crop of spinach to be harvested.

The owners of the land had sold the crop at the time of its planting, and had nothing to do with the picking of the spinach; the people who had bought the crop had arranged with a labor contractor for its harvesting.

There was plenty of available labor in the vicinity for the job. In fact, many families on relief and other families that had lived in the region for a long time had been looking forward to that spinach crop as an opportunity for employment.

But the labor contractor had other ideas. He went down to the Imperial Valley, more than 500 miles away, and spread the word among migrant families from Oklahoma, Arkansas, and Texas that work would be available in a few days in Alameda County.

So there was a northward migration of hundreds of unfortunate people from the Imperial Valley.

They drove their ancient, wheezing "joloppies" from Brawley and El Centro to Alameda County in the eager expectation of work, and under the impression that free housing facilities would be furnished for them.

When they arrived there was no work available. There were no free housing facilities—only a dirty camp, with no decent sanitary arrangements, and a high charge for rent.

They had to wait more than 2 weeks for the promised work. Then they were allowed to pick the spinach. By that time they were so desperate that they were willing to work for a very low rate, and there were so many of them that very few of the local residents got jobs.

In the meantime, their children had crowded into the local schools, to which the local families deprived of work in the spinach field contribute tax support.

There were so many of them that the harvesting job lasted only a few days—which was to the advantage of the labor contractor.

He paid the harvesters by the crate, but he paid the supervisors, checkers, and truckers by the day, so it was to his advantage to make the job last as few days as possible.

But plainly this system is not to the advantage of local labor, or taxpayers, or charity and relief organizations, or schools, or public-health services, or wholesome social conditions.

It is certainly not to the advantage of the migrants. They have scattered again in search of jobs, and the health authorities have condemned as a menace the camp they occupied.

This incident gives one little glimpse into the background of the migrant problem which we hear so much about.

It helps explain why Congressman JOHN H. TOLAN'S bill for the appointment of a five-man commission to investigate conditions among migrant farm workers is getting the solid backing of all kinds of representative national groups.

It helps to explain why the realization is deepening that something intelligent and basic must be done about this problem.

Last week Eleanor Roosevelt and Herbert Hoover both advanced the proposal that a way should be found to settle these migrant families on subsistence farms—preferably in the States of their origin.

This week the Associated Farmers down in Tulare County pointed out to the State legislative committee on employment that in some ways these pitiful, dispossessed migrant families, now drifting over the country and living in ditch-bank camps, must be provided with new homes, a piece of land, a new opportunity.

This is hopeful. The Tolan committee should get into action as soon as possible, sift the facts from propaganda and prejudice, and present a sound program for action on a problem that is the concern of all Americans.

Proposed Legislation Affecting the Patent System

EXTENSION OF REMARKS

OF

HON. CHARLES KRAMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

REPORT OF THE NATIONAL ADVISORY COUNCIL

Mr. KRAMER. Mr. Speaker, under leave granted me to extend my remarks in the CONGRESSIONAL RECORD, I am submitting, as Chairman of the Committee on Patents, a report of the National Advisory Council to the House Committee on Patents, together with recommendations respecting legislation.

The minutes of the meeting of the House Committee on Patents, February 16, 1939, disclose that the late chairman, Hon. William I. Sirovich, of New York, was empowered to create this advisory council, "without any expense to the Government," and that it be composed of "eminent representatives of inventors, consumers, industrialists, labor, engineering societies, judges, lawyers skilled in the patent laws, and so forth." Because of the death of the former chairman, the Committee at its reorganization meeting in the third session of the Seventy-sixth Congress confirmed the authorization of the council.

To this preliminary statement as to the origin of the council might be added the additional comment that publication is made to gain the advantage of public opinion in connection with this study, the filing of which appropriately coincides with the recent celebration of the sesquicentennial anniversary of the signing of the first patent act, and emphasizes continued efforts for the betterment of the patent system. The report is as follows:

REPORT OF THE NATIONAL ADVISORY COUNCIL TO THE PATENTS COMMITTEE OF THE HOUSE OF REPRESENTATIVES, TOGETHER WITH RECOMMENDATIONS RESPECTING LEGISLATION

APRIL 1, 1940.

HON. CHARLES KRAMER,
Chairman, Committee on Patents, House of Representatives, Washington, D. C.

DEAR SIR: On behalf of this council, I beg to submit the following report of its work to date, together with recommendations concerning legislation for the betterment of the patent system.

This council has approached its study with the full acceptance of the importance and value of the patent system as a means for encouraging invention in order to promote the progress of the useful arts, and with the understanding that its duty is to advise how the law may be modified to better effectuate that purpose. It realizes that it must proceed deliberately and avoid sensationalism. It has obtained the opinions of other groups. It has sought to balance the often conflicting views of inventor, patent lawyer, assignee, industrialist, and consumer in order that undue weight shall not be given to the interest or prejudice of any.

Of necessity the work of the council has been conducted mainly by correspondence. Its membership is so large and widely scattered and includes men of such activity and leadership in various important fields of work that frequent meetings of the full council were impossible. However, two such meetings have been held on September 11, 1939, and February 27, 1940, and by correspondence every member has been fully informed of every question to be passed upon by the council and has had the fullest opportunity to express his opinion. No recommendation is herein made that has not been approved by at least a full majority of the members of the council.

At the September 1939 meeting of the council a number of the proposals herein incorporated were approved in principle, and it was directed that committees consider the various subjects further and report upon them and, in certain cases, recommend the particular form of statutory amendments that would be appropriate. Such committees were appointed and submitted reports. These reports and additional matters were discussed at the February 1940 meeting, and it is as a result of resolutions adopted at that meeting, supplemented where necessary by correspondence and written ballots, that the recommendations herein submitted were authorized.

RESPECTING PATENTS THAT MAY BE INVALID ONLY IN PART

This council believes that the existing law as applied to patents which are, or may be, invalid in part only, is highly unsatisfactory because it brings about grave injustices, extreme uncertainties, and much unnecessary expense and delay. These evil effects have manifested themselves to a progressively increasing degree in recent years. To remedy these evils the council recommends that a statute be enacted substantially in the form of the bill accompanying this report and marked "Proposed bill I (H. R. 9384) of the National Advisory Council to the Committee on Patents of the House of Representatives."

An antique rule of law established by court decisions is that a patent invalid in part is thereby rendered totally invalid. This has never been a statutory provision, but the statutes have recognized its existence. Early in the history of this country it was appreciated that this rule brought about unjust results, and remedial statutes were enacted for the preservation of rights to the patent owner in the valid portion of his patent through the prompt filing in the Patent Office of a formal disclaimer of such separate portion of the patent as was invalid.

There are three statutes relating to such disclaimers. The circumstances under which a patentee may disclaim are prescribed in Revised Statutes, page 4917 (U. S. C., title 35, sec. 65). The conditions under which a disclaimer may be effective in a patent-infringement suit are prescribed in Revised Statutes, page 4922 (U. S. C., title 35, sec. 71), and these are partly repeated in Revised Statutes, page 973 (U. S. C., title 28, sec. 821). The bill proposed

by the council would repeal these three statutes and provide that a patent invalid in part is not necessarily invalid as a whole, but may, under proper conditions, be effective for that part of the patent to which the patentee should be entitled.

This recommendation is made because the history of the attempts by the courts to interpret and apply the disclaimer statutes has resulted in uncertainties, delays, expenses, and injustices that far outweigh the supposed protection to the public, which is at the basis of our present laws. For a complete analysis of this situation, you are referred to an article beginning in the February 1940 issue and concluding in the March 1940 issue of the Journal of the Patent Office Society, entitled "Defects of the Disclaimer Statute," by Dr. Charles Martin, a member of this council. Dr. Martin undertook the research work and wrote this article for the specific purpose of aiding this council. He was chairman of the special committee of the council which formulated the proposed bill.

This subject has been for a number of years discussed by many bodies of patent lawyers and others interested in the patent system, and it is safe to say that there is substantial agreement among those who have studied the subject that the disclaimer statutes have brought about intolerable results, that they should be repealed, and that the old rule of law that a patent invalid in part is wholly invalid should be nullified or substantially modified. The bill herewith submitted differs very little from bills that have heretofore been proposed by various committees who have studied the subject. It follows very closely a bill proposed by a committee of the patent section of the American Bar Association.

RESPECTING JOINDER OF APPLICANTS FOR PATENTS, THE FILING OF APPLICATIONS BY ASSIGNEES, AND THE REQUIREMENTS FOR EXECUTING THE APPLICATION

The council further recommends the enactment of a bill to liberalize (a) the rights of inventors to unite together as joint applicants for a patent, (b) to prevent injury to, or loss of rights of, assignees of inventors by permitting such assignees, under certain circumstances, to file applications for patents in lieu of the inventors, and (c) to simplify the formal application papers. Accompanying this report is a bill designated "Proposed bill II (H. R. 9386) of the National Advisory Council to the Patents Committee of the House of Representatives" to effect these purposes.

As to joinder of applicants: The present statutes require that an application be made by the inventor and in terms fail to recognize the well-known fact that many inventions are made jointly by two or more persons. However, the statutes have always been interpreted as meaning by the word "inventor" or "person" or "applicant" either an individual or such individuals as may have jointly made the invention. This has given rise to widespread, continuous difficulty in determining, under the circumstances of each particular case, who among associated persons actually made the invention sought to be covered by the patent. Moreover, after the matter has been determined on the basis of the facts as then understood, circumstances often arise which show that, as regards the subject matter of invention of allowed claims, the situation as to inventorship is quite different. The courts have even held that in a clear case a patent issued to joint applicants is invalid if the invention of the claim at issue was not truly the joint invention of all the applicants. The council is of the opinion, and this opinion has long been held by a great majority of those who have studied the subject, that this state of things is injurious to inventors, assignees, and the public. It is of the opinion that it would be beneficial to all interests to permit all persons who claim to be the inventors of any part of the matter for which a patent is sought to unite as joint applicants regardless of whether the individuals believed themselves to be sole or joint inventors or whether they had been working upon it cooperatively or independently. By such a practice inventors and attorneys would be relieved from the constant fear that an inadvertent error of this kind had been made, which would result in loss of rights on purely legalistic grounds.

The only pertinent and proper interest of the public is that everyone having any claim to the invention is included as one of the patentees. It has no substantial interest in the question of the particular relations to each other of the joined applicants, and should not have the right to infringe a patent otherwise valid and assert invalidity on the ground that one or more but not all of the applicants made the invention.

As to the matter of application by assignees of inventors: It frequently happens that an application and the invention thereof is assigned before the patent issues, and that for one reason or another it is necessary to file a divisional application, or a continuing application, or an application for reissue of the patent after it is granted. When this necessity arises the inventor usually has no further interest in his invention, and it may be that he cannot be found, or that for reasons of his own he refuses to execute any further application. Thereby the assignee frequently loses rights for which he has fully paid. The proposed bill provides the remedy in that it permits an assignee to file an application wherever the invention thereof has been previously disclosed as a part of the invention set forth in an application which had been made and sworn to by the inventor.

As to simplifying the formal application papers: At present it is necessary that the applicant or applicants sign the formal papers at three different places. Frequent annoyance has been suffered, particularly in the case of applications executed elsewhere than in the attorney's office, because the applicants overlooked one of the necessary signatures. Sometimes delays are caused thereby at a time when it is vitally necessary that the application be filed before a certain date. The bill proposes that when the oath to the application is appended to the other papers, a signature to the oath may be deemed a signature to each of the papers.

It is believed that the changes of law proposed by this bill will serve to simplify proceedings to eliminate certain technical losses of right and save considerable expense to many inventors and patent owners, but will harm no one.

RESPECTING INVENTIVE ACTIVITIES IN FOREIGN COUNTRIES

The council recommends that the law should be amended to provide that neither an applicant for patent nor a patentee shall have the right to rely upon evidence of inventive activities occurring in a foreign country. At present the law (R. S. 4923, U. S. C., title 35, sec. 72) forbids evidence of knowledge or use in a foreign country from being relied upon to invalidate a patent, but there is no provision of the law which prevents an applicant or a patentee from relying upon such knowledge or use. This anomalous situation was recently discussed by the United States Supreme Court in the case of *Electric Storage Battery Co.* v. *Shimadzu et al.*, 307 U. S. 5, wherein that Court sustained a patent by accepting evidence of the making of the invention in Japan prior to an actual independent use in this country, which domestic use had taken place earlier than that on which the patentee had filed an application in this country. It is believed that those familiar with the subject are in accord in believing that it is against the public interest, and is a great injury to American inventors, to permit reliance upon evidence of unpublished and unpatented activities in foreign countries to affect any question of priority of invention or of patent validity.

The council agreed that a specific addition should be made to R. S. 4886 (U. S. C., title 35, sec. 31) to take care of this situation. In this the council accepted an amendment that had been proposed twice by the patent section of the American Bar Association. Then we learned that on February 13, 1940 a bill, H. R. 8442, was introduced in the House of Representatives, which bill provided for precisely the same amendment. The council, therefore, approves this bill, H. R. 8442, and submits no separate bill. It is noted that H. R. 8442 does not state when it is to become effective and how far its effect may be retroactive. It is suggested, therefore, that H. R. 8442 should include the following section 2:

"This act shall take effect immediately and apply to all pending applications for patents and existing patents, except that its provisions shall not be effective to nullify any judicial finding of the validity of a patent heretofore made by a court of competent jurisdiction."

RESPECTING THE EFFECT OF A FOREIGN PATENT UPON THE ISSUE THEREAFTER OF A DOMESTIC PATENT

It is recommended that the law be amended in such manner that no patent shall be refused or invalidated merely because of the fact that the applicant for the patent had, prior to the issuance of the United States patent, been granted a patent in a foreign country on an application filed in that foreign country more than a year before his application was filed in this country.

There are many bona fide reasons why an applicant, either a United States citizen or a foreign citizen, may file an application in a foreign country and then, more than a year later, find himself in a position to file an application in this country. Under our present law he may do so if there is no statutory bar, such as a 1 year earlier publication use or publication, and he may obtain his patent if he can manipulate the speed of prosecution in this and the foreign country, respectively, in such a manner as to have the United States patent issue first. This is purely artificial. If this restriction be removed, the applicant would still be under the disability that he can make no use of the date of application in the foreign country and, therefore, would be subject to statutory bars 1 year earlier than the filing of his application in this country.

The present requirement of the statute not only injures these occasional inventors, but it is also a public injury for the reason that in practice the Patent Office, sympathizing with the unfortunate applicant, makes special efforts to speed the prosecution of this type of case, thus delaying prosecution of other applications.

Accompanying this is a bill designated "proposed bill III (H. R. 9388) of the National Advisory Council to the Patents Committee of the House of Representatives," which will take care of this situation. This bill merely eliminates one clause from R. S. 4887 (U. S. C., title 35, sec. 32). It is thought that there will be no serious opposition to this bill.

RESPECTING THE MINIMIZING OF THE ISSUANCE OF INVALID PATENTS

An important committee working in collaboration with this council, of which committee Mr. Leonard S. Lyon is chairman, has made various recommendations concerning legislation for the purpose of minimizing the issuance of invalid patents and for bettering the nature of the patent application and of the patent itself. This committee is still continuing its work, but one of its recommendations has already been finally approved by the council. This recommendation is that the law should be amended to create a proceeding which the committee describes as follows:

"Upon final allowance of the claims, the application shall be published prior to formal allowance of the application, allowing a limited time for any persons interested to communicate to the

Patent Office any prior printed publications or prior patents that they deem anticipatory. It would thereupon be the duty of the examiner to reconsider any allowed claims in the light of any prior patents or printed publications so communicated and, if found to warrant the rejection of any claims, to result in a new action with the right to the applicant to amend. To avoid possible abuse of the publication of the allowed claims, it is believed that any new law of this kind should provide that the issue of the patent should not be delayed on account of any interference based upon an application filed after the publication of the allowed claims, and that no public-use proceeding should be allowed to be initiated after the publication of allowed claims."

By direction of the council, Mr. Lyon's committee is to prepare a suitable form of bill to cover this subject matter.

In past years there have been various proposals for opposition proceedings, but these have generally been open to criticisms which the council believes are inapplicable to the procedure above outlined.

The obvious purpose of this proposal is to minimize the issuance of invalid patents, by enabling the public to call the attention of the Patent Office to earlier patents and publications which the examiner may have overlooked, or been unable to find because not available to him in his search. The benefit to the public of thus reducing the number of worthless patents is obvious. Such patents constitute threats which are embarrassing and costly to industry and which are likely to result in unnecessary and expensive litigation. Such winnowing out of the chaff from the wheat is equally beneficial to those inventors and patent owners who are seeking and purchasing patents for bona fide purposes. Such persons do not want worthless patents, but want patents to which are attached a strong presumption of validity.

There are a number of reasons why proposals for opposition proceedings which have been made from time to time have not met general acceptance. They created contests. They gave opportunities for industrial concerns to delay the issuance of a patent indefinitely, while subjecting an applicant for patent, including those without substantial financial resources, to the expense of prolonged inter partes proceedings, to meet arguments of powerful opponents. Many of these proposals gave opportunities for opponents to take testimony regarding alleged prior and published uses. Also, such proposals were subject to the objection that the making public of the application would incite others to file new applications for the purpose of causing the institution of interference proceedings. And another vital objection of the permitting of such oppositions is that unscrupulous persons would be tempted to create such expenses and delays in bad faith.

These objections to opposition proceedings do not seem applicable to the procedure which the council recommends. The Patent Office could, and undoubtedly would, in its rules provide that the examiner in charge of the application would not be informed concerning the identity of the party submitting information of prior patents and publications nor of anything argumentative in the paper submitted by such party. On the other hand, this procedure would effect the most important purposes that could be effected by conventional opposition proceedings, because, where patents are invalid, it is generally because of patents or publications which the examiner had not noted.

RESPECTING PROPOSALS OF OTHERS TO FORBID RESTRICTIONS IN PATENT LICENSES, AND TO LIMIT RIGHTS OF PATENT OWNERS IN SUING FOR INFRINGEMENT

Recently there has been much discussion throughout the country regarding a report of the Temporary National Economic Committee approving certain recommendations made by the Department of Justice. These, speaking generally, propose to make it illegal for patent owners to grant licenses having restrictive provisions relating to price, geographical location, quantity, or field of use. The proposals also include provisions to limit the right of patent owners with respect to the infringers who may be sued, the general idea being that where possible the patent owner must sue the licensor, if any, of the machines or devices employed by the infringer, rather than the infringer himself, and must sue the manufacturer of the device rather than any dealer or user of that device.

This matter was referred by the council to an able committee, of which Mr. Robert Cushman is chairman, and the council has had the benefit of a report of that committee. It has approved the recommendations of that committee that the limitations as proposed by the Department of Justice should not be enacted into law.

At this time no bills have been introduced into Congress relating to these recommendations, and it is quite possible that if any bills are introduced later they will reflect much modified viewpoints. It seems sufficient, therefore, that the council advises you of its opposition in principle to the recommendations, without burdening you with a statement of the specific reasons which has led it to this conclusion.

RESPECTING H. R. 8441

The council has given preliminary consideration to H. R. 8441, which was recently introduced and which has been referred to the Patents Committee. This bill applies to applications for patent the same rule with respect to recording an assignment or exclusive license which the present statute applies to issued patents. A committee was appointed to consider this bill and report upon it, the report to consider possible amendments to the bill. The council has approved the report of its committee to the effect that the enactment of this bill should be recommended, but that the bill should be amended to substitute the words "thirty days" for the words "three months", in line 3 of page 2 of the printed bill.

CONCLUSION

Various other proposals, some of them of great importance, are now being studied by the council or its committees, but have not been finally decided by the council. Some of these will form the basis for further reports.

Representatives of the council will be glad to cooperate with your committee in connection with any hearing concerning the recommendations made herein or in any other way.

Respectfully,

RICHARD EYRE, *Chairman.*

The N. L. R. A. Encourages and Upholds Violence

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

EDITORIAL FROM THE PHILADELPHIA INQUIRER

Mr. HOFFMAN. Mr. Speaker, the Republic Steel Corporation case, decided on November 8, 1939, by the Circuit Court of Appeals for the Third Circuit, and affirmed by the United States Supreme Court when it denied the company's petition for writ of certiorari, is authority for the doctrine stated in the caption to these remarks and in the editorial which follows.

That editorial is from the Philadelphia Inquirer of April 9, 1940, and reads:

[From the Philadelphia Inquirer of April 9, 1940]

A LABOR LAW THAT UPHOLDS VIOLENCE

In accordance with its custom, the United States Supreme Court gives no reasons for its refusal to review the National Labor Board's order directing the Republic Steel Corporation to reinstate 5,000 employees who participated in the notorious 1937 strike.

The effect is to leave standing the decision by the Federal circuit court in Philadelphia last November upholding the order for reinstatement, with back pay estimated at several million dollars.

The Labor Board had held that such violence as was perpetrated by the strikers constituted no reason for refusing to restore their jobs and compensate them for time lost on account of their own actions.

It also held that the steel company's "unfair labor practices" were responsible for the strike, a contention that was sustained by the circuit court.

The lower court made an exception in the case of 40 strikers who were convicted of carrying explosives, damaging property, or interfering with the mails.

That court also agreed that major crimes, "such as assault and battery, destruction of property, or the carrying of weapons or explosives" were sufficient bars to reemployment. It did not consider "mere fist fights and minor scraps along picket lines" in this category.

This opinion was exceedingly puzzling to the man in the street. For fist fights are breaches of the peace, punishable by law and frequently leading to serious disturbances in industrial disputes.

The Labor Board, in extenuation of its stand, remarked that the acts complained of were committed by strikers "in the heat and turmoil of bitter industrial strife." Violence is not commonly committed in a mood of cool and judicious calm.

The circuit court threw the responsibility for its decision on the Wagner Act when it said: "Violence of this nature, however much it is to be regretted, must have been in the contemplation of Congress when it provided that nothing in the act should be construed to interfere with or impede or diminish in any way the right to strike."

Then the thing to do with a law which, according to this decision, expressly upholds and condones violence in labor disputes, is to scrap it and the sooner the better.

The courts have no option except to interpret the law as they see it. But it is difficult to believe that the Senators and Representatives who voted for the Wagner Act intended to sanction the use of violence in strikes.

Certainly the United States Supreme Court took a different view in the Fansteel case when, in outlawing the sit-down strike, Chief Justice Hughes declared: "The employees had the right to strike, but they had no license to commit acts of violence or to seize their employer's plant. To justify such conduct because of the existence

of a labor dispute or of an unfair labor practice would be to put a premium on resort to force, instead of to legal remedies, and to subvert the principles of law and order which lie at the foundations of society."

In the Republic Steel case, now apparently closed so far as the courts are concerned, the circuit court rules that the strike could not be classified as of the sit-down variety and therefore did not come within the Fansteel case decision.

Among the proposed amendments to the Wagner Act is one which would prohibit the Labor Board from reinstating an employee in his job after he had engaged in violence or participated in seizing or destroying property of his employer.

Senator WAGNER, author of the act, is up in arms against this just provision. He declares that it would forever bar a man from employment "because of a minor scuffle in a picket line."

This is ridiculous on its face. All employers would continue to hire or rehire whom they chose. But the Labor Board would not be permitted to force an employer to take back a former worker who has been proved guilty of violence or sabotage.

Any law which confers such autocratic powers on a board of three men, or on any agency, calls for a thorough overhauling.

It's small wonder that a law so designedly one-sided should be judicially interpreted as countenancing violence and even rewarding those engaging in such conduct, a law which lists unfair practices by employers but none by employees.

Opponents of any sweeping revision that would remove this law's most serious injustices are now resorting to desperate legislative tricks to prevent wholesome action.

The circuit court decision, which the Supreme Court has now declined to review, has made the responsibility of Congress doubly plain.

If Congress did not intend to condone and encourage violence in strikes, let it hasten to make the meaning of the law plain beyond mistake.

It will have to adopt more than one sorely needed amendment. But the first should definitely outlaw all violence in industrial disputes and require that employees as well as employers come before the Labor Board and the courts with clean hands.

Capitalism

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1940

ARTICLE BY DR. JOHN BARR

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dr. John Barr:

CAPITALISM

(By Dr. John Barr)

Capitalism is our system of doing business. In its purity it is one of the most beautiful theories ever devised by the mind of man. It is a foolproof, self-regulating system in which the individual while doing the best thing for himself also does the best for society as a whole. It is also known as laissez-faire capitalism, laissez faire being French for "do as you please" and meaning that the businessman may do as he pleases without Government interference. Laissez faire believes that the rightful functions of government are very simple. They consist only of providing for the national defense against an external enemy, of maintaining order within the country, and in setting up a system of courts wherein citizens can arbitrate their own civil disputes.

Capitalism derives its name from capital and capital is something that has been saved. Economists tell us that there are three instruments of production: Land, capital, and labor. In the beginning there was no capital, only land and labor. Capital can be considered, therefore, as saved labor. There was no capital so long as men currently consumed all that they caught or produced. But when some early man postponed the immediate satisfaction of some want and took time off to fashion the simplest tool or weapon, he created the first capital goods. There is no doubt that the enormous amount of capital goods that we have today is one main reason why the average man has so many more things than he had in the past. His standard of living has been raised and it is largely a result of his own saving and the saving of his ancestors. It has all come through the deferring of immediate satisfaction in the hope of greater satisfaction in the future. We have progressed, perhaps, from the first fish net, the result of a few hours of labor by one man, to the innumerable and gigantic machines of the present time. We glory and may well glory in such progress. We have passed from the time that men had a desperate struggle to produce the bare necessities of life to the time when by a proper utilization of all this machinery we could produce comparative abundance for all with many fewer hours of labor. It is a great achievement, but the question remains, as in the consideration of all jobs well done, could we have done still better.

The smooth and successful working of capitalism was predicated upon two assumptions and qualified by the statement that it would work in the long run. The first of these assumptions was complete freedom of competition and the second was that investment would always equal savings.

In a state of completely free competition no huge fortunes would ever be acquired. There would, of course, be differences of income, but these would be kept within reasonable limits by the fact that if any man or company was making too much money in any location or particular industry, others would soon come in and divide the field.

In this country we have never had completely free competition as our very first Congress adopted a system of import tariffs. The cotton and tobacco farmers of the South were exporting a large part of their crops where they were sold on a free world market, but were forced to buy their supplies in a protected market. Government had stepped in and the system of laissez faire found itself impaired to some extent.

It was also assumed that the workingman was free to work or not as the wages offered by employers were or were not satisfactory. This is manifestly untrue, as the workman and his family can starve to death in 30 days if without funds, whereas the employer with some wealth to support him can always outwait the employee.

In England, in the early part of the 1800's, a great many children of 5 years of age and upward were employed in the textile mills and were worked as much as 16 hours a day. They were collected from the countryside and kept in barracks (sometimes under lock and key) near the factories. In 1819 a reform law was enacted which prohibited the employment of children under 9 years old. Those under 16 were not to be worked over 12 hours a day; they were to be given time off for their meals, and their barracks were to be whitewashed twice a year. Those who opposed this measure denounced it as rank socialism and said that the Government was interfering with business.

In the early days of this country it was unlawful for as many as two men to approach the boss together and ask for a raise. Free competition has never existed, and pure capitalism, like Christianity, has never been tried. At the present time our giant corporations are to a great extent monopolistic. While written agreements do not exist amongst them, in those industries dominated by a few large companies the leader sets the price of the product and the others follow.

If investment equals savings, it means that the entire national income is respent almost immediately—either spent for consumption goods or invested in capital goods. Economists say that supply creates demand—that when a certain amount of goods is produced, enough money is paid out in wages, rent, interest, and profits to buy the goods. If this actually happens, an equal amount of goods can again be produced and the process goes on and on ad infinitum. What does actually happen?

The absence of free competition has permitted some men to have incomes out of all proportion to what was contemplated and thereby accumulate huge fortunes. It was also assumed that the interest rate would serve as a stabilizing mechanism and automatically regulate the amount of money saved or, which is the same thing, the formation of capital. When opportunities for investment were great, such as in the development of new inventions or of newly discovered natural resources, businessmen would offer higher rates for the use of money and people would be induced to forego the satisfaction of immediate wants and save the money. When such opportunities did not appear, there would be less demand for money, interest rates would fall, and some of the money which would otherwise have been saved would be spent on consumption goods. The perfect working of this simple process would prevent the accumulation of any idle money; all income would either be spent for goods to be consumed or invested in production goods.

But the process is not so simple. Much of our income now makes its first appearance as the earnings of corporations. The corporations do not pay all the earnings out to their stockholders. If it seems wise to the directors, they expand the business, investing much of the earnings in buildings and equipment. If such opportunity is not present, they still withhold a large part of the earnings, saying that they may need them in the future to maintain the payment of wages and dividends in hard times and thus cushion the downward trend. What does this mean? If the earnings are held as cash, so that they may be immediately available, the money is withheld from the business stream, the principle that it must be spent is violated, and disaster is invited.

It seems necessary at this point to consider the distribution of income. In 1929, the most prosperous year we ever had, the national income was $81,000,000,000. It was so divided that $54,000,000,000 went to one-third of the people and $27,000,000,000 went to the remaining two-thirds. The people in the first group had on an average four times as much as those in the second group, and if we had taken the upper and lower tenths of the population, the divergence would have been many times as great.

The people in the upper third all had over $200 per month per family, and independent investigators tell us that families with less than $200 per month save little if any money. The larger the individual income, the larger the proportion of it that is saved. Families having larger incomes than they care to spend on their living save the balance and save it without deferring any satisfactions and without paying any attention to what the interest rate may be. If then there should be a let-down in the opportunities for investment, idle money will accumulate. Again part of the annual income is not being spent, and we are sure to have a recession in business.

There are in the United States in the spring of 1940 about ten billions of idle dollars. This is roughly estimated as follows: There are six billions of excess bank reserves, the required reserves are nearly double or three billions more than was looked upon as necessary before 1936, and we also have at least three billions more dollars in circulation than we had in 1929 when we were doing considerably more business. This adds up to twelve billions, but some of them are probably overlapping. This is money that has been saved but not invested.

The increase in the national debt since 1933 has been about $22,000,000,000, but President Roosevelt says that $14,000,000,000 have gone into recoverable loans and investments and durable improvements. That leaves $8,000,000,000 that have gone into direct relief. There are, as we have seen, more than eight billion idle dollars in the country at the present time. Had these idle dollars been at once returned to the business stream instead of being allowed to accumulate, the others would not have been necessary.

It is apparent that capitalism has not worked according to the two assumptions; there has not been free competition and the interest rate has not been a stabilizing mechanism.

As to working in the long run, the country has had many depressions and has in the past recovered from them all and gone on to bigger and better things. Our present-day apologists for capitalism are prone to either completely ignore or at least to greatly minimize the effect of these depressions. These men overlook the misery that has come to millions of other individuals and they tell us either that nothing can be done or that they prefer the state of depression to having the Government become paternalistic.

The key to the situation seems to be that opportunities for investment are not constant; they come and go in waves. The early writers recognized this when they depended upon the rate of interest to act as a regulator, but the rate of interest is powerless and there is nothing to take its place—nothing except the Federal Government.

In ordinarily good times many of our workers are employed in the heavy or capital goods industries; that is, in the investment industries. As the wave of great opportunity for investment recedes some of these men lose their jobs. If they could be immediately reemployed on public works, there would be no depression. This is where the Federal Government, as being the only agency that is big enough, must come in and play the role of regulator. It can by its power of taxation take the money that is being saved but not invested in private industry and distribute it so that consumption will be increased, by investing it, not in the things in which private industry would ordinarily invest it, but in other things which are just as necessary and just as desirable to the country as a whole.

The general goal to which Government should work is a healthy, husky, intelligent, educated, honest, and prosperous citizenry. Viewed merely from the standpoint of national defense, nothing could be more desirable. To accomplish this, more attention must be paid to the social sciences. Private investment goes into the production of goods; Government investment may go into health, education, and security. Money may be spent on sanitation, hospitals, schools, recreation centers, health insurance, unemployment insurance, and old-age pensions. All these things are just as wealth-producing; they produce just as much satisfaction as factories, farms, and mines. The time is past when we must worry about the ability to produce sufficient food and clothing. This in spite of the fact that millions of our families still do not have a decent amount of them. A taxation policy of the Government which would insure that no idle money would accumulate would also provide more goods for our lowest-income groups. All money spent upon the above-mentioned services would create a market for the products of private industry.

The private capitalist does not simply believe in many factories. He does not believe that our wealth should be in our homes, but has an insatiable desire for more and more factories. He would cover the country with factories so that at some indefinite time in the always-coming future we should have an enormous productive capacity that could turn out goods for the benefit of all the people. Of course, when money is saved and spent in building factories, most of it becomes available for the purchase of the products of the factories. But let's follow this process of saving and investing to its ultimate conclusion. Suppose we all decided to save just as large a part of our income as we possibly could. We could live on bread and water, wear the cheapest sort of clothing, live in shacks, never take a drink, smoke a cigarette, buy a gallon of gasoline, or go to a movie. We could still exist and build factories, and as money came back to us, we could save it again and build more factories. But would we? There would be so little demand for the product of these factories that we would see them standing idle and would soon sicken of the program.

This reduces the picture to an absurdity. It has shown that we can progress too fast. But there does seem to be somewhere a rate of saving that can be constantly maintained. Carl Snyder has written that his investigations lead him to believe that the American people for the last 150 years have saved on the average about 5½ percent of the national income. Mr. Snyder also believes that this saving has been remarkably constant from year to year. But his contention that our progress has been made at a constant rate is contradicted by the findings of the Brookings Institution, which says that for several years during the 1920's we saved around 20 percent of the national income.

We all believe in progress, but it would seem to be impossible to progress faster than at some small but as yet undetermined rate. When we exceed that rate for a time, we invariably fall into a decline. Our progress so far has been by a series of booms and depressions. To the great majority of our people who feel the tremendous impact of the depressions, their elimination, or at least the easing of the impact, is of vital importance.

The Federal Reserve Bank publishes a chart showing the production of durable and nondurable goods from the beginning of 1919 up to date. A glance at the chart will show that just previous to the beginning of our three last major depressions, in 1920, 1929, and 1937, the durable-goods line rose to meet the non-durable-goods line. This same condition presented itself in December of 1939, and again total production turned sharply downward, and we entered a period of business recession.

For the last 20 years the production of durable goods as plotted on the chart has averaged 73 percent of nondurable goods, and for the period of prosperity from 1922 to 1929 the lines are roughly parallel, with durable goods averaging about 85 percent of nondurables. This should be some indication of the rate of saving which can be constantly maintained under a system in which savings go primarily into industry. Most financial writers, in considering the statistics of production, mention only the total volume of goods produced, completely overlooking the vital importance of the relationship between the two types of goods.

Again if we look at the chart for the past 6 years, we will find several periods of very steep advances in the production of durable goods. But all of these periods were of short duration, none of them lasting for more than 7 months, another proof that a high rate of investment in industry cannot be maintained.

We may reach the same conclusion by an examination of this rapidity of investment from an entirely different angle. Let us consider technological improvement accompanied as it is by technological unemployment. Such improvement is the building of more and better machines, the invention of new machines or the discovery of new processes by which goods can be produced with less human labor. As these new machines and processes come into use, men lose their jobs. Since 1924 a new method of rolling thin sheets of steel has been developed. Many new machines have been installed for this purpose, and thousands of laboring men have been displaced. It is obvious that the more machines we have the easier it will be to produce a given volume of goods, and it has always been claimed that the men would find work in other lines or perhaps in producing more of the same kind of goods. This has in the past been true, *but it takes time.* The men cannot find other work immediately, and it is impossible for them to quickly adjust themselves to the new conditions. This new process of rolling steel is progress, but again we find that if the rate of change is fast it will also be painful.

There is still another consideration which bears upon this rate of investment. Whenever we build new factories, we more or less displace and destroy the value of the older ones. If we go so fast that the older ones are still quite useful, the losses will largely offset the gains.

Up until the collapse in 1929, most of our investments had been made in industry. When a man buys insurance, he saves money and invests it in security; but the private insurance companies take the money and in their turn invest it in industry. Whenever an investment is made in industry, it sets up a debt. If an entirely new debt is created, the investor's money goes into production, it is returned directly to the business stream and is not hoarded. But investors very often buy old debts; that is, they may buy already existing bonds or shares of stock. In that case the money does not necessarily go into production, but the responsibility of putting it into production rests upon the man who sold the bond or other evidence of indebtedness and now holds the cash.

Government can, however, through its power of taxation invest without setting up a debt, and by investing in other things than industry enable us to save more money without throwing the burden of rapid change upon industry.

Consider old-age pensions. If a man during his active years wishes to provide for his old age, he will save money and buy, we will say, an annuity. Suppose the Government taxed the active generation and paid the annuities to the aged. If it based its taxation on ability to pay, it would largely decrease the possibility of idle money piling up, and it would not set up a debt upon which interest must be paid, although it would obligate itself to continue the system.

But old-age pensions would be relatively constant. It would be almost impossible to make them flexible so as to take up the slack of a decline in opportunities to invest in industry.

Now consider unemployment insurance. If men who lost their jobs either from the advent of new labor-saving machines or from

any recession in business activity were at once paid a part of their usual earnings, they would still retain a part of their purchasing power and the recession would be cushioned. This process would be flexible and would work automatically, but, due to the temptation to malinger, the men could not be paid their full wages. This would still leave an amount of purchasing power to be made up in some other way. A prearranged program of public works, ready to be set in motion by the Government whenever the necessity arose, would take care of that.

It has been suggested that whenever the national income shows signs of declining by an appreciable amount the Government get busy at once. Government cannot increase business by taking in taxes money that would otherwise be spent anyway. It can effectively prime the pump only by taking the money that would otherwise be hoarded or by deficit spending.

The experience of the last 10 years has shown us that it is not absolutely necessary to balance the Budget for each calendar year. We can safely overspend for a limited period. If the process were started soon enough, it would never be necessary to go very far. Our big mistake was in letting the national income decline so far before taking vigorous steps to counteract it. It used to be said that the difference between good times and bad times was only 10 percent, but the national income declined 50 percent from 1929 to 1932. It is the effort to regain that $40,000,000,000 that seems to be the superhuman task. It is much easier to keep a car in motion than it is to start it or accelerate the pace.

Amazing Story of Treason That Opened Norway to Germans

EXTENSION OF REMARKS

OF

HON. PHIL FERGUSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

ARTICLE BY LELAND STOWE

Mr. FERGUSON. Mr. Speaker, this article by Leland Stowe, showing what actually happened in Norway, should shock this Nation out of its feeling of smug security. Oslo fell because of intrigue boring from within. This should make every American citizen realize what can happen in every country in North and South America. We cannot depend on our Regular Army and Navy alone. Every citizen must realize that in the world of dictators we will have to defend this democracy of ours—build a Navy, equip the Army, have the greatest air force in the world, but most of all, we must train our citizens to protect this great country of ours.

I am opposed to compulsory military training, but we can train our men the American way. Every young man should be given a chance to learn to shoot a rifle. This could be done purely on a voluntary basis, without other military training. C. C. C. boys and R. O. T. C. schools should have this training in the use of arms. The citizens of this Nation should be ready to defend this country when and if we are invaded.

The article is as follows:

[From the Washington Evening Star of April 15, 1940]

AMAZING STORY OF TREASON THAT OPENED NORWAY TO GERMANS—NAVAL GUNS SPIKED, MINES DISCONNECTED, REPORTER DECLARES—VAST PLOT LET GERMANS WALK IN WITHOUT RESISTANCE, HE SAYS

(By Leland Stowe)

STOCKHOLM, April 15.—For the first time the story behind Germany's paralyzing 12-hour conquest of vital Norwegian ports on Tuesday, April 9, can be told. Between midnight and noon on the bewildering day, Norway's capital, all her principal seaports, and her most strategic coastal defenses fell into German hands like an overripe plum.

Norwegian people were stunned as the Belgian people must have been stunned in 1914, and most of them still have not the slightest conception of how this incomprehensible tragedy could have happened.

I spent these hours in Oslo, together with the only other American newspapermen who were on the spot—Warren Irvin, of National Broadcasting Co., and Edmund Stevens, of the Christian Science Monitor—and we ourselves could scarcely believe the evidence of our own eyes.

But I had to remain in Oslo through 4 days of German occupation to learn how this miracle of lightning naval and military occupation was made possible. Then I could scarcely believe my ears. After that, with the last train connections to Sweden severed, Irvin and myself decided to try somehow to get across the border. It was the only possible way to give a detailed account of the most astonishing thing that has happened since the second World War began.

PORTS SEIZED BY GIGANTIC CONSPIRACY

Norway's capital and great seaports were not captured by armed force. They were seized with unparalleled speed by means of a gigantic conspiracy which must undoubtedly rank among the most audacious, most perfectly oiled political plots of the past century.

By bribery and extraordinary infiltration on the part of Nazi agents and by treason on the part of a few highly placed Norwegian civilian and defense officials, the German dictatorship built a Trojan horse inside of Norway. Then, when the hour struck, the German plotters spiked the guns of most of the Norwegian Navy and reduced its formidable fortresses to impotence.

Absolute control of only a handful of key men in administrative positions and the Navy was necessary to turn the trick and everything had been faultlessly prepared. The conspiracy was about 90 percent according to schedule. Only in two or three places was it marred by unexpected hitches, but Norway's sea gates were already wide open.

For the success of the German plan, the capture of three key cities was essential, these being Oslo, Bergen, and Narvik. It is known that Narvik was betrayed to the Germans by its commanding officer. How Bergen's harbor defenses were taken remains a mystery, as far as I can learn. But most important of all to the Nazi plot was the immediate domination of Oslo Fjord with its mighty fortresses and the forcing of its virtually impregnable narrows at Drobak, together with the seizure of the great Norwegian naval base at Horten.

Only in this manner could the Germans penetrate to Oslo and deliver an almost irreparable blow to Norway's parliamentary Government. To seize all of Oslo Fjord and force its narrows would have appeared impossible to any foreign government except the Nazi dictatorship, but, by methods even more astonishingly efficient than those which it used against Austria and Czechoslovakia, the inconceivable was accomplished. Until now, I believe, the outside world has had to guess how it was done.

GERMANS SAILED NIGHT OF APRIL 4

To understand the conspiracy's scope one must go back somewhere near the climax of the plot. In Oslo I learned, on the most reliable authority, that Germany's sea forces and troop ships sailed from German ports for their Norwegian adventure during the night of Thursday, April 4—3 full days before the British mined the upper Norwegian coast between Bergen and Narvik. I also was informed with impressive assurance that the German Army chiefs strongly opposed Fuehrer Adolf Hitler on the plan to invade Norway because they insisted that communication lines for an army of occupation in Norway would be most dangerously limited and exposed. Nazi radical leaders supported Der Fuehrer and the decision was taken against the regular army chiefs' counsels.

On Friday night, April 5, while the German fleet and transports already were streaming toward Norway, an event of enormous historical importance occurred in Oslo and, until now, has probably never been reported. The German Legation held a soiree to which it invited 200 persons representing Norway's influential personalities. All the members of the government were invited, as well as many officers of the defense forces, leading bankers, shipping executives, and industrialists. The invitation emphasized the importance of the soiree by reading, "White ties, uniforms, and decorations."

Despite the great formality imposed, it was no official dinner. Norway's elite had been invited to see an "unusually interesting film." It proved to be the motion picture "Baptism of Fire," depicting in the most graphic details Germany's aerial destruction in Poland. For more than an hour the distinguished Norwegian audience sat in icy silence, gripped by the horror of many of the scenes. Afterward the German Minister explained that the film was not a war, but a peace, film, since it showed what nations which elected peace would save their people from suffering. The Norwegians left the German Legation that night filled with gloomy ominous thoughts.

QUISLING RETURNED TO OSLO ON APRIL 6

In Oslo I learned that Maj. Vidkun Quisling, leader of the pro-Nazi Norwegian party, called the Camling, and now Premier of the so-called national government set up after the German occupation was in Berlin at the time the film was shown in Oslo and while the expedition was being organized. He returned to Oslo on Saturday, April 6. On Sunday night the British sowed mine fields below Narvik. On Monday Berlin's press flamed against this provocation. In the first hours of Tuesday, April 9, Norway's naval defenses were betrayed to the German fleet and the first German troops landed at Fornebo, Oslo's airport, a few hours after daybreak.

This brings us to the methods by which Oslo Fjord and Oslo itself were captured from the sea early in the morning hours of April 9. The Germans could not enter without controlling the vital Norse naval base at Horten. At 1:30 o'clock that morning—3½ hours before Berlin's ultimatum was handed to Foreign Minister Dr. Halvdan Koht—the commander of three Norwegian warships at Horten received an urgent message. It was supposedly signed by Dr. Koht himself and accepted as coming direct from the Government via the Ministry of Foreign Affairs. It ordered Norwegian ships not to fight against the German warships which were about to come up the fjord and to put all their men ashore immediately—without their arms.

Without questioning the origin of the order, the commander ordered all his men ashore except stokers and messmen.

From here on a slight hitch which was costly for the Germans occurred. The Norse minelayer *Olaf Trygvason* had unexpectedly put in for repairs the previous evening. Its presence apparently was unknown to the leaders of the conspiracy in Oslo. This was the only Norwegian war vessel which did not receive the order and so remained in condition to fight. Afterward the Norwegian sailor who verified these developments declared, "It was only through treason that the Germans got in."

Meanwhile, an even greater coup had been scored by the plotters. The narrows of Oslo Fjord were mined and controlled from Drobak. About 1:30 o'clock in the morning of April 9 these mines were all rendered harmless by being electrically disconnected from the Drobak central. The mystery of who ordered this to be done remained unsolved when I left Oslo, but this move enabled the German cruiser to penetrate the narrows before dawn.

At 4:30, still half an hour before the German Minister handed the ultimatum to Dr. Koht, a German cruiser, believed to have been the *Emden*, accompanied by two submarines, reached Horten. The three Norse war vessels were completely helpless, but the little minelayer, *Olaf Trygvason*, blocked the entrance to the narrows. It immediately discharged torpedoes and sank the cruiser and the submarine. It was reported, though I was unable to confirm this, that the cruiser *Bluecher* also was sunk by the narrows fort, called Oskarborg.

GERMANS LANDED AND SEIZED HORTEN

In any case, all other crews were ashore without arms at Horten, and by daybreak the Germans landed marines and seized Horten. The way through the narrows was open and Oslo defenseless from the sea.

I talked to another Norwegian who was a member of the Horten naval base that night. He confirmed all the main details of the above events, including the fact that two German cruisers were sunk.

"Later the Germans got about 100 men ashore," he related. "There was some fighting. We had 4 men killed; the Germans, 2. But there was nothing we could do. The officers on our ships ran up white flags. We didn't know why, and I still don't know why. We thought they had orders from the Government.

In this fashion Norway's capital was betrayed from within and the German occupation of Oslo assured before its Government knew what had happened or parliament had courageously refused to capitulate.

Before the Germans' capture of Horten the Oslo government had already ordered mobilization as a precaution. Accordingly, before daybreak on April 9 scores of young Norwegians reported at the Horten railroad station. They were immediately surrounded by the German marines landing party and placed aboard other German ships which came up.

When German warships approached the formidable Oskarsborg fortress, at the narrows above Horten, so it was stated there afterward, they radioed the fort's commander not to shoot. According to report, the Nazi said: "We've got your own men aboard." The fortress guns remained silent and the German warships passed into Oslo's inner harbor. The occupation of Oslo was then inevitable.

Meanwhile, we had spent an eerie night in Oslo's Grand Hotel with a succession of air alarms, the first of which sounded at 12:35 o'clock in the morning, about the time mobilization was ordered. At first I could not believe my ears, as the sirens were so different from those in Helsinki. They sounded like motorcars honking in a traffic jam. Later, Stevens and I decided that the Norwegians were only air-alarming as a precaution. So I refused to get up until 7 o'clock, when a Finnish diplomat informed me of the ultimatum and the Government's decision to leave.

PLANES DOVE OVER THE CITY

At 7:45 o'clock, while we still had not the slightest idea what had happened in Oslo Fjord and at Horten, five Nazi bombers suddenly came roaring over the roof tops, so low they almost touched them. We watched them some, expecting bombs momentarily. For 2½ hours German planes dove over the city, always only three or five in number. They were intended to terrorize the populace into surrender and the authorities into inaction while the first troops landed by air at Fornebo outside the city.

Thousands of Osloans gazed curiously and fearfully, but no panic occurred. None of us dreamed that German warships were in the inner harbor and that Oslo was already doomed. We still thought that British ships and planes might come at any moment. It seemed utterly incredible that the narrows of Oslo Fjord could have been forced by the Germans and its powerful forts silenced.

The same madness of incomprehensible events continued all day long. First was mystification over the complete lack of defense of the city by its naval forces and coastal forts. Then it was the immunity of the low-flying Nazi planes to thousands of machine-gun bullets which pattered almost incessantly until after 10 o'clock. Then it was the further fact that only one antiaircraft battery seemed to be firing against the German planes, and this became silent after firing only a few shells, all of which were inexplicably wide of the mark.

Finally, at 10:30 o'clock, came an equally fantastic lull, in which German planes only circled occasionally, and absolutely nothing seemed to happen. Tens of thousands of persons, clustered in the streets and on the sidewalks, looked and waited, utterly baffled. We all asked where were the British, but also where were the Germans.

BATTLE TO HAVE DISPATCH ACCEPTED

Meanwhile, I had a great battle to get the telegraph office to accept a dispatch without a special government press card.

At 9 o'clock in the morning Stevens and myself could find no responsible chief at his post in the telegraph building, only groups of perplexed employees standing in the corridors—those few who had reported for work. It was only through the personal intervention of Raymond Cox, first secretary, who remained in charge of the American Legation, that our first dispatches were finally accepted—and the only ones which were allowed to pass for more than 24 hours.

But Norway's capital in every quarter was the scene of dazed disorganization, completely without leadership. Apparently even the men who had been called to the colors did not know where to go or simply forgot about it. The streets were filled with men of fighting age, all standing watching the German planes, waiting and speculating, but doing nothing and going nowhere.

It was like this until 2:30 o'clock in the afternoon. Then, as I rushed up to the hotel desk, a porter asked me, "Aren't you going out to see the Germans come in?"

"What do you mean, the Germans?"

"Yes, they are marching up Carl Johan boulevard any minute now."

I called Irvin and Stevens and we rushed outside into the strangest conceivable scene. Oslo's beautiful main boulevard was jammed with people, all flocking to see the Germans come in. Strangest of all, Norwegian policemen were calmly forming lines along the sidewalks and clearing the streets for the Germans' triumphal entry. One of the policemen told me that the Germans would be there within 10 minutes.

NONE OF DISPATCH WAS SENT

All this and what followed I told in a dispatch which was filed that afternoon—but the Germans had just taken over the telegraph building, and I learned 2 days later that not a line of my dispatch was ever sent. Meanwhile, we supposed that the world knew most of the story.

We waited half an hour on the hotel balcony with an excellent view all the way up the boulevard to its beginning, at the foot of the hill on which the royal palace stands. Shortly before 3 o'clock two trucks filled with a dozen German soldiers rolled up the street. The soldiers lolled in them, with their guns dangling, as if they had been assured that they had not the slightest resistance to fear. From the rear of the second truck two machine guns poked their noses meaningfully straight down the boulevard. Their operators lay prone with intent, hard faces, ready to fire. This was the only show of force, and all that was needed.

At 3 o'clock there was a murmur through the crowd. We could see two mounted men swinging into the boulevard in front of the palace, then six more, then the head of a marching column in field gray. The mounted men were Norwegian policemen actually escorting the German troops which were occupying the capital. We looked uncomprehendingly. Later I was told that Norwegian policemen never carry any kind of arms. This was also why they failed to fulfill the government's order to arrest Major Quisling.

The German column marched steadily nearer through a lane of 20,000 or 30,000 Osloans, fully half of which were men of military age. A tall, broad-shouldered officer, Gen. Nikolaus von Falkenhorst, and two other officers marched directly behind the mounted police. Then came the German regulars in columns of threes, as if to make the line look as long as possible. One out of nine carried light machine guns; all toted compact aluminum kits and bulky shoulder packs.

They were hard-muscled, stony-faced men. They marched with guns on their shoulders, with beautiful precision. Mostly, they stared straight ahead but some could not restrain triumphant smiles toward the onlookers. Several times General von Falkenhorst and the other two officers returned Nazi salutes from persons in the crowd who must have been German advance agents who had been busy in Oslo for weeks before the crowning moment. From our hotel balcony two Nazis gave the salute. I noticed in particular the beaming face of a chic, slim, blond German woman whose husband had been very active in our hotel since we arrived on the previous Thursday.

COLUMN COMPOSED OF TWO BATTALIONS

It was a thin, unbelievably short column. It required only 6 or 7 minutes to march past. It was composed of only two incomplete battalions—surely less than 1,500 men in all. Norway's capital of

nearly 300,000 inhabitants was being occupied by a German force of approximately 1,500 men.

The last of the German troops went by without a single jeer or hiss, without a single tear noticeable on any Norwegian face. Like children, the people stared. Thousands of young men stood watching this occupation parade. Not one hand or voice was raised. We could discern no sign of resentment upon any face about us. This was the most incomprehensible thing among all the incomprehensible things of the fantastic 24 hours.

Somehow it seemed as if curiosity was the strongest sentiment in the throng of Osloans who watched the Germans come in. No other emotion was betrayed in the countless faces we scanned anxiously. The only indignant people we met or saw that day were foreigners. The Norwegians of Oslo seemed stunned beyond recovery. Everyone acted curiously like children suddenly given a chance to see a parade of strange creatures out of prehistoric times—something which had no connection with real life.

But within 2 hours real life was making itself felt in Oslo. The Germans had occupied the capital without dropping a bomb, without firing a shot within the city limits. They simply had paraded in and taken it over much as Frenchmen or Italians might parade into a colonial interior village somewhere in Africa. Now they went to work. It was the urgent task of the tiny force of 1,500 men to seize key places in the nation's capital. They did it swiftly, without any fear of interruption.

When I hurried into the telegraph building I had hopes. There were still no German troops guarding the door. But immediately I knew it was too late. The tipoff came when a women employee, who had always addressed me in perfect English, spoke to me in German and tried to refuse my message on the grounds that I had no special telegraph card. But her chief had already accepted my dispatch at 1 o'clock. Finally she accepted it reluctantly, together with $64 worth of Norwegian crowns, which had to be paid in advance. Then she told me in German that I must see Fraulein Hauge tomorrow morning or no more messages would be accepted. Of course, my own and all other dispatches for the next 24 hours were never sent. The Germans had closed all the wires as well as telephone lines to the outside world.

GERMAN SOLDIERS IN PARLIAMENT

The next day, Wednesday, was as unbelievable as the events of April 9 had been. German troops now stood guard in Parliament, the university, the city hall, and other public buildings. My first shock came early in the morning as I passed the Storting (Parliament). Twoscore German soldiers filled the open windows on the third floor of the building, all singing lustily, while one pumped joyfully at his accordion. Osloans stood watching and listening on the sidewalks below. I looked closely, but so far as I could see they were simply curious and somewhat entertained.

As on the previous night after the occupation, the city's cafes were filled in almost normal fashion, and a large number of young men were lolling in them as if there were no such thing as a regular Norwegian Army, ready to offer resistance to an invader, only 50 miles north of the capital. Wherever we went we saw groups of young people clustered around German soldiers on guard. Some of them chatted pleasantly with the soldiers; some stared at their rifles and machine guns and asked questions about them. Many young girls gazed admiringly at the men in field-gray uniforms.

Outside the telegraph building I encountered an open car with half a dozen hardened German regulars who had a machine gun mounted for action. The crowd laughed and joked with the soldiers; one man, apparently half intoxicated, shouted "Deutschland über alles" several times. The soldiers laughed. The chief of the machine-gun crew looked down upon his admirers with an indescribable smile. He stood up proudly like a member of a conquering Roman legion who realized that he had the right to do so.

Such scenes, far from infrequent, had not ended when I left Oslo on Friday. By that time, however, many young Norwegians had disappeared from the capital with packs on their backs. A great many more went after the Germans landed 20,000 troops on Oslo's quays on Thursday afternoon. This sight at last awakened many men from the daze which they had been in. Many others, however, still remained in the capital on Friday—seemingly a large part of the men.

RECEIVED COURTEOUSLY AT NAZI LEGATION

On Wednesday evening we discovered that the Quisling government had been formed in room 430 of the Continental Hotel. I went there about a matter which was said to require the new premier's personal decision. Three Germans in civilian clothes and one Norwegian were in room 430. After waiting I saw Major Quisling very briefly, but he turned for advice to a sharp-faced German who introduced himself as Reichsamtleiter Schoedt. The Reichsamtleiter decided the matter while another German assisted in giving further directions. From there we were referred to the German Legation, where we were received courteously. It appeared that the German military censorship was not yet completely organized and nothing could be arranged about the transmission of dispatches until the next day.

Nevertheless, we made another call at the telegraph building. The public hall was deserted when we entered after passing German guards. Inside, two German privates were standing. While we wrote our cablegrams they began an exercise in mass psychology. They marched 15 or 20 steps, slowly and calculatedly pounding the heels of their boots down on the cement floor at every step. Each step echoed loudly and menacingly against the ceiling. After a few seconds' pause the two soldiers pounded their heels again.

They continued this exercise as long as we were in the hall. The echo of their hobnailed heels was amazingly eloquent.

This is how Norway's capital was captured without a bomb being dropped and without a shot being fired within several miles of the city.

I believe this to be the first story of any completeness to reach the outside world. I also believe it to be the most important newspaper dispatch I have ever had the occasion to write. It is my conviction, for the sake of history and also for the sake of the ultimate restoration of security and freedom in all three Scandinavian countries, that it is crying to be told now. I am closing it with the earnest hope that it will reach America and the outside world quickly.

Foreign Trade Zone No. 1

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

EDITORIAL FROM THE STATEN ISLAND ADVANCE AND REPORT OF THE FOREIGN-TRADE ZONES BOARD

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interesting editorial, Mercantile Mecca, which appeared in the Tuesday, April 9, issue of the Staten Island Advance. This editorial speaks of the growing significance and vast importance of foreign-trade zone No. 1, which was set up in Staten Island, N. Y., in pursuance of the bill which I introduced, and for the passage of which I labored for a number of years.

MERCANTILE MECCA

The port of New York, which embraces the water fronts of the North and East Rivers as well as the shores of the kills and the upper bay, is the Nation's greatest clearing house for raw products and manufactures from all corners of the globe.

Within that port—part of it, and yet apart—is our own Staten Island free port, more accurately called foreign-trade zone No. 1. We are so close to it that we are barely conscious of its rapid growth and of its growing significance as a mercantile mecca, a market center of the world where all lines of origin and destination converge.

Here, within a comparatively small, fenced-in space, is a cosmopolitan port in miniature—still in its infant state, but steadily growing more active, more extensive in its radiations of influence, and destined to occupy more space on the east shore—provided selfish interests can be stopped from undermining its structure.

Constant effort is being exerted at Washington by warehouse interests to destroy its prestige, and to bring about legislation to strangle and cripple it, for the benefit of private warehouses and to the detriment of the Nation's foreign-trade and good-neighbor policy.

Only 3 years ago the cargoes of the free port area were confined to occasional trifles such as "two bales of tweeds," or "three crates of glass beads." The spectacle of these huge pier sheds, so carefully segregated and guarded against smuggling, holding a couple of bales or packing cases was pitiful. What a contrast today!

The cargoes that are landed there to await regrading, resorting, packaging, bottling, labeling, mixing, blending, and ultimate import or reexport include such things as tobacco from Sumatra, brandy from South Africa, silver fox furs from Scandinavia, tungsten ore from China, corned beef from the Argentine, whiskies from Dublin, linoleum from Italy, millions of pounds of nuts from Brazil, watch parts from Switzerland, sisal fiber from Yucatan, diamonds from Holland, hides from Australia and South America, rugs from Persia. Their value is measured in millions.

The war has temporarily added to the zone's importance as a transshipping point, but its prosperity will not depend upon prolongation of hostilities. Economic competition will survive. The port of New York, because of the free port facilities available at Stapleton, will benefit by business and employment which would not exist under the old system of private bonded warehouse storage, with its lack of facilities, its reels of red tape, and restrictions which hampered and discouraged foreign business.

Everything possible should be done to encourage the growth and patronage of the free port. Nothing to discourage or hamper its normal, legal growth should be tolerated.

I also insert herewith the annual report of the Foreign-Trade Zones Board.

I cannot let this occasion go by without saying a word of praise for Thomas E. Lyons, executive secretary of the Foreign-Trade Zones Board, who has labored diligently to make a success of the operation of the foreign-trade zone under the Celler bill. He has worked incessantly and intelligently for the setting up not only of the foreign-trade zone at Staten Island, New York, but in other coastal cities as well.

The report is as follows:

FOREIGN-TRADE ZONES BOARD,
Washington, D. C., January 16, 1940.

To the Congress of the United States:

The Foreign-Trade Zones Board has the honor to submit herewith its annual report for the fiscal year ended June 30, 1939. There is also transmitted the annual report of the city of New York, covering the operations of foreign-trade zone No. 1, Stapleton, Staten Island, for the calendar year of 1938.

Public, No. 397, Seventy-third Congress, second session (48 Stat. 998, 1003), provided for the establishment, operation, and maintenance of foreign-trade zones in or adjacent to ports of entry of the United States, and created a Board consisting of the Secretary of Commerce, as chairman and executive officer, the Secretary of the Treasury, and the Secretary of War, to administer its provisions. The legislation authorized both public and private corporations to make applications to the Foreign-Trade Zones Board for the privilege of establishing foreign-trade zones. In the case of a private corporation, authority for filing an application must first be obtained from the legislature of the State in which it is proposed to establish the zone.

As contemplated by the act, a foreign-trade zone is an isolated, enclosed, and policed area, under Federal supervision, operated as a public utility by a corporation, in or adjacent to a port of entry, without resident population, furnished with the necessary facilities for lading and unlading, for storing goods, and for reshipping them by land and water; an area into which goods may be brought, stored, and subjected to certain specified manipulation operations. If reshipped to foreign points, the goods may leave the restricted trade zone without payment of duties, and without the intervention of customs officials, except under certain conditions. Such products cannot, of course, leave the trade zone for domestic use or consumption without full compliance with existing customs laws. Goods may not be manufactured or exhibited in such an area, but may be "broken up, repacked, assembled, distributed, sorted, graded, cleaned, mixed with foreign or domestic merchandise, or otherwise manipulated." The foreign-trade zone is subject equally with adjacent regions to all the laws relating to public health, vessel inspection, postal service, immigration, and to the supervision of Federal agencies having jurisdiction in ports of entry, including customs, to a limited extent.

Because of the experimental nature of foreign-trade zones in this country and perhaps in part because of lack of familiarity with the purposes of such facilities and the details of their operation, the establishment of such zones has proceeded slowly. The first grant under the act was made to the city of New York on January 30, 1936. That zone was opened a year later, on February 1, 1937, and is the only one now operating.

The only other zone to be established was under a grant made to the Alabama State Docks Commission, on September 22, 1937, for a foreign-trade zone at Mobile, Ala. That zone was completed and opened for operation on July 21, 1938, but its efforts to attract a substantial amount of business during the first few months of operation were unsuccessful. It was voluntarily closed in January 1939, and on the petition of the State of Alabama the grant was canceled by the Foreign-Trade Zones Board. While it is felt that 6 months' operation was too short a period to determine the zone's eventual success or failure, the newly created department of State docks and terminals, which succeeded the Alabama State Docks Commission, concluded that the operation of the zone would be unprofitable, and its maintenance too costly in its experimental stages to the State of Alabama.

A number of other port cities have evidenced an interest in the possibilities of increasing their foreign trade through the establishment of such zones. The Board of State Harbor Commissioners of California has given consideration to the establishment of a zone at the port of San Francisco, but the site originally selected was unsatisfactory. Also, in May 1936, the Governor of Puerto Rico gave consideration to the establishment of a zone at the port of San Juan. However, no applications for the establishment of zones were presented to the Board during the last fiscal year.

It must be remembered that the New York zone has only been in operation since February 1, 1937. Sufficient time has not elapsed to afford a very broad experience from which to judge the efficiency and value of its services. New York Harbor perhaps presents an exceptionally favorable opportunity for this type of development. Nevertheless, it is to be expected that the results of that operation will be carefully watched by other important ports of the country. If the New York operations prove valuable, it is to be expected that other port cities will eventually finance and operate similar activities.

NEW YORK FOREIGN-TRADE ZONE

The New York zone, "foreign-trade zone No. 1," utilizes a part of the municipally owned waterfront property at Stapleton, Staten Island, on which 11 piers were constructed during the World War period, but only occasionally used since that time.

At present the foreign-trade zone consists of four double-decked piers and the adjacent upland, a total of approximately 92 acres of land and water area. Two of these piers are equipped with semi-portal electric revolving gantry cranes and electrically operated elevators for handling cargo. The zone is segregated from surrounding territory by a land barrier in the form of a high fence of woven galvanized-wire netting surmounted by barbed wire, and a waterside barrier in the form of a photoelectric beam across the pier ends, both barriers establishing a perimeter of about 8,415 linear feet. Additional protection of the zone is afforded at night by a system of floodlights placed uniformly at about 50 feet inside the land barrier and on the several piers. Fifty-one of such lights are located on the piers and 37 on the land area. In addition, customs guards are on duty within the zone at all times.

In connection with its application for a grant the city undertook to construct certain facilities in addition to those already on the site. Plans for these additional structures were submitted and approved by the Board in connection with the issuance of the grant. Due to the experimental nature of the zone, however, the Board had heretofore authorized the deferment of the construction of these additional facilities.

With the expansion in zone activity the need for further structures has increased. On May 25, 1939, the city submitted plans for an extension of the present gatehouse, tanks for the storage of vegetable oil, and a utility building to be used primarily for repacking, distributing, sorting, crating, cleaning, mixing, and otherwise manipulating merchandise held in the zone. These plans were approved by the Board on June 29, 1939.

The erection of these new structures would not complete the plans originally submitted and approved, but would provide a substantial part of the additional facilities which the city is ultimately required to construct. The new buildings are much needed, since at the present time all zone operations, including manipulations, are performed on the piers. The difficulty of heating extensive pier areas and the inability to provide facilities for storing merchandise which requires controlled temperatures seems to have materially restricted the expansion of zone activities.

Construction has not yet been started on the new facilities now authorized. The Board is of the opinion that when such structures are completed the zone will be in a much better position to render the full services for which it was designed.

Summary of operations and fiscal condition

The books of the New York zone are kept on a calendar-year basis. Accordingly, its latest annual report, a copy of which is attached, covers only its operations for the calendar year of 1938. This report shows a gross operating income of $69,085.56, and operating and administration expenses of $116,508.46. Twenty-two thousand eight hundred and twenty-two dollars and twenty-nine cents of this latter sum represented the cost of United States customs guards whose services are paid for by by the grantee of the zone. We are advised that during the first 6 months of 1939 the activities of the zone continued to increase at a very satisfactory rate and that the operating results were much more favorable than in either of the two earlier periods.

During the year 1938 the city continued its work of improving and repairing the structures which were initially on the property. Its expenditures for that purpose during the year aggregated $228,543, and its total investments on that account including all items of expense in adapting the area for zone purposes at the close of the year amounted to approximately $997,546.

The statistical tables attached to the report of the city show receipt during that calendar year of 1,285 lots of merchandise weighing 77,790,893 pounds and having a value of $5,752,071.17. These figures represent a substantial increase over 1937, when 92 lots of merchandise, weighing 21,172,954 pounds valued at $1,174,293, were received in the zone. This gain is encouraging when it is shown that the number of different commodities increased to 152 in 1938, and came from 49 different countries, including the United States and its possessions.

Distribution of merchandise from the zone to 31 foreign countries amounted to 1,046,761 pounds, valued at approximately $151,951; and merchandise imported into customs territory of the United States from the zone in 1938 weighed 31,972,685 pounds and was valued at $3,729,860. The remaining merchandise in the zone on December 31, 1938, weighed 56,589,882 pounds and was valued at $2,769,546, being nearly five times the amount and having over three times the value of merchandise in the zone at the start of the year 1938.

Collection of customs duties on merchandise imported into customs territory rose from $29,936.26 in 1937, to $345,635.70 in 1938. The collection of this revenue was at no expense to the Government, the salaries of customs officials being borne by the grantee.

Merchandise was delivered at the zone in 1938 by 29 vessels engaged in foreign trade; 4 in coastwise and intercoastal trade; 153 in inland waterway and harbor traffic; 642 motortrucks; and 5 parcel-post deliveries.

Merchandise was shipped from the zone by 178 inland waterway and harbor craft, 2,388 motortrucks, and 5 parcel-post deliveries.

In order of value, the 10 leading commodities handled at the zone in 1938 were—household effects, $943,945; rugs and linoleum,

$893,708; Brazil nuts, $560,505; murumuru and babassu nuts, $511,730; cocoa beans, $511,608; wood pulp, $450,888; canned beef, $300,692; tobacco, $263,258; cod liver oil, $243,275; and raw flour, $154,375.

In order of weight the 10 leading commodities handled at the zone in 1938 were wood pulp, 14,539,550 pounds; murumuru and babassu nuts, 12,605,412 pounds; cocoa beans, 11,148,406 pounds; Brazil nuts, 5,924,369 pounds; raw flour, 5,781,380 pounds; household effects, 4,024,291 pounds; lumber, 4,016,000 pounds; canned beef, 3,718,817 pounds; palm-kernel meal, 3,342,480 pounds; and rugs and linoleum, 3,281,314 pounds.

In order of importance, by weight, the 10 leading foreign countries from which merchandise came to the zone in 1938 were Brazil, Sweden, West Africa, Argentina, Germany, Italy, Japan, Netherland Indies, Belgium, and French West Africa.

In order of importance, by weight, the six leading foreign countries receiving merchandise from the zone in 1938 were Cuba, Australia, United Kingdom, Spain, Japan, and Mexico.

Manipulative operations undertaken in connection with merchandise consigned to the zone have included sampling, cleaning, fumigating, curing, drying, sifting, grading and sorting, assembling, bottling, labeling, marking, and repacking. An examination of the manipulations most frequently employed shows that the opening, inspecting, repacking, and remarking of commodities was the procedure most in use.

While the foreign-trade zone is designed to encourage commerce, the New York zone is also serving a humanitarian purpose. European refugees summarily banished from their homelands have consigned their furniture and personal effects to the zone. At present there are several thousand lift-vans, boxes, crates, and bundles stored in the zone, representing in many instances the sole possessions of these unfortunate people. These articles may be kept in the zone indefinitely, subject to the usual storage charges, until the owners find homes in other lands to which their possessions may then be shipped.

MOBILE, ALA., FOREIGN-TRADE ZONE

Following 10 months of preparation, which included the erection of a land-barrier fence, installation of floodlights, and the construction of guardhouses, the Mobile foreign-trade zone was opened on July 21, 1938. For a brief period active efforts were made to attract business to the zone. Pamphlets printed in Spanish and Portuguese languages describing the facilities of the zone were sent to a number of Latin American countries. A representative of the zone made a brief visit to several of the Central American areas. As previously stated, the zone was voluntarily closed early in January 1939 and the grant canceled by the Board on April 14, 1939.

The Alabama State Docks Commission in its report to the State legislature for 1938 gave the following account of expenditures in connection with the establishment and first 5 months of operation of the foreign-trade zone; preliminary expenses, including cost of economic survey, $14,969.72; operating deficit, $15,540.30 (this item included cost of customs personnel); capital expenditures, $20,327.78; total outlay, $50,837.80.

BOARD'S ACTIVITIES DURING FISCAL YEAR

During the past fiscal year the Foreign-Trade Zones Board considered and acted on a number of matters concerning the administration of the act, which had previously been reviewed by the committee of alternates, and submitted to the Board with the committee's recommendations. Matters considered by the Board on which formal orders were issued included the adoption of a uniform system of accounts, records, and reports, for use by grantees, pursuant to the provisions of sections 16 (a), (b) of the act; an amendment to a previous order excluding gold and silver from foreign-trade zones, to permit the handling and storing of silver in foreign-trade zones; and the withdrawal and cancelation of the grant to the Department of State Docks and Terminals of the State of Alabama to operate foreign-trade zone No. 2 at Mobile. These, together with the previous numbered orders of the Board, are contained in the appendix of this report.

After a public hearing, the Board approved the plans submitted by the city of New York to erect additional facilities in foreign-trade zone No. 1, consisting of a utility building, and an extension to the present gate house; and storage tanks for vegetable oil. The estimated cost of the proposed improvements is approximately $500,000.

At the request of the mayor of New York City, the Board reviewed an agreement between the city of New York and a private company to operate the foreign-trade zone on an agency basis. The Board was of the opinion that the contract did not constitute a transfer of the grant within the meaning of section 17 of the Foreign Trade Zone Act. The Board also has before it a question raised by the American Warehousemen's Association relative to the scope of the Board's authority with respect to the publishing and filing of rates and charges in individual foreign-trade zones.

EDWARD J. NOBLE,
Acting Secretary of Commerce, Acting Chairman, Foreign-Trade Zones Board.

HERBERT E. GASTON,
Acting Secretary of the Treasury.

HARRY H. WOODRING,
Secretary of War.

Home Loan Bank System

EXTENSION OF REMARKS

OF

HON. HOMER T. BONE

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, April 18 (legislative day of Monday, April 8), 1940

ADDRESS BY HON. JAMES F. TWOHY

Mr. BONE. Mr. President, on February 10 of this year Hon. James F. Twohy, Governor of the Federal Home Loan Bank System, delivered a very important address in Chicago on the subject of the Federal Home Loan Bank System. Many of our people are very much interested in this subject. The address is very illuminating. I therefore ask unanimous consent that it be published in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I hope you will not ascribe it merely to etiquette when I say that I am sincerely grateful for your invitation to this conference. As far back as I can remember I have found a thrill in visiting Chicago. Here, to my mind, among all our cities, is the ideal campground for convention or conference. No one can understand our Republic who does not know this city, and no one can come here from whatever remote section of the continent and feel himself a stranger. Here you will not find the towering brilliance of New York, the exotic charm of San Francisco, the flavor of quaint New Orleans. But you will discover all the direct raw energy of the Nation, gathered from north and south, east and west, from every race and creed and color, here commingled in a dynamic fusion which is creating a mighty future, as yet unshaped and unpredictable. At this one great cross road of the Nation, where there are no through trains, because every incoming line ends here; where the farm barters from hand to hand with the factory, and the East meets West; where a world-famous university rises on the site of yesterday's log cabin, and remembers the Indian arrowheads buried beneath its classic cornerstone; those of us who will can see, as in a glass darkly, the looming image of America. No wonder a visit to Chicago, even without the stimulation of a gathering like this, is an excitement to the inquiring mind. It recharges the batteries.

Besides personal enjoyment, however, as the Governor of the Federal Home Loan Bank System, I recognized in your kind invitation another opportunity for that candid exchange of opinions with the men who manage our savings and loan institutions, which I regard as an essential and a continuing part of my job. Frankly, I am out to invite the criticism and to earn the confidence of the men who run this business, and of the State officials, the officers of your leagues, and the many experts throughout the country who are devoting their energies to its development. Without this counsel and confidence I do not know how we can hope to make our system the important and powerful factor in the Nation's business which our Government designed it to be.

The Governor of our system reports to the Home Loan Bank Board, which prescribed his policies and procedures. He transmits these through the 12 regional banks of the system, where they are translated in turn to our member institutions throughout the country. Certainly, I should feel remiss in my duty to our Board, to our regional banks and their members, and to the public whom we all serve, if I did not seek anxiously to make my office the clearing house it should be for examining, sifting, testing, and interpreting the best operating opinions of the industry. Our Board does not want the Governor's office to be an avenue for one-way traffic only. We can't sit in quarantined isolation, and define new and constructive patterns for a great industry without intimate, realistic contact with its operators. We need your collaboration in working out patterns of action, recognizing that it is your business which we are commissioned to develop and to safeguard in the interest of the public. We need sharp criticism, not only from within but from outside the industry, and I may say in passing that we are receiving a fairly generous share at present.

In thus emphasizing our desire and need of your criticism, however, I would not have you think that I interpret our system as merely a Government instrument for expressing the uses and wishes of the industry. Such an interpretation would degrade the principles upon which the system was founded, and stultify its true objectives.

It cannot be as simple as that, and if it could, I am sure you would not have it so. Our Government, when it tackled the disordered problem of thrift and home financing in this country at

the critical time when the Nation's entire mortgage structure was on the verge of collapse, created the Home Loan Bank System, not to follow but to lead the industry. The system was designed to eradicate dangerous abuses in this vital field of public service, to provide a sound pattern of operation, and to set up for the future protection of our people a national barricade against panic and decay. Its principles of organization are soundly American. It recognizes free enterprise, the need for profit, and the necessity for organic decentralization. But it can never function as designed, for the good of the industry and the protection of the public, without vigorous and independent leadership. That leadership, you may be sure, we shall do our best to give it.

In casting about for a topic which you might find interesting and helpful in these remarks it occurs to me that I can do no better than disclose, as frankly as possible, my own views of the Home Loan Bank System, particularly with reference to what I believe is required of us if its future possibilities are to be attained. As you know, I am newly appointed the Governor of the system, and I must confess that I am much more eagerly concerned at present with learning them rather than with expounding its nature and possibilities. It seems to me, however, that this very fact may prove of some advantage to these remarks, because it will at least give them new and fresh color, which is always a benefit, and it will serve as well to expose to your judgment, and I hope to your criticism, my own approach to a job which is bound, as I well recognize, to affect your business profoundly. A national system such as ours depends for success not only upon the basic principles of its organization but also, and perhaps quite as much, upon the men charged with its administration. What we do can hardly ever be more important than how we do it. In this three-dimensional world of ours the blueprint is proven in the performance, and in the long run performance will always reflect in strength and weakness the character of the men who direct it.

I have spoken of the blueprint, and I suppose it would be impossible to give you an intelligent idea of the scope of our task without first advertising to the general background and conditions out of which our system has embarged. My job as an administrator is largely one of action, but action can become something like nihilism in motion if it is not related to the thought and philosophy which motivate it. It is not doctrinaire theory to make a reconnaissance survey before you begin construction; it is a fairly good way to avoid complicating chaos. To build a road is a rough, tough job, calling for driving energy rather than fine theories; but the most headlong direct actionist who ever operated a steam shovel has to have a profile and grade stakes to go by unless he wishes his road to miss the tunnel when it hits the mountains.

I think you will agree with me that it would be impossible to make a fair assessment of our system, or give a true outline of its character without reference to the drastic upheaval in our economic life which called it into being, and the world conditions which, do what we will, are bound to color and condition its existence. It is a commonplace for each generation of men to mark its own period as earth shaking, and as somehow the beginning or the end of an era. That is part of the mysterious chemistry of our make-up, I suppose, and men go on doing it even though history is ever busy to erase their pathetic conviction and to reduce their succeeding ardors and aspirations to a uniformity not unlike the succeeding seasons of the year.

Now and then, however, a certain period in history is singled out for sweeping changes so violent as to reshape the patterns of human living, much as a geological slip might affect the face of nature. The foremost economists and philosophers are agreed that we of this generation are the more or less bewildered spectators and actors in one of these rare convulsions in human affairs to which chapters in important history books will be devoted. Certainly, this conclusion is confirmed by daily events the world over in characters very grim and terrifying. In our own brief lifetime we have seen in Europe the dizzy fall of democracy from a position of almost universal ascendency to a position hemmed in by deadly peril. Organized wrath is converging upon it from the "black" right and the "red" left with a cunning and a fury which threatens to sweep away not only democracy as a political form but many of the spiritual and ethical values of our civilization. This conflict, as I see it, is not a new philosophy challenging an old. No convinced believer in the corporative state as a form of government can find in Hitlerism any vestiges of his creed. No Marxist, however pop-eyed a contortionist, can square the circle of Stalin's sinister mind. This conflict is the raw force of pure destruction flung against democracy, because millions are persuaded of its corrupt infirmity. It is nihilism marching with axes against a power which it feels must be destroyed.

Now, you and I may believe that this bloody force in the world is a new diabolism which must be stopped before its insensate fury wipes out the precious inheritance of the race. Our impulse is to reach for a weapon to defend what we hold sacred. But in my humble opinion, our present course lies in another direction, and we should not suffer propaganda, however moving and sincere, to turn us from it. It is our duty, I believe, to prove democracy. By geography and by providence, we have the material means to make ourselves physically invulnerable. Our job is to summon the moral energies of the Republic to make our own principles truly work. If we succeed in providing our own people with a working economy suitable to their temporal needs and compatible with the personal dignity of man, we will preserve democracy. If we fail, we have more germs of Stalinism and Hitlerism and nihilism within our own borders than can ever be erased by victory on the battlefields of Europe. Democracy, if we truly believe in it as a social instrument for helping man fulfill his spiritual destiny, should be vindicated here at home where we are endowed with such abundant means to prove it. Our people are now making heroic answer to this challenge. Ours is not a resort to force, which so often is a declaration of bankruptcy smothered in martial music, but the effort of a proud and free nation grimly enlisting to defend its inheritance, in a spirit as authentic as Lexington. We will experience plenty of discouragement, fear, and frustration, for it is a job enormously difficult and complex to thrust a whole people forward along an economic front; but to the task we bring a rich endowment, and a warrant from the highest authority; the rest depends upon our capacity to work together, and our own vision and resolution.

The Home Loan Bank System is one salient in the economic line which our Government is throwing around the particular and important field of the invested savings of our people. We might well be alarmed if the tremendous transformation which is now spreading over our entire economic and social order did not take in also our basic business of managing and mortgage lending these savings for home ownership. It is true that the building and loan business, by more than a century of tradition, is geared to neighborly, intimate close-up operation. Nothing in business, I suppose, is more personal than a mortgage loan, and every safeguard should be erected to preserve the individual and personal character of the business. We must never permit the federation of our industry to dehumanize it. But without Federal direction to provide a parity and a proper relation with other Federal agencies in finance, and to furnish national strength and sanction in its reserves, in a word to bring our great industry in line with the swiftly developing economic pattern of all American business, believe me, gentlemen, your business would soon be thrust into the alleys in the back of cigar stores where some of your critics and competitors would like to put it and keep it.

No one distrusts bureaucracy more than I. I come from the far West where the pioneer tradition and the doctrine of laissez faire made its last stand on our continent, if not in the world, and I inherit a good healthy hatred of regimentation. I try to dodge the red-eyed medicine man running around the country with patent cures for our ailments, and new formulas for our salvation which violate the fundamental tenets of democratic dogma. We all know, by a kind of mass instinct, that the amazing welter of existence cannot be compressed into these ingenious algebraic equations, and we turn a far-away look on the expert with an easy answer, no matter how learnedly thick his spectacles. Strange creatures always appear in time of flood and fire, and, while we wrestle with the disaster, we segregate the harmless ones, and turn the looters over to the proper authorities.

Nevertheless, I am even more distrustful of the impenetrable mind which fears all progress, or worse yet, is perfectly unaware that any change is upon us. Very dangerous to us all is the fact, which John Stuart Mill points out and which all history attests, that great changes can creep like lava over communities only half conscious of what is befalling them. You will recall the three old ladies in Arnold Bennett's masterpiece, whose only recollection of the siege of Paris, which they had endured in their youth, was the unaccountable trouble they had experienced with the poultryman in 1871; and Anatole France's sardonic tale in which he shows us Pontius Pilate in a Roman bath, gossiping of his youth, and unable to recall the name of that just man whom he had sentenced to death as the procurator of Judea. After the fear of the Lord, I suppose, the beginning of wisdom in approaching any problem is to know the significance of the events which have created it, and the circumstances which condition it. In these times, with the rising river washing away our bench marks every day, and cracking our gages, there is little comfort to our anxious minds in the plump planter who would have us all singing mammy songs about the good old days. In the muscular job of reshaping our business we will get little benefit of counsel from the critic who invokes false charges of regimentation and bureaucracy to conceal his homesickness for the good old 1920's, that dead decade of speakeasy heroes and thinkeasy philosophers. In the forward movement of a whole nation on the march, we may have to leave that soldier by the roadside with his belt of blank cartridges.

The details of the legislation which created our System were patterned largely on the Federal Reserve Act and the Farm Loan Act. While its purposes and functions are not strictly comparable, the Home Loan Bank System is intended to serve thrift and home-financing institutions in much the same way the Federal Reserve System serves the commercial banks and the Farm Credit Administration serves in the financing of farm ownership.

Our great Federal Reserve System serves the commercial area primarily by supplementing the funds of local banks, particularly in times of emergency. It is thus a source of temporary financing. The Federal land banks in turn were established to accommodate agriculture. Not only do they constitute the sole source of funds for national farm-loan associations which lend directly to the individual farmer, but in addition, the funds are provided for a long period of time. In similar manner, the Federal Home Loan Bank System was created to provide for the needs of urban home financing. Because of the nature of the primary institutions which operate in the field, the bank system is empowered to make both long- and short-term advances. The latter afford protection to investors by making funds available to relieve any unusual requirements. The former furnish funds to member institutions to foster home building and home ownership.

Thus there have now been established in this country these formally organized systems of finance—commercial, farm, and home.

Here, then, is a system of major importance in the business life of the Republic. It is predicated upon principles which to my mind fairly approximate the prescription which America in the future will make for the management of its savings: That it be personal in responsibility and profitable and yet mutual and profit sharing; that it be privately owned and operated and yet publicly insured and regulated; that it be constructive and expansive and yet rigorously guarded against speculative abuse. It is wisely set up under Federal direction to provide a parity and a proper relation with other Federal agencies in finance, and to furnish national strength in its reserves. It is broken into district banks to insure regional responsibility and ready response to local needs and conditions. In principle and in pattern it is soundly conceived for the protection of the industry and the public which it serves. There are able men, I know, who are skeptical of our system and who attack it. Some of them are within the industry; some outside. As I said before, I respect their judgment and do not question their good faith. I welcome their candid criticism, but I would be wanting in the same candor if I did not express a friendly warning, as a matter of my own opinion, that they are on very dangerous ground in attacking the principles upon which the home-loan bank system is founded or the organized pattern of its operation. We are ready to take them on, and will let them choose the precise debating ground, whether it be the particular history and hazards of this business, an appraisal of our national fiscal system and our relation to it, or the broad question of how best to protect and use the people's savings, which is the ultimate test of all.

All of these observations, I well appreciate, are the broadest generalities. A beginner, however, in any job is well advised to walk around it first before arranging all his machinery. Our task, it is true, is bristling with specific problems, each one of which might be made the subject of our earnest discussion, because all of them in their eventual solution will comprise the ultimate effectiveness of our system. For example, there is the Federal Reserve System, the office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation. We have to work out a relationship there which will appropriately fit into the changing and developing fiscal plan of the Nation without invading the field of others or suffering a stultifying curtailment of our own. Or take the American Bankers Association—a great organization—and its savings-bank division. Here, too, clarification and an understanding must be reached which will be measured by the only true yardstick, the most effective service of our people. Or, again, take our State-chartered institutions and our relations with the State authorities, whether or not the institutions be insured. Principles must be stated and definitions formulated so exactly as to insure to the public our respective assistance and protection on a basis mutually respecting and cooperative. Then there is the question of supervision—a good "hot oil" subject. Here, too, the task is to extract essential principles, and the process, I suspect, will be predicated upon some fairly vehement and vigorous debate. But these and many kindred questions, though they constitute the substance of our present everyday work, may well wait upon a broader enunciation of our general objective from which, after all, they must derive. Moreover, of their nature, they do not belong so much in the school-masterly and unilateral field of the lecture room as in the harder and closer quarters of the laboratory. It is in conflict, criticism, and controversy, and in the cooperative way of experiment and trial and error, thank Heaven, that America attacks a problem, and it will be by these means that we will work out ours.

There are three major functions in my job as governor of your bank system which have been taking shape in my mind during my 3 months of wrestling with it. The first is to translate to the leaders in other and related Government agencies, to our banks, to our member institutions, and to the public an understanding of our service; what it is and is not; what it may become, and what it should not be; and to do so by methods and in language commensurate with its dignity and importance, and the profound respect I have for it. Frankly, I am out to eradicate a faint but widespread tendency to depreciate our vital function in the national economy; a tendency I may say not only evident among our critics and competitors where we might expect it, and where it will do us good, but also within our own ranks in our industry, where it can do us immeasurable harm. Certainly, our future importance and our real service to our people will be no greater than we think it, and we must not permit our great possibilities to be cheapened and truncated by little men of selfish purpose or no vision, whether they be outside the industry or within it. Speaking for myself, if you will permit the personal allusion, I could not work in an enterprise which did not command my honest respect and enthusiasm. Half of our troubles in this industrial age, I believe, arise from the fact that millions of men to whom work is as natural as flight is to a bird, spend their entire working hours and days and years on the assembly line of mass production, doing some senseless fragmentary bit of piece work which offends the spirit and degrades the natural creative impulse of man.

I believe our system can grow and expand its service to the public, and to an undreamed-of extent—not in any starry-eyed way, but by a hard work-a-day devotion to our real trusteeship—assist our people fulfill the dream of a better America. I am proud to have a hand in it.

The second function of my office is to encourage and promote the discussion and the dialectic which will truly create the system. We are only 7 years old, which, as I recall it, is the canonical age when reason only begins. Ours is not a fixed and frozen plan of action which has sprung full blown from the brow of Jove. It is a national system with its roots embedded in good earth, whose growth and health and harvest depend upon the nurture and care and pruning we give it. The particular problems I mentioned before, and a host of others like them, will only be solved by the friction of mind against mind in the dialectic of our experience. On behalf of your institutions on the one hand, and of the Board I work for on the other, I conceive it to be an important part of my duty to transmit from one to the other the freest traffic of ideas in order to develop our common usefulness to the public.

The third function I have in mind is the quality of leadership. I said before that we would try to provide the vigorous and independent leadership which the system needs. We recognize, however, that vigor and independence are by no means the only attributes of true leadership. There must also be restraint. It is quite as important to know and to respect the boundaries of authority as to act boldly within them. A captain can get in as much trouble roaming away from his company as ever he can by failing to lead them. The key to the democratic way of life is that we do not keep leaders who do not earn the job. We do not indulge the fantastic sovietism that everybody is his own boss until some slant-eyed dictator comes along to capitalize the fallacy. We know that no one can diminish his proper responsibilities, and yet continue to discharge them. It was not the Carthaginians who crossed the Alps; it was Hannibal who took them over, and we know from the lessons of history that officers who will act are essential to organization and to achievement. But it is part of the anatomy of leadership in our country that a captain functions by law and not by whim, and that he functions only so long as he deserves the job. The terms of his commission are his own qualities of courage and patience and vision.

I must confess to you that my first survey of your system gives me a very decent humility of mind before the magnitude of our job. Of course, we could slide over it if we would, but to make it what it is designed to be will tax and strain the best talents of us all. We shall make our share of blunders, you may be sure, with lapses and overlapses aplenty to confound us. It is a real assignment to balance the essential freedom of operation, which is our native way, with the effective Government supervision upon which our future depends. We will just have to chart a course in the historic spirit of good nature and determination, like the covered wagon caravans which brought the East to my part of the country. As with them, there is tension ahead of us, and hardships, and perhaps bickerings; but we shall also have prairie hen on the way, and now and then banjo music in the evening by the camp fire. Our discipline must be strong enough to avert a break-up and disaster, and loose enough for the free play of pioneer independence. We will probably lose some of our more reckless members to the Indians, for they lurk along our trail, too, and some of our children may wander away from the wagon train and get drowned in the river. But we will make the trail like those Argonauts before us did. We are of their blood, and we are pioneering as surely and as resolutely as they did, and for the same reason: because we mean to extend the frontiers of our civilization to make room for freer life. Beyond the plains, and the desert, and the mountains, lie fertile fields of plenty for our children if we have but the fortitude to reach them.

Order Sons of Zion

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, April 18 (legislative day of Monday, April 8), 1940

ADDRESS BY HON. JAMES M. MEAD, OF NEW YORK

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me at the thirty-second annual banquet of the Order Sons of Zion at the Hotel Astor, in New York City, on April 14.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am honored with this opportunity to speak to you on this happy occasion of your thirty-second annual banquet. Your great fraternal society has recently undertaken a magnificent project which has involved the collection of a large sum of money for the establishment of a colony in Palestine to provide a haven for

some 1,000 refugee families. The success of your undertaking, the enthusiastic humanitarianism of your society, and the worthiness of your objective commends itself to righteous people everywhere. I am sure you will succeed in fostering the ideals and aspirations which form the keystone of the arch in the reconstruction of the Jewish national home in Palestine.

In these troublesome times when intolerance, bigotry, and class hatred tear at the very vitals of human liberty, we need more of this spirit, more humanism and less barbarism in the hearts and souls of men.

Here in this most-favored land, we dine together tonight under happy circumstances. We have confidence that, fortified with the blessings of self-government and freedom of word and action, we are able to bend our united will into the avenues of progress and prosperity.

We are individually and collectively happy tonight because we all feel safe and secure. The future carries promise and hope of the fulfillment of our ambitions.

Here we enjoy freedom and order and enterprise under the protecting arm of our beloved democracy.

But in other lands there is less fortification against oppression. There bigotry beclouds the minds of leadership. There group is set against group, race against race, class against class. There doubts are instilled as to the worth of democracy. There religion is defiled, culture is stifled, and the higher aspirations of man is crushed to earth.

When the codes of religious, social, and political morality are violated by any system of government we must vigorously oppose that philosophy, and we must deny its infiltration into American soil. We feel that such violations to human rights have taken place under the totalitarian regimes, and therefore we must erect a bulwark of patriotic opposition to the inculcation of any such doctrine into this happy land.

Let us say again and again we believe in democracy. Let us repeat again and again for all the world to hear that we believe in defending the right of man to follow the dictates of his conscience. Let us by action and accomplishment demonstrate with unmistakable emphasis that we subscribe to a philosophy which permits and encourages freedom of personal and public independence in thought and action.

I ask you to live and breathe the spirit of democracy. I ask you by word and deed to typify the very embodiment of American principles. I ask you never to forget for one instant that American democracy stands for the enthronement of law and equity. I ask you to constantly sow the healthful seeds of good citizenship.

With diligence, with ample safeguards, and with a fundamental faith in our doctrine of government, we will be able to nip in the bud any sporadic or fly-by-night movement which may arise to plague or to threaten our citadel of freedom.

Current events in Europe involve not only the unfortunate victims who have been caught in the whirlwind of hate, but they involve every citizen throughout the world who subscribes to freedom, equality, and tolerance. With this in mind, we must take double caution lest these antidemocratic philosophies scatter their firebrands in our own peaceful land * * * lest here, too, the poison of oppression and bigotry threaten our national well-being.

What steps should we take to insure the preservation of our democratic institutions? What should be our plan of action in this battle of force against freedom? How should we emphasize the necessity for all our citizens to eliminate hatred of creed against creed, race against race, and to look upon one another, not as enemies but as brothers.

The answer, my friends, is threefold: First, we must rededicate ourselves to the Bill of Rights and reconsecrate ourselves to those basic principles of freedom and justice contained therein; we must resolve ourselves to a sustaining moral support of our heritage of freedom of speech, of the press, of worship, and of assembly—the sacred rights guaranteed to all Americans by our Constitution.

All of us, regardless of racial ancestry, or of differences in religious worship, must stand shoulder to shoulder in a united aim to eliminate racial and religious prejudice.

If such is our faith, it follows that we must not assume the role of a complacent, self-satisfied citizen lulled into the inertia of slumbering half interest. We dare not leave the arena of human rights to the despot or the demagog, thinking them to be but a harmless nuisance. Not if our eyes, ears, and minds are alert to the grim realities of today; not if we remember that democracy is not saved by laws alone, but by those who will speak for it, live for it, and, if need be, defend it.

Our second resolve should be to strive to provide for men the actual enjoyment of these liberties. "To be a free citizen," said that eminent American liberal, Justice Brandeis, "one needs a job, a minimum standard of living, a little saving, a little insurance. These are essential to the security of a free citizen." Ours must be a determination, therefore, to care for that group of citizens who, through no fault of their own, are without food, clothing, and shelter.

In the third place, we must be ever alert to combat sinister influences which may come to our shores from abroad. To those who would scoff at our institutions of self-government and who would ridicule our political philosophy which upholds tolerance and which extends a friendly hand to the oppressed everywhere, it would be well to remind them of our history—to recall the Protestants, Catholics, and Jews who came to our shores searching for the freedom, the opportunity, and the liberties we all now rightly enjoy.

We must forge new instruments and new methods to combat the blindness of the partisan, the passion of the jingoist, the vengeance of the bigot. Through education, logic, and understanding the clouds of prejudice must be dispersed.

As a nation we are devoted to the cause of peace. We condemn and abhor the persecution and oppression of unfortunate and defenseless minorities; we condemn and abhor class rule and government by violence.

We realize the conditions that exist today. We know that economic bewilderment has led people into strange and untried pathways of government—pathways that have, in many instances, led to the debasement of human dignities and of personal liberties. Let us resolve that that shall not come to pass in our country.

With that resolution in mind, let us not forget that it is our obligation, individually and collectively, to nurture peace in our hearts and to disseminate the philosophy of the good neighbor. In a world bewildered, overwrought, and unnerved by calamities which sometimes seem to challenge the ingenuity and intellect of man, a reassignment to religious ideals can conquer where moral skepticism, force of arms, and ruthless warfare must surely fail.

When the present European conflict is over, the wounds of men, of nationalities, and of regimes must be bound up by terms of peace. It must be a peace founded on an enduring formula, and that means that the elements of tolerance, reason, and morality must be given priority over all other considerations.

I think that we carry a portion of the responsibility for presenting to the world an example of fraternalism, neighborliness, and peace-loving behavior. The President of the United States has declared, "I hate war." The people of this Nation echo and reecho that sentiment. We will remtain a nation where peace abides.

Through our example and by our behavior we must indelibly impress upon warlike humanity elsewhere the unfaltering determination that is ours to stay out of military entanglements in foreign wars. At the same time we must impress the world with the fact that we are willing to assume our share of the burden in promoting peace.

Through united endeavor, and with a common purpose, such as that so nobly exemplified by the Order of the Sons of Zion, we will wage our campaign for peace.

We have the opportunity, the power, and the possibility of success. If we have the determination to succeed, our efforts will not be made in vain—for we can, and, I believe, we shall, succeed. America will then influence the world's new social and political order.

Abraham Lincoln and the Negro's Future

EXTENSION OF REMARKS

OF

HON. JAMES P. McGRANERY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

RADIO ADDRESS BY MAJ. R. R. WRIGHT, Sr.

Mr. McGRANERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered on February 11, 1940, by Maj. R. R. Wright, Sr., president of the Citizens & Southern Bank & Trust Co. of Philadelphia:

Today it is appropriate to speak of Abraham Lincoln and the Negro's future. For today is the eve of the celebration of the second greatest and most far-reaching event in American history; it's the birthday of Abraham Lincoln, and the seventy-fifth anniversary of the adoption of the thirteenth amendment to the Constitution of the United States.

Abraham Lincoln's achievements, and those of George Washington, like those of the Haitian Toussaint L'Ouverture and our hero—Frederick Douglass, matchless examples of our two great American spirits, George Washington and Abraham Lincoln—the one who founded and the other who saved the greatest and most powerful Nation still alive. Long live our United States of America, now freed from slavery and may she soon free herself from internal race prejudice and discrimination.

Abraham Lincoln's character had many phases and angles similar to the character of the Negro, particularly his exhibition of humor under the saddest conditions, and his uncanny belief that God would deliver him out of all troubles. Thus, it was Lincoln's greatness of heart, his sound common sense and his wonderful political sagacity, which met and overcame a crisis probably

unequaled in the world's annals. Born on a Sunday morning in a benighted hut, in a slave State, 131 years ago, Lincoln struggled upward to a manhood such as gave him a commanding position in a Government tainted with slavery which God willed that he should change into a Republic freed from slavery.

Never was the chief magistrate of a great nation confronted with a more difficult mission than that which confronted Lincoln. Elected by a minority vote of his fellow citizens, he assumed the Presidency of the United States surrounded by a hostile cabinet who had no confidence in his ability to guide the Nation. In his lonely presidency, Lincoln was like the freedmen liberated by a minority of the American people and left without a dime in the midst and at the mercy of their former slave masters. How astonishing has been their rise from their lowly estate. Few believed, 75 years ago, when the thirteenth amendment to our Constitution was adopted, that the freedmen would ever be in the condition to be incorporated fully into the American Government and civilization. But as the great God, who still rules in the affairs of men and nations, lifted Lincoln from his humble surroundings to the most exalted place in the Nation, so the same influence has guided the Negro along the line of moral, spiritual, educational, and economic progress into American citizenship.

Notwithstanding that, at the gate of American citizenship, that goodly garden of political, economic, social welfare and enjoyment, there appeared to be placed a flaming sword of racial and other prejudices which turned every way to keep the way of the tree of life, of that full and abundant life which our Constitution, as amended, guarantees to every citizen of the Republic. Notwithstanding these handicaps the Negro has met his difficulties as Lincoln met his difficult situation, with patient and courageous intelligence. Lincoln won. So must we win.

Starting with nothing, ignorant and penniless, now, without reciting statistics, we are happy today that what the Negro's 75 years in progress have accomplished stands for itself a luminous monument.

Lincoln changed the Republic's Negro people from a liability to an asset by restoring the Negro's initiative and liberating his energy.

After surveying the life and conduct of Lincoln, and the life and conduct of the Negro, I feel that the careful and sincere student of Lincoln and of the Negro must admit that the Negro has many traits like those of Lincoln. Lincoln's sweetness of disposition, his great patience of the wrong, his lack of memory for injustice, his forgiving spirit, his readiness to wait for the slow and patient development of opportunities, find a likeness in the Negro's patient and tenacious advance up from slavery. Gradually the Negro is now entering more and more fully and securely into American citizenship and life. In the future he will think more intensely, work more intelligently, and plan more definitely for the great task of true citizenship.

We are today, in the midst of a World War catastrophe and times look dismal, civilization shudders. We all feel it. Perhaps, no time in modern history have the world's leading statesmen so disappointed us. We agree with General Sherman about war. Hence as neutral nations we shed tears over the fate of Ethiopia, Czechoslovakia, Poland, Finland. Our own Nation may be tempted to take arms to fight for the freedom of people we have never seen.

Why should nations in this age have to resort to war to settle their differences?

And yet, envisaging the universal indignation at the attitude of the dictators, we are led to feel that this world-wide concern must mean that the spirit of altruism and brotherhood is not dead. The world is not going to the worst. While we know that the fate of our Republic is bound up with the fate of the world, we must not lose our heads. Forms and types of civilization may pass away as they have passed away, but the population of the world today is greater and more prosperous than ever; greater forms of civilization today than the ancients ever knew. Hence, no possible world catastrophe can permanently destroy the farthest reaches of our present civilization.

Therefore, why should the Negro despair with reference to his future? Can we not find enough in our past success to warrant the expectation that we shall be able to make the grade in our great country against any fate? We are getting more and more in step with advancing civilization. Let us patiently and wisely contend, as other citizens contend, for every right, immunity, and privilege accorded to any other citizens. As laborers, as farmers, as masters in industry, religion, and business, as scholars, scientists, and artists, let us seek to integrate more definitely ourselves into the thought and action of the American national set-up. Let us realize that no individual or race or nation can succeed without intelligent hard work and judicious savings from their work. We must solve our own economic problems.

Convinced that Lincoln was our benefactor and that our future is hopeful, let us make ourselves a more active and valuable asset.

I am willing to conclude that nowhere else in the world should the Negro have a better chance to think, act, to worship God as he pleases and achieve for himself as other human beings, than here in America. Ours may be a hard way; whose is not? We can take it. Let's go forward.

Our Choice—Decentralization of Governmental Responsibility or Government By a Centralized Bureaucracy

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

SPEECH BY HON. HATTON W. SUMNERS, OF TEXAS, THURSDAY, FEBRUARY 26, 1925

Mr. SUMNERS of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech which I delivered in the House 15 years ago, which is pertinent to the bill passed today:

Mr. SUMNERS of Texas, under general authority, extended his remarks on the creation of a joint committee to investigate and report to the next session of Congress with reference to the reduction of Federal governmental responsibility.

Mr. SUMNERS of Texas. Mr. Speaker, leave having been obtained, there is being printed herewith, in part, copy of a resolution pending before the Rules Committee, together with a statement made before that committee with reference thereto.

I wish it clearly understood that in what is said no reflection upon the personnel of Federal bureaus and departments is intended. Whatever of criticism there may be is directed against the policy of government under which bureaucracy develops and not against those who are carrying out that policy. I hope there will be no confusion on this point.

The resolution is as follows:

"Whereas the vast increase since its organization of the territory in which the Federal Government has jurisdiction, the natural development in such territory, and the shift of new governmental responsibility to the Federal Government have created an aggregate of Federal responsibility which is overloading its machinery and rendering it increasingly difficult to discharge with efficiency and economy through the agencies at its command either its original or its acquired responsibilities, and under which increasing responsibilities it is difficult, if not impossible, to prevent the Federal Government from becoming distinctively bureaucratic in its operations: Therefore be it

"Resolved,

"STATEMENT OF HON. HATTON W. SUMNERS, MEMBER OF CONGRESS FROM THE STATE OF TEXAS, BEFORE THE RULES COMMITTEE OF THE HOUSE

"Mr. SUMNERS. Mr. Chairman, this resolution proposes the creation of a joint committee to investigate and report back to the next Congress, if it can determine, how the Federal Government may be relieved of its governmental overload, in order that it may be able thereby properly to discharge its Federal duties. That is the primary purpose. Conferences with State officials and, as far as practicable, with the people are contemplated.

"Let us consider briefly the condition in which the three branches of the Federal Government find themselves at this time. First, the legislative branch.

"THE LEGISLATIVE BRANCH

"In the legislative branch of the Government gentlemen know from observation and from experience that matters of tremendous importance are acted upon without the membership, generally speaking, having had an opportunity to give the consideration which safety and good legislation require. Congress must have to do with the vast country between the oceans, from Canada to Mexico, with the Territory of Alaska extending up into the Arctic region; to the south in the West Indies are the Virgin Islands and Puerto Rico; farther down is the Panama Canal Zone; out in the middle of the Pacific Ocean are the Hawaiian Islands; and on the other side of the earth are the Philippines. Congress not only has to legislate for this territory in interstate, national, and international matters, but under our present system Congress is more and more being called upon to legislate as a State legislature, going further and further into the domain of State responsibility.

"There are thousands of bills coming in each session. If Congress legislates wisely it must not only study the proposed legislation, but it must know conditions in the sections of the country with which it deals. We have our committee work; we are called upon by our constituents to aid them in getting consideration of their matters with these bureaus which we are creating, and thousands of letters must be replied to in the course of a session. It is not a question of the ability of the present membership of Congress, but of human capacity. I do not care whom the people send here, this

accumulated governmental responsibility cannot properly be discharged by them. Nobody thus pressed can give the time and thought to the problems of the Federal Government which those problems require. There is not the slightest use for us longer either to deny or to undertake to hide that fact. That condition has to do not merely with efficiency but with the possibility of efficiency.

"DELEGATION OF RESPONSIBILITY TO COMMITTEES

"In trying to take care of the ever-increasing demands the Congress has already divided itself into what in many respects are little legislative bodies—we call them committees, but they are more than committees as committees were originally intended to function. The Members of Congress, not because they wish to do it, but because they are compelled to do it, follow to a dangerous degree the judgment of these small groups of men as distinguished from their own independent judgments based upon knowledge. It is beyond human capacity.

"DEVELOPMENT OF A BUREAUCRACY

"Not only that, but even with this dangerous arrangement, which increases capacity to handle volume at the sacrifice of safety, the legislative branch of the Government cannot take care of its overload, so that it makes a further sacrifice by turning over important legislative powers to the various rapidly multiplying bureaus of this Government; that is to say, the Congress will enact a general law and delegate to these bureaus the power to legislate as to details. We call their enactments rules and regulations. But in practical operation, insofar as the average citizen is concerned, they are laws. Not only that, but there is given to these bureaus the power to construe the rules and regulations which they make and the power to enforce them—the three powers of government. Contrary to our traditions, to our philosophy of government, contrary to all the things we profess to believe and against all the warnings of history, we are placing the three powers of government—legislative, executive, and judicial—into the hands of the same personnel, not one of whom is elected by the people.

"Not only has that happened and is happening to a greater and greater degree each year, but, as the power delegated to these bureaus accumulates around the heads of the bureaus those nearer to direct responsibility in turn are compelled to pass them on down to subordinates and from these subordinates to other subordinates, until the point is reached where some subordinate many times removed from anybody whom the people have had the opportunity to elect goes to the private citizen carrying with him all the powers of the great Federal Government.

"When he goes to that individual he does not go as one whom that individual has had a voice in selecting. He goes not as a responsible agent of popular government, responsible to the public; he goes as an appointed governor of the private citizen. As a practical proposition what can the private citizen 2,000 miles from this Capitol do to resist such an agent of the great Federal Government? That is the test. We have gone so far in increasing numbers and in increasing Federal powers that there is not, in fact, any elected person who in good conscience can be held responsible for the acts of these appointed persons. There are now between 500,000 and 600,000 persons scattered over this vast territory operating the machinery of the Federal Government. Only 533 of them are elected by the people, and all of them are located here in Washington, one little spot on the eastern border. There is no elected person who it can be charged, knows what the individuals of this appointed personnel are doing.

"THE JUDICIAL BRANCH

"Passing to the judicial branch of the Government, the thing which has happened with regard to the Federal judiciary is very interesting and indicative of what has happened with reference to the increase of governmental responsibility of the other branches of the Government. Until 1891 practically all appellate jurisdiction in the Federal system was vested in the judges of the Supreme Court of the United States. At that time Congress created circuit courts of appeals to relieve the Supreme Court. We now have nine of such circuit courts exercising appellate jurisdiction, much of which the Supreme Court formerly had.

"Notwithstanding that, the Supreme Court, in the judgment of this Congress, is compelled to have further relief and by a unanimous vote of both Houses a bill was passed by this Congress shifting much of the obligatory jurisdiction from the Supreme Court to these circuit courts of appeals. But no such possibilities of relief for the other two branches are to be found in our system. There can be but one President and but one Congress. It is true the State Governors and State legislatures afford possibilities of relief, but instead of moving legislative and executive responsibility away from Washington, as we are moving judicial responsibility away from Washington, the current of movement is toward Washington, the point where the overload already is.

"THE EXECUTIVE BRANCH

"I beg to direct your attention now to the executive branch of the Government. There is but one man belonging to that branch of the Government, the President of the United States, elected by the people, and that only in a qualified sense. Under the President there are more than 500,000 people on the Federal pay roll, operating the machinery of that one branch of the Government. I shall not discuss the element of expense, of unnecessary burden upon the taxpayers, or the system which we have developed of having the Federal officers and State officers working at the same governmental jobs, or of the policy of sending the tax gatherers into the States to collect money from the people, bringing it up to Washington and sending it back to the people from whom it was collected and fooling the people into the belief that they are getting something for nothing from Uncle Sam. I am talking about the result upon general governmental efficiency of this policy of concentration, without regard to cost.

"Has anybody little enough sense to imagine—when the duties of the President, dealing with all sorts of international questions and great national questions are considered, with the duty to make recommendations to Congress, the duty to examine and the power to veto every bit of legislation that we pass here, the necessity to make nomination of all the chief officers, and to do hundreds of other things—that Calvin Coolidge or anybody whom God has ever created or ever will create can supervise and direct any considerable part of what is being done by these 500,000 people who are operating the executive machinery of this Government within our own territory out among the States everywhere and into the farthest corners of the earth? Of course, he does not know what they are doing. And yet he is the only elected person of all that half million people, the only one directly responsible to the people.

"There is no use complaining of bureaucracy so long as the total of governmental responsibility concentrated in Washington is beyond the capacity of a government of the representative type to discharge.

"When the capacity of the ordinary machinery of the Federal Government becomes overloaded, these bureaus are the only agencies to which the overload can be shifted. When these bureaus have transferred to them such powers of government as it is necessary now to place in them, and they exercise those powers without effective supervision by elected agents of the people, as is now the case, we have a great Federal bureaucracy far toward its full development, regardless of what the Constitution provides.

"NATURE AND DEVELOPMENT OF OUR SYSTEM OF GOVERNMENT

"In this connection I would like to say a few things with reference to our Constitution, which I believe pertinent to this consideration. I will attempt only to touch a few high points. I am convinced that much of our confusion and of our difficulty has come from our acceptance as actual facts the mythological tales peddled over this country by Fourth of July orators and others of like sort as to the origin and nature of our system of government. These stories are all very fine and thrilling, and during our formative period where helpful, no doubt, to hold us together until we could develop into a nation, but they are utterly hurtful and confusing since that stage of national development has passed and the serious prosaic task of operating the governmental machinery which was established has come to challenge the genius of this generation. We must get it out of our heads that the 'fathers' established a self-adjusting, self-operating, bombproof, foolproof government. Our history runs counter to the fairy tales told to us by these Fourth of July orators. The 'fathers,' all honor to their memory, were too wise and too patriotic to attempt so impossible a thing as is ascribed to them. They well understood—those who assembled in the State constitutional conventions and those who assembled in the Federal conventions to complete the work begun in the State conventions—they understood that written constitutions cannot create a popular government, but that popular governments create written constitutions. The 'fathers' in 1787 understood that the constitution of popular government inheres in the nature of things; that it can no more be placed in the pages of a book than can a living human being be written into the pages of a book. What they wrote was descriptive, declaratory, interpretative, facilitatory, in a sense fixative, and was supplemental to the State constitutions which had already been adopted.

"Insofar as our Constitution is written, and in the sense that it is written, for each citizen, it is to be found in the document called the constitution of his State; there is where most of his constitution is to be found; and in the Federal Constitution. They are parts of the same thing. In theory, no; in fact, yes. We have passed the theorizing stage and are dealing with the facts of government now.

"I am taking a little time here, because I am convinced that there are a few basic things which we must get straightened out before we can properly consider what we should do in our present circumstances or how to do it.

"Our Constitution within historical times has been in process of development under natural law since the second century. I cannot cover that. It is an important thing, however, to have in mind. As a bearing upon our own task, it is necessary for us to have in mind also that in our own country we have passed through two periods and are now in the third. It would be more exact to say that we have passed through one period and are in the second. The colonial period was in fact a part of the formative period of our separate national development.

"During the formative period of our National Government, of any national government, where different territorial units are brought together into one governmental organization, there is tremendous pressure from the inside outward. During that period strength moves—it seems to move naturally—to the point of weakness. That is the period of concentration of governmental power, naturally and properly so.

"A constitution—written words—can never hold within itself the element of cohesive strength, especially among a people whose philosophy of government was, as expressed in the words of the Declaration of Independence, which became the battle cry of the Colonies, that governments 'derive their just powers from the consent of the governed.'

"During that period the Constitution acted as does the tape of the horticulturist, binding parts of different plants together. But the tape does not unite. It can only hold in proper adjustment and give Nature a chance. Our Federal Constitution held exactly that relationship during the formative period of our National Government.

"I do not know when we had grown together, but it is clear from the views expressed with reference to the annexation of Texas that by 1843 no minority of States in point of military strength could have left this Union without a civil war. If New England had undertaken to separate, we of the South would have joined with the other sections of the country to coerce those States back into the Union. There was one great weakness. I do not want to inject a matter that may raise controversy, but the tariff and slavery together helped to put an element of weakness between the two great sections, North and South. Those issues were as foreign substance between the sections. There was not the possibility of complete union between those sections until slavery at least was gotten rid of. At every other point there had been complete union. The States of these sections had united, but the sections had not. Suffice it to say that the union of the States is now a fact. The first period is now history. We have reached the point where no controversy can ever again reach through to test the strength of the Federal compact, whatever it may be. We are a Nation, created not by words nor Federal compact, but by nature. To all practical purposes we have ceased even to have a dual system of government. I know gentlemen will question that. I am just stating my judgment.

"We have a system of government, a Nation, a part of the governmental power of which is lodged in the municipality, part in the smaller units of government, part in the county, part in the State, and part here. In its construction it was built from the smallest unit upward. It functions from the bottom upward. That is its nature. We seem to have overlooked that fact. We are trying to operate it from the top downward. It cannot be done.

"OUR RESPONSIBILITY

"Our duty now and our responsibility is entirely different from that of those who in the Constitutional Conventions undertook to recognize and to declare the fundamental laws of popular government and to set up the machinery through which such a government may properly function. Our duty and our responsibility is also entirely different from that which obtained during the period when it was a question whether the Central Government—I do not use that designation in an exact sense—could hold the States together until they could grow together and thus form a nation. That has been an accomplished fact, at least since the Spanish-American War.

"We now have no further need for our very interesting mythology. I do not underestimate its former usefulness. Of the composite virtues, magnified, of the great men who wrought in that period, we builded a national shrine around which all the people of all the States could gather. That helped to strengthen at the point of weakness. I would not detract from those men or lessen in the slightest degree popular love and gratitude for them, but I would put them where they belong, upon a sane, humanly possible, historically true basis. That would better enable us truly to honor them by preserving the fruits of their labors and the heritage of centuries of governmental development, which, in a very definite sense, they transmitted to us.

"Popular governments grow as a tree grows. Man can help but he cannot create, and he can help only when he works in harmony with nature. Not only must those who establish the visible evidences of a popular government and provide its functioning machinery work in harmony with natural law, but those who operate that machinery must do that thing also. We seem to have overlooked that fact. We seem to have overlooked the fact that everywhere there is law which directs and limits human discretion. The physician recognizes it. The farmer recognizes it. The builder recognizes it, and those who operate the machinery of this Government must begin to recognize it. We will have to face about. Nature compels respect for her plan as much by the limitation imposed upon human capacity as by the capacities given to human beings. When the limit of human capacity is reached, that is the end of argument.

"Is there anybody in position to know the facts—Democrat, Republican, Socialist, or what not—who does not know that the total of governmental responsibility concentrated at Washington is beyond human capacity to discharge through any agency susceptible of popular control?

"REACTIONARY MOVEMENT

"Gentlemen, the present direction of movement is not progress. It is reaction; I do not care what sort of brand the individual puts upon himself who advocates it. I lay down this proposition, sound in theory, sound in governmental philosophy, and established by history, that after the completion of the formative period of a popular government, all true governmental progress, by the very nature of that system of government, must be in that direction which moves governmental power away from the central governmental agency where it accumulates during the formative period back toward the people into those governmental agencies more directly and more completely under popular control. The reasons for that are not founded in theory; they are founded in necessity. We face that necessity now. That is why I have introduced this resolution. This is not left to the will of statesmen. It is fixed in the economy of nature. Popular government is not an accident. It is necessary for human development, and nothing necessary for human development is left to chance. Human respect for nature's plan is secured by natural laws which human beings must respect or pay the penalty. We are paying the penalty not only here but in the States.

"DESTROYING STATE EFFICIENCY

"We are not only destroying the efficiency of our system of government at the Federal end by an overloaded governmental machinery but we are destroying the efficiency of the States. If we want to destroy the States as virile, efficient agencies of popular government, there could be no more effective method than our present policy of taking from them the necessity to discharge the powers that rest naturally within the scope of their governmental jurisdiction. That is what we are doing and doing largely by State and popular surrender as distinguished from Federal usurpation. That is a most remarkable fact. Can anybody question that the States are losing their dignity, their independence, their importance, and their vigor as sovereign units of government when he sees them bereft of responsibility, begging at the door of the Federal Treasury? That is not a beautiful figure. It is not a beautiful fact, either. There are exceptions as to individual States and as to individual officials of States, but this is true generally, not only as to States but as to the citizenship of the States.

"That is not all. We are not only destroying the efficiency of the Federal Government by the overload, and the vigor and governmental capacity of the States by this process, but we are doing a far greater harm than that. By taking governmental responsibilities from those units of government that are close to the people we are taking from the private citizens the necessity of a more direct grapple with the problems of their government, which problems and the necessity to work them out in good providence come to develop them for the bigger responsibilities of tomorrow.

"SYSTEM DEPENDENT UPON GOVERNMENTAL CAPACITY OF CITIZENS

"If this system of government is to endure, it must depend for its strength in the crises that are to come not so much upon its laws or upon the written provisions of its Constitution, or even upon the capacity of men in official position, but upon the virtue and the governmental capacity of its private citizenship. The present policy of creating a feeling of dependence upon a great central government is not calculated to develop such a citizenship. It is the sense of responsibility that sobers judgment, that develops civic virtue; it is the strength which comes from the struggle, from the grapple with the difficulties incident to the operation of a system of popular government which gives capacity. Nor can the lesson, taught by the penalty imposed for mistakes made, be dispensed with. How can we hope to develop a citizenship capable of dealing with the greater difficulties of tomorrow when we are constantly moving the power and responsibility, the necessity to govern, away from the people, away from those units of government wherein the private citizen has the more direct control and the larger share of responsibility? We have turned our backs on the lessons of history and are trying to operate our system of government from the top downward, in violation of the laws of its nature, and in violation of the laws of human nature as well.

"I do not care what the form of that government is; I do not care what the political philosophers say; if you injure the governmental capacity of the people, you strike at the foundation of governmental strength and at the ability of the people to protect their right against governmental and private oppression. We have not only to stop concentration, but we have to begin an intelligent decentralization of governmental responsibility.

"Whatever may be thought of the other reasons which I have given, there is one reason which no informed person will question either as to the fact or as to its sufficiency. This Federal Government has accumulated a total of governmental responsibility which is beyond human capacity to discharge through any governmental agency susceptible of popular control. I do not know whether or not what I have proposed would do any good. I believe it is the way to begin. I believe that if a joint committee were created to study our problems from the Federal end, to confer as I have indicated with State officials, to go really to the bottom of this situation and let the people of this Nation know the truth, it would help. We have not been telling them the truth about this situation because men do not like to go home to their respective constituencies and confess their lack of knowledge or the limit of their capacity. We are too much like a certain type of the old-fashioned school teacher who seemed to have the idea that they had to impress their students that all knowledge was an open book to them. I am willing to admit the truth when I say that important items of legislation pass through this Congress with regard to which I have very imperfect information, because it is the fact.

"Mr. BERTRAND. Have you any plan in mind?

"Mr. SUMNERS. As indicated in this resolution. I know we cannot drift along this way; I know this Federal Government is today more

bureaucratic than it is representative, and is drifting more rapidly each day in that direction. I am not unmindful of the difficulties before us. It is a big job. It is getting bigger all the while. The quicker we move, the less will be the task. We can do it because it has to be done. Things which have to be done can be done.

"I do have some ideas as to how to start, but I do not believe it would be good strategy for me to indicate now how I think this thing should be done—I mean decentralization brought about. I will say this: It cannot be done—I am speaking now as a practical proposition—unless the people will that it be done. Of that I am certain. That was had in mind when the resolution was framed. I have the most profound confidence in the capacity of the people of the United States to operate a system of self-government, if those with official responsibilities will discover the facts and tell them the truth. I do not underestimate the importance and the necessity of wise leadership. If the material for such leadership is not here now, it is in the body of the citizenship and can and will be sent here when the facts are made known to them.

"The CHAIRMAN. The general proposition with you is that you want someone to study the situation that has grown up here of concentration of power at Washington. That is the general idea?

"Mr. SUMNERS. Yes, sir; and to confer with State officers. This matter has to be handled as much at the State end as here. There is no use of the States deploring the loss of powers to govern unless they exercise the powers they have. They have to stand on their own legs. They cannot hold the strength they have, much less grow stronger, by leaning on the Federal Government in matters which lie within their governmental capacity.

"The CHAIRMAN. There is no question but that this is a very important proposition and so considered by very many Members of the House. It is an interesting study and will take a lot of time to accomplish definite results.

"Mr. NELSON. You would have to delegate a great deal of power to people who are not responsible.

"Mr. SUMNERS. Yes. And if we could get rid of non-Federal matters which destroy the possibility of supervision, it would be all right to do that.

"There are some things the Federal Government ought to do which it is not doing, but which under its present overload Members of Congress hesitate to commit the Federal Government to do. We hesitate to place more power in these bureaus because not only do we create these bureaus and turn over to them these powers, but the little group of elective agents of the people are so busy with responsibilities, which cannot be shifted, that they cannot supervise or control for the people what is being done by the appointed personnel which operates these bureaus. We are not only turning over the governmental powers to an appointed personnel, but to an unsupervised personnel. They are becoming with tremendous rapidity not agencies of popular government effectuating the public will but the unsupervised actual governors of the people, not only expending their money but exercising over them the most absolute and far-reaching governmental powers. Somebody elected by the people may find out about things that are done months and years afterwards, more often never at all. There are things which this Federal Government ought to do and would do if it could get rid of those things which the States can do, which are cluttering up the whole Federal machinery.

"Mr. NELSON. What the gentleman said was enormously true during the war. One lieutenant somewhere could bind the Government in a marvelous way.

"Mr. SUMNERS. Gentlemen, the plain facts about the matter are that we have made an awful mess of our job. It was the business of the 'fathers' to establish this system of government and it is ours to operate it. They established the machinery for a system of government with such a distribution of governmental powers as to render it susceptible of popular control; and we, with a rapidity unequaled in the governmental history of the world, by a concentration of those powers, are converting that marvelous system into a great Federal bureaucracy—a type of government in many respects the least efficient, the most expensive, the most susceptible of corruption and of tyranny of any of the known systems of government. Nobody can deny that. Is that not an important fact? Is it not time we were giving that fact earnest patriotic consideration?

"Regardless of who is responsible for the condition in which we find ourselves, whether the Congress in not having more vigorously resisted the pressure for centralization, or the State governments in not having insisted on the retention of their powers, or the people in having urged their representatives in Congress to function for them in shifting these governmental responsibilities, we face a situation which requires the united cooperative effort of the people and of their officials—State and Federal.

"It is my opinion that in one way or another responsibility is fairly well distributed. I will accept mine and have no time to quarrel with those who say they have none. I am trying to help deal with this situation. I feel confident that if a joint committee should be created and during this coming vacation devote itself to a study of our general governmental problems and of our governmental resources, consult with State officials, and, wherever opportunity presents itself, with citizens of the country, and formulate a clear statement presenting the situation as it is, I believe—I am certain to whatever degree judgment can give me certainty—that great good would result. Gentlemen, the general attitude of the public mind gives promise of helpful cooperation at this time. This is the time to act."

It will be of interest that there are in the executive departments of the Government, as of last December, 987,533 persons, and, based on the salary of that month, at an annual salary of $1,827,678,708.

Veterans' Hospital at Baltimore, Md.

EXTENSION OF REMARKS
OF
HON. WILLIAM P. COLE, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

Mr. COLE of Maryland. Mr. Speaker, for a number of years the Maryland delegation in the Senate and in the House has been very active in support of a plea from the veterans of Maryland, with which the delegation has been uniformly in sympathy, for the construction of a new Veterans' Bureau hospital in or close to Baltimore City.

Sometime ago I introduced a bill in the House authorizing the construction of such hospital, and Senator TYDINGS introduced a similar bill in the Senate. The Federal Board of Hospitalization of the Veterans' Bureau, following a public hearing attended by Governor Nice, then Governor of our State; Mayor Jackson, of Baltimore; representatives of all veteran organizations in Maryland; and many other public-spirited men and women, approved the project.

For several years there has been an effort made to secure the necessary appropriation, but other hospital plans on the approved list ahead of Maryland were given preference. In the early part of 1939 the Maryland delegation was advised that recommendation for the construction of the veterans' unit in Maryland, to be built in or near Baltimore, had been recommended by the Federal Board of Hospitalization to the Bureau of the Budget, and it was felt that finally the establishment of this much-needed veterans' facility was at last a reality; but the demand for further economy prevailed, and in lieu of funds being appropriated the Veterans' Administration was authorized to entertain offers for proposed sites in or near Baltimore. In the early part of the present session of Congress it was thought the funds would become available.

The Maryland delegation was disappointed in January 1940 to find the Bureau of the Budget did not recommend this project and, as will be found in the record, during the discussion of the Interior Department appropriation bill, hope was expressed that before adjournment of the present session it might be found possible to include this item in a deficiency appropriation bill.

Because of the delay the Maryland delegation in the House and representatives of the veteran organizations of Maryland, speaking through Mr. James B. Fitzgerald, department commander of the American Legion of Maryland; Mr. James H. Arther, department commander of the Veterans of Foreign Wars of the United States, Department of Maryland; Col. Henry S. Barrett, department commander, United Spanish War Veterans of Maryland; Mr. Albert Meid, Jr., commander of the Disabled American Veterans of the World War; and others, held a conference and decided to bring their appeal directly to the President, with the hope that necessary appropriations to carry out the long-awaited veterans' hospital for Maryland might be expedited and become available during the present session of Congress. To that end I was requested by the group, as dean of the Maryland Representatives in the House, to present this appeal to the President. I did so by letter under date of April 12, setting forth in substance what I have outlined above. I am happy to say I am in receipt of a letter from President Roosevelt in acknowledgment of my

letter, and because of the tremendous interest which I know the veterans and their friends in Maryland, as well as the Maryland delegation, have in the position President Roosevelt has taken, I insert herewith the letter from the President:

THE WHITE HOUSE,
Washington, April 17, 1940.

Hon. WILLIAM P. COLE, JR.,
Dean of the Maryland Delegation, House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: I desire to acknowledge receipt of your letter of April 12 in regard to the need for a new Veterans' Administration facility for the State of Maryland, and I note that the veterans of that State have taken up with the Maryland delegation the matter of urging early action in regard thereto.

Your letter indicates that you are familiar with the study of the future hospital-construction program which has been before the Federal Board of Hospitalization for some time. The Board submitted to me for my consideration, after the adjournment of the first session of the Seventy-sixth Congress, a construction program as a result of its studies. Between this date, the date of the assembling of the present Congress and the preparation of Budget estimates to be submitted to this Congress, I am sure you are aware of the new problems which arose making unusual demands for expenditures in connection with our national defense. The Federal Board's study had to do with making provision for additional beds, looking to the future and at the time that we expect to reach peak requirements. Because of the unusual current demands it was necessary to defer new construction projects for later consideration.

More recently I have directed the Administrator of Veterans' Affairs, who is Chairman of the Federal Board of Hospitalization, to cause the Board to make a comprehensive review of the entire hospital construction needs and to submit to me, on or about May 1, a complete program with recommendations covering the entire subject. I know that the Board will give full consideration to the requirements of the veterans from your State, and you can assure the veterans that their interests have not been overlooked because in the authorization of the new naval hospital which is being built at Bethesda, Md., provision is being made for 250 additional beds for veterans of that institution.

When the report of the Federal Board is before me, I will be in a better position to indicate to you and others interested just what action we may be able to take in providing new projects looking to our future requirements.

Sincerely yours,

FRANKLIN D. ROOSEVELT.

In behalf of Governor O'Conor, of Maryland; Mayor Jackson, of Baltimore City; the veterans of Maryland, and their many friends who are so much interested in this project, and speaking for the Maryland delegation in Congress, I hope sincerely the foregoing expression of interest from President Roosevelt means funds for the new building in question will be available before adjournment of the present session of Congress.

Analysis of Logan-Walter Bill

EXTENSION OF REMARKS
OF
HON. LUTHER A. JOHNSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1940

MEMORANDUM BY LOUIS G. CALDWELL

Mr. LUTHER A. JOHNSON. Mr. Speaker, under leave to extend my remarks, I am inserting herewith a memorandum prepared by Mr. Louis G. Caldwell, an attorney of Washington, D. C., and Chicago, Ill.

Mr. Caldwell is a very able lawyer and active practitioner, and is a member of the American Bar Association and has had considerable experience in dealing with departmental regulations, and litigation affecting same, and it is believed that his analysis of the Logan-Walter bill will be helpful, since he has a practical rather than a theoretical knowledge of the subject. The memorandum is as follows:

MEMORANDUM ON LOGAN-WALTER BILL (S. 915 AND H. R. 6324)

The bill is really a combination of two bills: (1) to regulate Federal administrative agencies in the making of rules and regulations, in other words, their quasi-legislative functions; and (2) to regulate Federal administrative agencies in the determination of particular controversies, in other words, their quasi-judicial functions. Section 1 is devoted to definitions and section 7 to exceptions and reservations. Both sections are applicable to the two portions of the bill.

Although the bill has been greatly improved over the original draft submitted to the American Bar Association, it still is full of flaws, ambiguities, and even incongruities. In order not unduly to extend this memorandum, I shall for the most part pass over such matters. Some of the more important will be mentioned under the appropriate headings below.

I. DEFINITIONS

An "agency" is defined in the bill as an establishment having one chief officer as the immediate head. An "independent agency" is defined as a board having two or more officers at its head. These definitions raise questions that are difficult if not impossible to answer. Do they mean that the Civil Aeronautics Administrator and the Civil Aeronautics Authority will be governed under the two entirely different procedures specified for these two kinds of agencies in section 4 of the act? What do they mean as applied to the borderline cases where agencies are established within the departments for budgetary or other limited purposes but are otherwise independent?

The other definitions in section 1 contain provisions which almost defy analysis, particularly when taken in connection with the later sections of the bill.

For example, "decision" is defined as "any affirmative or negative decision, order, or action on specific controversies which determines the issue therein involved." What is meant by a "negative decision, order or action"? If it means a "failure to act," as it apparently does under section 4 (b), how can it be expected that any agency will send a registered letter notifying the aggrieved person of the failure to act, and how can any such person give notice of his objections within 20 days thereafter, as required by section 4 (b)? What are "specific controversies"?

"Controversy" is defined as "any dispute or disagreement concerning any claim, right, or obligation for or against the United States and any refusal to grant any license, permit, or other privilege." Just as frequently as not, the granting of a license, permit or other privilege to A will adversely affect the interests of B. If the Federal Communications Commission grants a license to a new broadcast station, it usually adversely affects the interests of existing stations because of interference or for economic reasons. The granting of a certificate of convenience and necessity under the several statutes regulating various forms of transportation frequently aggrieves existing carriers that will be injured by competition. It is not clear that modifications of license or renewals of license are covered by the definition although both are frequently as important as the original license. The definition, furthermore, is so broad as to require a lot of judicial interpretation before it makes sense.

II. RULE-MAKING FUNCTIONS OF AGENCIES

Sections 2 and 3 have to do with the quasi-legislative or rule-making functions of Federal administrative agencies, both of the one-man and three-man types.

Section 2 makes notice and hearing prerequisite to the adoption of any regulation or amendment thereof and further requires publication in the Federal Register within 10 days after approval. The regulation "shall not become effective until such publication, except when the President declares that a public emergency exists."

With respect to regulations now in force, any person substantially interested is given the right to subject any regulation to notice and public hearing.

Section 3 gives the right of appeal from determinations having to do with regulations to the district court of appeals. No rule may be held invalid except for violation of the Constitution or for conflict with the statute or for lack of authority on the part of the agency. The court may order the taking of evidence. The section stipulates that nothing therein contained "shall prevent the determination of the validity or invalidity of any rule which may be involved in any suit or review of an administrative decision or order in any court of the United States as now or hereafter authorized by law."

Section 2 (d) provides that no person shall be penalized for reliance on a rule which is later rescinded or declared invalid for a period of 30 days after publication in the Federal Register of the rescission or determination of invalidity.

Section 2 (b) provides, with respect to statutes hereafter enacted, that regulations shall be issued within 1 year after the date of enactment "subject to the adoption thereafter of further rules from time to time."

These sections 3 and 4 are the basis for the principal objections against the Logan-Walter bill on the part of the Federal administrative agencies themselves. In my opinion, their objections are, on the whole, well taken. My reasons are as follows:

1. The sections impose drastic procedural restrictions with respect to functions as to which there is no noticeable or prevalent evil. On the whole, the procedure of Federal administrative agencies in adopting regulations has given general satisfaction, including agencies such as the Federal Communications Commission, which otherwise are subject to widespread criticism. It is true that occasionally regulations are adopted which are regarded as unsound, but this is usually not the fault of the procedure but of the wisdom or philos-

ophy of the agency. Even the must-discussed "censorship" regulation of the Federal Communications Commission in its rules governing international broadcasting was given a very full hearing, was suspended, and has stayed suspended ever since.

2. The overwhelming bulk of regulations do not require such formal procedure. They are better handled by informal conferences between the interested parties and the agency's experts or, on some occasions, by the traditional investigatory methods of questionnaires and correspondence. Usually highly controversial matters are set for public hearing, which operates for the protection and education of the agency as well as for the parties. There probably are particular kinds of regulations which always should have formal hearing, but such instances should be provided for specifically by Congress—and usually are.

3. Administrative agencies should be encouraged to express their principles and policies in formal regulations and not discouraged by burdensome procedural obstacles. A regulation, even if imperfect, is much better than a haphazard principle recognized in today's decision and ignored in tomorrow's. It leads to uniform and undiscriminating enforcement, and, if too harsh, is quickly modified or repealed. It makes the agency's principles easily accessible to the lawyer or individual wishing to inform himself. The provision in section 2 (b) requiring the issuance of regulations within 1 year after the enactment of future statutes means precisely nothing. Any agency can give a colorful performance of this obligation without actually accomplishing anything. No agency in a rapidly developing field, such as radio or aviation, can possibly foresee what regulations will be necessary next year or even next month. The imposition of a burdensome procedure will, in my estimation, tend to discourage the adoption of regulations, if it has any effect at all.

4. It is difficult to foresee what will be before the reviewing court on an appeal. The determination will have to be more or less in vacuo. The tendency may be toward requiring that the full justification for the regulation be in the record in the form of evidence. This would be unfortunate since, in exercising a legislative function, an agency should be permitted to consult all legitimate sources of information. In making regulations its function is very similar to that of Congress in enacting statutes. Congress may, and usually does, have hearings before its committees but does not, as a rule, have formal procedure in such hearings, may dispense with hearings whenever advisable, and is entitled to rely on information obtained from other sources.

5. The reviewing court's determination of a regulation's invalidity is necessarily final and the agency has no further recourse. The reviewing court would be sitting as a superior administrative agency and its determination would not be appealable to the United States Supreme Court. If the reviewing court holds the regulation valid, then its holding has accomplished nothing, since it is still just as much open to attack as before by the usual methods.

In a word, sections 2 and 3 subject the rule-making process to a very heavy burden whereas, so far as I know, there is no evil calling for so drastic a measure.

III. QUASI-JUDICIAL FUNCTIONS OF AGENCIES

This subject has three subheadings, (1) the procedure prescribed for agencies with one chief officer as the immediate head, (2) the procedure contingently provided for "independent" agencies, that is, agencies having two or more officers at the head, and (3) judicial review of proceedings under the act before either kind of agency.

1. Procedure prescribed for one-man agency

Section 4 (a) to (d) prescribes the procedure for determining "controversies" and for reaching "decisions" before agencies with one chief officer as the immediate head. Presumably, these provisions apply principally to the 10 executive departments of the Government, although, as already pointed out in connection with the definitions in section 1, it is difficult to tell whether certain agencies come within one classification or the other.

The bill directs that every head of an agency shall, from time to time, designate such three-man intra-agency boards as may be necessary or desirable. These boards are to be designated from among the employees of his agency, one of them to be a lawyer and to act as chairman. When not engaged in the hearing of "administrative appeals," these employees are to be assigned to other duties in the service of the agency. Employees who have participated in a particular case or in the preparation, draft, or approval of any rule involved, may not sit "in appeal of the case or application of the rule." It is specified that "each board shall be impartial, free, and independent in the hearing and determination of administrative appeals." The bill contains no definition of "administrative appeals" but it must be assumed that its meaning is intended to be coextensive with the definitions of "decision" and "controversy."

Procedure may be invoked by any person "aggrieved by a decision of any officer or employee of any agency" by notice in writing of objections to the head of the agency specifically requesting that the "controversy" be referred to a board. The objections are thereupon to be promptly referred to such a board, which is to afford the aggrieved person a full and fair hearing. Any person "having a substantial interest in the controversy" is given the right to intervene. Within 30 days thereafter the board is to "make written findings of fact and a separate decision thereon which shall be subject to the written approval, disapproval, or modification of the head of the agency concerned or of such person as he shall designate in writing to act for him. A copy of the findings of fact and decision showing the action, if any, of the head of the agency concerned, or his representative, shall be filed in the agency as a part of the written record in the case, and a copy shall be mailed to the aggrieved person and to the intervenors, if any."

There are further procedural provisions, and also a provision covering cases of emergency where "administrative action or inaction" may take place before hearing subject to an award of damages to the aggrieved person. These provisions, however, raise questions of detail which may be passed over in this memorandum.

In my opinion the procedure thus provided by the bill is highly objectionable for a number of reasons (in addition to the uncertain scope of matters covered):

1. The bill sets up, and tends to perpetuate, an unsound model for the adjudication of administrative controversies, vastly inferior to what has already been provided either by statute or regulation in a number of agencies. It may be conceded that a doctrinaire separation of the functions of prosecutor and judge is not practicable or feasible at present (although on the whole highly desirable in controversies that correspond in gravity to those usually heard by courts). On the other hand, there is no reason why Congress should now go on record that in all administrative controversies the desired separation of the two functions should be completely abandoned, including a number of instances where fairly satisfactory procedures have been worked out by agencies after years of experience. In this connection the following features of the bill should be noted:

(a) The head of the agency, who is in reality the party defendant, appoints the board from among his own employees. Under such circumstances it is idle for Congress to provide that such a board "shall be impartial, free, and independent."

(b) While the board is to make "written findings of facts and separate decisions," they are to be secretly submitted to the head of the agency (or his delegate), who is to have unlimited power to approve, disapprove, or modify the findings and decision before the parties are advised of them, and no party is to have opportunity to be heard by the head of the agency (or his delegate) before he approves, disapproves, or modifies. So far as appears from the bill (although this is ambiguous), the findings of fact and decision served upon the parties will not distinguish between the findings of the board and the revised findings of the head of the agency. In any event, under the doctrine of the Morgan cases, a serious and perhaps unconstitutional defect in procedure is present.

(c) It must be kept in mind that the findings of fact thus reached are binding on the reviewing court unless "clearly erroneous" or "not supported by substantial evidence" (sec. 5). The bill provides, therefore, for no independent adjudication of the facts, but simply for an adjudication by one of the parties most interested, namely, the head of the agency.

2. Subject to the foregoing, the procedure may serve sufficiently to cover sporadic or occasional disputes between individuals and the Government arising out of such matters as breach of contract, torts, and the like, where there is no regulatory feature and no particular need of a regularized procedure and a building up of rules and principles. Just as certainly, however, the proposed procedure will tend toward confusion and an absence of jurisprudence in the many quasi-judicial functions of agencies of a regulatory character, corresponding to those exercised by the independent commissions. The boards will be chosen in haphazard fashion, will not sit consistently in any particular class of cases, will not have any continuity of personnel, and are provided with no machinery for preserving, recording, and publishing their determinations. This represents a step backward and not a step forward from the point of view of bringing order out of chaos in administrative law.

3. Many of the agencies within the departments already have a far superior machinery for hearing controversies and making decisions. They have regular staffs of examiners or members of their law departments performing equivalent duties, with provision for examiners' reports, oral argument before a superior officer, and the like. Examples will be found in the Post Office Department in connection with fraud orders, in the Department of Agriculture in several of its bureaus, and in several of the other departments. A trained examiner under such a system is much more desirable than a transient three-man board, only one of whose members need be a lawyer. Here, again, the bill represents a step backward and not forward in the matter of introducing a measure of due process of law into administrative controversies.

Notwithstanding these obvious defects in the bill, its proponents are making the most astounding claims, and bar associations throughout the country (including the American Bar Association) have endorsed the bill, apparently, on the basis of the claims rather than its actual contents. Among the claims that are frequently heard are that the bill is aimed against the prosecutor-judge combination, that it cures administrative absolutism, that it provides an opportunity for hearing where none is now available, that it curbs the agencies, and other extravagant assertions. So far as the quasi-judicial functions of agencies are concerned, it would appear that, on the contrary, none of these claims is well-founded. With minor exceptions, it is difficult to know just what agencies and what quasi-judicial functions are reached by the bill that are not already equipped with at least equal and usually superior machinery.

2. Procedure contingently provided for "independent" agencies

Section 4 (e) of the bill provides a procedure for "independent" agencies, that is, agencies having two or more officers at the head.

It should first be noted that the bill does not prescribe any procedure for such agencies. It is simply permissive or contingent. In effect, it states that such an agency may provide by rule that "where any matter arises out of the activities" of such agency it may be heard in the first instance by one of its trial examiners. If the agency so provides by rule, the examiner shall file his written findings of fact and separate decision after public notice and a full and fair hearing, copies to be sent by registered mail to the aggrieved party. There follow rigid provisions giving the aggrieved party an opportunity within 30 days to file written objections; and if he does so, the agency shall not enter its decision without first according a public hearing upon reasonable notice to the party. There are other details which may be passed over.

The foregoing is objectionable for the following reasons:

1. Even if it be conceded that the procedure is meritorious, no independent agency is required to follow it, and any such agency may evade it by simply not providing by rule that matters may be heard by trial examiners. In fact, most of the statutes governing the important commissions specifically prescribe or authorize the delegation of the power to hear and decide controversies in the first instance to individual members or groups thereof, employees, examiners, etc., and it seems probable that the specific provisions of such statutes will not be considered to be repealed by the general and ambiguous language of the bill.

2. The machinery now available at most of the important commissions is at least equal to, and in a number of instances is better than, the procedure specified in the bill.

3. The bill attempts (on a contingent basis) to prescribe rigid details of practice such as the requirement of service by registered mail and the specification of a 30-day period; such matters should not be enacted into law without study of their actual effect upon existing procedures. It is my impression that in some instances the 30-day period is probably too long and in others too short. The Federal Communications Commission, for example, allows a longer period under certain circumstances for parties from the Pacific coast, Hawaii, and Alaska than it does for parties farther east. Corresponding differences will be found in the procedures of other commissions, usually built on years of experience.

4. So far as is apparent from the face of the bill, no existing evil in any of the independent agencies will be cured by its provisions.

At this point a comment may be made that applies both to this and the preceding subheading. It is to be feared that, if enacted into law, the bill will have the effect of hindering or preventing any fundamental or far-reaching reform of Federal administrative agencies such as has frequently been proposed and as was endorsed by the President's Committee on Administrative Management. This type of reform would, broadly speaking, consist in returning all the regulatory functions of independent commissions, other than their quasi-judicial functions, to the executive departments, and setting up really independent quasi-judicial boards for the hearing and determination of controversies on the model of the Board of Tax Appeals.

3. Judicial review

Section 5 provides for judicial review of proceedings before either kind of agency under section 4, at the instance of "any party * * * who may be aggrieved by the final decision or order." The appeal may be taken to either the district court of appeals or to the several circuit courts of appeals. Seven grounds are enumerated on which the decision shall be set aside but, when added together, they amount to nothing more than the traditional basis on which courts review the decisions of administrative agencies, namely, on questions of law, with the agency's findings of fact binding on the court unless not supported by substantial evidence.

Much is being made of this right of review supposed to be conferred by the bill. The fact is that, with reference to those agencies where a statutory appeal is already provided, the bill adds precisely nothing, although in some instances it would work a radical change in the courts to which the appeal is taken. For example, most decisions of the Federal Communications Commission having to do with radio licenses are now appealable solely to the district court of appeals whereas, under the bill, the appeals may be also taken to all the 10 circuit courts of appeal if the Commission chooses to adopt the procedure specified in section 4 (e). In view of the reservation in section 7 (a), which specifically saves all existing rights of review, considerable confusion is certain to be created.

With respect to agencies from whose decision no appeal is now provided by statute, the bill will, of course, definitely provide judicial review (although, so far as independent agencies are concerned, this review will be available only if the agency chooses to adopt the procedure of section 4 (e)). At present in such cases, in the absence of a statutory appeal, judicial review is sought by mandamus or injunction proceedings, usually in the United States district courts and particularly in the District of Columbia. An example is furnished by fraud orders issued by the Post Office Department. To the extent that such decisions would be subjected to statutory appeal, the bill represents an improvement although it is questionable whether all such cases should be subjected to appeals all over the country and directly to the circuit courts of appeals (which are obviously going to be overloaded). It is so impossible to foresee the scope and character of matters that are made appealable by the bill (because of the definitions of "decision" and "controversy" in section 1) that the problems that are created by the appeal section are also unforeseeable. It is claimed by opponents of the bill that section 5 attempts to provide judicial review on matters which, under the Constitution, may not be reviewed by constitutional courts.

In any event, the claims made by proponents of the bill as to the virtues and advantages of the proposed judicial review are highly extravagant.

IV. RESERVATIONS

Section 7 of the bill has two subsections. Subsection (a) preserves all rights or procedure now provided by law for judicial review in any district court or circuit court of appeals. Clearly, therefore, the bill does not promote the cause of uniformity to any serious degree.

Subsection (b) exempts a number of agencies, both of the one-man type and the independent type. Except for certain matters such as military or naval establishments and the Department of State, the exemptions are not based on any logic whatsoever. Most of them are due simply to the fact that at the Kansas City meeting of the American Bar Association in 1937, all Federal agencies which had representatives at the meeting and which protested loudly enough were included in the list of exemptions as approved by the association. One independent agency, the Federal Trade Commission, secured its exemption by a similar process after the bill had been introduced in Congress.

There is no conceivable justification for exempting the Federal Trade Commission and the Interstate Commerce Commission and not exempting the Federal Communications Commission and the Securities and Exchange Commission. The same may be said with respect to many agencies, both independent and otherwise.

CONCLUSION

The foregoing is not intended, and should not be construed, as an endorsement of the existing procedural situation in Federal administrative agencies, particularly with respect to the exercise of their quasi-judicial functions. I believe I have been as vocal as anyone in my criticisms, and as anxious to see a remedy found. This is not a proper occasion for me to elaborate my views which, subject to some modification due to further study and investigation, will be found in the 1933, 1934, and 1936 reports of the special committee on administrative law of the American Bar Association, and in various law-review articles (see particularly Comments on the Procedure of Federal Administrative Tribunals, 7 G. Wash. L. Rev. 741, April 1939). Incidentally, the Logan-Walter bill represents a reversal of position by the association (and of its special committee on administrative law) as against the position adopted at its annual meetings in 1934 and 1936. Briefly stated, my view is that the proposal urged in 1937 by the President's Committee on Administrative Management, if I understand it correctly, was basically sound, although it would have to be put into effect carefully and with due consideration to the problems presented by each agency. It was unfortunate that the proposal became enmeshed in controversies that obscured its merits. As already pointed out, it would have used or adapted the Board of Tax Appeals as the model for administrative adjudicatory machinery and would have opened the door to a satisfactory compromise between the demands of governmental efficiency in administrative matters and the requirements of due process of law in the adjudication of particular controversies.

I do not want to leave the subject without adverting briefly to developments which represent a point of view at the other extreme from the Logan-Walter bill. It is evidenced by the monographs now being made public under the auspices of the Attorney General's committee on administrative procedure, submitted to it from time to time by its staff. While the monographs do not as yet have the approval of the committee, they reveal a uniform approach which to me is just as far from leading to any remedy for the evils of the existing situation as is the bill. In general, and with exceptions, the Attorney General's committee staff appears to disapprove of and almost to ridicule, public hearings and the procedure incidental thereto as a method for determining questions of fact and of law, and to desire, so far as possible, to substitute what it is pleased to call the "investigative technique," coupled with a lack of the usual safeguards and a minimum of restriction on administrative discretion. Its studies were originally conceived to be for the purpose of gathering and assembling facts with regard to administrative procedure, to serve as a badly needed basis for a later intelligent analysis of the evils and of possible remedies. Instead, to a disturbing degree, they are being made the vehicle for circulating a preconceived point of view as to both the evils and the remedy. In the process, facts are suffering badly. Its monograph on the Federal Communications Commission, for example, is so inaccurate in describing and commenting on that agency's procedure that no person not already familiar with the subject may safely use it as a source of information (see my comments on the monograph in 8 George Washington Law Review, p. 749, March 1940). While I believe that the other monographs so far published do not exhibit inaccuracy or want of objectivity to the same extent, some of them reveal that the Commission's procedure is tacitly used as a measuring rod and all of them reveal the same à priori approach. The staff's philosophy may or may not ultimately prove to be correct. My point is that the issue, which is at least highly controversial, should not be determined in advance or on the strength of faulty evidence.

LOUIS G. CALDWELL.

Clarence Darrow on John P. Altgeld

EXTENSION OF REMARKS

OF

HON. T. V. SMITH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

FUNERAL ORATION BY CLARENCE DARROW

Mr. SMITH of Illinois. Mr. Speaker, under leave to extend my remarks, I insert a funeral oration of Clarence Darrow upon one of the great Governors of Illinois, John P. Altgeld. The speaker spoke of the dead, and now himself is dead. Sons of Illinois' best tradition will joy to link together the names of Altgeld and Darrow and doubly thus to fortify brave spirits for the battles still coming on.

In the great flood of human life that is spawned upon the earth it is not often that a man is born. The friend and comrade that we mourn today was formed of that infinitely rare mixture that now and then at long, long intervals combines to make a man. John P. Altgeld was one of the rarest souls who ever lived and died. His was a humble birth, a fearless life, and a dramatic, fitting death. We who knew him, we who loved him, we who rallied to his many hopeless calls, we who dared to praise him while his heart still beat, cannot yet feel that we shall never hear his voice again.

John P. Altgeld was a soldier tried and true; not a soldier clad in uniform, decked with spangles and led by fife and drum in the mad intoxication of the battlefield; such soldiers have not been rare upon the earth in any land or age. John P. Altgeld was a soldier in the everlasting struggle of the human race for liberty and justice on the earth. From the first awakening of his young mind until the last relentless summons came he was a soldier who had no rest or furlough, who was ever on the field in the forefront of the deadliest and most hopeless fight, whom none but death could muster out. Liberty, the relentless goddess, had turned her fateful smile on John P. Altgeld's face when he was but a child, and to this first, fond love he was faithful unto death.

Liberty is the most jealous and exacting mistress that can beguile the brain and soul of man. She will have nothing from him who will not give her all. She knows that his pretended love serves but to betray. But when once the fierce heat of her quenchless, lustrous eyes has burned into the victim's heart, he will know no other smile but hers. Liberty will have none but the great devoted souls, and by her glorious visions, her lavish promises, her boundless hopes, her infinitely witching charms she lures her victims over hard and stony ways, by desolate and dangerous paths, through misery, obloquy, and want, to a martyr's cruel death. Today we pay our last sad homage to the most devoted lover, the most abject slave, the fondest, wildest, dreamiest victim that ever gave his life to liberty's immortal cause.

In the history of the country where he lived and died the life and works of our devoted dead will one day shine in words of everlasting light. When the bitter feelings of the hour have passed away, when the mad and poisonous fever of commercialism shall have run its course, when conscience and honor and justice and liberty shall once more ascend the throne from which the shameless, brazen goddess of power and wealth have driven her away, then this man we knew and loved will find his rightful place in the minds and hearts of the cruel, unwilling world he served. No purer patriot ever lived than the friend we lay at rest today. His love of country was not paraded in the public marts or bartered in the stalls for gold; his patriotism was of that pure ideal mold that placed the love of man above the love of self.

John P. Altgeld was always and at all times a lover of his fellow man. Those who reviled him have tried to teach the world that he was bitter and relentless, that he hated more than he loved. We who knew the man, we who had clasped his hand and heard his voice and looked into his smiling face; we who knew his life of kindness, of charity, of infinite pity to the outcast and the weak; we who knew his human heart, could never be deceived. A truer, greater, gentler, kindlier soul has never lived and died, and the fierce bitterness and hatred that sought to destroy this great, grand soul had but one cause—the fact that he really loved his fellow man.

As a youth our dead chieftain risked his life for the cause of the black man, whom he always loved. As a lawyer he was wise and learned; impatient with the forms and machinery which courts and legislators and lawyers have woven to strangle justice through expense and ceremony and delay; as a judge he found a legal way to do what seemed right to him, and if he could not find a legal way, he found a way. As a Governor of a great State, he ruled wisely and well. Elected by the greatest personal triumph of any Governor ever chosen by the State he fearlessly and knowingly bared his devoted head to the fiercest, most vindictive criticism ever heaped upon a public man, because he loved justice and dared to do the right.

In the days now past, John P. Altgeld, our loving chief, in scorn and derision was called John Pardon Altgeld by those who would destroy his power. We who stand today around his bier and mourn the brave and loving friend are glad to adopt this name. If, in the infinite economy of nature, there shall be another land where crooked paths shall be made straight, where heaven's justice shall review the judgments of the earth—if there shall be a great, wise, humane judge, before whom the sons of men shall come, we can hope for nothing better for ourselves than to pass into that infinite presence as the comrades and friends of John Pardon Altgeld, who opened the prison doors and set the captive free.

Even admirers have seldom understood the real character of this great human man. These were sometimes wont to feel that the fierce bitterness of the world that assailed him fell on deaf ears and an unresponsive soul. They did not know the man, and they do not feel the subtleties of human life. It was not a callous heart that so often led him to brave the most violent and malicious hate; it was not a callous heart, it was a devoted soul. He so loved justice and truth and liberty and righteousness that all the terrors that the earth could hold were less than the condemnation of his own conscience for an act that was cowardly or mean.

John P. Altgeld, like many of the earth's great souls, was a solitary man. Life to him was serious and earnest—an endless tragedy. The earth was a great hospital of sick, wounded, and suffering, and he a devoted surgeon, who had no right to waste one moment's time and whose duty was to cure them all. While he loved his friends, he yet could work without them, he could live without them, he could bid them one by one good-bye, when their courage failed to follow where he led, and he could go alone, out into the silent night, and, looking upward at the changeless stars, could find communion there.

My dear, dead friend, long and well have we known you, devotedly have we followed you, implicitly have we trusted you, fondly have we loved you. Beside your bier we now must say farewell. The heartless call has come, and we must stagger on the best we can alone. In the darkest hours we will look in vain for your loved form, we will listen hopelessly for your devoted, fearless voice. But, though we lay you in the grave and hide you from the sight of man, your brave words will speak for the poor, the oppressed, the captive and the weak; and your devoted life inspire countless souls to do and dare in the holy cause for which you lived and died.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

Mr. THOMAS F. FORD. Mr. Speaker, in spite of the fact that the Reciprocal Trade Agreements Act has been renewed for a period of 3 years, the din of the battle waged over the adoption of the 3-year extension is still to be heard.

I suppose I am warranted in saying that the advocates of tariff rates, equal to or higher than those set up in the Smoot-Hawley Act of 1930, will never be reconciled to any other plan despite the fact that under the influence of the Tariff Act of 1930 our total exports declined from $5,241,000,000 to only $1,675,000,000.

It was, in fact, the drastic shrinkage of our foreign trade, between 1929 and 1933, that made it imperative that some plan be adopted to promptly counteract the disastrous effects of that act. It was this critical situation, plus the able leadership of President Roosevelt, that made it possible for Secretary of State Cordell Hull to secure the adoption of the Trade Agreements Act in June 1934.

How does the Trade Agreements Act affect California?

California is both directly and indirectly dependent upon foreign trade for continued economic development and sustained prosperity. It needs foreign markets for the surplus products of its factories, its farms, and its forests. It shares in the improved domestic market created when, by selling their surplus commodities abroad, other sections of this country increase their purchasing power.

Total exports reported as originating in California fell from $380,000,000 in 1929 to $149,000,000 in 1932. As the

volume of exports from California, and the United States as a whole, dropped, purchasing power throughout the State was reduced, large surpluses accumulated, and prices fell. The total accountable income of California fell from $5,200,000,000 in 1929 to $3,200,000,000 in 1932, and cash farm income declined from $712,000,000 to $366,000,000 between the same 2 years.

BENEFITS TO CALIFORNIA FROM THE TRADE AGREEMENTS

Since the Trade Agreements Act was approved, agreements have been negotiated with 21 ccuntries, 19 of which are in operation. With so many variables in the economic situation here and abroad affecting the movement of trade it is difficult to determine precisely the extent to which trade agreements have helped in the restoration of foreign markets for American farm and factory products. It is significant, however, that United States exports to the countries with which trade agreements were in force showed an average annual increase of 42 percent in 1936–37 over 1934–35, while exports to all other countries showed an increase of only 26 percent. Annual average exports to trade-agreement countries in 1937–38 were 61 percent above the 1934–35 average; exports to non-trade-agreement countries increased only 38 percent during the same period. California undoubtedly shared in these increased exports.

CONCESSIONS OBTAINED WHICH BENEFIT CALIFORNIA

Fruits and vegetables, fishery products, petroleum products, and automotive products are examples of the important products of California for which expanded and more stable foreign market outlets have been obtained in trade agreements.

California farmers raise a great variety of fruits and vegetables which are shipped to foreign countries in either the fresh or the processed form. Both growers and processors, therefore, have direct interest in the concessions obtained in 17 agreements for vegetables and products, and in all agreements for fruits and products.

Among the important groups of concessions on these products are those obtained in the agreements with Canada and the United Kingdom. Canada lowered its duties and removed the 3 percent excise duty on a long list of fresh, canned, and dried fruits and vegetables, reduced the advanced valuations used in calculating regular and special duties, and reduced its in-season charges on fresh vegetables and fruits. The United Kingdom reduced or bound its duties on a wide range of vegetable and fruit products, and provided in the agreement for freer access to British colonial markets.

California's fishermen and canners are benefited by concessions obtained in 16 agreements. Fourteen countries reduced their rates of duty and two countries bound their rates of duty on such products as canned salmon, halibut, mackerel, oysters, shelled or in the shell, and many other kinds of fish.

Since one of California's important exports is petroleum products, petroleum refiners in the State are particularly interested in concessions on these products obtained in 12 agreements. Five countries reduced their duties, four countries bound their rates of duty, and one country bound the rate of duty and increased the quota on such petroleum products as gasoline, kerosene, lubricating oils, lubricating greases, fuel, oil, paraffin wax, and special petroleum preparations. In addition, two countries bound petroleum products on their free lists.

California manufacturers of automotive products benefit from concessions obtained on these products in 17 agreements. These concessions include reductions in the rates of duty, bindings in the rates of duty, bindings on the free list, and increases in quotas on many kinds of automotive products. Concessions on engines, parts for assembly and replacement accessories, and service appliances have been obtained in many agreements.

In addition to the direct concessions obtained, there is a most-favored-nation provision in each trade agreement which automatically extends to American products reductions or limitations on tariff rates granted by the agreement country to countries other than the United States. For example, lower tariff rates on some 600 items formerly extended by Canada to France but not to the United States, now apply to American commodities. Among these California is particularly interested in the reductions on fruit pulp and crushed and frozen fruit; on various canned fruits and vegetables; on many different kinds of canned fish; on crude petroleum and petroleum products; and on parts for motor vehicles.

BENEFITS TO CALIFORNIA LABOR FROM TRADE AGREEMENTS

It is estimated that approximately 20 to 25 percent of the persons engaged in farming and fishing and 15 percent of the wage earners in manufacturing industries in California owe their jobs to the export trade of the State. The trade-agreements program by reopening and expanding foreign markets increases the demand for labor. When foreign countries increase their demand for American products, industry must employ greater numbers of wage earners to produce these commodities. Increased employment in industries manufacturing for export provides greater domestic consumer purchasing power and creates greater employment opportunities for those engaged in supplying the domestic market.

Expanding foreign trade means greater tonnage of freight handled by the ports of California, as well as greater activity and employment in railway, steamship, and truck transportation, foreign-trade brokerage, warehousing, stevedoring, advertising, insurance, and banking.

CALIFORNIA BENEFITS AS THE UNITED STATES BENEFITS

There is a direct interrelationship between prosperity of any section of the country and prosperity of the country as a whole. Thus, the concessions obtained on American products not produced in California indirectly benefit the citizens of the State by creating increased domestic demand for the fruits and vegetables, fishery products, petroleum products, and the endless other commodities produced in the State.

Amendment of National Labor Relations Act

EXTENSION OF REMARKS

OF

HON. FRANK W. FRIES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

LETTER FROM THE CLOTHING MANUFACTURERS ASSOCIATION OF THE UNITED STATES OF AMERICA

Mr. FRIES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Clothing Manufacturers Association of the United States:

CLOTHING MANUFACTURERS ASSOCIATION OF THE UNITED STATES OF AMERICA,
New York, April 13, 1940.

HONORABLE SIR: We oppose the adoption of amendment 2 of the Norton bill, H. R. 9195, for the following reasons:

For upward of 20 years approximately 90 percent of our industry continuously and uninterruptedly maintained harmonious relationship through collective-bargaining agreements with the Amalgamated Clothing Workers Union. These agreements covered all the workers in our cutting rooms and factories. The making of a coat involves 92 operations; as many more operations are involved in the making of a vest and pants. A majority of workers employed in each of these operations under proposed amendment two would have the right to require the Board to designate it as a craft unit and compel the employer to bargain collectively with 180 units and perhaps as many unions. Chaos to our industry is the only conclusion.

The board of directors of our association at a meeting this afternoon convened to consider this amendment; by a unanimous vote, adopted the following resolution:

"*Resolved*, That the men's and boys' clothing industry inform the Congress of the United States of the irrevocable injury that will be perpetrated upon the employers engaged in the manufacture of men's and boys' clothing if amendment two, requiring the Board to designate a craft as an appropriate unit whenever a majority of employees of a particular craft so decide, is adopted."

Respectfully,

FRANK P. ZURN, *Executive Director.*

Jefferson and the New Deal

EXTENSION OF REMARKS

OF

HON. J. WILLIAM DITTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

RADIO ADDRESS BY HON. CHARLES A. PLUMLEY, OF VERMONT, APRIL 13, 1940

Mr. DITTER. Mr. Speaker, under the unanimous consent granted me, I include in the RECORD the text of a Jefferson birthday address delivered by Representative CHARLES A. PLUMLEY, of Vermont, over the N. B. C. Blue Network, Saturday, April 13, 1940.

The address is as follows:

Tonight I speak of a carelessly dressed redhead; one who, born to the purple, was nevertheless the greatest and truest friend that we, the common people—the workingman and the farmer—have had during our country's history.

This truly great liberal, who so appropriately used the house of a bricklayer in which to write the Declaration of Independence, and who later insisted on amendments to the Constitution to insure to the common man his freedom of religious worship, his freedom of utterance, his freedom of the person and the home from unreasonable searches and seizures, was Thomas Jefferson, of Virginia, the one hundred and ninety-seventh anniversary of whose birth we celebrate today.

It was he, Thomas Jefferson, who during his life represented the thought of the man on the farm, the man in the small community, the artisan, the laborer, the small-business man; that great mass of everyday common folk who then, as now, were devoted to the principles of the Declaration of Independence, and who had an unquenchable faith in the rights of man; men whose fathers had paid the penalties for their patriotism on the gallows, in their native lands overseas; and who from such aristocratic tyranny had fled.

What would he do were he President today? What would he do and say about our present irresponsible Government?

From his works and writings we know him to have been the most zealous, untiring partisan of the people of his day and age; by protecting and insisting upon the protection of their rights, he firmly believed the continuance of our republican government would be assured; failure so to do would result in its overthrow.

What would he do? Of many things we may be certain. I feel sure that he would not tolerate the unnecessary Government expense that has been incurred in such a profligate manner during these past few years—no, not this statesman who said, "We must push to the uttermost in economizing." I think he would view with justifiable holy horror the $45,000,000,000 debt of your Government.

Forty-five billions dollars in debt. Why, do you know that if you were to take $45,000,000,000 bills and lay them end to end and side to side you could construct a roadway 25 feet wide that would run around the earth and 10,000 miles out into space?

And do you realize that, since these dollars come out of the Treasury from the pockets of the taxpayer, in order to discharge the obligations they evidence, somebody will have to pick up and put back into the Treasury to relieve the taxpayers' burden the $45,000,000,000 plus the interest that is accruing? Somebody will have to pick them up. And it is going to be back-breaking picking.

His disapproval certainly would be given to our mounting Federal bureaucracy which continues to spawn an endless number of governmental employees; for he warned explicitly that "covering our land with officers, and opening our doors to their intrusions * * * once entered, is scarcely to be restrained from reaching successively every article of produce and property."

The Congressional Directory for January 1940, lists 10 departments, 39 boards, 42 bureaus, 81 commissions, and 10 corporations and authorities, all within the Federal Government.

It has reached the point, right now, where there are some 939,000 civil employees on the Federal pay roll; this figure does not include the buzzing swarm of census employees nor recipients of relief.

This man who charged his political foes with trying to perpetuate the Federal debt would most assuredly decry our present national financial policy which makes no attempt to maintain a balanced budget, nor a sound currency, but which, rather, repudiates the sacred obligations into which it has entered.

Just think of it, your Government is spending, every day, $15,000,000 more than it takes in.

How applicable, at this very time, are the words this scientist of government penned when he wrote his friend Monroe:

"We are ruined, sir, if we do not overrule the principles that 'the more we owe, the more prosperous we shall be,' 'that a public debt furnishes the means of enterprise,' 'that if ours should be once paid off, we should incur another by any means however extravagant'."

I know that the average man does not appreciate the fact that when you are talking about the public debt you are talking about a financial situation in which he should be vitally interested, since he has a share in it.

It is from his contributions, through the taxes he pays, that the money is raised to carry on this Government of ours. The public debt of each individual in the United States has increased from around $40 to nearly $442—and that is what it means to you and to each individual in dollars and cents—whether you are a wage earner, a salaried worker, a professional man, or not.

The average man and woman have been paying these taxes without knowing that they were paying them; paying, and still paying, other peoples' taxes, those who have shifted their taxes to your pocketbook. You are the ultimate consumer; you cannot pass your taxes along; you pay.

Because you are single and earn $18 a week and live in a furnished apartment you think that taxes cannot hurt you. Well, the truth is if you are earning $960 a year you are paying $116 in hidden taxes. I could reduce this to the items, but I am telling you if you could find some way of getting around the hidden taxes you are paying as a single man it would be the same thing as a 12-percent raise in your salary.

The farmer is the hardest hit of all. Every additional cent of debt increases the invisible mortgage on every acre of cropland he owns, if agriculture were to bear the burden of the load.

This gets right down into every man's pocketbook. There is a difference between spending when you have it, and borrowing to spend, or going into a morass of debt from which this country can never escape, just to let folks know you are a good fellow. You would not spend your own money that way. This administration cannot spend mine, or that of my constituents, that way without a protest from me.

The tax load on each one of us can be lightened only by reducing Government costs. I am the last one to suggest that the tax load should be lightened at the expense of the necessary duties of government, provided such duties are efficiently performed, but I am determined so far as anything I may say and may do, that the waste and inefficient and reckless spending of the people's money must stop.

The sooner the people themselves come to realize that they—the rank and file—are the actual taxpayers the sooner there will be a stop to this program, and the better off all of us will be.

The taxpayer has some rights, as some will discover when they recover from their debauch of reckless spending in which they seem determined to indulge again. If they think that by voting to load down posterity with an unbearable burden of debt in order to make it appear that they are broad-minded is going to get them any votes, they will wake up some day and be ashamed of the reckless way in which they have forced the taxpayer into the hands of the pickpockets of the Treasury to make a Roman holiday with up-to-date oratorical skyrockets that will come down like a dud on their heads.

The wage earners of this country, those who earn comparatively small incomes, the so-called low-income workers, are in for a sad awakening one of these days. They may not realize the extent to which it has gone, but with their homes, their food, their clothes, their jobs all being taxed, they are paying taxes from daylight to dark of every day.

Contrary to general belief, a larger percentage of the income of those who earn $1,000 a year is taxed or absorbed by taxes, direct and indirect, than is the case of the income of those who earn $5,000. Since practically every tax is passed along to the ultimate consumer, the low-income earner is always on the paying end, since he cannot pass his tax along to anyone else.

It is not difficult to imagine what Jefferson would say of any plan and program to erect and establish here in the United States of America a centralized, authoritarian, economic totalitarian state, all at the sacrifice of that liberalism, individualism, and Americanism for which he so valiantly fought.

It was Jefferson, you will remember, who so cogently said, "Were we directed from Washington what to sow and when to reap, we should want bread." In that sentence he made a particularly strong argument for the retention of control over local matters by the local political unit, be it town, county, or State. How exceedingly far we have come from that adjuration when it seemingly has become the necessary practice for delegations from our towns and cities to take the train to Washington whenever they wish to secure the consent and the necessaries with which to build sidewalks and curbs, a water system, or a sewage-disposal plant. Is not that the essence of the very thing against which he so vehemently warned?

How greatly at variance with the belief he so strongly held that to be really and truly independent one must support one's self by one's own exertions is the present situation wherein not only the people—yes; even the young men and women—are being taught not only that the "Government owes them a living" but that this is a good Government in which to live because it is a good one on which and off which to live.

I have few doubts as to the reactions of Jefferson were he here to witness the expenditure of billions for relief, only to find that after many years of such gigantic expenditure there were still the same number of unemployed; that in the process of giving such relief there had been painted the rosy picture of "a more abundant life."

I believe that Jefferson would tell you that we cannot have recovery until the unemployed are absorbed by productive industry. Industry cannot absorb the unemployed until it can expand and sell more goods; industry cannot expand until the people of this country feel sufficient faith in the future to risk their money in industrial undertakings, in the hope of making a profit.

People with savings are going to continue to hoard them so long as our governmental policy penalizes thrift and enterprise, through extortionate taxes and strait-jacket regulations.

The essence of Jefferson's contribution to thought involving government is that this Republic is founded on inalienable liberties. It is dedicated to the dignity and personality of individual men and women. It is consecrated to truth, justice, tolerance, and mercy. These liberties and obligations are inseparable. If political freedom, intellectual freedom, or economic freedom are any one of them undermined, all the others will fall.

These high purposes of this Nation are being undermined by the policies now pursued at home and by alien theories from abroad. Our first great mission is the preservation of these principles.

Today economic progress is being paralyzed. That destruction is the destruction of social progress. The imperious necessity of America is to restore economic productivity and thereby jobs for men. That alone can support our humanitarian aspirations. For social progress in care of the aged, the young, the ill-fed, the ill-clad, the ill-housed there must be parallel economic strength. Economic restoration is our second great mission.

We are the living custodians of the torch which fell from the hand of Thomas Jefferson. We may again rekindle the heart and mind of America with the glow of hope and promise for the future.

If Jefferson were here today surveying the potential wreckage of that republic for which he fought and slaved, I think he would say to his successor, the present occupant of the White House, as did the English Disraeli to Gladstone a century or so ago:

"You have had 4 years of it. * * * You have threatened every corporation and endowment in the country. You have examined into everybody's affairs. You have criticized every profession and vexed every trade. No one is certain of his property, and nobody knows what duties he may have to perform tomorrow."

Midwestern Farmers and the Republican Party

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

LETTER FROM CLARENCE F. WILLIAMS

Mr. HOPE. Mr. Speaker, if the Republican Party is to be successful in the election this fall, it must carry the Middle West. To do that it must nominate a candidate and adopt a platform which will appeal not only to Middle Western Republicans but also to thoughtful independent and Democratic voters who feel that this administration has failed.

I believe that Middle Western farmers want to vote the Republican ticket this fall. They are concerned about governmental expenditures; about low farm prices; about unemployment; about agricultural imports, as well as about the labor and relief policies of this administration. They feel that this country is going on the rocks if these policies are continued. Yet they know that conditions have changed during the past decade and that these changes must be realistically appraised and considered by any administration which has the responsibility of meeting present-day problems. They will not vote for the Republican Party unless they feel it is fully aware of the great problems confronting the country and that it has a program to meet them.

The following letter from a successful, capable, and thcughtful Illinois farmer, who has been a Democrat in politics, expresses in a very clear and effective way the viewpoint of many Middle Western people, both on and off the farm:

PITTSFIELD, ILL., *March 9, 1940.*

Hon. CLIFFORD HOPE,
Washington, D. C.

DEAR MR. HOPE: I am writing you as a farmer and a Democrat regarding your efforts in making the Republican platform this year favorable to agriculture. I wish to commend you. I will try in my poor way to give you the situation as it exists in my community. I live in Pike County, Ill., the west-central part of the State, right in the heart of the Middle West. Within a radius of 20 miles of my home is the greatest individual hog-raising region in the United States of America. I live on United States Highway 36, midway between Pittsfield and Detroit, Ill.

There are 18 farms in the 6 miles between the 2 towns. Seventeen of the farmers have automobiles, only 2 were new when bought. Three have furnaces, the others are heated by coal and wood stoves. Twelve have electricity, thanks to the R. E. A., but I have heard several say they could not keep it another year unless their income became greater.

I have made a survey of my township, a typical agricultural one. There are 198 farmers in it, and I find that an average of $1,057 is needed to restore the depreciation of the last few years—paint, fencing, roofing, lumber, tile, limestone, and many other smaller items. Each family would have spent $800 more for clothing, furniture, floor covering, etc., during the same time. Two thousand dollars would have been spent by each family for automobiles. Four hundred dollars for furnaces by 132 of them and $500 miscellaneous and $2,220 for educating their children, making approximately $6,800 each would have spent in the last 5 years if they had had income enough to do it, almost $1,400 a year average. This multiplied by 10,000,000 farms would have kept industry so busy in the same length of time, there would have been no depression, recession, unemployment, or other retarding element toward recovery.

I am not a politician, but I am like Jim Farley in one way, I am an American first and a Democrat second. If the Republican Party can show me the way out, I will gladly vote that way and help organize my neighbors. Many of them, both Democrats and Republicans, feel as I do, but suspicion that the old guard will finally control the party and we will go back to the things that caused the debacle of 1929.

The Illinois Agricultural Association and the Farm Bureau are the strong farm organizations in Illinois, and I find that almost without exception the officers and employees are for the present program. I am an admirer of President Roosevelt in his efforts to help agriculture, but I believe the program has failed. I know that pork cannot be produced profitably for a nickel a pound, nor can corn and wheat be produced at 40 and 65 cents a bushel, respectively.

In the last week I have heard three men express themselves, an old Republican county judge, a middle-aged Democratic farmer, and a young cabinetmaker who professes no politics. They were not together when I talked to them, and I am sure they had not been, although their viewpoint was the same ultimately. Each one believed the depression was brought on by the uncontrolled inflation under Coolidge. Not one blamed Hoover for it, except they believed as Secretary of Commerce he should have warned the American people and should have made a greater effort in stopping deflation when he became President. Each admires Roosevelt but believes the only way out is to vote Republican this fall; and then all three say if that party fails, God help America. They reason that the youth of America is so highly educated that they will tire of promises and platforms and take matters into their own hands. Each agrees that if agriculture had been prosperous the last few years our troubles would have been over.

There is only one thing that I know. It is this: College and high-school graduates are tired of being truck drivers, filling-station attendants, waiters, and bartenders. Several million more will pour out of the halls of education in a few months. A very few will be specially prepared for positions. The great majority will face defeatism.

What is the answer? Shall the exploitation of agriculture be stopped and farm incomes rise to the point where it will be possible to put the United States of America on solid footing? Or shall we go on and face national disaster in a few years? I have never been a pessimist. Too much the other way, perhaps, but I am out where grass roots are grass roots, and I believe I can sense a deep feeling of despair in the American people. If the Republican Party can offer more than promises and platitudes, they will be successful, and I will be glad to help them.

Respectfully yours,

CLARENCE F. WILLIAMS.

Retired Pay and Allowances in the Army, Navy, and Marine Corps

EXTENSION OF REMARKS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

Mr. IZAC. Mr. Speaker, I recently introduced a bill, H. R. 7866, which provides in substance—

That any officer or enlisted man of the Army, Navy, Marine Corps, or Coast Guard who has been advanced on the retired list of his respective branch of the service and promoted to the highest grade of his wartime rank; who has served honorably in three wars or insurrections, in which the United States forces have been en-

gaged, * * * shall upon the passage of this act be granted the retired pay and allowances of his highest wartime rank and grade * * *.

This bill in effect amends the acts of June 21, 1930, and May 7, 1932, which specifically provide that no increase of active or retired pay or allowances shall result from the advancement of officers, warrant officers, and enlisted men to their wartime rank on the retired list.

Mr. Speaker, my purpose in introducing this bill is to recognize the outstanding contribution to national defense made by the officers and men of the armed services who have served their country in three or more wars or insurrections and who, although in most cases advanced in rank on the retired lists, do not receive the compensation commensurate with that rank.

It is the custom in most foreign countries to recognize service to country of those who exercised command in places of great responsibility. In our country we limit such recognition to a very few whose service has been most spectacular. However, it is obvious that in times of war not all can be chosen to lead the armies in the field nor carry the colors in the face of the enemy. Some must accept their lot in drab positions of equal but less spectacular responsibility.

I feel these men are just as much entitled to the gratitude of the Nation as are the one or two selected for the highest honors. And I feel further that we can in no better way show the appreciation of the Nation for the services of these fine officers and men than by the enactment of a bill such as this, which will give them on the retired list the pay of the highest grade or rank which they exercised in wartime.

Inasmuch as the average age of the officers affected is 70 years, and that of the enlisted men only slightly less, it is evident that the small expenditure that would be necessary to carry out the provisions of my bill would be considerably less year by year. And it is estimated that at most it will be for the next fiscal year approximately $160,000. In all, I estimate that less than 600 officers and men will be affected and the average increased rate of pay would be not much over $20 per month.

I am indebted to our former Adjutant General of the Army, Maj. Gen. P. C. Harris, United States Army, retired, who, while not profiting by the enactment of this legislation, has nevertheless recognized the justice of it and has aided me in the compilation of the figures quoted herewith. He has likewise made an exhaustive survey of all the officers, warrant officers, and men of the Army that would be affected by this bill.

The number of officers that might be affected totals 92. This includes 1 general, 1 lieutenant general, 8 major generals, 7 brigadier generals, 32 colonels, 19 lieutenant colonels, 22 majors, and 2 captains, of whom 69, it is estimated, would probably come within the provisions of the bill. Likewise of the 77 warrant officers, including 1 lieutenant colonel, 17 majors, and 59 captains, about 58 would come within the provisions of the bill. And of the former enlisted men, totaling 530, a break-down shows 6 lieutenant colonels, 109 majors, and 415 captains, of whom about 398 would probably benefit by enactment of the bill.

I trust my colleagues will see the justice of this legislation and help me to bring about its enactment.

The Test of Citizenship

EXTENSION OF REMARKS

OF

HON. FRED A. HARTLEY, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

ADDRESS BY J. EDGAR HOOVER

Mr. HARTLEY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address delivered by J. Edgar Hoover, Director, Federal Bureau of Investigation, United States Department of Justice, before the Forty-ninth Continental Congress of the Daughters of the American Revolution, Constitution Hall, Washington, D. C., April 18, 1940:

It is with pride that I meet with you this morning upon the occasion of the Forty-ninth Continental Congress of the Daughters of the American Revolution. Yet the pleasure of our meeting must be tempered with the necessity for bringing certain facts into the open where we may face them with the courage demanded for their remedy. These are not bright days for the America which your forefathers fought so valiantly to preserve.

Your organization has witnessed in the past a succession of remarkable instances of patriotic cooperation designed to aid our Nation toward a better plane of existence. Therefore, because you are one of the truly great influences which have molded this Nation, I want to discuss with you a most important problem concerning our country's welfare. It may be stated in simple language. Foreign "isms" are seeking to engulf Americanism; this must not be allowed to happen. It need not happen, for we have had ample warning.

No finer job has ever been done in the history of the American press than that which now is being performed by the rank and file of our truly American publications. Heroic efforts are being made by them to separate the facts from propaganda, the true from the false, the pure from the impure. Hard-working journalists and editors have given of their best efforts and thought that we might be correctly informed, and this without hysteria.

Meanwhile, the editorial staffs of magazines which have a real national conscience have striven as never before to place before us a correct and sincere evaluation of the world's problems, seeking not to influence, but to educate. The same, of course, may be said for the responsible men and women of the radio and screen.

But while all this has been taking place, there has been a contrary effort in the underworld of literacy. By oral and printed attack, numerous thinly camouflaged organizations of questionable background and endeavor have sought to wash away our national foundation in an ink stream of vilification. It seems inconceivable that in a land dedicated to freedom and existing under a constitution ordained for the well-being and protection of its every citizen, there should be so many despicable ingrates.

Many of them come from countries where political murderers have stained their hands with the blood of thousands; where every decent thing in life has been ravaged; where every man is expected to spy upon his neighbor and betray his best friend; and where the underlying fundamental principle of government seems that of harassing humanity and defying God.

Cloaking themselves with the guaranties of our Constitution and the things for which it stands, they have the inconceivable effrontery to tell us that they are seeking to bestow upon us the blessings of Utopia, instead of degrading us to the level of the blood-smeared countries for whose principles they are the bought-and-paid-for traveling salesmen. And I say that there is no place in America for such purveyors of hate and horror.

One may rightfully ask why I, as Director of the Federal Bureau of Investigation, should direct your attention toward revolutionary efforts in America. A main reason, of course, is the fact that by Presidential order, the F. B. I. has been designated as the central agency of the Federal Government to receive and give attention to complaints of espionage, sabotage, and matters pertaining to our national defense. In addition, there is a distinct connection between the professional destructionist and the professional criminal. Both are in a state of revolt against the American way. Both are racketeers.

However, what I have to say to you today should be construed as an appeal to common sense, and a desire for a calm, common-sense appraisal of existing circumstances. While there is yet time, we must lock our national stable before the horse is stolen. If we use our heads today, we will not be forced to use our rifles, our airplanes, and our battleships tomorrow. And one thing is certain. We in the United States want peace.

I must remind you that in times like these, there is great danger of misguided efforts on the part of over-zealous groups of individuals who are often the victims of those motivated by a desire to further their own selfish ends. Let me warn you against the patriotic racketeer, the only things lower are the vipers of alien "isms" whose poisonous fangs are fatal.

Our national apathy toward the subject of crime represents a condition which in fact is an incubator for the things which are anti-American. Our antisocial groups grow rapidly; it is a fact that today 1 out of every 26 persons in America has been arrested for an offense more serious than a traffic violation. Every 21 seconds witnesses the commission of a murder, aggravated assault, burglary, car theft, robbery, or larceny.

If we do not accomplish more toward the wiping out of this crime front, the enemy within our shores will steadily make wider use of its possibilities for the destruction of American institutions. You have seen recently in the constantly changing story of Europe, the vast inroads which have been made in neutral nations by the employment of spies, traitors, and saboteurs.

Before this year comes to a close, unfortunately, we may expect that 1 out of every 17 homes will be a victim of crime—either some member will be charged with an offense or will have suffered a loss, ranging from petty larceny to life itself. Our army of criminals numbers into the millions.

The representative of gangster governments find a fertile field for his recruits in the underworld. He sings his hymn of hate in our prisons and penitentiaries, he skulks in the dives of desperate men, there to paint his picture of the glories to come when, to quote a manifesto of the Communist Party, there will be established "a stern dictatorship * * *. It will confiscate the banks, the factories, the railroads, the mines, and the farms of the big corporations."

Perhaps you have labored under the mistaken impression that the radical who dreams of overthrowing our government classes as his future victims only persons of enormous wealth. Regardless how meager your possessions, someone will want them. If you lose them it makes little difference whether they are taken by an ordinary murderer or an international pirate masquerading as a self-appointed savior of a country whose language he can barely speak. Again I ask, why don't these perverted busybodies go back and save the countries which espouse their views? Can it be possible that there would be no money in such a venture?

The average American has understandably been so confused by the muddled charges and denials made regarding various revolutionary organizations that, with typical American apathy, he is more than eager to shrug it all away with the belief that it is a great deal of smoke and very little fire. We haven't the time, we say, to understand what the proponents of foreign "isms" are working toward and why they want it. That is exactly what these destructionists desire. Their tactics are to becloud the issue, to let others connected with ostensibly reputable organizations "front" for them, to cover their tracks with confusing statements, to confound the average brain so that they may be able to proceed toward their goal with the slightest resistance.

These "ism" advocates and their fellow masqueraders point to our forefathers as their historical sponsors. The preamble to the Constitution of the Young Communist League states that its organization "* * * cherishes the ideals of Americanism embodied in the democratic traditions of our Nation and its great patriots * * *" such as Thomas Jefferson, Andrew Jackson, and Abraham Lincoln. This organization then desecrates the memory of these great Americans by stating that it "* * * derives inspiration from those great teachers and guides of all mankind: Karl Marx, Frederick Engels, V. I. Lenin, and Joseph Stalin." Others exploit the workingman, the colored races, the farmer, the renter, and the white-collar class by any and all hokum by which they can create a smoke screen for their real endeavors. On the surface, their claims, to the unthinking person, look enticing.

However, if the claims of such organizations are so meritorious, why have they not proven of worth in the countries which sponsor the ideals of these disturbers? Is there any such thing as peace or happiness or liberty in places where the populace is ruled by the fear of secret police, where one must live or die by decree, where children are reared to the godless lullabies of rattling machine guns, the horrible burst of airplane bombs, and the juggernaut progress of clattering tanks, belching flame and death upon those who flee before them?

It is amazing what credulity such proponents of brutality attribute to us, and it makes little difference from what foreign "ism" they emanate; recent unions of allegedly opposing factions have ended much necessity to differentiate. They are of the same stripe—they use the same approach, both openly and brazenly they flaunt democracy. What the worshippers of one bloody creed desire is also the desire of others.

These newly allied destructionists stand for the complete overthrow of all American institutions. They plan for the destruction of all religion. They would strangle patriotism, or to quote the words of a youth publication of the Communist Party: "You must fight against teachings which tell you to be a patriot in your country." That is why, incidentally, as the result of propaganda, there have recently been many examples of a growing disrespect for the American flag and a cynicism toward the freedom for which it stands.

To these scoundrels the sanctity of the American home is meaningless. They dream of the day when every American school shall become their own training ground. They are under instructions to permeate our Army and Navy with proponents of revolution. Agitators have worked among farmers, particularly sharecroppers, painting rosy pictures of the day when skies shall be red with the flames of destruction, and that which has belonged to others shall change hands—simply for the taking.

The cry among these defamers of American traditions is always for more youth to be fed into the maws of deceit. In manifestos and training manuals, plan upon plan is urged for the infiltration of agitators and destructionists into youth-serving organizations.

It should be a matter of greatest national concern that while exponents of hatred, vice, and atheism seek youth with the rapacity of a starving wolf, we should be so apathetic to the needs of our civilization that of all our crime, nearly 20 percent is committed by boys and girls of less than voting age. To whom will these boys and girls listen while in jail, reformatory, or prison—to the chaplain with his earnest hope that they will proceed upon a better life, or to the skillful agitator and his fawning promises of a place at the table of luxury if only help be forthcoming on the day when freedom shall fall, outraged and bleeding before the assault of international terrorists?

You should remember that since the Federal Bureau of Investigation is in the first line of national defense against the saboteur, the espionage agent, and the revolutionist, it also is among the first to bear the brunt of attack. And I might add that no method is too foul, no lie too rotten, for these people, who dedicate themselves to the teachings of the leader of all communism, Lenin, who wrote: "We must know how to apply at need, knavery, deceit, illegal methods, hiding truth by silence * * *."

Therefore, since we know in advance that every trick of falsehood will be employed to lead us astray, let us look at the truth, so that we may know the lies when we hear them.

It is ever the cry of the "ism" advocate that his constitutional rights and civil liberties are constantly in danger. These destructionists care nothing about violating the civil rights of others, and they would revile our Constitution except for the smoke screen of defense it gives them while they dig deep at our foundations of decency and liberty.

Therefore, let us have an understanding in this matter here and now. I charge that accusations indicating a purpose on the part of the Federal Bureau of Investigation to become an Ogpu, a Gestapo, a national police, or anything resembling such bodies, emanate, directly or indirectly, from certain anti-American bodies who hope to discredit the F. B. I. as a step in a general plan to disrupt the entire United States or from well-meaning but misinformed persons who have fallen to the lies and utterly false information of those who would tear asunder America's machinery of law enforcement.

Such monstrosities as the Ogpu or the Gestapo are foreign-born. They are inhuman, uncivilized, and un-American. Any person who charges that such methods have been condoned or even considered within the Federal Bureau of Investigation deliberately purveys a malignant falsehood.

Let us proceed a bit further and really look at the record of the F. B. I. During the past 12 years the F. B. I. has investigated more than 52,000 cases in which convictions have been obtained. Not in a single instance has a conviction been reversed in a court of appeal for the alleged violation of civil liberties during the course of the investigation. In not one single instance has a conviction been reversed on a charge of brutality, third-degree tactics, cruel, or inhuman treatment.

Recently in Washington the Federal district attorneys from the entire Nation unanimously adopted a resolution commending the F. B. I. for its preservation of the constitutional rights and civil liberties of persons arrested by its representatives. These prosecuting officials of the Federal Government are in daily contact with our special agents in their work and are intimately acquainted with all of the policies, regulations, and practices of the F. B. I.

And I might remark that those who now seek to traduce the F. B. I. as a first line of espionage defense are most eager to have you forget those dark days when fear stalked through every nursery, when the gruff voice of gangsterism made its demands for family fortunes, threatening meanwhile the death or disappearance of American boys and girls.

Those were the days when thousands of mothers placed their faith in the Federal Bureau of Investigation, where brave men stood ready, day and night, as they do now, to battle gangsterism on its own grounds. More than one of those men now lie in their graves, sacrificed to the underworld in your defense, their memories immortal to us who were their comrades.

The Federal Bureau of Investigation of today is exactly the same organization which battled the underworld in the black hours of the kidnaping menace and which has successfully solved 177 of 179 kidnapings since June 1932. It is the same organization which has successfully met the extortion and bank-robbery menace. There have been no changes in motive, in policy, in fundamental methods, or in the fidelity, bravery, and integrity by which we have sought to protect you. However, certain individuals have hoped that the lapse of time may have lured you into disregard for the events of the past.

All I can say is that if the F. B. I. was a good organization when fiends like Bruno Richard Hauptmann, John Dillinger, Alvin Karpis, and hundreds of other blood-crazed gangsters roamed America, then it is still good today when personalities like Earl Browder, Fritz Kuhn, and other representatives of un-American organizations, no matter under what name they masquerade, seek to lead you, by lies, smoke screens, and innuendoes, into treacherous trails.

The extent of these efforts sometimes reaches almost unbelievable depths. Only last week, for instance, orders emanating from the Communist Party of America, demanded national and concerted action against the F. B. I. With fantastic belief in American credulity, these plotters announced that every effort must be made by members of their organization to involve F. B. I. special agents in situations where they might be accused of crimes or improper activities. Then, said these Communist leaders, with its reputation strained by the "smearing" and discrediting of some of its men, destruction of the Federal Bureau of Investigation could proceed unmolested.

Anyone in public life must, of course, expect criticism—it is wholesome and beneficial when constructive. This applies particularly to law enforcement. It is your duty to criticize freely when there is need; it also is the American duty to stand by the brave, honest, efficient officers who give of their best for the communities they serve. A law-enforcing agency is only as good as its popular

support, regardless of whether it is a constable's office, a county sheriff, a metropolitan police department, or a Federal agency.

Despite the tremendous obstacles that have had to be overcome, the character of law enforcement is today on a higher plane than ever before. Members of the law-enforcement profession, in many instances, have faced almost insurmountable odds in overcoming the barriers of apathy and venality, to say nothing of propagandist efforts everywhere, designed to picture the officer as a brute and the civilian as an object of oppression. Remember that all propaganda is not of the direct sort. The most dangerous type is that designed to make you doubt and distrust American methods, American habits, American institutions.

You have noticed that I have not designated all of our "ism" enemies by name. There is a good reason; it is a part of present-day strategy among these different assailants of liberty to claim all good things for themselves and all bad things for the organization down the street, thus creating confusion while they attack our institutions. Therefore the test of American citizenship lies in the ability to have nothing to do with any of them. The real test of citizenship is our devotion to the preservation of the American democracy for which our forefathers fought and died, and which we are permitted to enjoy as a blessed heritage.

Let us consider the miserable type of destructionist who seeks to be our self-appointed savior. Look into his background; study his so-called panaceas. Read the recent history of the countries which he so proudly points to, or by which he has been duped. What do you find? Ruthlessness, the destruction of civil rights, destruction of happiness, destruction of freedom and the destruction of life, often in such great numbers that they beggar statistics. From a land of starvation, hatred, envy, greed, brutality, and mass murder, they come fawning to us with their lethal drugs. Let us have none of them.

Our job is to keep to the path which has led us to happiness in the past, and to regard with suspicion any winding trail or alleged short cut, no matter how alluring it may be portrayed. These praters against the American way of life are in reality a gang of international confidence men, seeking to steal our wallets by promising us the pot of gold at the end of the rainbow which no one will ever reach. Apply to every self-appointed savior the acid test of Americanism and, if he cannot pass that, suggest that he go to the lands of stinking death which incubate his ideas.

And, I hope that today you will pledge yourselves with me to a solemn rededication of citizenship. That you will give more of your efforts, more of your being and of your hearts to the task of teaching and emulating Americanism. That you will strive ceaselessly to focus the spotlight of truth upon the "ism" scum which seeks to undermine the foundations of our Nation. By doing so, you will illuminate the world with the brilliance of American democracy, and demonstrate the sacred character of honest, decent, human elements which, God willing, our Stars and Stripes may forever symbolize.

No, Dr. Townsend; I Have Not Signed Your Petition

EXTENSION OF REMARKS
OF
HON. ROBERT G. ALLEN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1940

LETTER FROM HON. ROBERT G. ALLEN, OF PENNSYLVANIA

Mr. ALLEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following letter:

Mr. OTIS J. BOUMA,
Editor, Washington Flash,
1038 Washington Building, Washington, D. C.

MY DEAR SIR: I have just received a copy of No. 7 of your Washington Flash, in which my name appears among those who have signed a petition to discharge the Townsend bill from the Ways and Means Committee. I have not signed this petition nor will I do so. I signed your petition 1 year ago, and helped give you a fair hearing in Congress. This you had. In my opinion, you are guilty of deluding the old people of this country in a shameful way. You are primarily interested in perpetuating your own jobs rather than alleviating the woes of our elderly citizens. The economic basis of your legislation has undergone an annual change for the past 5 years. If the original bills which you supported were correct, your latest bill is wrong, and vice versa. A year from now you will probably pull a new bill from Dr. Townsend's hat which will be as different from H. R. 8264, today's bill, as it is from H. R. 6466, which you tried to cram down our throats last year.

Your political machinations and the demagoguery of your leadership have brought your movement into disrepute. I ask that you correct the statement in your Washington Flash of April 17, where my name appears among those who have signed the so-called Townsend discharge petition.

Very truly yours,

ROBERT G. ALLEN.

Forestry in the North Pacific Region

EXTENSION OF REMARKS
OF
HON. WALTER M. PIERCE
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 18, 1940

LETTER FROM LYLE F. WATTS, REGIONAL FORESTER

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the regional forester at Portland, Oreg.:

UNITED STATES DEPARTMENT OF AGRICULTURE,
FOREST SERVICE, NORTH PACIFIC REGION,
Portland, Oreg., March 28, 1940.

Hon. WALTER M. PIERCE,
House of Representatives, Washington, D. C.

DEAR GOVERNOR: The Report of the Chief of the Forest Service for 1939 has just been issued. As a member of the Committee on Forestry and Agriculture you, of course, have received a copy, but I should like to amplify Mr. Silcox's statement insofar as it applies to forestry in the north Pacific region.

You are, of course, familiar with the important place which the Pacific Northwest holds in the national forestry program. About one-third of the Nation's timber supply of soft wood timber is in Washington and Oregon. About one-third the current supply of wood products comes from this region. Growth of timber is rapid. Conditions unfavorable for the production of timber can be controlled, or modified. Depletion undoubtedly exceeds the growth of saw timber and some phases of protection and of logging practice can be improved.

In 1938, which is the latest year for which complete information concerning State and private activities is available, expenditures for forest protection were $790,672. Of this amount, $126,336, or 16 percent, were contributed by the Federal Government under the terms of the Clarke-McNary Act. The public interest in Oregon timber is by no means expressed by this amount.

Recurring epidemics of tree diseases and insects make serious inroads on the timber supply. The current epidemic of the western pine beetle which has killed about 15,000,000,000 feet of ponderosa pine in Oregon and Washington during the past two decades, is one example. These epidemics can be controlled, but they are beyond the efforts of individual owners and are a public matter. Mr. Silcox's proposal that protection from insects and diseases could, to advantage, be provided for in an amendment to the Clarke-McNary Act, has merit.

Forest land in Oregon is held by about 27,000 owners. Most of these lands have little or no value for any purpose other than raising timber, and title to great areas has been abandoned after the timber has been removed. It is understood that about one and one-half million acres has passed to the counties through foreclosure for taxes. The Oregon law provides that the State Board of Forestry can take over lands of this class for State forests, and a beginning has been made. The Federal Fulmer Act was intended to assist States to buy land for State forests and to administer the forests so obtained, but so far no provision has been made to give the States the necessary financial assistance.

The forest and range experiment stations are most valuable in developing principles of land use and methods for making them effective. The change from virgin forests to managed forests is of much importance to the residents of Oregon and Washington. State, private, and Federal agencies are pioneering in this enterprise. The fact-finding work of the stations covers every phase of land use and is indispensable.

For about 10 years the Forest Service has been conducting the resource survey. The work was started in Washington and Oregon and has been completed in these States. Eventually it will cover the entire forest area in the United States. The information obtained and made public about the volume, area, ownership, depletion, and growth of the forest resources, is in much demand by all forestry agencies. The field work for about one-half the country is completed; the work of compiling the information obtained and making it available for use is finished for about one-half the area covered by field work. At the present rate of progress it will not be finished for many years. This information should be available for all parts of the country and it should be brought up to date at intervals. Here in the Northwest where changes from logging, fire, and growth are rapid, some of the information obtained 10 years ago is already obsolete.

The Forest Service has been studying the feasibility of forest management in each of the major operating areas in the North Pacific region. Several of these studies have been completed and a few companies operating outside the national forests are taking the steps necessary to put their lands on a sustained yield basis, or are seriously considering the practicability of this move. In many localities close to the national forests, this process would be facilitated if national forest timber could be blocked up with private

timber outside the boundaries to make sustained yield units. I believe that authorization to take this step is desirable and that assured access to public timber would be a strong inducement to operators and owners of private stumpage to stabilize their operations.

A very large acreage of timber in Oregon and elsewhere is so located that its owners, who have in many instances held it for a long time, cannot expect to realize on it for another decade or more. Other timber owners are not in a financial position to hold their lands indefinitely. In similar cases the owners have abandoned title to timber lands in order to avoid the tax burden, or have disposed of it to operators for small sums. This condition, of course, exists in connection with property of other kinds, and it may not be a matter of great public concern when private investments turn out badly.

What is of public concern is the disposition of an important public resource and asset. Failure to pay the taxes on great volumes of timber seriously weakens the finances of many counties. The forced sale or abandonment of timber forces down the value of the remainder and further contracts the tax base. The temporary abundance of this "distressed" timber on the market promotes wasteful logging practice and effectually prevents acceptable management of much of the remaining stand. I believe that the public welfare would be well served if the timber in excess of normal holdings was repossessed by a strong governmental agency, either State or Federal, and held until the market requires it. Public financial aid in the shape of low-interest-bearing, long-time loans might also help.

The 1939 fire season was severe. Periods drier than any on record were accompanied by strong winds, and several violent lightning storms occurred. One storm set 822 fires in 48 hours. The area of national-forest land burned over in Oregon was about 49,000 acres. In the entire region it was about 58,000 acres. Severe losses also occurred in State and private territory. About 150,000 acres of the 1933 Tillamook burn reburned, killing much of the reproduction which had started. This was a real calamity, because no source of seed to reproduce the area now remains. Improvements were made in organization of Forest Service suppression crews, in the technique of using tractors in building fire lines, and in radio communication. The smoke chaser's radio kit, developed by the Forest Service radio laboratory for two-way communication, weighs only 9 pounds. Some fire camps so situated that supplying them by ordinary methods was difficult, were serviced by planes. About 86,000 pounds of supplies and equipment were transported in this manner. Landing fire fighters from planes, using specially designed parachutes and equipment to insure safety, was tried successfully as an experiment. This may be an important development for suppressing fires in remote parts of the forests.

The deficiency in moisture which has lasted for more than a decade has decreased the grazing capacity of national forest ranges, and the number of stock grazed under permit was of necessity reduced also. In 1939 the number of stock grazed on national forest ranges in Oregon was about 74,000 cattle and horses, 460,000 sheep. Twelve hundred and fifty-two pay permits and 856 crossing permits were issued. Small numbers of stock belonging to over 600 owners grazed without charge under various exemptions. In 1935 the number of cattle and horses was about 87,000, the number of sheep, 570,000. More intensive management of the national forest ranges will undoubtedly increase its carrying capacity.

Wildlife on the national forests is handled in full cooperation with the State game commission and with the assistance of the Biological Survey and the Bureau of Fisheries. The overstocking of deer on the Murderer's Creek Range is not yet wholly corrected. The 1939 legislature passed an act authorizing the killing of antlerless deer during the 1939 and 1940 seasons in this reserve, but this measure may not furnish a complete remedy. The overpopulation of the range on the Fremont Forest along the California line, requires, and is receiving, attention.

The latest report shows 1,078,049 visits to the national forests in Oregon for recreation. The number has doubled in 5 years. The average visit was 2.6 days. About 100,000 of these visits were for hunting; 350,000 for fishing; 130,000 for winter sports. The great majority of campers and picnickers used the forest camps built by the Forest Service and the C. C. C. These camps make use of the woods during the fire season practicable. The accommodation of so great a number of visitors without the pure water supply and the sanitary facilities offered by the camps would not be feasible. The office of recreation and lands reports 2,421 special-use permits in effect in Oregon, 1,120 of them without charge. The permits cover a great range of uses, from water-power projects to summer cottages. Twenty-seven thousand three hundred and fifteen acres of land were acquired for the national forest by exchange for timber.

Timber-sale business is increasing, although it has not yet reached the high point of 1929. The cut in Oregon for 1939 was 217,371,000 board feet. Receipts were $503,136. The average price per thousand feet was $2.34. Of the 1,561 sales, 892 were to residents for domestic purposes at cost. The number of free-use permits issued was 3,735. This does not include free use on areas for which permits are not required. Timber in private ownership is more accessible and, as a whole, of better quality than the timber on the national forests. Pressure to realize upon it is heavy, and increases in sales of national-forest timber in Oregon can be expected to increase only as private holdings are cut out. It is probable, however, that timber-sale business will be greatly accelerated during the next 10 years.

The heavy loss of ponderosa pine by insect attack, to which reference has been made, and the continued loss of overmature timber which is especially vulnerable to many destructive agencies, suggested the need of a revision of logging methods. As you so well know, the method is light selective cutting confined to the weakened or overmature trees in the stand. In practice half the volume or less is removed, and this part is made up of relatively few individuals. The more valuable lumber grades are recovered and the residual stand consists for the most part of thrifty young trees containing the lower grade logs, capable of fast growth and with low mortality. This method is now in use in national-forest sales in Oregon, Washington, in Indian Service sales in Oregon, and in a few private operations.

We must recognize that the great bulk of our timber in Oregon is in private ownership. Unfortunately, too much of it is cut without due regard for acceptable forest practice. Recognition of this situation probably prompted the Secretary of Agriculture to advocate to the Joint Congressional Committee for Forestry increased public cooperation with private forest land owners in solving private forest land problems. Where cooperation is not effective in obtaining the results indispensable to public welfare, he suggests that public regulation may be required.

This is by no means a complete picture of the forest situation in the North Pacific region. I have noted some of the salient features and shall be glad if I can be of assistance in furnishing additional information.

Very sincerely yours,

LYLE F. WATTS,
Regional Forester.

What Price Security?

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

EDITORIAL FROM THE COUNTRY GENTLEMAN FOR MAY 1940

Mr. REES of Kansas. Mr. Speaker, under leave given me by unanimous consent to extend my remarks, I include herein an interesting and informative editorial by Philip S. Rose, editor of the Country Gentleman, which appears in the May 1940 issue:

[From the Country Gentleman for May 1940]

WHAT PRICE SECURITY?

With the utmost sympathy, it is time for a careful look at the vast experiment in security that has been set up in this country. The hopes of millions who are unable, or feel they are unable, to take care of themselves are centered around it.

Only a part of these are wage earners, whose future security is supposed to be financed out of contributions by themselves and their employers. The number of others is both large and increasing. It includes the aged and the handicapped who are receiving pensions, the unemployed on relief, and the dependent of various kinds who are getting help. Demands for other forms of security are rising.

All this represents a new and uncharted trend in American life. It raises a very important question: What is the price of security?

The question has never been answered by those who talk most about security. But there is a practical answer and it needs to be publicly realized. The standard old-age assistance that is advocated is $30 a month. It is prevailingly less than that, but since both husband and wife are eligible this figure will do. According to the latest tables, Government bonds average less than a 2-percent return. That is the most the banks will pay on savings. Thirty dollars a month thus represents the income on $18,000 of capitalized wealth. A $35-a-month relief check is the return on $21,000 at current investment rates.

There is an ominous connection between those figures. The funds for all security, public or private, can come from only one source. That source is created wealth. The Alexander Hamilton Institute has worked out an unvarying formula for calculating our national wealth. It is five times the national income. The national income for the past year was nearly $12,000,000,000 below the peak that was reached 11 years ago. Thus our wealth-creating capacity has decidely lessened, at the same time that we are putting enormous new demands upon it.

Foresighted action would have teamed up the security program with an intense effort to get our productive facilities into full operation. Instead, much was done to retard them.

As a result the Government is caught in a conflicting tangle of policies. To meet the demands of the now widespread security program it must levy heavier taxes and make up whatever deficiency there is by borrowing. But heavier taxes reduce buying power and further discourage enterprise, which alone can increase the Nation's wealth.

To make the cost of borrowing easier to carry, the Government has had to keep down interest rates. But that, in turn, calls for a larger amount of capitalized wealth to yield the necessary funds. This is what accounts for the seeming oddity of an old-age or relief beneficiary receiving the equivalent of an income from what is a small fortune to most people. These low rates of return have also placed many self-supporting families in a precarious position. Farmers who have retired from active work with what seemed sufficient for a comfortable living know how harshly true this is. It takes much larger savings now for self-dependent people to enjoy any security for themselves. At the same time the low return on savings makes it difficult for the average person to hope to accumulate enough to provide for old age.

Such facts as these recently led the editor of the Indianola (Iowa) Record to comment: "Retirement, except as wards of the State, has become almost impossible for millions of farmers, trades people, small-business men, and teachers. It is not altogether a pleasant outlook to those who have had an ambition to take care of themselves."

But will there be any room in the house of security for these prospectively more numerous dependents ahead? The demands now are being met only by borrowing from the future or taxing the present to a repressive degree. Clearly there must be a change of national attitude, or the outcome will be a tragedy.

The one and only price at which we can have security is to create enough wealth to pay for it. We probably have the resources, human and material, to afford a fair and decent amount of it. But, before we can, there must be policies that release and energize all our productive forces and increase the opportunities for self-support. No one has a deeper interest in seeing this done than the people who are themselves in need of security.

The Trade-Agreements Program

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

Mr. THOMAS F. FORD. Mr. Speaker, it is my purpose today to call to the attention of the House a speech delivered on the floor on the date of March 29, 1940, by the distinguished gentleman from Wisconsin [Mr. JOHNS]. That speech was timed for the purpose of giving aid and comfort to the enemies of the reciprocal trade agreements program which was then being debated on the floor of the Senate.

Much as I dislike taking issue with my distinguished colleague, I cannot refrain from calling attention to that speech because, I regret to say, it contains so many glaring examples of garbled statements of fact, and unwarranted conclusions as to immediately disqualify it from the consideration of any one who knows the truth or has access to the facts, facts which my distinguished friend could easily have secured, had he been interested in facts.

Just to start with, I quote from the address as printed in the CONGRESSIONAL RECORD for March 29, 1940, page 3713:

> Butter, under the Tariff Act of 1930, there was an import tax of 14 cents per pound. Under the agreement in 1935 this was left at 14 cents, but under the new agreement of November 17, 1938, this was reduced 2 cents a pound and is now 12 cents a pound.

The fact is the 1930 tariff rate of 14 cents a pound on butter has never been reduced under any trade agreement and is still in effect. Furthermore, there have never been any negotiations for reduction of the tariff on butter, in connection with any trade agreement whatever. This misstatement alone is enough to reflect on the credibility of all the rest of the speech.

The gentleman from Wisconsin spoke repeatedly of "24 treaties." The fact is that, while 22 agreements have been negotiated, only 19 agreements with reciprocal concessions are in effect. While the point is not fundamental to the issue, it demonstrates that the gentleman failed to inform himself as to how many agreements it comprises.

On page 3711 of the RECORD the gentleman asserted that dairy farmers, among all groups of farmers, have received no subsidy from the Federal Government. I quote:

> The population of the 5 leading dairy States I have named is approximately 6,000,000 people [here he includes both city dwellers and nondairy farmers]. I figure the farmers raising cotton, corn, and wheat represent about 3.1 percent of our national income [here he excludes city dwellers and shifts the basis from one of population to one of income] and have received millions in subsidies during the last few years. The dairy farmer has received nothing in subsidies.

Here the gentleman from Wisconsin finds himself in direct conflict with another very eminent Member from his own side of the House, the gentleman from Kansas, the Honorable CLIFFORD HOPE, who also opposed the trade-agreements program. Mr. HOPE, in an address on the floor of the House on December 3, 1937, after more than 3 years of the trade-agreements program, said:

> We have tariffs on dairy products which are in effect prohibitive. The imports of butter in an ordinary year are considerably less than 1 percent of our total consumption. While the percentage of cheese imports will run higher than that, such imports are mostly of classes and grades of cheese which we do not produce in this country.
>
> The same thing is true, of course, of other dairy products, such as fresh milk and cream, ice cream, and other manufactured dairy products. All of them are protected by high and practically prohibitive tariff rates. While it is hard to compute in dollars and cents how much of a subsidy the dairy industry receives as a result of this tariff protection, yet I think it is only fair to say it receives substantially the difference between the price of comparable dairy products in other countries and the price in this country.

Further along in the same speech the gentleman from Kansas, who bears no mean reputation as an agricultural statesman, made the following statement:

> Therefore it is hardly fair for the producers of dairy products to say other crops and other producers are receiving a subsidy and they are receiving none, because they are receiving the most effective subsidy which can be given to any producers through the tariff benefits they receive.

If the gentlemen from Kansas and from Wisconsin want to impress the country they would do well to get their heads—and their stories—a little closer together.

The trade-agreements program has been an effective force in bringing about an increase, in 1939 over 1932, of $1,500,000,000, or 97 percent, in United States exports; $995,000,000, or 75 percent, in our imports; over $3,000,000,000, or 65 percent, in farm cash income; of $364,000,000, or 37 percent, in farm income from the sale of dairy products; of $98,000,000, or 58 percent, in the farm cash income—excluding Government payments—of the State of Wisconsin.

These figures and facts bear directly on the economic situation of farmers in Wisconsin and all over the United States under the trade-agreements program as compared with their situation under the Hawley-Smoot policy from 1929 to 1932. The gentleman from Wisconsin carefully avoided putting them into his speech. They are conclusive evidence that his farmer constituents have not been "sold down the river." They are not generalities and half facts.

There is perfectly clear-cut proof, both common sense and statistical, that the trade agreements have benefited American agriculture. There is not a shadow of evidence that they have injured any of its branches.

The agreements have sustained and supported foreign markets for American agricultural surpluses—against exceedingly powerful adverse factors in some cases. American exports of farm products to trade-agreement countries during the course of the program have generally increased much more rapidly than have farm exports to nonagreement countries. In fact, in the fiscal year ended June 30, 1939, the value of the United States farm exports to the 16 countries with which trade agreements were in effect throughout that year was 15 percent greater than the value of such exports to the same countries in the fiscal year ended June 30, 1936, whereas farm exports to all other countries were 19 percent lower in value than they had been in the earlier year.

Meanwhile, export advantages for American industrial products, obtained through the trade agreements, have created employment and stimulated business activity in the United States and increased the buying power of the American customers of the American farmers.

The apparent thesis of the gentleman from Wisconsin, insofar as it can be separated from the welter of irrelevant, incomplete, handpicked, and misleading statistics with which he sought to support it, seemed to be that the trade agreements, by reducing United States tariffs on agricultural products, have deprived American agricultural producers of some of their domestic market to the consequent detriment of their incomes.

The thesis is entirely unsound and untrue. It could be disproved simply with the facts about agricultural income in the United States, which I have already cited and about which the gentleman from Wisconsin was painfully silent.

But equally significant in their indication of the confidence which the statement deserves, are some further examples of misrepresentation and distortion which appear in it and which demonstrate its general unreliability.

The gentleman from Wisconsin was extremely wary in choosing and using only such statistics as seem to bolster his assertions while painstakingly ignoring others, regardless of their significance. His omissions of this kind were often conspicuous.

For example, he gave export and import figures on corn for the years 1934 through 1937, apparently to show that we import too much and export too little. But why did he stop with 1937? The figures for 1938 and 1939 are just as readily available. It is because he did not dare to admit that in 1938—following the bumper corn crop of 1937—the United States exported 147,505,104 bushels of corn, practically a record, and imported less than half a million bushels. He was equally silent about 1939 when we exported 32,117,186 bushels of corn and imported 490,000 bushels.

He preferred to give only the figures for 1934–1937 during which period drought cut the corn crop of the United States by a billion bushels in each of two years. He directly implied that the trade agreements caused the increases in imports during the drought years. Is he willing to admit that the trade agreements also caused the increases in exports after the crop recovery? The proponents of the trade agreements have never made any such claim.

Even when he ignored the effects of droughts and bumper crops how did he conclude that trade agreements increased the imports of corn into the United States when the only change in the tariff on corn that has been made in a trade agreement is the reduction of 10 cents a bushel in the tariff on corn from Cuba alone? In 1937 imports of corn from Cuba amounted to 48,000 bushels. All the rest of the 86,289,000 bushels of corn imported in 1937 paid the regular 1930 tariff of 25 cents a bushel.

The gentleman laid a good deal of emphasis on imports of cheese and performed some really extraordinary statistical juggling in trying to show that the cheese industry of Wisconsin and of the United States had been injured as a result of reductions in the United States tariff on some types of cheese, under the trade agreements.

Among other things he declared that Wisconsin farmers lost a million dollars in 1937 because of cheese imports amounting to 60,000,000 pounds in that year. He did not even attempt to explain how he got this answer. He ignored all the really pertinent facts about income and imports. He quoted the 60,000,000-pound figure with the implication that the whole amount came in under reduced tariffs and displaced Wisconsin production. The implication is flatly untrue.

Through trade agreements United States tariffs have been lowered on several types of cheese, but they have been lowered on less than half of the cheese imports. Only two types—Cheddar and Swiss—on which there have been duty reductions, are produced in significant quantities in the United States. The tariff reduction to which the gentleman from Wisconsin referred applies only to Cheddar cheese, which accounts for some 70 percent of total United States production of cheese. There were not 60,000,000 pounds of Cheddar cheese imported into the United States in 1937; there were less than four and three-quarter million pounds imported. These imports did not cause Wisconsin dairy farmers to lose a million dollars in 1937 because the price of cheese on the Wisconsin market in 1937 was 15.9 cents a pound—the highest since 1930 when the Hawley-Smoot Tariff Act took effect. The estimated income to American farmers from cheese production in 1937 was over $78,000,000, the highest on record. Cheddar cheese imports into the United States in 1937 were less than 1 percent of domestic production.

The gentleman from Wisconsin pointed with justifiable pride to the great dairy industry of his State and to its growth, but sees no connection between that expansion and the level of prices for dairy products. He preferred to find the explanation in the dribble of imports.

In 1939 the United States production of Cheddar cheese was 151,000,000 pounds, or 40 percent greater than in 1932, and the price on the Wisconsin market was higher by 2.9 cents, or 29 percent. Estimated United States income from Cheddar cheese had risen $30,000,000, or 81 percent. The increase in imports was 5,746,000 pounds, to a total of 6,352,000 pounds in 1939.

In other words, the United States cheese industry had increased its production by over 23 times as much as the total imports of Cheddar cheese amounted to in 1939.

The gentleman from Wisconsin knows well enough that the market for the United States dairy industry is in the United States, and that market depends upon the buying power of urban consumers in the United States—it does not depend on the insignificant quantity of dairy products that are either exported or imported.

The American dairy industry supplies, normally, nearly 99 percent of the American market for dairy products of all kinds. In 1939 it supplied 99.4 percent of that market.

The gentleman from Wisconsin wants the other six-tenths of 1 percent of that market, and in order to get it he advocates a course which from 1929 to 1932 resulted in a fall of American dairy income from $1,844,000,000 to $991,000,000—almost one-half. Rather than let the American worker employed in an exporting industry buy even a pound of imported dairy products, the gentleman from Wisconsin would prefer him to lose his job entirely and be unable to buy any dairy products at all.

This is a basic consideration and wholly aside from the juggled and misleading figures which the gentleman used in his speech. He knows well that the best and biggest markets for the dairy products of Wisconsin are the areas in and adjacent to his own State, which produce automobiles, machinery, rubber products, and iron and steel products which the United States exports. But this is a segment of the American market which he does not want his constituents to have.

In a recent survey made for the American Farm Bureau Federation, economists of the Iowa State College estimated that increases in exports of farm machinery, automobiles, and other motor vehicles, rubber products, and primary iron and steel products—all of them produced in the marketing area of the Wisconsin dairy industry and all of them benefiting from foreign concessions obtained through trade agreements—from 1935 to 1937 made it possible for workers engaged in producing those commodities to increase their expenditures for foodstuffs—including dairy products from Wisconsin—by a total of from $8,616,000 to $11,142,000. The gentleman from Wisconsin proposes to cut out such increases.

Similar to the cheese argument of the gentleman was his argument on live cattle, in which he used hand-picked and partial figures and drew distorted conclusions. He quoted many figures on increased imports of live cattle. But he did not mention the facts that: (1) less than half—329,304 head—of the cattle imported in 1939 were admitted at tariffs reduced under trade agreements, whereas 424,266 head paid the 1930 tariff rate. (2) United States average farm prices for beef cattle were above parity throughout 1939, averaging $7.03 per hundred pounds for the year, and (3) farm cash income in the United States during 1939 from the sale of

cattle and calves in 1939 is estimated at about $1,250,000,000, the highest since 1929.

Still another example of evasion and misrepresentation is his reference to canned meats—again with the implication that all kinds of canned meats come in under tariffs reduced under the trade agreements. The truth is that the only canned meats on which the tariff has been reduced under a trade agreement are meat pastes, other than liver pastes, packed in cans weighing, with their contents, not more than 3 ounces each. This reduction, which is a very slight one, was granted to the United Kingdom and did not become effective until January 1, 1939. However, the gentleman from Wisconsin, in discussing canned meats, gave the figures on canned beef from Argentina and Uruguay, going back to 1934. Of course, any one familiar with the trade-agreements program knows there has never been any reduction in the tariff on canned beef in any trade agreement.

The gentleman mentioned imports of live hogs, trusting apparently that all his hearers or readers would be too ignorant to know that the imports of live hogs are infinitesimal compared to United States exports of hog products. In 1939 the United States imported $5,227 worth of live hogs and exported $44,714,752 worth of hog products, on practically all of which foreign countries had made concessions through trade agreements. He disparaged the exports of canned meats, hoping apparently that it would pass unnoticed that only a small percentage of United States meat-product exports are ordinarily in the form of canned meats—only about 8 percent in 1939.

Such half truths, misleading interpretations, incomplete statistics, evasions, and direct misstatements characterize this speech from start to finish. They typify the method of attack followed by many opponents of the trade-agreements program whose real motives are purely partisan.

The gentleman's omissions of things he did not want to talk about are no less conspicuous and glaring than the misstatements he makes. He is most anxious to ignore, among other things, the effects of the Hawley-Smoot embargo-tariff policy of 1929–32, the policy which he espouses and to which he would again consign the economic welfare of his constituents.

The gentleman spoke in glowing terms of the good times that American farmers are supposed to have enjoyed from 1922 to 1929 and the growth of United States exports and imports during that period. Of course, he did not point out that the bulk of those exports in those years were financed by American loans to foreigners who have not yet repaid them. They were not exports, they were gifts, financed by gullible American investors. And he was utterly silent about what happened to American producers between 1929, the last year before the embargo-tariff policy reached its culmination under the Hawley-Smoot Act, and 1932, when the depression reached its depth, in large part as a result of that policy. It should be emphasized that, through the trade-agreements program, we are attacking, and effectively remedying, the conditions that existed after the passage of the Hawley-Smoot Tariff Act.

If high tariffs meant prosperity for American farmers and other producers, why was it that in the 3 years of the highest tariffs in American history United States exports dropped 69 percent from $5,250,000,000 in 1929, to less than one and two-thirds billions in 1932; United States imports dropped $3,000,000,000; United States farm-cash income declined $6,500,000,000, or 58 percent; cash income from the sale of dairy products dropped $853,000,000, or 46 percent; and the farm-cash income in his own State of Wisconsin tobogganed 59 percent, from $413,000,000 in 1929 to one hundred and sixty-eight million in 1932? Is that the prosperity to which he wants his constituents to return?

Opponents of this program do not like to talk about the course of events from 1929 to 1932. They prefer to use average figures for some period preceding 1929 or preceding 1933, and cover up the fact that it was not an average nor a trend that constituted the situation in 1932 and which made necessary the various recovery programs of this administration, including the trade-agreements program. They prefer to average off the figures since 1933 and not to draw too close a comparison between things as they were in 1932 and things as they are today.

But conditions in 1932 are very pertinent to this issue, and so are the factors that brought about those conditions and that this administration is successfully seeking to overcome. The policy which found its disastrous climax in the Hawley-Smoot Tariff Act was one of the forces that brought agriculture and industry in the United States down to the depth of the depression. The policy of fair and equitable and enlarged foreign trade upon which the trade-agreements program is based is a major factor in recovery from that depth.

Let me say right here that anyone who has studied the trade-agreements program or the subject of international commerce generally is fully aware that many forces in addition to the agreements are operating in this field. There have been downward fluctuations in exports, imports, income, and industrial activity which have not been entirely offset by the effects of the agreements and there have been upward fluctuations which would have taken place if there had been no agreements.

But it is contrary to common sense and statistical evidence to take the ground that the trade-agreements program has not helped materially in sustaining and enlarging both our foreign and domestic markets by making it easier to sell abroad the surpluses of things we produce in this country. Careful, scientific, painstaking examination of all concessions have not been to the disadvantage of American producers but have been helpful in increasing our general industrial activity.

In the study by the Iowa State College economists already referred to, the general conclusion was:

> The trade agreements are "working" for agriculture and for industry; that is, for our economy as a whole. * * * The conclusion is not based upon any notions of spectacular accomplishments in the past or roseate prospects in the future. It is based upon three separate conclusions that seem quite solidly grounded. They are: (1) There have been positive gains to agriculture from the trade-agreements program. * * * (2) There have been important less tangible gains in that under this regime we have contributed to checking restrictionism in international trade that both at home and abroad had been hurting the farmer, and that was still in full process of development when the trade-agreements program went into effect. (3) We are plainly and simply extremely pessimistic as to the turns our trade policy might take if we throw over the present program in its essential outlines.

Members of Congress who seek, through manipulations of fragmentary statistics, by unsupported generalities, and by misleading interpretations to confuse and misinform their constituents about the effect of the trade-agreements program upon their economic welfare, are doing those constituents a most notable disservice.

Marksmanship—An Essential of National Defense

EXTENSION OF REMARKS

OF

HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

ADDRESS BY MAJ. GEN. C. M. WESSON

Mr. ENGEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Maj. Gen. C. M. Wesson, chief of ordnance, to the National Rifle Association of America, at the Mayflower Hotel, Washington, D. C., February 2, 1940:

> Mr. Toastmaster, members of the National Rifle Association, and guests, it is a special pleasure to address you this evening, for you give me an opportunity to express to you my appreciation of the cordial relations existing between the Ordnance Department and your association. Let me assure you at once of the wholehearted support and cooperation of my Department in continuing your program, which is of such importance to our national defense.

That program, as I understand it, is to perpetuate that fine tradition, "America is a Nation of riflemen." Not only to perpetuate that tradition, but ever vitalize it so that it shall be as true today as in the past.

This slogan imports a high purpose. In choosing it tonight as the theme of my remarks, I have selected a text from a great book, well known to many of you, A Rifleman Went to War, by the late Herbert W. McBride.

"Probably no other thing in the soldiering game is so little understood as rifle shooting. The general impression seems to be that all that is necessary is to give a man a rifle and some cartridges and that, in some miraculous way, that man immediately becomes a perfectly good and competent rifleman, able to knock over any number of the enemy at most any range—but we know."

Tonight, tomorrow, and every tomorrow we must hearken to McBride's words, and make sure that we do know.

Since the founding of this Nation our people have prided themselves on their rifle marksmanship. This development came perforce from necessity, as have many other things. The early settlers lived in an immense wilderness and were dependent upon their weapons for much of their food and for the safety of life itself. Their weapons had to be accurate and their individual skill of a high order. Ammunition was scarce, each round fired must find its mark. The epic of the Kentucky rifle is the record of necessity.

Many of the rifles of those early days were laboriously made by hand and the workmanship on some of them was truly remarkable. If we can believe Fenimore Cooper and other early story tellers, our forefathers employed their trusty rifles with telling effects. There is no doubt that much of the success of our colonial wars and the Revolutionary War can be directly attributed to these fine weapons and to the skill with which they were employed.

Until 1871, when the National Rifle Association was established in the State of New York, there was no organized effort to create and maintain interest in rifle shooting throughout the Nation. This association, originally founded by a group of sportsmen in New York City, immediately interested itself in the improvement of small-arms marksmanship in the National Guard and in the Regular service of the United States.

Under the guidance of this association, interest in shooting throughout the country grew by leaps and bounds; but it was not until 1914 that the aid and support of the Government was obtained through the creation of the National Board for the Promotion of Rifle Practice.

It is gratifying to note that today there are more than 1,600 civilian rifle clubs, each with an average membership of 25. To each of these clubs is issued from two to eight rifles, target equipment, and an annual supply of ammunition. Medals are issued to those who qualify under prescribed rules as experts, sharpshooters, and marksmen. Needless to say the winners of these medals are proud of their achievement and become disciples of civilian rifle practice. They spread the gospel of marksmanship throughout the country. A medal for rifle shooting has most other medals pushed off the boards and well it should.

Make no mistake about this: In the wars of the future, as in the past, the plodding doughboy with his rifle and bayonet will be in at the finish. Of course, airplanes, artillery, tanks, and other similar contrivances will be necessary; but these are merely auxiliaries to the infantry, which always has been, and will continue to be, the Queen of Battle. At least, I see no other royalty at this stage of things to oust her majesty.

Prior to the World War, training in rifle marksmanship was all but abandoned by many of the armies of Europe. The theory was advanced that skill in marksmanship was unimportant as a factor in modern war. Numerous instances were reported in the Allied armies of men chasing an individual enemy throwing hand grenades at him instead of mowing him down with a shot from his rifle.

It did not take long for the American soldier, armed with the Springfield and carefully trained in its use, to discredit this theory. General Pershing from the beginning insisted that our troops be thoroughly trained in marksmanship, and he has stated many times that this training was an important factor in the success of our forces in the World War.

Our national military policy has always been to maintain a small highly trained Regular Army and National Guard and to depend upon a citizen army for our major fighting force. This policy, of course, throws a double load on the Regular Army and National Guard at the beginning of a war. They not only must bear the brunt of the early part of the conflict, but must also direct the training of the citizen Army. It is, therefore, essential that as many of our citizens as possible should be trained in time of peace in the use of the soldier's basic weapon—the rifle. Your organization more than any other is responsible for the interest being taken in its use throughout the country today. You are providing a body of men highly qualified to assist in the instruction of a large citizen army in this most important phase of training. The initials "N. R. A." have stood for lots of things not always foolproof. But when they mean National Rifle Association they always connote the trained citizen rifleman.

Another most important contribution to the national defense by your association has been the influence exerted in defeating detrimental firearms legislation. Some of this proposed legislation, had it passed, would have served to cripple the firearms industry in this country. I rise to applaud you for that. Our private firearms industry is an essential source of supply in an emergency, and therefore is an essential part of our defense potential.

The Ordnance Department is the supply service for all the activities under the tutelage of the Board for the Promotion of Rifle Practice, including your vast organization of rifle clubs, schools, colleges, and also for the national matches. Since 1914, when Government aid was authorized by the Congress, it has been our aim to provide you with the best rifles and ammunition possible. Improvements in ammunition and rifles have been undertaken each year and many changes have originated from experiences at the national matches.

These matches, held annually at Camp Perry, and perhaps the most important rifle activity under the jurisdiction of the War Department, until the present time have been conducted with the Springfield rifle. This rifle, which is known the world over for its superiority as a military weapon, has established many enviable records at Camp Perry.

The model supplied for the national matches is and always has been identical with the service rifle as to general design; but, in order to provide greater accuracy and smoothness of operation, careful selection is made from current production of parts that go to make up this rifle. For example, the variations of the interior dimensions of the barrel must not be more than one-half those permitted in the service rifle. When assembled, the rifle must pass a very rigid accuracy test before it is acceptable. The rifles for this year's matches will be of the same high quality as heretofore.

As all of you know, the War Department in 1936, after many years of extensive experimentation adopted a semiautomatic rifle to replace the Springfield as the arm of the individual soldier. This rifle, popularly known as the Garand, is now in production at the Springfield Armory, and 25,000 have been completed and delivered to troops. A year ago we were making 800 a month. In September last this was increased to 2,000 a month and in the current month a production rate of 4,000 a month has been attained. To supplement the production of Springfield Armory and also to provide another source of supply, a substantial order for these rifles has been placed with the Winchester Repeating Arms Co. That company plans to deliver at the rate of 3,000 per month beginning November next and subsequently to increase this rate materially. It is expected that the entire Regular Army and the National Guard will be equipped with it within the next 2 years.

This rifle made its first appearance at the national matches last year, where it was used in the small-arms firing school, and from the reports received it gave a very creditable account of itself.

In the hands of troops, it has been subjected to every conceivable test. Under the most adverse conditions it has met every expectation and the adoption of this rifle has put into the hands of each soldier the equivalent in aimed shots per minute of two and one-half Springfield rifles. Due to the decreased recoil and ease of operation this greater rate of fire can be maintained for a considerable period without causing undue fatigue. Instances have been reported of men firing as many as 600 rounds continuously without showing any ill effects; a feat hardly possible with the Springfield.

There is one thing, however, about this rifle that I want to especially call to your attention: It is primarily a combat weapon rather than a weapon for long-range accurate target work. So far as inherent accuracy is concerned, it is the equal of the Springfield. By that I mean that in a machine rest it will do about as well as the Springfield, but that the sights with which it is equipped are especially designed for combat use and are not adapted to long-range accuracy shooting. At ranges up to and including 600 yards, it will compare very favorably with the Springfield.

At the matches to be held at Camp Perry this year, it is proposed to supply about 400 of these rifles and several matches will be arranged in which they will be used. The course of instruction at the Small Arms Firing School and at these special matches should in my judgment be so designed as to develop in the riflemen the ability to utilize to the maximum the great battle efficiency of this rifle.

The facilities for the manufacture of the Springfield rifle have been converted to the manufacture of the Garand, and manufacture of the Springfield has been discontinued. When the present stock of National Match Springfield rifles has been exhausted, there will be available for the matches at Camp Perry, both the old Standard Springfield rifle Model 1903 and the new Standard Garand.

I am confident that with the reorganization of the target courses so as to best utilize the potentialities of the semiautomatic rifle as a superior battle weapon, it will attain all the popularity of the famous Springfield. This is another way of saying that the rifle and the rifleman are marching forward.

The development of rifle-caliber ammunition has kept pace with the development of the rifle. Prior to the World War and during that conflict, our standard service ammunition was the M1906. This ammunition, with various modifications, was used for many years in the national matches with satisfactory results. Many experiments were carried out with this cartridge, to improve its accuracy for national-match use. The cases were specially manufactured, bullets were selected from current production as to uniformity of weight and balance, and the velocity was increased above that of the service cartridge to better resist the effects of wind, particularly at the longer ranges.

During the progress of the war as the machine gun became more and more in use, a demand arose for an ammunition having a range far in excess of that obtainable with the M1906. This led to experimentation with various shapes and weights of bullets, the culmination of which was the M1 ammunition having a boat-tailed, 172-grain bullet, 22 grains heavier than the 1906 bullet. The production of 1906 ammunition was then discontinued.

The M1 cartridge was eventually adopted for all weapons. Its range is so great that it has been difficult to obtain target ranges of sufficient area to safely permit its use. As long as stocks of the M1906 ammunition were available, this type was supplied for use on those ranges where it was unsafe to fire the M1 ammunition. With the exhaustion of the supply of the M1906 ammunition, it became necessary to reestablish its production. In so doing certain improvements were made and this ammunition is now known as the M2.

In the intervening years since the World War, much thought and study have been given in the military service to the effective battle range of the individual rifleman, the amount and weight of ammunition carried, and the fatiguing effect of firing; particularly, the relationship between this effect and his efficiency in hitting.

As a result, it is now generally conceded that with whatever rifle he may be armed, the fire of the individual rifleman in combat will not be employed at ranges beyond 600 yards. There are many who are of the opinion that the maximum effective range is even less than this. Following this line of thought, the question naturally arose: Why should the individual soldier carry a cartridge as powerful as the M1 when its excess power serves no purpose other than to subject him to a terrific wallop each time he fires? It also adds nearly an extra pound of weight to his already heavy load, and has no more deadly effect on an enemy at effective ranges than a less-powerful cartridge; such as the M2.

This led to quite extensive tests of the new M2 cartridge. The results were so conclusively in favor of this cartridge that it was adopted for all shoulder weapons. Subsequently, it was adopted for all machine guns, except the aircraft type, when tests demonstrated that its maximum effective range was adequate.

The M1 cartridge has been retained temporarily for aircraft machine-gun use only because its time of flight at the maximum ranges contemplated in these weapons is slightly less than that of the M2 type. I believe that this slight difference is inconsequential; and that as a result of certain tests now being made, the M2 ammunition will also become standard for aircraft use and thus we will have only one type of caliber .30 ball ammunition which is, I think, as it should be and ought to serve every purpose.

From a military standpoint, it is my opinion that the adoption of this M2 cartridge has been a great step forward. It not only provides our troops with an entirely satisfactory combat cartridge, but one which can be manufactured much more readily than the M1 type. The fact that it can be produced by existing commercial facilities is extremely important in connection with the tremendous procurement program which must be undertaken in the event of war. I can assure you that the problem of obtaining the large quantities of small-arms ammunition which will be required is no easy one.

The difficulty of procurement of ordnance items is not only true of small-arms ammunition but is true of ordnance items in general. The designs must be such as to be adapted to quantity production by commercial firms upon whom we must rely for the greater part of our equipment in time of war.

These facts, which are of general knowledge, are being brought to our attention very forcibly today in connection with the large program of rearmament now in progress. This program, amounting in money to $120,000,000, more than two-thirds of which has been placed with private industry, includes substantial quantities of modern light tanks, combat cars, scout cars, antiaircraft guns with their mounts and fire control, antitank guns, mortars, artillery of several types with their mounts, semiautomatic rifles, and other items.

If additional funds are provided, sufficient to equip completely our troops with these improved weapons, we will have repaired a grave deficiency. The least, it seems to me, that we owe to the fighting man is to arm him with fighting tools equal in effectiveness to those possessed by any nation. As for our doughboy, with his semiautomatic rifle, we are well on the way to make him the most formidable rifleman in the world.

If we can achieve that goal and maintain it, we will have done well. But we must be sure always that rifle shooting is understood in all its essentials.

It was the Duke of Marlborough who said, "No soldier can fight unless he is properly fed on beef and beer." I suggest, in all deference to the great duke, that we amend his rule not by removing either the beef or the beer but by adding, "Neither can he fight unless he be properly trained in the battle efficiency of his rifle."

Hon. Louis Johnson

EXTENSION OF REMARKS
OF
HON. JAMES A. SHANLEY
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

Mr. SHANLEY. Mr. Speaker, it was with a particular source of pride that I noted the high tribute paid by news commentators to my distinguished friend the Honorable Louis Johnson, Assistant Secretary of War, and former national commander of the American Legion, for consideration for the second highest elective post in these United States.

The origin of that tribute and the attitude of the recipient are so expressive that I am using the unanimous consent I obtained yesterday to include the background of the honor in today's RECORD.

PORTLAND, OREG., *March 31, 1940.*

LOUIS JOHNSON,
Assistant Secretary of War:

We respectfully request that you wire Early Snell, secretary of state in Oregon, asking him to have your name entered as Democratic candidate for Vice President for the May 17 primaries. Thousands of your friends among the veterans' organizations and another great host of your warm admirers are eager for you to make your entry into the Oregon primary.

FRANK TIERNEY, *State Chairman.*
HOWARD LATOURETTE,
National Committeeman.

APRIL 1, 1940.

FRANK TIERNEY,
State Chairman,
HOWARD LATOURETTE,
National Committeeman, Democratic National Committee, Portland, Oreg.:

I am highly honored and deeply touched by your telegram of March 31 and the other communications suggesting that I enter the Oregon primary as Democratic candidate for Vice President. It is the loyalty and enthusiasm of such friends that make life worth while and make one do his best even when the going is toughest.

At present I am dedicating my every thought and effort toward the assurance of peace for America by way of sound and adequate national defense. Toward this objective, my friends of Oregon, without regard to party, have given me every encouragement and support. For me to personally and actively enter your primary would necessarily take time from this effort. I believe you would not have me do that in these troublous days.

I plead for your continuing support for a sound and peaceful America.

Your expression of confidence has moved me profoundly. Please express to all my friends, and particularly my comrades of '17 and '18 to whom you refer, my appreciation, my affection for them and for your glorious State, and my every good wish.

Gratefully yours,

LOUIS JOHNSON.

American Sugar

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 18, 1940

RESOLUTIONS OF BROOKLYN (KINGS COUNTY) COUNCIL, AUXILIARIES TO VETERANS OF FOREIGN WARS OF THE UNITED STATES

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

BROOKLYN (KINGS COUNTY) COUNCIL, AUXILIARIES TO VETERANS OF FOREIGN WARS OF THE UNITED STATES

Whereas Brooklyn is an old and important cane-sugar refining center which gives work to hundreds of men and women, who receive the high American wage; and

Whereas this cane-sugar refining industry gives employment indirectly to hundreds of other workers employed in the railroad and other supplying industries; and

Whereas the Federal sugar legislation, which governs our entire American sugar system, expires this year; and

Whereas cane-sugar producer-refiners in the Tropics, and beet-sugar producers at home who receive heavy subsidies from the American consumer, paid for partly through a sugar sales tax, are attempting to increase their share in the American market at the expense of our home-refining industry; and

Whereas our home-refining industry receives no benefits of any kind under the Sugar Act, and cannot possibly compete with groups receiving large subsidies, cash and otherwise: Therefore be it

Resolved, That when Congress formulates sugar legislation this year, this legislation shall not result in a loss of jobs or loss of business for our home cane-sugar refining industry, and loss of jobs to our refining men and women; and be it

Resolved, That the Brooklyn Council of the Auxiliaries to the Veterans of Foreign Wars, in passing this resolution, endorses this method of maintaining home industry and home employment; and be it further

Resolved, That copies of this resolution be sent to the congressional Representatives from Brooklyn, to the two Senators from New York State, and to the Secretaries of Agriculture, Interior, State, and Commerce respectively in Washington, D. C.

ANNA MORRA, *President,*
EDNA M. RATZSCH, *Secretary.*

APRIL 3, 1940, *date passed.*

Peace Plank for Political Platforms

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 16, 1940

RADIO ADDRESS BY HON. LOUIS LUDLOW, OF INDIANA

Mr. LUDLOW. Mr. Speaker, by unanimous consent, I present for publication in the RECORD an address I delivered last night over the red network of the National Broadcasting Co., as follows:

ANNOUNCER. War in Europe. War in the East. Peace in America. How may we keep this peace? What steps will the key political parties take in the coming campaign? These are some of the questions that Representative LOUIS LUDLOW, of Indiana, considers tonight in a talk from our N. B. C. studios in Washington. Mr. LUDLOW, author of the famous Ludlow amendment requiring a national vote for the entrance of this country into any overseas war, has entitled his address tonight "Peace Plank for Political Platforms."

Representative LUDLOW.

Mr. LUDLOW. The United States is slipping in the direction of war. If we keep out of the bloody chasm, we will have to build up our resistance by constructive thinking and planning. That is why I am proposing at this early date a definite peace plank for our 1940 national political platforms.

Our country will go a long way to insulate itself from foreign wars if it will demonstrate to all the world in an impressive way its inflexible will and determination not to be dragged in. The platforms of our national political parties will furnish exactly the vehicle needed to manifest and dramatize that will and determination.

The foreign picture is ugly, and there are many indications and trends that point to our ultimate involvement, unless we have the vision to erect proper safeguards. The broadening of the war in Europe increases our peril. Soon, judging from present portents, the Eastern Hemisphere will be aflame from the Arctic Circle to the Tropics. Every additional country invaded, every extension of the conflict has its menace for America.

But, grave as are the many possibilities that might be imagined as the outgrowth of the kaleidoscopic changes in Europe, I believe that more dangerous still, as an incentive toward our involvement, is our vast and expanding Allied war trade, which I fear will sooner or later be pulling with the strength of a million hawsers to drag us into the war. I have been unable to secure from the State and other Departments even a rough idea of the magnitude of that trade, but it is enormous and is growing like a rolling snowball. It was recently publicly announced that the Allies are placing orders in American factories for a billion dollars' worth of bombing airplanes. Only the Lord knows the size and extent of the other orders for lethal instruments of death and destruction that are pouring in from the belligerents.

Anyone would be credulous indeed to believe that the belligerent governments that are placing these enormous orders have the cash to pay in full for them. Those governments have bled themselves white building up armaments and otherwise preparing for war. They have used for this purpose not only money we loaned to them during the World War but about all of the money they can squeeze from their people in taxes. Does anyone think they have the billions in cash to lay on the barrel-head in payment for the vast orders they are placing in America?

They no doubt have enough cash to get operations started in the execution of these orders, and when everything is going good and vast numbers of men are employed in these American factories in the execution of foreign war orders the word will come across the ocean:

"We have run out of cash. You must vote us a loan to give us the credit to continue the execution of these orders, or we shall have to cancel them."

What will happen then? The workingmen engaged on munitions will say to our American Congress:

"We need this work. You must not throw us on the breadlines. You must grant the loan."

Our farmers will say:

"We will be ruined unless we have a market for our products. You must grant this loan so the city people can buy what we raise."

What is almost certain to happen then is that we will grant the loan, and from that time on we will be actively financing one set of belligerents.

A very high-up War Department official said to me the other day:

"I will favor lifting the ban on credits and furnishing the Allies everything we have that they need, but I will strenuously oppose sending even one man to fight in Europe, and, if necessary, I will take the stump to speak against participation with our manpower."

This position, I think, is wholly unsound, for if we take over the job of financing one side in the European war we will be in the war up to our necks and the time will come when resistance of pressure to send our troops will become our major problem.

Secret diplomacy adds to the nervousness of our situation and, I think, to the danger of our involvement. Secret diplomacy, engineered largely by Ambassador Page and Colonel House, was one of the major factors in getting us into the World War. Whether the activities of Ambassador Bullitt and Sumner Welles are in any way comparable to the movements of the great secret envoys of the World War era remains to be seen. The difficulty in making an appraisement is due to the impenetrable secrecy that surrounds their operations. In this game of life and death the people who have to do the dying and the suffering are entitled to have the cards on the top of the table. It is no disparagement of the ability or the rectitude of Mr. Bullitt and Mr. Welles to say that their past unrestrained utterances necessarily create a conviction that their minds are made up. I fear they are not unbiased emissaries. I apprehend that they are surcharged with eagerness to help the Allies.

Now with all of these and many more dangers and menaces surrounding us, what can we do to keep out of war? I think the most effective thing peace lovers can do, now and in the weeks immediately to come, is to cooperate in a determined Nation-wide movement to secure the adoption of a plank in our Democratic and Republican national platforms that will hold America in the path of peace.

Such a plank, to be effective, must be forthright, clear, and explicit. Unless the people arise and demand an unequivocal peace plank, the disposition of the politicians will be to pussyfoot and evade the issue by adopting a plank that will sound well but mean nothing. If our national political parties meet in solemn conclave in June and July and piously resolve that they are for peace and stop there, they will do nothing more than make colossal jokes of themselves. Even Hitler says he is for peace. His codisturbers, Mussolini and Stalin, are strong for peace if we take them at their word. In this crucial time, with the lives of human beings at stake and with the fate of democracy in the balance, the people of America, if I judge their temper, are not going to tolerate sidestepping and circumlocution on this issue. The national conventions will have to fish or cut bait.

In a speech in the House on February 28 last I recommended a peace plank for adoption by both the Democratic and Republican national conventions, as follows:

"*Resolved,* That we favor a Nation-wide referendum before declaration of war, except in case of invasion of the United States or some other country in the Western Hemisphere, or internal rebellion."

This proposed plank simply says in effect:

"Unless we are attacked or invaded, or unless some other country in the Western Hemisphere is attacked or invaded, the people shall have a right to decide whether our boys shall be sent overseas to die in foreign slaughter pens. In dealing with this most tragic of all questions the principal, and not the agent, should have the right of decision and in this case the principal is the 130,000,000 people who comprise the American Nation."

That is all there is to it. What could be more elementally just than that? Under this plank women would have an equal right to vote with men on proposals to participate in foreign wars. And why should not women have that right? Women go down into the valley of the shadow of death to bring our boys into the world. Why should they not have something to say as to whether their flesh and blood shall be hurled into the hell of a foreign conflict? In the Congress of the United States, where the power to declare war now rests, only 7 of the 531 Members are women, so you see how pathetically impotent is the opportunity now given to express women's viewpoint on any particular war proposal. Women are virtually shut out of consideration on this most vital of all issues.

The referendum on war proposed in this plank would not in any way, shape, or form interfere with our national defense for in the case of attack or invasion the referendum would not apply. It only goes to the point of providing that when it comes to sending our boys overseas to participate in foreign wars over boundary disputes, blood feuds and the like, the people who have to suffer and if need be to die and to bear the awful burdens and costs and griefs of war shall have something to say about it.

I will be frank in explaining that the verbiage of my proposed peace plank was chosen because it is substantially the language of

a resolution unanimously and enthusiastically adopted by the Young Democrats of America in their national convention at Indianapolis in 1937, with James Roosevelt presiding. With the flower of our young Democrats, 5,000,000 strong, back of it, this resolution ought to be powerfully appealing to the youth of the land, and, since there is no politics in war, this plank, or the substance of it, should be just as appealing to Republicans as to Democrats.

During the 47 days that have elapsed since I proposed this plank in the House of Representatives I have received letters from all over the country approving it. These have come from Democrats and Republicans, young and old, with an exceptionally large number from youths, who are the Nation's potential cannon fodder. Many want to know what they can do to help along the movement. Many college students have written to say that they favor such a plank. Labor leaders are well represented in the ranks of endorsers.

In a brief radio address like this it is impossible to scratch the surface of this large volume of approving correspondence. A great archbishop of the Catholic church sends his warm endorsement. Eminent ministers and rabbis are in hearty accord. Senators and Representatives in the Congress pledge support. Maj. Gen. William C. Rivers, retired, United States Army, writes:

"Your suggestion is, I am sure, an excellent one which the people at large will approve. I should think that both the great political parties would have such a plank in their platforms."

Ex-Congressman Herbert S. Bigelow, Cincinnati, writes:

"It is a 'clarion call.' I am for your plan 1,000 percent."

Jerome Davis, president of the American Federation of Teachers, writes:

"Taxation without representation was tyranny. For Americans to fight and die in Europe without being given a chance to vote on whether they want war or peace is also tyranny. Let us make our country truly democratic, both in peace and in war."

Ona Barroda, president of the National League of American Pen Women, writing from Los Angeles, says:

"How else can women use their vote but through a measure like you present in your bill?"

Dorothy Detzer, writing for the Women's International League for Peace and Freedom, says:

"Any American who does not rally to the support of this plank must be discouraged in himself or in the ideals of his country. Youth, responsible for the future of civilization and democracy, must see to it that to preserve it is to strengthen it against the forces of economic insecurity and war. The same appeal made to youth should be made to women for, as you point out, they have a special stake in peace."

Rabbi Edward L. Israel, of Baltimore, writes:

"I have always thought that our people should have an opportunity to vote in the matter of a declaration of foreign, overseas war. It seems to me that the exception you make in your suggestion, namely, whereby in case of invasion or internal rebellion Congress should have the right to declare war without a popular referendum, takes care of every possible objection."

Rev. John Hayes Holmes, paster of the Community Church of New York City, says:

"I have long been a supporter of the so-called Ludlow amendment and welcome this opportunity of expressing my gratitude to you for your brave and devoted leadership in this great work for peace. If there is anything elementary in this war business it is that the common people, the fathers and mothers of our boys, should be consulted before the Nation goes to war. Once fix it so that every father and mother going into the voting booth knows that he is voting life or death for his own son and the war business is going to become immensely difficult all of a sudden."

I might quote for hours similar expressions from key Americans that have come to me in the mails since I proposed my peace plank.

What would be accomplished by a peace plank in our national platforms such as I propose? Two things, as I see it:

1. With that plank in the national platforms any administration that may come into power next January will be very slow to get our country into war.

2. That plank would hasten the restoration of world peace because it would serve notice on powers which may think of prolonging the war until the United States becomes involved, that the people of the United States may have the last word in framing our foreign war policy.

The immediate effect of the proposed plank, therefore, would be that of a great stabilizing influence toward establishing and guaranteeing the peace of America and the peace of the world. Its ultimate effect, I think, would be that the Congress and the States would react favorably to the platforms and there would be written into the permanent Constitution of our country a very just and humane democratic provision that would save America from entanglement in foreign wars in the years to come. I firmly believe that if the mad world is to be saved America must save it, and we can perform that monumental service to humanity by keeping out of embroilment and spreading the leaven of peace.

I hope that all of my radio listeners who approve this suggestion for a peace plank in our national political platforms will get busy at once. I ask you to discuss the matter in your neighborhood circles and clubs, for in a multitude of counsel there is wisdom. Write to your local newspapers and your Congressmen and to the leaders of the political party to which you belong and tell them what you think about it, and finally send me your views with permission to insert your letter in the CONGRESSIONAL RECORD if I should find it possible to do so.

The Presidency of the United States

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

Mr. KEFAUVER. Mr. Speaker, today I have introduced a bill designating a person who shall act as President if a President shall not have been chosen before the time fixed for the beginning of his term, or when neither a President-elect nor a Vice-President-elect shall have qualified.

Feeling that this legislation should be given immediate attention, and for the purpose of calling it to the attention of the Members of Congress, I ask unanimous consent that the bill and a brief explanation of same be printed in the RECORD.

The bill is as follows:

Be it enacted, etc., That if a President shall not have been chosen before the time fixed for the beginning of his term, or neither a President-elect nor a Vice-President-elect shall have qualified, the Speaker of the House of Representatives shall act as President until a President or a Vice President shall have qualified: *Provided*, That if the House of Representatives shall not have elected a Speaker, the President of the Senate pro tempore shall then act as President until a President or a Vice President shall have qualified: *Provided further*, That no vacancy shall ensue in the office of the Speaker of the House of Representatives nor in the office of the President of the Senate pro tempore by reason of this act.

SEC. 2. The person who shall act as President shall take the oath of office prescribed in the Constitution before entering upon the discharge of his duties, and he shall receive compensation at the rate prescribed for the President and none other during his incumbency as acting President, and he shall exercise the powers, functions, and prerogatives of the Chief Executive while so acting; and when a President or a Vice President shall have qualified such person shall thereupon relinquish the office as acting President, and automatically resume the duties of the office of Speaker of the House of Representatives or President of the Senate pro tempore, as the case may be.

EXPLANATION OF BILL

This bill is intended to meet the contingency, remote, but nevertheless possible under certain circumstances, namely: First, if a President has not been chosen before the time fixed for the beginning of his term; and, second, if a President-elect or a Vice-President-elect shall not have qualified.

The first contingency may arise through failure (1) of the electoral college to elect a President, and (2) through failure of the House of Representatives to choose a President before the beginning of his term. The second contingency would arise by reason of the death or disqualification of both the President-elect and the Vice-President-elect, or through failure of the Senate to elect a Vice President when the right to choose one when that duty shall devolve upon them. Should the election of a President devolve upon the House and the election of a Vice President devolve upon the Senate, and a person for neither office be chosen before the beginning of the term, this bill designates the Speaker of the House of Representatives as acting President until a President shall have qualified. If the House of Representatives has not chosen a Speaker, then, and then only, the bill designates the President of the Senate pro tempore to act as President.

It is more likely when the election is thrown into Congress that the Senate would elect a Vice President than that the House would elect a President before the beginning of his term, in which event the Vice President would become acting President until the House should elect a President. The Senate is a continuing body, and a majority of Senators would elect a Vice President from the two highest on the list of those

voted for in the electoral college. But the method of choosing a President by the House is more involved.

It would be a new House, one elected at the previous election. It would meet on January 3. It would have to organize. It could not organize until it elected a Speaker. This may not be possible for days or weeks, or even months. Deadlocks have occurred in the past over the election of a Speaker, one lasting several months. And it is reasonable to suppose that the strength of a third party candidate which should cause a stalemate in the electoral college would be reflected in the composition of the House where the vote for President from among the three highest on the list would be by States and not by individual Members as in the Senate. The vote of each State would be determined by a majority of its delegation, and in case a State delegation is equally divided that State would lose its vote. The electoral vote is required by law to be counted on January 6, only 3 days after the first meeting of a new Congress. Obviously, if a deadlock over the speakership should ensue and not be broken by January 6, the two Houses of Congress could not even meet in joint session on that date to count the electoral vote, much less proceed to the election of a President or Vice President. Assuming, however, that a Speaker of the House were to be elected promptly, and the count of the electoral vote disclosed a stalemate, the House would proceed to ballot for President. No other business would be in order from day to day. The date for the inauguration of a President is January 20, as fixed by the Constitution, allowing but 12 weekdays in which to make a choice, and if no one is chosen by that time the Vice President, if the Senate meanwhile has elected one, would become acting President, otherwise, under this bill, the Speaker of the House would become acting President, and the House and Senate would continue to ballot for President and Vice President, respectively. In the election of a Vice President by the Senate two-thirds of the Senators shall constitute a quorum, and a majority of the whole number is necessary to elect. It might be an easy matter to prevent an election by the absence of a constitutional quorum. In the extremely remote possibility of the death of both the President-elect and the Vice-President-elect or of some disqualification of each, then the Speaker of the House would become acting President until a President should qualify.

The bill designates the Speaker as acting President for the twofold reason that he is first elected by the people as a Representative and second, he is elected by a majority of the House of Representatives as its Speaker. In other words, it might be said that he derives his power direct from the people as the result of a recent election. In lesser degree the same could be said of the President of the Senate pro tempore.

This bill is in pursuance of the provisions of section 3 of the twentieth amendment to the Constitution and is made necessary by that amendment, section 3 of which is as follows:

SEC. 3. If, at the time fixed for the beginning of the term of the President, the President-elect shall have died, the Vice President-elect shall become President. If a President shall not have been chosen before the time fixed for the beginning of his term, or if the President-elect shall have failed to qualify, then the Vice President-elect shall act as President until a President shall have qualified; and the Congress may by law provide for the case wherein neither a President-elect nor a Vice President-elect shall have qualified, declaring who shall then act as President, or the manner in which one who is to act shall be selected, and such person shall act accordingly until a President or Vice President shall have qualified.

Under this provision it will be seen that Congress derives authority to designate any person whomsoever it desires to act as President under the circumstances indicated. Hence, by designating the Speaker of the House of Representatives, the Congress, by the enactment of this bill, would be designating a compatible officer just as it did recently when an Assistant Secretary of the Navy was designated as Acting Secretary. Also, an analogy is furnished in the temporary function exercised by the Chief Justice of the United States when presiding over the Senate in a trial of an impeached President. His authority so to act is in the Constitution. Likewise, the authority of Congress to designate a person, any person, to act as President is derived from the same source, the Constitution.

Upon the election of a President or of a Vice President, the Speaker of the House would automatically resume the duties of that office in which, as the bill provides, no vacancy would have ensued, and he would receive the emoluments of the President only so long as he should act as such.

The necessity for legislation to take care of the contingencies heretofore described was forcibly pointed out by the Honorable William Tyler Page, minority clerk of the House of Representatives, in an address broadcast from Washington in October 1924. The text of this address may be found in the report of the hearings before the Committee on Election of President, Vice President, and Representatives in Congress in 1925. Attention to the necessity of this legislation has also been presented in a series of articles by George Rothwell Brown, a well-known and able columnist.

The Good-Neighbor Policy for the Americas

EXTENSION OF REMARKS

OF

HON. CLARA G. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

ADDRESS BY THE HONORABLE HENRY F. GRADY, ASSISTANT SECRETARY OF STATE

Mrs. CLARA G. McMILLAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable Henry F. Grady, Assistant Secretary of State, before the Forty-ninth Continental Congress of the National Society of the Daughters of the American Revolution on the occasion of Pan American Evening, April 18, 1940, in Constitution Hall, Washington, D. C.:

The foreign policy of the United States is based on friendliness and fair dealing. We want to be good neighbors. We are led to this policy not by blind altruism or unthinking idealism. We have come to realize that the world consists of an interdependent community of nations and that in order to protect and promote our own interests we must have regard and consideration for the interests of other countries. We have come to realize that prosperity, as well as peace, is dependent on international cooperation and that such cooperation can be obtained only by according to other countries the kind of treatment which we desire from them.

This realization was brought to us clearly and forcefully by the world-wide depression of 1930–32 and has resulted in a significant change in our attitude toward foreign relations. Before that time we had often failed to consider the effects of our actions on other countries. We had, for instance, traditionally regarded our tariffs as a purely domestic matter. Certainly we did not establish the excessively high Hawley-Smoot Tariff of 1930 with a view to accord to other countries the kind of treatment we desired from them. Nevertheless, we got what we gave. We barricaded our markets against foreign products, and in return foreign countries barricaded their markets against our products. The export markets of all countries thus became drastically curtailed. The decrease of activity and employment in our own export industries resulted in a falling off of purchasing power at home and contributed greatly to the deflation of the domestic market for American products. The result was that the depression of 1930–32 was intensified and prolonged.

In adjusting our foreign policy to the broadened prospective of international relations which the shock of the depression gave us, it was recognized that the practice of the Golden Rule, as well as charity, begins at home. We resolved to be good neighbors first of all in the community of the American republics. The good-neighbor policy of this administration has achieved notable results in the development of the concept of cooperation and good will in the Western Hemisphere. Through the medium of the trade-agreements program similarly notable results have also been achieved in international commercial relations on a broad world front. In the Western Hemisphere, however, efforts in this direction have extended considerably beyond the field of commerce and involve other aspects of international relations.

The celebration last week of the fiftieth anniversary of the founding of the Pan American Union is indicative of the fact that

there is a sound and tried basis for the establishment of a good-neighbor policy in this sector of the world. The extent to which this vast area of the world has been able to live almost completely at peace for generations is in striking contrast to the situation in Europe where wars seem almost to have been chronic. The lesson of the relations of the countries in the Americas is one for the world to study and to follow.

There are virtually no boundary defenses in the Americas. This is notably true between such great industrial countries as the United States and Canada, where the fear of invasion or armed conflict is entirely absent. In contrast to the present situation in Europe, as exemplified by the Maginot and Siegfried lines, there are thousands of miles of unfortified boundaries in the Americas which, except for the customs and immigration services, are not even patrolled.

Armament in the Americas, compared to that in Europe prior to the outbreak of the present hostilities, has also been strikingly less. For example, the per capita national defense expenditures in 1938 in North, South, and Central America amounted to $4.64, while those for Europe were about four times greater, amounting to $16.98. For the Americas the percentage of population accounted for in 1938 by active land forces was 0.21 percent, as compared with Europe's 0.98 percent, whereas the percentage of population accounted for in active and reserve land and air forces was 0.75 percent for the Americas and 8.76 percent for Europe, nearly 12 times greater.

As a matter of fact, the need for large armaments and fortified boundaries in the Western Hemisphere has been in part removed by the remarkable development of machinery for the peaceful adjustment of boundary disputes, one of the major sources of international strife. Particularly is this important because the change from the status of colonies to that of sovereign States left virtually all the American republics with undefined boundaries. Most of the boundary questions have been settled by peaceful negotiation or by submission to arbitration. At the end of the last century boundary difficulties nearly resulted in armed conflict between Argentina and Chile, but the matter was finally settled by arbitration.

A statue of Christ, high in the Andes, now marks the boundary between the two countries in commemoration of this peaceful solution. The Tacna-Arica controversy between Chile and Peru, dating back nearly a half century, was settled in 1929 through the good offices of the United States. The boundary dispute between Guatemala and Honduras was settled by arbitration in 1933. The dispute between Colombia and Peru over Leticia was settled peacefully in 1934. The long-standing dispute between the Dominican Republic and Haiti was brought to a close in 1935 by direct negotiation between the presidents of the two republics. Although the Chaco controversy between Bolivia and Paraguay resulted unfortunately in open hostilities between the two countries, it was ultimately settled in 1938 by mediation. There are a number of boundary questions still pending in the Americas, and it may be expected that these also will be settled in accordance with the well-established principle of peaceful solution.

In view of the long tradition of friendly relations existing between the nations of the Western Hemisphere and the establishment of machinery in this area for the orderly settlement of international questions, it has been possible for the American republics to make marked headway in the development of inter-American cooperation and understanding not only in respect of economic matters including trade, but also in respect of cultural and political relations.

It is extremely important to the success of the good-neighbor policy that it find expression in our economic relations with the other American countries. Economic questions are of growing concern in our foreign relations. Rapid improvements in transportation and communication have in a sense reduced the size of the world and have knitted together more closely the economic interests of all countries. Moreover, there has been a growing interest on the part of governments in the economic and social problems of their peoples. Certainly no country can for long maintain a liberal and neighborly attitude in its political relations with the rest of the world without maintaining a helpful and cooperative attitude in its international economic relations, especially those involving trade.

It is as important to get trade barriers between the Americas reduced as it is to keep the territorial boundaries clear of menacing and provocative military fortifications. Excessive barriers to trade may be defensive in their inception, but inevitably they tend to become provocative, as do excessive armaments. The idea persists that we can sell and not buy. We envisage increased markets for our products in the American countries; in fact, there are those who confidently expect full compensation there for trade losses in Europe; but when the administration seeks to increase our trade with the countries to the south of us in the only practical way that it can be done, through reciprocity, and announces that it proposes to negotiate trade agreements for this purpose, a clamor of protest arises from this special-interest lobby or that, all protesting vehemently that this or that article must not be touched by any concessions to facilitate imports, even when only remotely and indirectly competitive products are concerned and irrespective of the care with which concessions are formulated for safeguarding our own producers. It is futile to talk about cooperation and the common interests of nations unless we are willing to buy as well as sell in foreign markets. Neighborliness demands that reasonable opportunities be provided for the international exchange of goods and that all traders be treated equally well. It means reciprocity in providing opportunities for trade and nondiscrimination in the treatment of the traders. These are the principles on which the trade-agreements program is based.

This program has made marked progress in gaining support in inter-American commercial relations for the principles of reciprocity and equality of opportunity. Trade agreements have been entered into by this Government with 11 American republics. Such contracts are essential to any sound method of promoting inter-American trade.

There has been considerable discussion since the outbreak of war in Europe of the possibility of increasing our export markets in the Americas. As a matter of fact, there has been since last September a substantial increase in our exports to the American republics. Trade gains resulting from economic dislocations growing out of the war may not, however, be of an enduring character. The possibility of preserving some of these gains after the war and of further expanding our commerce with the American republics in the post-war period depend in a large measure on the direction in which our present commercial policy and activities are being guided. If our present efforts to bring about closer trade relations with the American republics are to produce lasting benefits, they must be directed toward placing such relations on a solid and permanent basis, such as is provided by the trade-agreements program.

The good-neighbor policy of this Government has found expression in inter-American economic relations not only in the exchange of reciprocal opportunities for increased trade but also in various types of economic and technical assistance. Substantial financial assistance has, within the past few years, been extended by this Government through its Export-Import Bank to a number of American republics with a view to enabling them to strengthen their foreign-exchange positions and to undertake various programs of economic development. Our Department of Agriculture has sent experts to a number of these countries to study the possibilities of their developing new agricultural industries and of improving their agricultural economy. An act of Congress approved May 3, 1939, provides for the loan of experts and specialists of this Government to other American republics. Technical assistance has been extended under the provisions of this act in such fields as highway engineering, taxation, patrol-boat operation, customs tariffs, statistics, and monetary matters.

Economic cooperation among the nations of the Western Hemisphere is of a continuing and growing nature. In accordance with the resolution on economic cooperation adopted at the meeting of the foreign ministers of the American republics held in Panama last September, there was established at Washington on November 15, 1939, the Inter-American Financial and Economic Advisory Committee. This committee has for consideration questions involving the establishment of closer cooperation between the American republics in order that they may protect their economic and financial structure, maintain their fiscal equilibrium, safeguard the stability of their currency, promote and expand their industries, intensify their production, and develop their commerce. With reference to financial problems, it has recently worked out and submitted to the 21 American governments for approval a project for an inter-American bank. The setting up of such a bank between American nations for facilitating inter-American trade and the rendering of financial assistance to each other will represent outstanding progress toward greater solidarity in international relationships.

The full realization of the objectives of our good-neighbor policy requires not only cooperation between the American republics in respect of their economic problems but also mutual appreciation and understanding of the cultural values and aspirations of one another. A greater knowledge on the part of the two continents of this hemisphere of how the peoples of the other continent live, of what they think, and what they like is fundamental to a closer drawing together of the Americas. A knowledge of the culture of a people leads to an understanding of their social, economic, and political life, and an interchange of ideas and of intellectual and spiritual values between the peoples of different countries leads to a mutual development and enrichment of their cultural heritage and a natural growth of international tolerance.

With a view to encouraging and facilitating the dissemination of such knowledge and such interchange of ideas and values, there was established in the Department of State in July 1938 the Division of Cultural Relations. This Division has—to quote from the departmental order establishing it—"general charge of official international activities of this Department with respect to cultural relations, embracing the exchange of professors, teachers, and students; cooperation in the field of music, art, literature, and other intellectual and cultural attainments; the formulation and distribution of libraries of representative works of the United States and suitable translations thereof; the preparations for and management of the participation by this Government in international expositions in this field; supervision of participation by this Government in international radio broadcasts; encouragement of a closer relationship between unofficial organizations of this and of foreign governments engaged in cultural and intellectual activities; and, generally, the dissemination abroad of the representative intellectual and cultural works of the United States and the improvement and broadening of the scope of our cultural relations with other countries."

In a democracy such as ours, international cultural relations constitute basically a people's movement, and the initiative for cultural exchange properly resides with private agencies and institutions. The major function of the Division of Cultural Relations is to make the good offices of the Government available to private enterprise. It does not in any way supplant the significant activities toward international understanding now carried on by colleges, universities, foundations, institutes, and other private agencies, but instead renders those activities more effective by the provision of an official agency serving as a clearing house for exchange of information and as a center of coordination and cooperation.

The development of greater trade opportunities, the rendering of assistance in various economic and technical fields, and the promotion of a mutual appreciation of cultural values in the relations between the American republics preclude in a large measure the rise of international frictions and provide a firm basis of peace and understanding in inter-American relations. I know of no large sector of the world where the peaceful processes of diplomacy can be and have been relied upon more confidently in the conduct of international affairs than in the Americas. It has become the normal procedure for the 21 American republics to consult through diplomatic channels on matters of common interest.

At the Montevideo conference in 1933, Secretary Hull announced general agreement of the United States to the contractual obligation undertaken by all the other American nations which declared "inadmissible the intervention of any one of them, directly or indirectly, and for whatever reason, in the internal or external affairs of any other." In 1936 the American republics held another conference at Buenos Aires to devise measures for their protection in the event of war between American states or any other part of the world. It was agreed there "that every act susceptible of disturbing the peace of America affects each and every American republic" and it was provided that "in the event that the peace of the American republics is menaced, and in order to coordinate efforts to prevent war," the American republics "shall consult together for the purpose of finding and adopting methods of peaceful cooperation." Having established the principles of and the machinery for peaceful cooperation in this hemisphere, the American states took steps at the Lima conference in 1938 to strengthen the machinery for consultation in respect of problems of hemispheric defense. Provision was made at this conference for consultation whenever it appeared that the American peace might be disturbed. Accordingly, consultation was held at Panama for this purpose following the outbreak last September of war in Europe.

The good-neighbor policy, implemented by economic cooperation and cultural understanding, represents an outstanding contribution which the United States has made to the building up of a basis of peace for the conduct of international relations. This contribution has arisen from the fact that American foreign policy appreciates and comprehends the growing importance of economic forces underlying international tensions and the benefits of closer cultural relations in the conduct of international affairs. The good-neighbor policy has demonstrated the feasibility and effectiveness of an understanding and cooperative approach to international problems. It is a beacon light shining through the gloom of war, indicating the way toward the reconstruction of a sound and lasting world peace.

Federal Crop Insurance Act

EXTENSION OF REMARKS

OF

HON. SAM C. MASSINGALE

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

Mr. MASSINGALE. Mr. Speaker, I am gratified at the opportunity afforded to voice my sentiments in support of the pending legislation to extend the present crop-insurance program to the cotton crop.

The membership of this body is familiar with my interest in all efforts that have been made during my service as a Member to further the best interests of American agriculture. That fact is equally well known to the people of my district, whom it is my happy privilege to represent. I know, as does every thoughtful student of the problem involved, that to reestablish our agriculture upon a sound and permanent basis we must raise the farming industry to a position of equality with every other major industry of the Nation. To do that we must materially increase farm income. Then, too, we must strive to make farming more secure. Crop insurance will help to do that. It is because I believe that crop insurance will add greater security and will likewise provide increased income for the farmers of our country that I now favor, as I have from the beginning, legislation in its support.

Title V of the agricultural conservation bill of 1938 carried a provision for the establishment of an all-risk crop-insurance program for wheat to be made available for wheat producers for the 1939 wheat crop. This was a decided departure from any of the past farm programs and was a venture into an insurance field in which commercial concerns had met with failure. These failures were probably due to one or two basic factors which were felt to have been corrected in the program worked out by the Crop Insurance Corporation on the basis of the recommendations of the President's committee. The initial program was limited to the wheat crop for several reasons, which have been discussed at length by this body and need not be reviewed.

It is now proposed that the program of all-risk crop insurance be extended to include the cotton crop. However, since such insurance on growing crops is a new venture, any prediction as to the outcome of a cotton-crop-insurance program must be predicated on the success of the wheat-crop-insurance program.

Because of my close personal observation of the wheat-crop-insurance program in my district, I have one or two points which I want to discuss very briefly.

First, does the program meet with the approval of the farmers affected? This can best be answered by the record of participation in the present wheat-crop-insurance program. During the first year of operation 166,000 insurance contracts were in effect. This year over 378,000 contracts have been entered into between the participating farmers and the Federal Crop Insurance Corporation. In my own district there were 3,170 contracts in 1939 and this number has been increased to 6,474 in 1940. Any program which is presented to the farmer on a voluntary basis which doubles in participation in the second year of operation most certainly must be satisfactory to the farmers affected.

Second, does the program accomplish the purpose for which it is designed? The crop-insurance program has for its chief purpose the stabilization of farm income, to provide for the participating farmer either 50 or 75 percent of his normal wheat crop for sale each year, and to absorb the shock of 1 or more years of partial or total crop failure. Out of the 3,170 contracts in effect in my district in 1939, losses were experienced on nearly half of them, in that 1,403 indemnities were paid in wheat or its cash equivalent. Thus, 242,017 bushels of wheat were added to the income of these 1,403 farms. This is an average of 172 bushels per farm. On the basis of total farm income, this represents a fairly large proportion. While to us an income of 172 bushels of wheat may appear rather small, it still represents the difference between profit and loss in many of the farming operations on the farms in my district. Many instances have been reported where the indemnity from a crop-insurance policy has been sufficient to prevent the loss of farms due to foreclosure, liquidation of current indebtedness, and payment of sundry farm bills which affects not only the farmer in question but all of the lines of industry and business in the average small-town farming community.

Now, again, and with particular reference to the proposal for crop insurance on cotton, it has been my observation that there is probably as great need for crop insurance on cotton as there is on wheat. This observation is fully substantiated by the records of the Department of Agriculture with regard to the losses sustained by the cotton farmers because of uncontrollable hazards.

Many of the 2,000,000 or more American farmers who depend on cotton as the major source of their income have at one time or another faced financial difficulties because of crop failures from causes beyond their control. The need for an agricultural program which will provide the individual cotton grower protection against these unavoidable production hazards has long been recognized. In fact, this need is emphasized by an old saying in the South that "Cotton can promise more and do less, and can promise less and do more, than any other plant."

It is true that widespread failures of the cotton crop are infrequent. It is also true that severe cotton-crop losses have never occurred over the entire Cotton Belt during any 1 year. But crop failures come every year in one part or another of the belt. For instance, widespread droughts brought disaster in 1918, 1925, 1930, 1934, and 1936. Excessive rains for 5 or 6 weeks reduced the crop over 50 percent in parts of Alabama, Mississippi, and adjoining States only last year, 1939.

In Oklahoma the most important cause of crop failures is drought. Severe crop losses occurred during 1934 and 1936, as shown in table 1. In this table is shown the annual yields of a representative sample of farms in four typical counties of my district during the years 1933–38, inclusive, together with the percentage of farms in the sample on which crop losses would have been sustained each year had the cotton crop been insured under a plan similar to the wheat-crop-insurance plan. The total number of farms in each county on which losses would have been sustained was estimated by applying to all farms in the county the percentage of the sample farms on which losses occurred. While the years 1933–38 do not represent a period of sufficient length on which a crop-insurance program should be based, a study of individual farm yields during this period gives some idea of how yields fluctuate from farm to farm and county to county.

It will be noted from table 1 that crop losses occurred each year in all of the four counties studied—Beckham, Harmon, Jackson, and Washita—except in 1933. Exceptionally good crops were produced in 1933; but in 1934, and again in 1936, the yields on 88 percent of the farms in these four counties were below 75 percent of the 1933–38 average. This means that 9,900 of the 11,300 farms in four of the most important cotton-growing counties in Oklahoma had less than three-fourths of an average yield.

TABLE 1.—*Annual cotton yields of a representative sample of farms, by counties, showing the estimated number and percentage of all farms in each county that would have had losses under the 75-percent insurance plan during each of the years 1933–38, inclusive*

State and county	Year	Annual yield, all sample farms		Farms having losses	
		Pounds	Percent of the 6-year average	Estimated number of farms in county	Percent of farms in sample
Oklahoma:					
Beckham	1933	238	188.9	35	1.2
	1934	61	48.4	2,256	78.0
	1935	138	109.5	211	7.3
	1936	61	48.4	2,293	79.3
	1937	129	102.4	986	34.1
	1938	126	100.0	917	31.7
Harmon	1933	232	179.8	0	0
	1934	55	42.6	1,440	89.4
	1935	144	111.6	39	2.4
	1936	44	34.1	1,592	98.8
	1937	200	155.0	39	2.4
	1938	101	78.3	777	48.2
Jackson	1933	230	198.3	0	0
	1934	28	24.1	2,645	95.1
	1935	144	124.1	373	13.4
	1936	23	19.8	2,748	98.8
	1937	160	137.9	136	4.9
	1938	112	96.6	815	29.3
Washita	1933	205	189.8	52	1.3
	1934	44	40.7	3,514	88.6
	1935	107	99.1	1,206	30.4
	1936	47	43.5	3,212	81.0
	1937	121	112.0	551	13.9
	1938	125	115.7	603	15.2

The number and percentage of all farms in the four selected counties on which yields were below three-fourths of the 1933–38 average during 1 or more of the years 1933–38 is shown in table 2. The advantages of having protection against crop losses through crop insurance are demonstrated by the fact that 100 percent of the farms studied in these counties had yields below three-fourths of their average in at least 1 year of the 6; 55 percent suffered such losses during 2 years of the 6; 38 percent lost in 3 or more years. The fact that so many farms had less than 75 percent of their average yield in 3 or more years is probably due to extremely high yields in 1 or 2 years and low yields in the other years. Individual farms are not identified in this table, and, as a consequence, a given farm having losses in 3 years may or may not be included in those having losses in 2 years or 1 year.

TABLE 2.—*Percentage of farms in a sample group in selected counties having yields during 1 or more of the 6 years, 1933–38, which were below 75 percent of their 6-year average, and the estimated total number of farms in the counties having such losses in yields*

State and county	Farms having yields below 75 percent of their average					
	1 year or more		2 years or more		3 years or more	
	Percent of farms in sample	Estimated number of farms in county	Percent of farms in sample	Estimated number of farms in county	Percent of farms in sample	Estimated number of farms in county
Oklahoma:						
Beckham	100.0	2,892	92.7	2,681	32.9	951
Harmon	100.0	1,611	92.9	1,497	44.7	720
Jackson	100.0	2,781	97.6	2,714	39.0	1,085
Washita	100.0	3,966	88.6	3,514	36.7	1,456
Average	100.0	----------	92.5	----------	37.4	----------

The fact that losses occurred during each year, and the fact that crop failures were common in 1934 and 1936, does not mean that premium rates for insurance would be prohibitive. However, rates will no doubt be higher in this area than in some parts of the Cotton Belt, because they will be based on previous losses. Indications are that the premium rate per acre for insurance of 75 percent of the average yield in the area represented by these counties will be around 25 pounds of lint or the cash equivalent thereof. This premium, which would be about 20 percent of the average lint yield, would include not only protection against losses in yields of lint but also losses in cottonseed yields, which always occur simultaneously with lint cotton losses.

The proportion of farms in the sample and the estimated number of farms in each county on which crop losses occurred each year from 1933 to 1938 is shown in table 3. In 1934 and 1936, when over 87 percent of the farms had less than three-fourths of an average yield, many farms had complete failures. Losses that occurred in the other years were less severe, so that premiums would no doubt have exceeded losses in 4 of the 6 years.

TABLE 3.—*Percentage of farms in the sample group in selected counties having yields below 75 percent of their average, by years, and the estimated number of farms in each county having such losses* [1]

State and county	Farms having yields below 75 percent of their average					
	1933		1934		1935	
	Percent of farms in sample	Estimated farms in county	Percent of farms in sample	Estimated farms in county	Percent of farms in sample	Estimated farms in county
Oklahoma:	*Percent*	*Number*	*Percent*	*Number*	*Percent*	*Number*
Beckham	1.2	35	78.0	2,256	7.3	211
Harmon	0	0	89.4	1,440	2.4	39
Jackson	0	0	95.1	2,645	13.4	373
Washita	1.3	52	88.6	3,514	30.4	1,206
Average	.8	----------	87.6	----------	16.3	----------

	1936		1937		1938	
Oklahoma:	*Percent*	*Number*	*Percent*	*Number*	*Percent*	*Number*
Beckham	79.3	2,293	34.1	986	31.7	917
Harmon	98.8	1,592	2.4	39	48.2	777
Jackson	98.8	2,748	4.9	136	29.3	815
Washita	81.0	3,212	13.9	551	15.2	603
Average	87.5	----------	15.2	----------	27.7	----------

[1] A farm would have a "loss" when the yield in any year fell below 75 percent of the 6-year (1933–38) average yield for the farm.

The data included in these tables were developed from actuarial studies conducted by the Bureau of Agricultural Economics for over 900 counties and more than 70,000 farm yield histories. However, the estimates made could not be expected to prove accurate in any given year, because they are based on average conditions during the 6 years 1933–38. These estimates assume for the county as a whole the same relationship between average yields and average losses per "insured" acre as for the sample farms, and they assume that insurance would be written on farms similar to the sample farms. However, the yield figures do show how cotton yields vary from farm to farm and from year to year.

It is my feeling that my district has a distinct advantage in that we produce both cotton and wheat. The farmers in my district have had an opportunity the past year to study the wheat-insurance program at first hand, and their participation in it certainly indicates that they are well satisfied. They have determined that the program meets a very definite need on the average farm and that the yields and premium rates set up for the individual farms are fair and adequately represent the relationship between farms so far as their productive capacity and risk of loss are concerned.

In the present insurance program we have one which has met a crucial test and has proven its feasibility and practicability. It is filling a need in American agriculture which cannot be handled by commercial concerns. To repeat what I have already stated, it is my belief that it should be extended to include the cotton crop for the year 1941, and I am in favor of extending it to other agricultural commodities as rapidly as the necessary actuarial data can be acquired by the Federal Crop Insurance Corporation and as rapidly as funds are made available with which to carry out the program as it may relate to other commodities. That is not only my view but I am confident that it is representative of the attitude of the people of my district.

First-Day Sale of Charles W. Eliot Commemorative Stamp

EXTENSION OF REMARKS

OF

HON. ARTHUR D. HEALEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

ADDRESS BY HON. JAMES A. FARLEY, POSTMASTER GENERAL OF THE UNITED STATES, AND REMARKS BY DR. SAMUEL A. ELIOT AND JEROME D. GREENE

Mr. HEALEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the Honorable James A. Farley, Postmaster General of the United States, at the luncheon of the Harvard Stamp Club and the postal supervisors, Thursday, March 28, 1940, at the Hotel Commander, Cambridge, Mass., held in connection with the first-day sale of the Charles W. Eliot commemorative stamp:

Outside of that part of the United States which is bounded on one side by the Atlantic Ocean and on the other by the Atlantic Monthly there used to circulate a saying that you could always tell a Harvard man, but you couldn't tell him much.

That, of course, was before Charles William Eliot was inaugurated as president of Harvard in 1869. For in the next 40 years of his tenure of that office the college became the university and plain students blossomed into earnest scholars. And from the fireplaces of Nahant to the verandas of Singapore the tenor notes of Fair Harvard and the resounding cheers to "Prexy" Eliot were heard around a magically changing world.

The addition today of the Charles Eliot stamp, as well as the similar honor being paid at Williamstown to Mark Hopkins, for many years president of Williams College, enriches notably the list of famous Americans so commemorated.

It is very difficult to realize that one man—even though he lived past 90—was witness to so prolonged a cavalcade of human events. Only six Presidents of the United States had completed their terms of office when Charles William Eliot was born, on March 20, 1834. This was 3 years before Queen Victoria began her reign. The California gold rush was a stampede before young Eliot entered college. His youth knew no telegraph, or electricity, or competent surgery; none of the most accepted comforts of our daily existence.

And yet this same man lived to see and enjoy the wonders of flying machines and electric trains, of telephone and wireless telegraph. At his ninetieth birthday celebration, in 1924, he appeared to receive the homage of the thirtieth President of the United States, of countless public servants, and of the majority of American citizens, upon whom he had wielded greater power and influence than any other unofficial citizen. Before the time of newspaper and radio commentators, he was America's public commentator, telling, explaining, interpreting the issues and events of the day. The Nation listened to his every utterance. As ancient Greece had its oracle at Delphi, so America had for half a century its oracle at Cambridge. Another citizen of the State of Massachusetts had made himself indispensable to the Nation.

I like to think back some 50 years before that day of honor and celebration. In the autumn days of October, in the modest First Parish Church in Cambridge, Charles William Eliot stood before another distinguished audience. His tall figure, imposingly erect, his young voice vibrant and clear, his eyes steady, "A university must be free," he told Emerson and Longfellow and James Russell Lowell. In the commonwealth of the university "we need grass and meadows as well as barracks. To observe keenly, to reason swiftly, and to imagine vividly is to be an educated man," he continued while the eminent Dr. Oliver Wendell Holmes listened. And with the whole academic world cocking its ears to these brazen heresies, he added: "The intelligence of public opinion is the one indispensable of social progress." Such was the stuff out of which were fashioned the Harvard years of its new president, Charles Eliot.

As Dr. Holmes described the process, Eliot went on to turn the college over like a flapjack. A new era had come to end the feudal system of college education. Students and faculty members alike were to be free. Students to master self-discovery and self-reliance and the background of an integrated general education, and professors to search for and pass on the truth; that alone could make men free.

Higher education at Harvard was no longer to be hog-tied and narrow. Instead, the sacredness of every path, of every man's enjoying his own work and seeking his own goal was to be paramount. The now general acceptance of the elective system and the quality of college graduates it has produced is a tribute to Eliot's understanding and perspective. Today, when truth is silenced in so many lands and when the individual will is more and more restricted, the hope of democracy itself, perhaps, is to be found in that challenge. A university must be free. May this stamp ever call to mind those five words.

Eliot's path was never an easy one. The established, the deeply ingrained "ways of doing," resisted bitterly. Eliot had to fight. Often he had to fight alone. Here his great characteristics of tenacity and patience often won out against great odds. "Can you fight?" he once asked a young instructor who came to him with a serious problem. "Why, yes; I can." "Can you fight when you are in the minority?" said Eliot. "I have had to occasionally," came the answer. "Can you fight when everybody is against you—when not one man is ready to lend you support?" "I am ready to try if necessary." "Then," counseled Eliot, "you need have no fear. But if you have convictions, it will sometimes be necessary to do no less."

For Eliot, it was often necessary to do no less. His broad understanding of educational problems was not always recognized. Each of his many reforms had to weather the storms of opposition. Older heads resented his youth. They rebelled against his personal determination to change the pattern. Modern subjects, higher entrance and graduation requirements, written examinations, emphasis on alert, productive scholarship, pioneering in graduate training and research were his ideas hammered through, often by only sheer persistence.

And the results? Today they are taken for granted. Harvard leadership was established among American universities; Harvard renown was spread to European institutions, some of whose ideas and methods Eliot had himself copied and enlarged upon. From 1,000 students and 60 teachers in 1869, Harvard in 1909 had 4,000 students and 600 teachers, a multiplied endowment, increased plant, and eminent professional schools of law, medicine, business, and engineering. Annually they contributed to the needs of our expanding Nation for capable, intelligent leaders.

Harvard was a crimson trail blazer balancing the old culture with the new freedom of President Eliot. The whole profession of teaching took on a new meaning. The role of student could be taken literally. And the office of college president became so well known and respected that 3 years after Eliot's retirement a college president was elected to the highest office of this Nation.

But retirement was far from ending Eliot's years of service. Throughout his academic career, his writings and speeches, as well as the revolution he had wrought in education, established him as a leader in social thought. He was officer and trustee of numerous boards, associations, and foundations. Challenged upon his statement that any intelligent man, through 15 minutes daily reading, could acquire a liberal education, Eliot compiled the famous Harvard Classics. His range of information, his keen ob-

servation, and his public spirit also made him a counselor on all questions of the time—political, social, and industrial. Especially in his 17 years as president emeritus, he held the position of America's first citizen.

The fullness and diversity of Eliot's knowledge is as amazing as the breadth of his lifetime experiences. He led in the movement to introduce business methods into government administration. He promoted the cause of civil-service reform, and he urged the commission system of municipal government. He believed in vocational education, and in higher education for women. As president of the American Association for the Advancement of Science, he was a force in scientific experiment and research.

On all public questions, Charles W. Eliot had his say—the conflict between labor and capital, war and peace, government and law, football, and the conduct of life. After he was 80, he published 200 articles. People asked his opinions on Presidential candidates, on the right books to read, and practically every other conceivable subject.

But unifying and making his thinking effective was an important factor in his eternal interest in the public welfare. He was a Yankee fired with trust in the institutions and destiny of the democratic heritage. From the slavery controversy to the World Court question, he spent his life preaching greater respect for the individual.

"He is the only man in the world I envy," Theodore Roosevelt once said. Certainly there is much to be respected—even envied—in the range and balance of Eliot's personal faculties. Puritan by background, he was restrained yet frank in holding to his faith in the dignity of human character. Tolerance was preeminent in his creed, a wholehearted tolerance, with a love of truth. He has been accused of coldness. Yet no one ever loved more his family and the sight of Nature. No Harvard student ever spent a warmer Christmas than those who, living too far away from home, spent the holiday with "Prexy" Eliot at his home. The man was humorless, it has been said. Yet those who really knew him sensed his inner geniality and good humor. Many are the times he paid streetcar fare for absent-minded freshmen.

There is the yarn of his crossing the campus one November afternoon, a familiar figure chatting with Edward Everett Hale, the author. They were on their way to a Harvard-Yale football game. A colleague, meeting the two gentlemen, asked the president where he was going. Eliot answered crisply and seriously, "To yell with Hale."

Yes, Charles William Eliot loved life in its permanent and fuller satisfactions. Physical and mental vitality was for him an essence of living. He went bicycling with his wife till after the age of 70. At the same age he joined a club devoted to good fellowship. The happy life—about which he wrote so abundantly—lay simply in health, the company of Nature, books, and friends, and in the fullest exercise of one's abilities for service to one's fellow beings.

In this stamp series of great Americans, Eliot is listed as an educator. His achievements make that term possess a scope a thousand times more forceful. This man, who stands as Harvard's embodiment, is also the embodiment of democracy. Never giving up the spirit of his youth, he never hesitated, honestly, to change his mind. This Nation can point with pride to the example of vital and enduring leadership provided by this teacher of democracy, Charles William Eliot. As his voice rang out, "a university must be free," so also was his life a fervent challenge that a nation, too, must be free.

It gives me a great deal of pleasure to be here at Cambridge today and to dedicate this stamp, one of the five issued for famous educators in our prominent American series. May this stamp serve its part as a lasting memorial to this great character.

REMARKS OF DR. SAMUEL A. ELIOT

I had opportunity at one informal gathering this morning at Eliot House of expressing to the Postmaster General our deep appreciation of the honor he has done us in coming hither today and personally taking part in these exercises. I also had opportunity of acclaiming the enterprise of the Post Office Department in issuing the stamps which commemorate men who have rendered good service to the Nation in the fields of education, literature, and the arts and sciences. In behalf of the descendants of President Eliot and in the name of the beloved community in which he lived for three-quarters of a century I made grateful acknowledgment of this recognition of the character and achievements of a citizen who made a real and, we trust, a reasonably lasting contribution to the stability, the intelligent progress, and the happiness of the land we love.

May I now add my thanks for the gracious hospitality extended to us by the postmaster of Boston and the supervisors of the Boston postal district at this luncheon and renew my gratitude to Mr. Farley for his admirable, clear, concise, and accurate interpretation of my father's honorable and serviceable career. The address to which we have listened presents an admirable analysis and description of my father's character and accomplishment.

If I can recall them, I should like to apply to President Eliot certain verses written by a Cambridge poet, whose likeness appears on another of these commemorative stamps, about another great American:

"The longer on this earth we live
And weigh the various qualities of men,
Seeing how most are fugitive—
The more we feel the high, stern-featured beauty
Of plain devotedness to duty,
Steadfast and still, nor paid with mortal praise,
But finding amplest recompense,
For life's ungarlanded expense,
In work done squarely and unwasted days.

Rigid, they said he was at first, severe,
But owned, as all men own, the steady hand
Upon the bridle, patient to command;
Prized, as all prize, the justice pure from fear,
And learned to honor first, then love him, then revere."

REMARKS BY JEROME D. GREENE, SECRETARY TO THE CORPORATION, REPRESENTING HARVARD UNIVERSITY

Mr. Chairman and Mr. Postmaster General, I am very happy to have the honor of speaking for Harvard University on an occasion which represents the interest both of this community and of the university in paying tribute to the memory of a great man whose character and achievements are a part of our common heritage. President Eliot's conception of a university was not one of isolation but rather of constant service to the community. The changes which he wrought in the structure of Harvard were in response to demands which, as he said in his inaugural address in 1869, were made by the developments of our American civilization. If he was a great educator, he was first of all a great citizen.

We are grateful to the Postmaster General for choosing as the appropriate scene of this day's ceremonies the university which President Eliot did so much to build and the city of Cambridge, whose citizens, with those of the Greater Boston community, unite in homage to the man in whose services to the Commonwealth and the Nation we may all take peculiar pride.

Constitutional Money

EXTENSION OF REMARKS

OF

HON. J. HARDIN PETERSON

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

LETTER FROM THE CONSTITUTIONAL MONEY LEAGUE OF AMERICA

Mr. PETERSON of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I have received from the Constitutional Money League of America with the request that same be filed in the RECORD:

CONSTITUTIONAL MONEY LEAGUE OF AMERICA,
St. Petersburg, Fla., March 18, 1940.

Subject: Constitutional money.

Hon. J. HARDIN PETERSON,
Congressman, First Congressional District of Florida, Congressional Office Building, Washington, D. C.

DEAR CONGRESSMAN: This body, after careful investigation and research over a period of 2 years, actuated not by any partisan considerations but for purely patriotic reasons in an endeavor to assist in a solution of the problems confronting our great democracy, has reached some definite conclusions.

In consideration of the various factors involved, our conclusions are based not only upon past history and experience but upon ample statistics of record in the Government archives, private statistical institutions, consultation of recognized authorities, and volumes of reference on monetary science.

This body has no illusions. The factor of psychology has been given full consideration. As a result of the failure of our present monetary policies to bring about general prosperity to all the people, America faces a crisis. The restrictions placed upon the banking business as a safeguard to depositors, while having some merit as a safety factor, has had about the same effect as furnishing a man at sea a life preserver; it does him no good if it keeps him afloat long enough for him to starve to death.

The Government-spending program might have succeeded in its intent, had pay checks been paid in good Treasury notes instead of phantom checks that short-circuited straight back to the Federal Reserve banks and canceled out of circulation.

As the investigation proceeded, the evidence became glaringly obvious: The Federal Reserve System had not only failed in functioning as enactment of law intended, but, due to its deflationary policies, was directly responsible for the losses of billions of dollars

in money, farms, and homes by the citizens of this country during the period of depressions—1920, 1929, and 1937. Our citizens, with faith in their Congress, are still dazed from these disastrous blows to prosperity.

Darkness is fading as the people become educated to the evils of our present monetary policy. Millions are now satisfied as to the need for an honest, adequate, and stable money system. Three-fourths of our present economic ills are due to the failure of Congress to exercise the mandate of our United States Constitution—Article I, section 8, paragraph 5: "Congress shall have the power to coin money and regulate the value thereof."

The people of this Nation have been patient and lenient with those who wish to perpetuate the special-privilege money system, and those in control have repeatedly failed them. Jefferson, Jackson, and Lincoln foresaw the consequence of relinquishing the control and issue of money to private interests and predicted with remarkable accuracy the consequences from which this Nation is now suffering.

The people of this country knew and showed by their reaction in 1932 that something was radically wrong; their reaction is still strongly implanted in the minds of many.

Propaganda and camouflaging the issue by unimportant legistion cannot much longer becloud the true situation. To balance production with sufficient medium of exchange to facilitate the distribution and consumption of goods and wealth is as logical as night follows day.

Money used for the purpose for which it was invented is a simple subject—a medium of exchange or the wages of man. As the wages of money, it becomes slightly more complicated. Human nature being what it is, money becomes dangerous to the general welfare when its control is in the hands of private interests.

We sincerely believe that to perpetuate our democracy, insure prosperity, and promote the general welfare our Congress must return to the Government the power to control and issue our currency.

As a means to this end, we, your constituents, request that you use your influence to bring the Voorhis bill (H. R. 8209) out of the committee for vote and/or discussion on the floor of Congress.

We further believe that action by Congress this session will prevent one of the worst depressions within the next 2 years that our Nation has ever been called upon to endure.

Awaiting your reply, we are,

Yours very truly,

M. YOWELL, *President.*
L. E. SAUPE, *Secretary.*

Army Needs Versus Economy

EXTENSION OF REMARKS

OF

HON. J. JOSEPH SMITH

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

ARTICLE BY MARK S. WATSON

Mr. SMITH of Connecticut. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark S. Watson from the Baltimore Sun of April 19, 1940:

[From the Baltimore Sun of April 19, 1940]

ARMY NEEDS VERSUS ECONOMY—EXPERTS GIRD THEMSELVES FOR COMING DISCUSSIONS WITH SENATE COMMITTEE, HOPING TO RESTORE SOME VITAL ITEMS STRUCK FROM 1941 APPROPRIATIONS

(By Mark S. Watson)

WASHINGTON.—While the extent of further Navy expansion is being warmly debated in the Senate's Naval Affairs Committee room, the Army's experts are girding themselves for discussions within the next few days before the Senate's Appropriations Committee. They have strong hope of restoring numerous items which the House Committee on Appropriations lately struck from the Military Establishment's 1941 budget bill, the House itself later approving by passing the bill as thus revised. Altogether, the House committee reduced the War Department's estimates of $853,000,000 (roughly, $2,000,000 over 1940 appropriations) to $786,000,000, and among the $67,000,000 items eliminated were several which the Department regards as of extreme importance.

To the largest single item in the reductions it is unlikely any protest whatever will be raised. This was a $19,400,000 reduction in Air Corps appropriations, effected by eliminating from schedule 440 airplanes intended for replacement, this elimination meeting no objection from the Army, which apparently is willing to let the planes go to Europe.

The official belief is that Allied plane orders are building up American factory production so fast that American preparedness will be immeasurably benefited—just as Allied purchases in 1915–16 built up our war industries at other nations' expense, to serve our own ultimate purposes in 1917–18. It seems to be agreed that by postponing our airplane purchases (save for certain essentials whose delivery is not affected) we will actually be in better position by 1942 than we had expected to be—for we then will be possessed of newer designs at less cost.

SOME ECONOMIES ACCEPTED

Other large reductions made by the House committee which the Army is expected to accept without serious protest include the cutting of $8,700,000 of National Guard outlay through elimination of 6 of the proposed 27 days of field training and 12 of the 60 armory drills. Few of the items in the $1,100,000 total of reductions in pay requirements will be resisted, with the exception, oddly, of one of the smallest, $97,000, by which the committee proposed to halve the flight pay for 136 nonflying officers. These are ordnance and chemical warfare officers, among others, who are assigned to observe the exact performance of their bombs in order to be guided in the techniques of their own corps; this service is regarded as extremely important. The $350,000 reduction in outlay for field exercises in Hawaii and Puerto Rico is unlikely to be protested.

But there are other forced economies which the Army is not thought likely to accept so placidly. The Ordnance Department, whose budget was trimmed $6,500,000, and the Chemical Warfare Service, which stands to lose $2,500,000 from its budget, are not easily convinced that they should sustain such losses. And it is certain that there will be new evidence to support the Army project for a great air base at Anchorage, Alaska, for the economy shears in the House nipped that $12,700,000 Air Corps enterprise entirely off, the committee report holding that more evidence of its need should be gathered before there is so large a commitment.

It may be remembered that there is now a considerable naval air base on Kodiak Island, far out at sea, 200 miles southwest of Anchorage, but this is definitely for reconnaissance planes, not the stouter defense which the Army has been planning for Anchorage. There is, too, as the committee points out, an Air Corps base at Fairbanks, 260 miles northeast. This, however, is designed only as an experimental station for solving problems of cold-weather flying which future air defenses must expect to encounter. Without flatly opposing Anchorage in principle, the House economizers effectively opposed it in practice by cutting its cost out of the Budget, and suggested that more information should be supplied. There is no doubt the Army is going to supply it.

THE EDUCATIONAL ORDER ITEM

There is a hint, too, that because of the troubled world situation White House support will be given the Army's hope for funds needed to complete immediately the equipment of our present initial protective force (227,000 Regulars and 235,000 National Guard), but no official word of that is yet in circulation. These items might total $39,000,000. Their importance is suggested by the Chief of Staff's assurance that he wishes them even before he wishes certain increases in personnel calculated to round out the present Regular Army. This added personnel of 15,000 is designed to round out 1 more of the new divisions (there are now 5), to supply a few corps troops, and to expand the existing mechanized brigade into a division. It is significant that General Marshall desires the "critical items" of equipment even before these important supplements in manpower.

But, in particular, and apart from all other current requirements, there is sure to be a spirited effort to put back in the bill one large item of $14,250,000. This was shorn bodily from the Army budget's $16,500,000 "educational orders," which constitute the sinew of the ambitious industrial mobilization program for national defense.

This program, for all its importance, is still not generally understood, even though it was called for by Congress so long ago as 1920, when memory of World War blunders was vivid; it was implemented 3 years ago, when $42,500,000 was authorized to be expended in 1939, 1940, and 1941. In 1938 and 1939 the Congress translated $26,000,000 of that authorization into actual appropriations, leaving $16,500,000 of the 3 years' total to be appropriated this year. This amount the Army sought, but the House committee has wiped out all but $2,000,000, explaining that the $14,250,000 thus saved was simply transferred from "educational orders" to actual "production orders" for Ordnance, Engineers, and Signal Corps equipment. In the mind of congressional critics there was apparently an air of reality about "production" orders, whereas "educational" items could be deferred.

FOR INDUSTRIAL PREPAREDNESS

The trouble is that this treatment of an admittedly genuine present need is not meeting at all the real and very important purpose of the industrial mobilization plan. This plan is only slightly related to current peacetime requirements. It is related rather to the enormous needs of a grand-scale war, and the fact that war is not at hand is hardly an answer, for current European experiences show that war can come suddenly to a peaceably inclined nation. The purpose of the industrial mobilization plan is to equip the country, not with a few actual weapons but with factory equipment and technical skills by which, when war's alarm is finally sounded, such weapons can be produced in great volume and without disastrous cost in time and money.

How serious is that need, in the view of War Department procurement officers, is suggested by the admission that if we should be faced with war tomorrow it would be impossible to get our prime-

need factories into production in less than 15 months. Save for aviation factories, and a very few others, the country is reported as very much worse off in productive capacity than it was in 1917, when many of our plants had been built up to high efficiency by the allied war orders of 2 previous years.

So far there have been, in 1939 and 1940, no important allied purchases of guns or shells, and hence no justification for a building up of American war industries (other than aircraft) such as were ready at hand in 1917. Even powder factories now standing have little more than peacetime capacity; the great plants of 1918 were long ago demolished to save upkeep and taxes. Britain and France have been making their own shells in their own plants, so far.

Hence, the procurement officials point out, when we place orders for the $14,250,000 needed goods referred to, we get them indeed—from a few plants which are already prepared to fill them. But by that means we do not develop any new production facilities whatever, whereas if the $14,250,000 were spent on educational orders, it would be divided among a great many plants which are not now in production for that sort of goods. In the first year we would no doubt get somewhat less in the way of goods, but we would enormously increase the Nation's potential output, and presumably shorten, by many months, the period which would be required for grand-scale production, when that grave need arises.

WHAT THE PROGRAM INVOLVES

The 1939 educational orders were for six items—(1) forging, and (2) machining of shells; (3) the first lots of the Garand semi-automatic rifle; (4) searchlights; (5) gas masks; and (6) recoil mechanism for antiaircraft rifles. Each order was to develop factory resources which had been nonexistent. It may be worth noting that, in the case of the Garand rifle (the factory asserts) the educational order saved the Government 1 year in time and $1,000,000 in outlay; the whole educational order had cost only $1,386,000. The financial savings in other cases are not so striking, but in time, which could be of gravest importance, comparable figures are cited.

As an example, the 1939 educational order for machining of shells went to just one plant. That educational work completed, the 1940 orders for machining of shells went to 14 plants, illustrating how effectively the system is widening the Nation's potential output of war industries. It is worth noting, too, that despite recognition of the inadequate air defense of both Army and Navy at the time, none of the 1939 educational orders (nor any since) went to aircraft factories. The procurement officers saw that civil aviation was already developing plants on a grand scale and the industrial mobilization plan could better spend its money elsewhere, in development for future possibilities.

In 1940, instead of 6 items, 116 items were listed in the program of educational orders (chiefly for essentials in ordnance, with lesser items of engineering and defensive chemical warfare). Not all these orders were actually placed, but the planning work on them is done. It had been planned, too, to add 115 more prime-need items for 1941, but at the moment the House committee action seems to be a body blow to that design.

Of all the things the Army and Navy need for war, there are approximately 1,200 which cannot be acquired readily from existing industries. Of this total the 1939–41 educational orders were designed to affect 237 items, thereby appreciably reducing the country's industrial defense problems. The Army says the desired goal will still be far in the future, and more, rather than less, will be required. There have been no official statements on the subject, but the procurement officers are assembling their facts and figures for a vigorous argument before the Senate's committee within the week.

One Hundredth Anniversary of Establishment of Supreme Court of Texas

EXTENSION OF REMARKS

OF

HON. FRITZ G. LANHAM

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

ADDRESS BY SIDNEY L. SAMUELS

Mr. LANHAM. Mr. Speaker, in the recent commemoration at Austin, Tex., of the one hundredth anniversary of the establishment of the Supreme Court of Texas, the principal address was delivered by the Honorable Sidney L. Samuels, of Fort Worth, Tex. It is so replete with historical information and a discussion of the principles of government pronounced and practiced by the pioneers of the judicial system that its preservation and availability for perusal seem quite worth while. In accordance with the leave granted to extend these remarks, the address of Mr. Samuels follows:

The architect of St. Paul's in London chose no monument or sculpture to mark his fame or to commemorate the sign of his triumph. On a slab in one of the panels is inscribed this simple legend: "If you seek his monument, look about you."

To entitle the worker to remembrance, if he would survive the fleeting breath of a day in a world of mortals, he must create something which adds to the stock of the world's capital, whether it be moral, intellectual, spiritual, or material, or he must save out of the wear and tear of civilization something which mankind craves to retain.

The charm of the spoken voice perishes with the speaker; the word he utters that stirs our emotions, that moves our sentiments to rhapsody or to wrath, haunts us like a familiar strain of music and then is forgotten. That is why the mere orators of the past become pictures in a mist and fade from the pages of history.

Of the actors that entertained and delighted the crowded audiences of the past with their dramatic passion and their mimicry. How few are remembered? Of the men who legislated for the Nation and who sat in the Halls of Congress, who were cheered by the galleries and acclaimed by their local constituencies, how many of their names are familiar to the people of this generation? Of the books that have poured in a flood from the printing press and hailed as the best sellers, how many will be sought by the readers of another day?

Who, then, are to be remembered? It is the builder, one who constructs an edifice, whether it be one of thought or a visible structure of brick and mortar to house the external symbols of thought, a ship that sails the sea, or, better still, an ideal which, like truth, shall set men free.

When stories of battlefield are dust-covered, when the shout of the charlatan in the market place is silent, when the tongue of legislative clamor is mute, the decisions of the great judges will survive the ruin of states and empires, and their shibboleths of liberty will resound and repeat themselves once again in the lives and deeds of our descendants.

This is a festival of a hundred years, and yet how solemn and how pensive—100 years—a century, which rated by the law of average is but the span of three generations. It is brief enough when measured against the marathon of time. It is but a swirling second in the aeon of the geologist, but reckoned as part of the story of the human family it includes so much of change and revolution that it may be fairly called an epoch.

Looking back on the path of the receding years, it is no flight of fancy to say that the year 1840 had not yet broken with the events of the eighteenth century. The current of life was still setting from that earlier period when in 1840 the curtain was lifted for the first time upon the Supreme Court of Texas. There were men living, not yet old, who in their youth had known George Washington and recalled the majesty of his living features. The guns of Waterloo, which marked a new birth of freedom to the world, fought in June 1815, almost 600 years to a day since Runnymede—the guns of Waterloo were still reverberating in the ears of living men. Then, as now, the British race was striving to save the precious heart of civilization from the dagger thrust of a giant assassin. In 1840, Louis Philippe was King of France, seeking to preserve monarchy for the mercurial French people, by surrounding it with the trappings of republican institutions. Victoria, of England, was still in the flush of young womanhood; Martin Van Buren was President of the United States, soon to be succeeded by an ignorant soldier whose campaign methods supplied the standard model of all time for the hillbilly demonstrations of even this day. There were men who had been watchers at the bedside of John Adams and Thomas Jefferson, who had seen the two great figures close their eyes in death—at almost the same moment of time—as if by the same cosmic event, on July 4, 1826, when the Republic of the United States was celebrating its half century of independence from the mother country. Thackeray has just begun to frame his deathless portraits of character and impale men on the lance of their own follies—characters of flesh and blood who breathed and sinned and pulsed and performed noble deeds and died with heaven in their eyes, just as men have done before and since, because they themselves were the everlasting patterns of mankind. Dickens had just created his Christmas Carol—the story in prose, half legendary, half real, of the spirit of redemption brought into the world by the infant cradled in a manger in the dim corner of a stable yard, in the ancient town of Bethlehem. John C. Calhoun, with lightning in his frown, and with a voice of thunder, like one of the ancient prophets of the Old Testament, was warning the North against its deliberate disregard of the guaranties of the Constitution.

With this stage setting of world events, the curtain was lifted upon the Supreme Court of Texas for the first time in its existence in a frontier village, seated amid an amphitheater of hills in the teething Republic of Texas.

How solitary was this first court. How lonely in its grandeur. Like a planet in space, it was in a sense limitless, without boundaries, drawing from the immensity of time, prescribing its own orbit, rationalizing its own mode of thought. It hewed its decisions out of the scant materials quarried from the ancient law and sought to fit its decrees to a virgin frontier. It was as if it had been appointed to shape destiny itself and transcend the scope of the present.

Never before in the history of organized society was a more stupendous task set before the judicial mind—a task to awe and stagger the curiosity of intellect. Without precedent in their own law, the inheritors of the Spanish civil system, on the one hand, and with no lamp in their hand to guide them through the twists and mazes of the Spanish civil law, with the crazy quilt of decrees, grants, and pronunciamentos of Mexican bureaucrats, with claims set up by the adventurers cast upon our shores by Spain and France, and the uncertain and wavering lines of the Louisiana Purchase, it would seem as if the very Fiend of Chaos had laid his spell upon all the institutions of the new government. Worthless scrip had been issued, the pen of the forger had circulated counterfeit land certificates, and the Indian tribes warring on the isolated settlers asserted claims of their own.

What was the literature of the court and from what hidden sources did it draw the wealth of knowledge and learning that shines and glitters in its early decisions? Bacon's Abridgement, Coke on Littleton, Kent's Commentaries, Hale's Pleas to the Crown, and Storey's matchless work on equity jurisprudence.

And the names of these men who first actively functioned on the court: Rusk, scholar and statesman, who mellowed the tone of a frontier society; Shelby; Jones; Mills; Robinson; Branch; Anglo-Saxons all. No alien blood to interrupt the course of English liberty that ran like a tide through their veins. They were of the same racial stock that gave to the world Sir Philip Sidney, scholar and soldier of Elizabeth's reign; John Hampden, who resisted the pretensions of the Stuarts; Raleigh, who laid his head on the block; Marlborough and Wellington, who put down the tyranny of the French kings; and Nelson, who, dying at Trafalgar, gave inspiration of duty to all the world. They spoke the same tongue as Shakespeare, the dramatist of all ages; John Milton, whose stately prose rolls like the voice of Deity; Shelley, the minstrel of English verse; Browning, the poet of our sober years when life's pulses have cooled; and Gray, whose Elegy intones the dirge of all humanity.

Their most notable trait, which excels all others, as character excels reputation, as true religion excels mere dogma, was superlative intellectual honesty—the integrity that has no guile, that reaches a sincere conclusion and then dares to declare it.

Their next most distinguishing trait was their love of liberty, for which their decisions became an abiding sanctuary. They knew how to value liberty because they had paid the price. They and their fellows had staked their lives to win it, and they resolved to preserve it and shield it even against government itself. Would that their spirits today could be incarnated in the men who set up the Federal tribunal of last resort so that the guaranties of the Constitution should never become the pliant tools of political opportunists.

Then again, came their attitude of mind in contemplating the relation of man to the social scheme—the dignity of independent man, an independence and dignity which government should never undertake to repress or cripple—that it was man who created the State, and that government should not essay to standardize intellect or regiment the mind or allow the dust kicked up by the hoofs and heels of mediocrity to blind the eyes of genius.

In sketching the constructive era of the court, we should not ignore the three great judges—Hemphill, Wheeler, and Lipscomb—the trinity to whom Judge Greenwood, who preceded me, has just paid due homage, nor should we forget the deep obligation to those judges who, when the Confederacy, crushed by inexhaustible members recruited from the borders of the Mediterranean and the fringes of southern Europe, had collapsed, sought to salvage Caucasian civilization from military rule, and the plundering clutch of the carpetbagger and the scalawag. Their task was to piece together the shattered framework of our social structure and to restore the sovereignty of the law to the throne of reason.

Foremost of all was Roberts, gifted above his fellows in knowledge of the common law, who, when he faced the confusion of antagonistic forces uttered the famous dogma, homely but historic, that "if the State has to go to hell, let it go to hell by law"; and if, Mr. Chief Justice, we seem at times in these troublous days to be hovering over the abyss, it is not because of the law but in spite of it.

No country, by means of its courts, has ever engrafted the attributes of slaves upon freemen. Legislators may transcend the scope of discretion and exact taxes to the last margin of constitutional limitation; executives, rulers, and kings may overturn laws and liberties, but the courts, in the long run have seldom denied justice when it was implored, even when it had been denied and crucified by a misguided popular sentiment.

Our children throughout the land should be told in the classroom how civil liberty has been cradled and cherished through the courts, and how the gospel of individual freedom has been the theme of holy texts in hundreds of decisions that guard the people from harm and protect them even as against themselves.

Children may quote glibly from the glittering roster of soldiers and politicians—I do not grudge soldier or politician his due—but how few can name the undaunted judges, State and Federal, who have withstood the ordeal of passion and temper and preserved rights within the law, when political bodies have quailed before the hurricane.

Oh, it has been said, gentlemen of the court, that these early men were adventurers. Granted. Life itself is a supreme adventure upon this planet, which existed before the advent of man and will revolve about the sun when man has disappeared altogether from the scene. They were adventurers as Columbus was an adventurer; as La Salle was; as De Soto was; as the Lees were that came from England in the reign of Charles I, and established a line that flowered and fruited in one great soul worthy to be ranked with Sir Galahad in quest of the Holy Grail, and to drink immortality from its crystal depths. But for these great adventurers, who carved a new Republic, Texas would be a wilderness today, stretching in wide unpeopled expanse to the western horizon, as when Coronado's band, in search of fabled gold, marched through its northern regions.

It is said that each age creates its own peculiar type, and that all men are creatures of time and circumstances. All this is but another way of stating the wholesome truth that all countries usually have the men that they deserve. Texas is still—and may we not hope that it will continue so to be—a civilization of hardy virtues, outlasting the refinements which sometimes enervate and soften a sturdy race.

These early men were the links of communication in the leagues of distance between man and man. They were neighbors in a period of time when travel was charted by instinct, with not even a wagon rut for guidance. Through all climates and seasons they rode these untraveled spaces and made their laws the escutcheon of a rough and ready knighthood. Seldom in the far-off days did they fail to heed the cry of distress or the appeal for help when for the most part each man was a law unto himself. Modern commerce had not then made the written word the measure and boundary of a promise, and so with them a promise was a solemn covenant, and in their untutored way they loved little children, guarded the honor of woman, and when necessary could shoot from the hip when the outlaw strove for mastery.

We should strive to preserve those legendary figures—men astride the horse under the noonday sun and under the pitiless gleam of the stars in wintry nights, who braved hardships and danger, who thirsted and parched in drought, who were their own physicians and their own priests, with no other healing agent but Nature, no canopy but the skies, and no other shield but their own stout hearts.

The judges who formed this first court were men of that fiber. They wrote imperishably with fingers numbed and gnarled, and graved on our lives a bill of rights of outlasting parchment, with ink compounded in the blood of sacrifice; and what they did and what they said will, if remembered, hasten the coming of that perfect day when in the evolution of the ages we shall render unto Caesar the things which are Caesar's and unto God the things which are God's.

Wheeler-Lea Bill (S. 2009)

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

Mr. VAN ZANDT. Mr. Speaker; the Congressman from Texas, my good friend and colleague, the Honorable JOSEPH J. MANSFIELD, extended his remarks in the Appendix of the RECORD, pages 2021 and 2184, in reference to my comments on previous dates to inland waterways. In his extension of remarks, on page 2021, the gentleman from Texas, Congressman MANSFIELD, indicates that happenings in Europe today demonstrate the value of inland waterways. An example is cited of Germany taking possession of the kingdom of Norway to insure better transportation of ore to Germany and to the use of the Danube River for carrying supplies into that country.

Surely the gentleman from Texas does not expect one to believe that the improvements of the inland rivers in this country are similar to the shipment of Swedish ore from Narvik on the open sea to the German port. No such comparison can reasonably be made.

It is indeed true that the newspapers have carried items with respect to the Danube River. The import of these items, however, is that such rivers are rendered useless and canals are rendered useless because winter stretched its frigid hand over these inland waterways and made traffic impossible. No longer were they of the slightest use for transportation purposes, and yet during an unprecedented winter in Europe railroad car wheels continued to roll. This marks the relative importance in national defense of a railroad system and an inland-waterway system.

It became an item of international importance that one small, insignificant shipment found its way by water from Yugoslavia to Trieste. Is this to be the reliance upon inland waterways for national defense?

Often my good friend from Texas [Mr. MANSFIELD] has called attention to the use of inland waterways in this country during the last World War. The record does not show any substantial contribution to the transportation facilities in this country during that war, and certainly nothing that could in any way be called a recompense for the tremendous cost to the Federal Government of approximately a billion dollars, with an average maintenance cost of $2,778 per mile, all expended in an effort to make these waters navigable.

What was the concern of the people in this country last September and October when a new war burst upon the world? There was no talk about waterway transportation or concern about its availability. Anxiety was expressed solely as to whether or not the railroads of the country could bear the possible burden that would rest upon them. In magnificent fashion they met the test adequately and successfully.

There has been before the people of Massachusetts the problem of discontinuing freight and passenger service on the Old Colony Railroad. At a hearing recently in Boston on this subject there appeared as witness Capt. Louis P. Davis, United States Navy, commanding officer of the naval ammunition dump at Hingham, representing Rear Admiral William T. Tarrant, commandant of the Boston Navy Yard, who testified:

> The abandonment of rail service will seriously affect the national program. The naval ammunition depot at Hingham is the only ammunition depot on the New England coast. It has water facilities so restricted as to only handle tugs and barges.
>
> The shallow water and narrow channel in the vicinity are inadequate for peacetime. In a time of war I cannot see how this depot could be maintained. To send ammunition by highways would be a real danger to the public.
>
> In regard to shipbuilding, there is the Fore River shipbuilding plant, on which the Government depends for its naval force and merchantmen. Any slowing up or stoppage of work there would be of grave concern to the Nation's defense program. With the outbreak of the war abroad, the building at this plant will substantially increase during the next 2 or 3 years.

In a letter to the Federal Coordinator of Transportation a few years ago, quoted in the recent report on Government aids to transportation, volume III, page 26, the Acting Secretary of War, Douglas MacArthur, wrote:

> It is, therefore, the desire of the War Department to reemphasize the suggestion made by Colonel Taylor that in the solution of the problem of coordinating rail and water transportation, the preservation of the Nation's trunk-line railway system, and continued development of bus and truck transportation as the principal collecting and distributing agency, with the protection of the capital investment represented in each, be considered as basic.

It may be that the gentleman from Texas, Congressman MANSFIELD, has wholly misread the dissenting opinion of Commissioner Eastman in the decision of the I. C. C., F. S. A. 17413, October 30, 1939. This is a case involving railroad relief from the fourth section provision. The point made by the Commissioner in his dissenting opinion is that the granting of relief to the railroads for handling gasoline from the Gulf to Chattanooga would prevent the movement of this commodity up the Mississippi, Ohio, and Tennessee Rivers. The improvements on these rivers, therefore, could not be justified on the basis of traffic not handled, by the cost to the Government for improving these projects remains to be paid and maintenance must be continued year by year. The Commissioner said, therefore, that it would be better to take the money wastefully spent in these river projects, which were not used to carry traffic, and subsidize the railroads in exchange for lower rates.

There is no basis in this statement for drawing the conclusion that the Interstate Commerce Commission is railroad-minded. The fact is the Commissioner made a sound business remark.

The gentleman from Texas, Congressman MANSFIELD, in his extension of remarks, Appendix of the RECORD, page 2184, called to the attention of the House that my statement, "Secretary of War Woodring is revealed by the records to have disbursed for rivers and harbors $723,006,637," reveals that the above figures are more than $600,000,000 over the correct figures of the Chief of Engineers, War Department.

I cheerfully acknowledge my failure to state that the $723,006,637 represents a 5-year period since 1935 and in breaking down this sum we find approximately $573,000,000 was spent by the Government for new work on rivers, harbors, and channels. The remainder of the approximate three-quarters of a billion dollars was spent over the 5-year period as maintenance cost.

Since the gentleman from Texas, Congressman MANSFIELD, shows by his remarks that he is a close analyst I join with him as a seeker after truth and in accordance with such principles respectfully call attention that in his remarks on pages 1900 and 1901 of the Appendix of the CONGRESSIONAL RECORD he apparently failed to recognize the fact in the table of rates inserted by him contrasting the rate on cotton charged by the railroads in comparison with the rail-and-water rates, that these rates are now subject to the jurisdiction of the Interstate Commerce Commission.

I call to the attention of my colleague that under the present law the Interstate Commerce Commission has jurisdiction over transportation that is partly by rail and partly by water.

Section 6, paragraph 13, of the Interstate Commerce Act clearly provides that very thing. Among other things, section 6, paragraph 13, further provides:

> When property may be or is transported from point to point in the United States by rail and water through the Panama Canal or otherwise, the transportation being by a common carrier or carriers, and not entirely within the limits of a single State, the Interstate Commerce Commission shall have jurisdiction of such transportation and of the carriers, both by rail and by water * * *.

Other provisions of the same section make it perfectly clear that these rates are subject to Commission jurisdiction. As a matter of fact, they are filed with the Commission. It is obvious, therefore, that the Commission cannot be hostile to water transport, since it has approved these low rail-and-water rates.

Treason in Norway Argues for Investigating the Nazis, Not Hounding the Communists

---

EXTENSION OF REMARKS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

ARTICLE BY JAY FRANKLIN

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Jay Franklin, which was published in the Washington Evening Star of yesterday:

[From the Washington Evening Star of April 18, 1940]

WE, THE PEOPLE—TREASON IN NORWAY ARGUES FOR INVESTIGATING THE NAZIS, NOT HOUNDING THE COMMUNISTS

(By Jay Franklin)

Leland Stowe, of the Chicago Daily News, did more than score a world scoop in his Stockholm dispatch describing the treason and sabotage by which certain prominent Norwegians admitted the Nazis to their country. He also made it abundantly clear that MARTIN DIES, the D. A. R.'s, and our de luxe red baiters are barking up the wrong tree in their current attacks on communism.

In Norway, for example, it was not the Communists who admitted the German Army. It was a number of highly placed Army and Navy officers, and ambitious conservative politicians who spiked the guns of the Norwegian Navy, surrendered forts and ports, sabotaged defense plans and equipment, and generally greased the rollers of Hitler's wooden horse.

It is as though—to use a farfetched comparison—some of our prominent conservatives, the Chief of Naval Operations, the commandant of the New York corps area, and a number of well-placed

officials in the Government had arranged to allow the British Navy to take possession of Portland, Boston, New York City, Philadelphia, and Washington—on the promise that the appointment of governor general of a new British protectorate over the United States would go to one of them.

NOT ONE COMMUNIST COUP

This Norway affair cuts the ground from under the American superpatriots. For the voice of history reveals the following facts:

In the last 20 years not one single country has been captured by a Communist revolution. The advocates of the class struggle have not one success to their credit since the Russian revolution of 1917.

In Spain it was not the Communists, but generals and grandees, who invited the Moslem Moors, the German Junkers, and the Italian Army into their own country in 1936.

In Germany it was not the Communists, but the Nazi, the industrialists, and the Reichswehr, that seized revolutionary powers over state in 1933.

In Italy it was not the Communists, but the Fascists, the industrialists, and the large landowners, who organized the march on Rome in 1922.

In Austria it was not the Communists, but the conservatives, the Heimwehr, and the clericals, who paved the way for annexation enforced.

In France and England, before Munich, it was not the Communists who counseled appeasement of the German ambitions, but the conservatives, the Tories, the Cent familles.

In almost every case communism served as the excuse for tolerating foreign invasion and social revolution. In almost every case, including our own, class hatred, social subversion, Jew baiting, etc., started from the top and spread downward through the press to the good-tempered and eternally patient masses of farmers and industrial employees.

The treason of the prominent Norwegians who opened their own country to the Nazis and thus made it a battlefield between Germany and the Allies ought to cause our Government to concentrate on its real enemies rather than the legendary "reds."

TIME TO CHECK ON TREASON

The time to act is now. The F. B. I. should immediately set to work in checking over the Army, Navy, and National Guard officers and men with a view to checking treason masquerading as anti-radicalism. The Labor Department should begin to check over the immigrants from Germany and Italy over the last 10 years, with a view to locating some of the pegs in Hitler's potential Trojan horse (American model). The Dies committee should go into action to get the facts and affiliations of the revived Ku Klux Klan, the Associated Farmers, and other thousand-percent "patriots." It would be a joke if MARTIN DIES felt obliged to issue a subpena to himself in the course of this investigation.

For history at least is not a liar, and history says that in 20 years Communist revolution has not captured a single country, while Norway is only the latest of a dozen nations to yield to foreign invasion and domestic treason for the benefit of the Fascists. Finland alone supplies the proof of the social pudding, for in Finland there was no Communist "wooden horse" to ease the entry of the "red" army, and the Russian-Finnish dispute was decided on the battlefield, not in the treachery and sabotage of the borders from within.

Widows' and Orphans' Pension Bill

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

Mr. BECKWORTH. Mr. Speaker, I wish to state I am strongly in favor of the passage of H. R. 9000, which will soon come before this House for consideration.

The veterans' organizations of my State are wholeheartedly behind this legislation, as is attested by a telegram I received today from the department chaplain of the American Legion of Texas, Brother Willis G. Jernigan, of Mineola, Tex., one of the most active, alert, and best-informed men concerning veterans and matters pertaining to their interests I know. The telegram reads:

MINEOLA, TEX., *April 18, 1940.*

Hon. LINDLEY BECKWORTH,
Congressman, Washington, D. C.:

As department chaplain representative 30,000 Legionnaires in Texas, I urge you support H. R. 9000, known as widows' and orphans' bill. Also omnibus bill liberalize certain pension benefits. The Legion in every locality in Texas is militantly fighting for this legislation.

WILLIS G. JERNIGAN,
Department Chaplain, American Legion.

Although, because of my age, I am not a veteran, I have always sought to be a real and genuine friend to veterans and their dependents. My record shows I have never opposed any legislation of any type designed to inure to the benefit of veterans and their dependents; on the other hand, I have enthusiastically and actively supported all legislation designed to aid these groups. On a number of occasions I have personally represented veterans and their dependents before the Board of Veterans' Appeals here in Washington. As a member of families, the blood of whose members has been shed in the last three wars in which this country has been engaged, I yield to no man in my allegiance to those who have made outstanding sacrifices for our country.

Corporations' Earnings Sharply Rise in 1939

EXTENSION OF REMARKS

OF

HON. RAYMOND S. McKEOUGH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

ARTICLE BY ROBERT P. VANDERPOEL

Mr. McKEOUGH. Mr. Speaker, manufacturing earnings show sharp increase as reported in article appearing in the Chicago American, April 14, 1940, written by Robert P. Vanderpoel, financial editor. It is evident from the information contained in this article that many, if not all, of the complaints registered by business of interference with the earning power by the present national administration are without justification.

The article follows:

[From the Chicago American of April 14, 1940]

MANUFACTURING EARNINGS ROSE SHARPLY IN 1939—BUT BIG COMPANIES SEEM CONTENT MERELY TO HOLD STATUS

(By Robert P. Vanderpoel, financial editor)

A more complete report on 1939 earnings of leading American corporations is contained in the April letter of the National City Bank of New York.

This reveals that 1,440 manufacturing concerns having a net worth just under $23,000,000,000 earned a trifle less than $2,000,000,000, or a net return of 8.5 percent.

This compares with 8.4 percent reported a month ago for 960 corporations. It compares with 4.6 percent earned by the same corporations in 1938 and with 10.5 in 1937 and 10.1 in 1936.

Thus over the last 4 years these corporations, representing approximately one-half of the industrial earning power of the Nation, have earned an average net return on their invested capital of more than 8⅓ percent.

SOFT DRINKS LEAD

The most remarkable showing was made by 20 concerns in the soft-drink business, with a return of 37.5 percent of net worth in 1939 and 35.2 percent in the previous year.

Aside from the manufacturing corporations, mining and quarrying companies earned an average return of 6.3 percent, despite losses reported by the coal producers.

The worst showing was made by the transportation companies, with a net return of 0.8 percent, compared with a loss in 1938. Other utilities earned 6.9. Concerns engaged in trade had an average return of 11.3; amusement and service companies earned 6.3, despite a deficit reported in the restaurant and hotel business; and finance companies reported an average profit of 7.9.

It should be emphasized that these profits are after all charges, including depreciation and taxes.

SHARPLY ABOVE 1938

The net of the manufacturing companies, as a whole, was 81 percent greater than in 1938.

The average profit in relation to sales in the manufacturing group was 6.5 percent—ranging from 1.2 percent in the meat packing to 11.3 in aircraft and parts. The mail-order houses earned 5.6 cents for every dollar of sales; department stores, 3 cents; food chains, 1.7; other chains, 5.7.

Each time we present these National City Bank figures on earnings we receive communications from readers regarding them. The most frequent complaint is that they are not complete and consequently are unfair. We have always emphasized that they are not complete, but if it is understood exactly what they are there can certainly be no reason to charge that they are unfair.

For our part we believe they are much more significant than are the figures for industry as a whole.

PROFIT RATE LOWER

The smaller corporations, representing slightly more than one-half of the industrial wealth of the Nation and somewhat less than one-half of the industrial earning power of the Nation, have earned during this period a much lower rate of return than the 8⅓ percent indicated in the figures here presented.

No one knows what the actual rate of return is because this does not become available until years later, when Government figures are compiled.

We believe it is a fair guess that the smaller corporations on the average have operated at a profit during these last 4 years, but at a rate of profit probably too low to attract new capital in sufficiently substantial amounts to absorb idle funds or create jobs for idle workers.

IN HANDS OF FEW

There results the conclusion that earning power in industry has been concentrated in relatively few corporations, which are content to maintain their positions and earn exceedingly high returns on invested capital rather than expand their operations, absorb new savings in the manner contemplated by the competitive system of capitalistic economics.

If this conclusion is correct, we have here a cancerous growth eating at the very heart of the American system of democracy and private enterprise.

Not more than a small handful of men in the United States have thus far shown even an appreciation of this situation, leave alone giving it intensive study.

The Twelfth Annual Tulip-Time Festival at Holland, Mich.

EXTENSION OF REMARKS

OF

HON. BARTEL J. JONKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I take occasion to call the attention of the membership of the House of Representatives, and especially the Members whose congressional districts are near the locality, to the twelfth annual tulip-time festival to be held at Holland, Mich., in the district I represent. The occasion has been arranged for a program covering 8 days, beginning May 18 and ending May 25.

Visitors to Holland at the time will be charmed by the sight of one and one-half million tulips in bloom, with a wonderfully arranged variety of color, planted along a circuit of clearly marked streets. An equal number of tulips in 500 varieties are arranged in massed beds at the floodlighted tulip farms located within a short distance from the city of Holland. Of added interest and pleasure will be seen the amazingly clever replica in miniature of the quaint and colorful sections of the Netherlands, comprising 75 human figures, 100 animals, canal boats, water-front scenes, windmills, bridges, waterfalls, locks, and so forth. An exhibit comprising a priceless collection of antiques, historical records, rare books, and objects of art featuring exhibits from the Netherland pavilions at the New York and San Francisco World's Fairs, will also be included in the festival. The daily program during the festival is diversified and includes wooden-shoe street dances with 300 dancers in Dutch costumes, a street-scrubbing ceremony including hundreds of costumed Dutchmen, band reviews, and many other events of pleasurable interest.

I extend to the membership of the House of Representatives and their constituents a very cordial invitation on behalf of the citizens of Holland, Mich., the officials in charge, and myself to attend the Twelfth Annual Tulip Time Festival. I assure you of the warm and hospitable reception by the citizens of the city of Holland and guarantee that your visit during all or any part of the festival will be highly pleasurable and entertaining and establish a memory of a truly beautiful and inspiring occasion.

Resolution by World War Combat Veterans on H. R. 6450

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

RESOLUTIONS BY COUNCIL OF WAR COMBAT VETERANS' ASSOCIATIONS

Mr. VOORHIS of California. Mr. Speaker, as further evidence of the importance of H. R. 6450, a bill introduced by myself, I am glad to include with my remarks the following resolution:

Subject: House Resolution No. 6450.
Submitted by: Southern California District No. 1.
Introduced by: The Society of the Third Division, Southern California Branch No. 22.

To the Department of California, Council of World War Combat Veterans' Associations, Inc., in regular convention assembled in Los Angeles, Calif., August 27, 1939:

Whereas of all United States World War Army veterans compensated by the United States Veterans' Administration for disability traceable to Army service, but 20.5 percent of those compensated are receiving it for injury or disease occurred in front-line duty, although 34.3 percent of the total United States World War Army enlistment performed combat duty, suffering 228,000 casualties of record from the effects of the enemy fire; and

Whereas 9.20 percent of the noncombatant United States World War Army enlistment, totaling 2,667,101, is now compensated by the United States Veterans' Administration, while only 4.55 percent of the 1,390,000 men who served in active combat duty are compensated for disease or injury traceable to the front-line trench duty, a ratio of 2 to 1 in compensation paid by the United States Veterans' Administration to those that served at home or in the rear areas of the front; and

Whereas the average yearly payment of compensation to the noncombatant veteran by the United States Veterans' Administration is 10 percent greater than the average yearly payment of compensation to the combat veteran; and

Whereas this injustice to the combat veteran is caused mainly by the combat veteran's lack of adequate service and medical record because of the type of his service, and because of no fault of his front-line treatment of injury or disease was not recorded to any extent by any combat unit, thereby not having an official record of such treatment, his just claim for compensation is rejected by the United States Veterans' Administration; and

Whereas service letters from the Administrator of the United States Veterans' Administration to the field stations of the United States Veterans' Administration have some value as to the declaration of principle but do not give any authority whatever to field officials to take action in alleviating this injustice to the combat veterans; and

Whereas the fair adjudication of the combat veteran's claim for compensation will never be fairly settled except by the passage of adequate veteran legislation: Now, therefore, be it

Resolved, To petition, urge, and recommend a favorable report by the Committee on World War Veterans' Legislation, Seventy-sixth Congress, second session, House of Representatives, upon House Resolution 6450; and further petition, urge, and recommend the immediate passage by the Seventy-sixth Congress, second session, of House Resolution 6450, thereby alleviating this injustice to the combat veteran, caused by the present interpretation of veterans' legislation by the United States Veterans' Administration.

Passed by and submitted to southern California district No. 1, Council of World War Combat Veterans' Associations, Inc., August 2, 1939.

Approved:

A. P. KRALICK, *President.*
BEN F. GURNETT, *Secretary.*

Passed by and submitted to the department of California, Council of World War Combat Veterans' Associations, Inc., August 8, 1939.

Approved:

SOUTHERN CALIFORNIA DISTRICT NO. 1, COUNCIL OF WORLD WAR COMBAT VETERANS' ASSOCIATIONS, INC.,
A. R. MONTGOMERY, *President.*
EDW. J. MAIRE, *Secretary.*

Passed by the department of California, Council of World War Combat Veterans' Associations, Inc., in convention held August 27, 1939.

Approved:

H. F. BERGAN, *President.*
R. G. SMITH, *Secretary.*

President Roosevelt and Sugar Legislation

EXTENSION OF REMARKS
OF
HON. FRANK O. HORTON
OF WYOMING
IN THE HOUSE OF REPRESENTATIVES
Friday, April 19, 1940

Mr. HORTON. Mr. Speaker, since the letter referred to below has already been made a part of the RECORD, it seems advisable to take that letter apart and determine just what President Roosevelt's policy really is toward the American farmer in competition with the foreign farmer.

Under date of April 11, 1940, President Roosevelt wrote the gentleman from Texas, MARVIN JONES, chairman of the House Agricultural Committee, opposing any sugar legislation at this session of Congress, except a joint resolution extending the Sugar Act of 1937. The President's letter, in holding no legislation is needed at this time, is notable in several respects. Among these are:

First. It ignores the needs for additional sugar-beet acreage in the irrigated areas of the West, particularly the Federal reclamation projects, where the present law bars American farmers from supplying the American market with a nonsurplus crop.

Second. No consideration is given the needs for a cash crop by thousands of farmers who are victims of dislocated agricultural prices and whose purchasing power would be far more remunerative to other American agriculture and industry than the uncertain returns from foreign trade with Cuba.

The President's proposal for continuation of the present law without amendment would freeze the discrimination against new sugar-beet producers in all of the Western States and against all areas that have been denied sugar-beet acreage because of lack of factory facilities or from the operations of the existing law. Because of the surplus sugar now in the United States, largely as a result of dumping by Cuba, it is probable the present sugar-beet acreage in 1941 may be reduced 20 to 25 percent if remedial legislation is not enacted at the present session of Congress. Thus the purchasing power of American farmers is likely to be curtailed with consequent loss in employment and to industry.

While there may have been some improvement in the sugar industry under the program adopted in 1934, the Cuban sugar industry has been a major beneficiary. It is owned principally by Wall Street and other non-Cuban capital. It is assured of nearly a third of the American market at a reduced tariff—a larger share than is given the American sugar-beet farmer.

Sugar-beet farmers dispute the President's assertion their incomes are at approximately parity level. The most they ask for in legislation this year (H. R. 8746) is that they be assured of 76 to 80 percent of parity.

Retail sugar prices are less today than they were 40 years ago when sugar beets broke the monopoly Cuba and the cane refineries had on the country's sugar supply. All other food prices are higher.

It may be true that some established sugar-beet growers and the corporation-owned plantations in the South, Cuba, Puerto Rico, Hawaii, and the Philippines enjoy a large production as the President says. However, many hard-pressed farmers on family-size units in the West with land adapted to sugar beets are denied a share in the sugar program and the benefits the President claims exists.

The recovery of our export market as a result of the sugar program, reported by the President, is of dubious value. Over a long period of years, Cuba's purchases of American products have averaged only $75 for every $125 in Cuban products the United States has purchased. Further, only 60 percent of the island's foreign trade is with the United States. American money paid for Cuban sugar is spent by Cubans in other countries.

Imports of Cuban sugar in 1938 displaced 2,100,000 acres of American farm land. In 1939, 1,900,000 acres were displaced. The crop value of 2,000,000 acres of sugar beets is more than twice the average annual value of Cuban purchases from the United States. Returns from the American crops are spent wholly in the United States.

Sugar beets are, as stated, a nonsurplus crop. The Mountain and Pacific States, in which 80 percent of the country's sugar beets are grown, buy more of the surplus corn-hog products from the Middle West than the total of all Cuban purchases of American agricultural and industrial products.

There is no desire on the part of advocates of the American market for the American producer to impair the country's good-neighbor policy, which must mean Cuba, since 99 percent of the foreign sugar comes from that island. However, since Cubans buy nearly half of their imports in other countries, should not a preference be given to American producers who make all their purchases in the American market?

There is no proposal before the Congress to reduce the quotas of sugar assigned the insular possessions, which are under the American flag. The Philippine Islands would be limited to the volume of sugar fixed in the Independence Act.

A proposal made by the Western Beet Growers' Association, representing areas that desire to grow sugar beets, offers a solution of the problem. An amendment to H. R. 8746 provides for a graduated scale of increases in the sugar quotas for all domestic areas with a gradual reduction in the Cuban allotments until the requirements of American consumers are filled by domestic production. This suggestion would permit Cuba to readjust its internal economy and at the same time American farmers would be allowed to produce a nonsurplus crop in increasing quantities.

So far as we are concerned our sweetheart is an American sweetheart, and our one and only love is America. We never did much believe in the sailor-boy tradition of "a sweetheart in every port."

Racine and Kenosha, Wis., Solve Their Labor Problems

EXTENSION OF REMARKS
OF
HON. STEPHEN BOLLES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 19, 1940

EDITORIAL FROM THE MILWAUKEE JOURNAL

Mr. BOLLES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which appeared in the Milwaukee Journal, Monday, April 15, 1940:

[From the Milwaukee Journal of April 15, 1940]

RACINE AND KENOSHA ON THE WAY

Racine and Kenosha, which not so long ago were plagued with jurisdictional labor strife, or else with strife between labor and management, seem on the way to solving their problems.

Kenosha made a big advance some years ago when the A. F. of L. and the C. I. O. agreed to harmonize their differences and work together for the general good of labor. The method used is united action by the governing bodies of the unions, which number 7,000 workers. Jurisdictional disputes are unknown there.

Racine is working out a similar plan through an interunion committee. It will handle jurisdictional matters to prevent those avoidable breaks that slow up industry, deprive men of wages, and in general come like a blight over an industrial community.

And now Racine goes a step farther. Under the sponsorship of the American Legion the labor leaders, the business leaders, and the civic leaders meet to discuss the problems they all face. The aim is to produce goods under favorable conditions and to sell goods under favorable conditions. It is simply an application of the rule that a community must be united (certainly not divided) if it is to prosper.

Here is wishing these communities well. They are off on the right road. We do not wish to look back to the time when they were in such grave difficulties because of agitation, strife, or division—we do not wish to look back except to point out how much better and more hopeful is their outlook ahead.

Proposal to Abolish Civil Aeronautics Authority and Air Safety Board

EXTENSION OF REMARKS

OF

HON. CHARLES A. EATON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

LETTER FROM AIR LINE PILOTS ASSOCIATION

Mr. EATON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Air Line Pilots Association:

AIR LINE PILOTS ASSOCIATION,
Chicago, April 16, 1940.

Hon. CHARLES A. EATON,
House of Representatives, Washington, D. C.

DEAR MR. EATON: Several days ago the pilots that fly America's air liners received news that was so abrupt, so far reaching, and so shocking that it left them stunned. President Roosevelt had announced his fourth reorganization plan to Congress, containing a proposal to abolish the new Civil Aeronautics Authority and the Air Safety Board and place the entire air regulatory and independent air-accident investigation duties that they have been performing so commendably back under the Department of Commerce, which made such an amazingly deplorable and costly failure of the same duties prior to the time that the new act was passed. The why of this is indefinable. The history of civil air regulation and air-accident investigation is a matter of record.

From the late twenties to the time that the Civil Aeronautics Act of 1938 was passed were black pages in the history of the country's air-transportation development. It is not a matter of suppositions, assumptions, or the preponderance of vaguely defined ideas, but what this amounts to is cold, hard, indisputable facts—facts established by stark realities, facts established by the loss of score upon score of human lives and the loss of millions upon millions of dollars.

On May 6, 1935, Senator Bronson Cutting lost his life in an air-liner crash. In sheer desperation the pilots, with the backing of a friendly, public-spirited press, started to lead the fight to free America's air transportation from the entwining tentacles of death in the air, which were strangling it to ruin.

During the period that the Department of Commerce regulated the country's air-transportation network 473 persons lost their lives in air crashes, of whom over 146 were air-line pilots. The ranks of the air-line pilots were being thinned at the startling rate averaging one every 28 days; their passengers were meeting death averaging one every 15 days. The crash-scared public was afraid to ride, which resulted in inestimably large losses of revenue to the industry, and progress was stymied.

Air-minded Congressmen and Senators became interested. A senatorial air-safety-investigating committee was appointed, namely, Senators Clark (Missouri), White (Maine), Donahey (Ohio), and the late Royal S. Copeland (New York). They did a good job. They listened patiently to everything that anyone had to suggest that might be the solution. The congressional record built up by this committee is truly a bible on air safety. The politically involved and obviously faulty regulatory and air-accident investigating procedure of the Department of Commerce is all written in the record of this senatorial air-safety-investigating committee.

Congress, the line pilots, and everyone else that was really interested in doing something about increasing air safety worked tirelessly and relentlessly, until in 1938 the new Civil Aeronautics Act was passed. The pilots had repeatedly pointed out through these dark years that the solution to the problem was to remove the control of civil aeronautics from the Department of Commerce, and, not only that, but to separate the functions of regulating civil aeronautics from the functions of investigating accidents and making recommendations as to what should be done to prevent recurrences. The pilots pointed out simply that no one agency could reasonably be expected to handle both functions efficiently and effectively because no one agency can be expected to decide against itself when something happens.

The line pilots recommended the creation of an Air Safety Board which was to be completely independent of the regulation-making divisions of the Authority; the sole duty of this Board being, without influence of any kind, to investigate accidents with the view of preventing recurrences and to make recommendations to the Authority which would, in the opinion of this Board, tend to prevent accidents.

Congress listened, and the Air Safety Board and the new Air Authority were created.

Now, let's look at the record since the Air Safety Board took over. Accidents have been cut to a minimum and there has not been a pilot death on our country's air lines in the past 16 months, nor a passenger fatality in more than 12 months. A world air-safety record. During this 12-month period the pilots that are making this appeal to you now not to permit the abolishment of the Air Safety Board flew 87,325,145 miles and carried 2,028,817 passengers without a fatality. Contrast this to 1 pilot being killed every 28 days and 1 passenger every 15 days for the entire period that the Department of Commerce regulated civil aeronautics and investigated accidents, numbering a total of 473 pilots and passengers killed.

Certainly no one wishes to go back to that. The pilots are not quarreling with anybody. All they are trying to do is a good job so that American air transportation may continue to be No. 1 in world flying.

When Congress created the Civil Aeronautics Act bringing into being the Air Safety Board, it won with one stroke the confidence of the American people and they took to the air. Real air safety has been established by the Air Safety Board with the cooperation of the new Authority. This combination is paying dividends in lives saved and thousands upon thousands of dollars saved because of not having to pay the cost of crashes, and millions earned due to increased patronage resulting from the no-fatality safety record that has just been established, and we have only just started. It is only plain, common sense to want to leave well enough alone. Your support to set aside the President's proposal to abolish the Air Safety Board and to strip the new Air Authority of its identity and independence is earnestly and respectfully solicited by the country's air-line pilots who fly our air liners on the most extensive civil air network in the world.

Respectfully yours,

AIR LINE PILOTS ASSOCIATION,
DAVID L. BEHNCKE, *President.*

The Problem of Unemployment

EXTENSION OF REMARKS

OF

HON. JOHN W. BOEHNE, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

ADDRESS OF HON. PAUL V. McNUTT, FEDERAL SECURITY ADMINISTRATOR

Mr. BOEHNE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. Paul V. McNutt, Federal Security Administrator, over the Columbia Broadcasting System, April 14, 1940:

I have been asked to discuss some of our national problems.

The number one problem of the Nation is unemployment, and I shall confine my remarks to it. In pondering this problem, I cannot help believing that our best chance of solving it is to hasten our return to the competitive profit system upon which the American capitalistic economy is founded.

For many years, particularly prior to 1932, we did not have this system in America. When we did have it, it seemed to work very well. We adhered fairly closely to the theory of the profit system in the years when it was impossible to produce enough consumers' goods to supply the market. But when, by scientific advances, we constructed an industrial plant which could provide a fair standard of living for all the people, we failed to readjust our practice to meet the new situation. The result has been that we have drifted away from the principles of private enterprise and competition which made it possible to build a great civilization.

The basic trouble lies in the thing which should be our greatest asset—technology.

Industry grows more efficient. It produces more goods for less money and with fewer men. This is called progress.

It is unquestionably progress in the world of science. New inventions and labor-saving devices reduce the human toil necessary for the production of goods to feed, clothe, and house mankind. Whether it is progress in the field of human relations depends upon other factors.

Increased efficiency can be a blessing or a curse to a civilization. It can make fewer jobs and create unemployment, or it can be the means of increasing consumption without displacement of labor and, in the long run, create new employment.

It is an economic fact, demonstrable from the experience of all industrial nations, that, as production increases, wage shares tend to expand, and when production is declining, wage shares tend to decline. This means that the total share of the benefits of industry which accrue to labor becomes less, and its purchasing power thus diminished, unless production is maintained. Economic history also demonstrates beyond question that the aggregate returns of capital vary with the volume of production. As production increases, aggregate profits also increase.

We also know, as a fact, that when prices are reduced, demand increases, and this makes for full employment of both capital and labor.

One of the striking incidents of the past 25 years is that periods marked by extensive technological advances have been characterized by great improvement in potential productivity without a corresponding increase in actual production. These periods have also disclosed, on the average, a proportional decline in employment of manpower and an actual decline in man-hours, a proportional decrease in wages, and a decrease in earnings on investment.

The trouble seems clear. The benefits from increased efficiency in industry have not been made available to the consumer, with the result that no one profited thereby.

I say "no one." This is not literally accurate. The employed profited somewhat, in a shorter working day, but not in total wages. But this advantage was gained at the expense of those workers who lost their jobs. A few producers profited temporarily by the increased profit on the articles produced, but this profit was offset in the long run by the decreased output resulting from reduced purchasing power of the consuming public. Labor, as a whole, did not gain. Industry, as a whole, did not gain. This means, in terms of the national welfare, that the country became poorer at the same time that it increased its efficiency in industrial production—a paradox in a democratic society.

I believe that the way to make the capitalist system work smoothly is to pass on the benefits of efficiency in production to the consumer in the form of reduced prices. Since labor and those who invest capital in one way or another constitute by far the majority of consumers, this is the one comprehensive way of dividing equitably the profits of technological advance. What is more important, it is a method of distributing these profits which will enable our industrial plant to operate at maximum capacity. America is now equipped to supply goods and services to produce a ninety-billion-dollar-a-year income, measured by the present purchasing power of the dollar. As that dollar is increased in purchasing power by lower prices we come closer to the ninety-billion goal.

Operating at capacity, our present industrial plant would supply a modest increase in the standard of living of the people in the lower 50 percent of our population. Every factor which increases the ability of this class to consume more goods tends to bring about an increased demand upon our industrial plant, including the use of capital and labor. It follows that, as technology increases efficiency, a corresponding reduction of prices prevents labor displacement, raises the level of living, and in the long run tends to generate still further production and increased prosperity.

A cross section of American industry shows that those industries which have given the consumers a large share of the savings from technological improvement have actually increased their production and added men to their pay rolls. Let me cite a few startling examples, selecting the boom year 1929 and the recovery year 1937 for comparison.

There were almost twice as many wage earners engaged in the manufacture of farm tractors and other agricultural implements in 1937 as there were in 1929. The same thing is true of refrigerators and ice-making apparatus. An increase in employment of 50 percent has taken place in the photographic-apparatus industry since 1929; 50 percent in the typewriter industry; 60 percent in the cash-register and business-machine line. Substantial increases in the number of men employed are to be found also in radio, rayon, rubber, sheet steel, aircraft, and a number of others where consumer benefits have greatly increased.

The buying public invariably responds to the stimulus of better but cheaper products. During the past 10 years the public has learned that each year it can buy a better refrigerator for less money. Do you recall what you had to pay for a refrigerator in 1928 or 1929? Compare it with the price and quality today. This is largely the result of technological progress, and as the consumer gets the benefit, he responds by extended consumption. The result is that 50,000 men are employed today in this line as compared to 26,000 in 1929.

We have recently had the testimony of one of the Nation's leading industrialists. Edsel Ford told the monopoly committee on Thursday that the advancement of technological science had, in the automobile industry, increased production, employment, and wages. His own company, he said, has pioneered in the use of labor-saving devices. It has consistently tried to pass on to the public the advantages and savings of this increased efficiency. The result has been, Ford testified—and I quote his exact words—"not only to lower costs and make more desirable products, but it has helped to increase employment."

This is not only true of the Ford plant but of the entire automobile industry. This industry was told by the Federal Trade Commission, after an exhaustive study, that it had made available consumer benefits to an extent unsurpassed in the history of American industry. It has been rewarded by a constant and steady expansion of production and by a profit return which is the envy of the entire industrial world.

The American people can use all the goods that American industry can produce with its entire labor resources fully employed. That means prosperity. But we can never obtain that result with industry, labor, agriculture all striving to obtain a larger and larger share of a smaller and smaller total.

The capitalistic system is based upon the principle of private enterprise and competition. Competition means the lowest possible price consistent with a reasonable return on invested capital. If we believe in the capitalistic system—and I do believe in it—we will devise means, by law, where necessary, to insure competition on equitable terms, for it is only by vigorous and genuine competition that the constantly diminishing costs of production can be transmitted into consumer benefits and the ensuing expansion of labor and capital.

To insure competition, monopoly must be crushed and small business given a fair chance to fight for its life.

As a matter of fact, a large part of the business of the Nation is done by small concerns and, of course, small business is the best customer of big business. Moreover, little business is ordinarily less conservative and more venturesome than big business with its huge investments in existing plant equipment and procedures. Unless pushed by small enterprises, it tends to become static and immobile. Big business is capable of conferring upon us many advantages, but unless it is subjected to the vigorous competition of many small rivals it is unlikely to do so.

We must learn how to utilize the power of taxation and control over combinations and trade practices to insure such competition. Thereafter, we may let business and industry run its own show. The normal rules of the capitalist game will insure prosperity if we give them a chance to operate.

A Challenging Plan To Reduce Unemployment and Aid Business

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

Mr. MURDOCK of Arizona. Mr. Speaker, on January 30, 1940, I introduced H. R. 8206 at the request of the officials of small-mine operators of Arizona, it being a bill to facilitate class C mining loans through the Reconstruction Finance Corporation. Besides the purposes of the measure indicated in the title, it is a bill to aid small-business men engaged in mining—that most neglected and yet the most productive of all our extractive industries. And at the same time, while intended to revive mining throughout the country, it is especially designed to reduce unemployment without additional burden on the taxpayers. The following analysis of the bill has been furnished by W. J. Graham, president of the Arizona Small Mine Operators' Association:

SECTION 1

The outstanding branch of our government upon which the welfare of our people depends is Congress; its membership is comprised of the average type of the educated American citizen who, when placed in a position of trust, responds to that trust to the best of his ability. Many Members of Congress become exceedingly well versed on particular subjects, and some become authorities in legislative circles on important matters vital to the present and future economic life of our Nation.

However, this fact does not preclude the placing before them for their observance briefs relative to pending legislation in order that they may be informed on many factors embodied in a legislative act that ordinarily do not present themselves in the wordage of a bill.

An act now pending of this type is H. R. 8206.

H. R. 8206 is deserving of close analysis as it constitutes a definite piece of productive legislation, and productive legislation is what our country is in dire need of. In order to present this brief in a manner that will permit an intelligent analysis of the statements contained, first the background on which H. R. 8206, the Small Mining Loan Act, is predicated should be presented.

The amended Gold Reserve Act of 1934, as amended, is:

"Each United States coinage mint shall receive for coinage into standard silver dollars any silver which such mint, subject to regulations prescribed by the Secretary of the Treasury, is satisfied has been mined subsequently to July 1, 1939, from natural deposits in the United States, or any place subject to the jurisdiction thereof.

"The director of such mint with the consent of the owner shall deduct and retain of such silver so received 45 percent as seigniorage for services performed by the Government of the United States relative to the coinage and delivery of silver dollars. The balance of such silver so received—that is, 55 percent—shall be coined into standard silver dollars and the same or any equal number of other standard silver dollars shall be delivered to the owner or depositor of such silver. The 45 percent of such silver so deducted shall be retained as bullion by the Treasury or coined into standard silver

dollars and held or disposed of in the same manner as other bullion or silver dollars held in or belonging to the Treasury. The Secretary of the Treasury is authorized to prescribe regulations to carry out the purposes of this act. Such regulations shall contain provisions substantially similar to the provisions contained in the regulations issued pursuant to the act of Congress approved April 23, 1918 (40 Stat. L., p. 535), known as the Pittman Act, with such changes as he shall determine prescribing how silver tendered to such mints shall be identified as having been produced from natural deposits in the United States or any place subject to its jurisdiction subsequently to July 1, 1939."

How does this act furnish background for the Class "C" Mining Loan Act? The domestic-produced silver subsequent to July 1, 1939, upon compliance with the single proviso that the owner consents to the Government retaining 45 percent of the volume tendered, the full volume tendered is monetized, and in the distribution the silver producer receives $0.7095 and the Government $0.5805 of each ounce tendered.

The retention of 45 percent of the silver is based upon "seigniorage for services performed by the Government of the United States relative to the coinage and delivery of silver dollars." The wordage of the amended Gold Reserve Act, as amended, discloses the fact that under its provisions the Government does not purchase the domestic silver produced subsequently to July 1, 1939. It provides direct authorization to place it in our monetary system based upon the sole proviso that the owner gives his assent to retention of 45 percent of the bullion or standard silver dollars. This presents unique legislation; it is doubtful if ever before in the history of this country was there 45 percent of a product directly absorbed from the producer by the Government.

The fund created by this 45-percent seigniorage could properly be allocated for purposes sought in H. R. 8206. Fair-minded citizens will agree the funds created by this 45-percent seigniorage should be visioned from the standpoint of being made accessible to a productive movement fostered by the industry that furnished the fund. H. R. 8206 seeks use of this fund for a limited period of time and without the remotest doubt its use will demonstrate in a manner easy to discern proven benefits to the Government and the citizens of the Nation.

No Member of Congress, or citizen of our country, would deliberately close off an avenue leading to a reduction of the tax burden or to the employment of our unemployed when such avenue can be opened without, now or in the future, levying even a penny of taxes—that is what H. R. 8206 does. It is difficult to understand why, if the purposes are understood, there should be any opposition to the enactment of this small-mine loan measure for the reason that the objector would be in the inconsistent position of seeking means for meeting the distressing relief of the country—and every Member of Congress is doing that—and at the same time rejecting a very definite and practical plan of providing employment for the unemployed.

H. R. 8206 presents an avenue to afford employment to hundreds of thousands of our unemployed, thousands of whom will secure permanent employment as the result of the enactment of this measure, that would result in making successful producers whose operations will continue long after their $5,000 loan has been repaid. Tens of thousands of men and their families will be taken off relief rolls.

What legitimate objection can be offered to enactment of a measure that Members of Congress should deem it a privilege and honor to support, particularly so during this trying period confronting the American people when they are anxiously awaiting productive legislation?

SECTION 2

The act providing for small-mining loans of not to exceed $5,000. H. R. 8206, is a measure deserving of a thorough analysis of its purpose and what it will accomplish, as it definitely provides for an avenue directly bearing upon the employment of hundreds of thousands of our unemployed, an avenue through which by fact of this employment will lead to reduction of tax levies for relief purposes of millions upon millions of dollars. This is not a surmise; it is fact. Legislation providing for employment of our unemployed in normal industrial channels very properly should receive prompt and favorable consideration by Congress, as the Members of Congress to a man are anxiously seeking solutions of the serious problems, unemployment, and relief.

The small-mining operators pioneer the mining industry, an industry that is largely responsible for the background which enabled our Nation to assume its position as the one nation on the face of the globe wherein its citizens were blessed with the high standard of living that maintains in the United States.

The passage of H. R. 8206 will result in disclosing by the small-mine operators the productive mines of the future, and without these productive mines the economic life of this country would be hard-pressed. The production of indestructible wealth such as emanates from the mining industry must continue and not be permitted to cease. This fact should be accepted by those who guide the destiny and welfare of this Nation. Class "C" small-mining loans are the answer to preventing the destruction of the future of the mining industry in the United States. Passage of H. R. 8206 will result in providing for taxable valuations that will not exist without its passage. The loss of these taxable valuations have an extremely important bearing on the future economic life of many of the sovereign States of the Union and place their welfare in a perilous position. Furthermore, destruction of the future of the mining industry will be sorely felt by the Nation when it becomes incumbent upon our people to retire the national obligations of our Government, when all sections of our country must be in position to assume their portion of the burden. The industry of this Nation must continue in its past valuable contribution to our national monetary wealth, a contribution shared in by all.

There appeared in a 1939 issue of the Mining Journal, published at Phoenix, Ariz., under the caption Arizona Mines Produce $90,855,462, a disclosure of the importance of mining to the industrial life of this Nation. Of the value of Arizona mineral production of 1938, $5,000,000 was paid for transporting unrefined products to eastern refineries; $5,500,000 was paid for refining of these products by eastern refineries; $29,000,000 went for employment of labor; $21,900,000 went for the purchase of lumber, fuel, electrical equipment, iron, steel, pipe and fittings, cars, cables, mine and mill machinery, etc.; and $11,000,000 was paid in taxes. The distribution of the value of the mineral production as cited in the Mining Journal was the contribution in the industrial life of this Nation of a single State. However, it serves to indicate the importance of the mining industry, which in 1938 produced and distributed $891,800,000 values of metallic minerals and $657,500,000 of nonmetallic minerals—the nonmetallic production cited above excludes all fuel nonmetallics, such as coal and oil. There is scarcely a State in the Union but what will benefit to some extent in a direct manner by passage of H. R. 8206, as practically every State produces nonmetallic mineral of some type.

The Small Mine Loan Act, H. R. 8206, is not a request for a gift or grant for money that a levy on taxpayers had been made to establish the fund—this fund is created exclusively from production of domestic silver.

The security for the small-mine loans consists of a lien upon the ore contained within the property—it matters not if the ore has been developed or not, the lien maintains until the loan is paid by a 15-percent royalty, and it must be paid even though the extraction of the ore takes place years after the loan has been expended, even though possession of the property may pass on after expenditure of the loan. These provisions serve to make the security for a loan reasonably fair. Any unpaid loans will be counterbalanced time and time over by the savings that will ensue to the taxpayer as H. R. 8206 will result in employing unemployed, many now on relief, to the extent that our relief taxes will be reduced millions upon millions of dollars.

The Small Mine Loan Act, predicated on the sources of the fund to carry out its provisions, when reviewed from the standpoint of the meritorious achievements to be accomplished by its enactment, stands out clearly as a constructive piece of legislation that deserves the unanimous approval of Congress.

SECTION 3

In what manner will the enactment of the Small Mine Loan Act, H. R. 8206, result in a reduction of the tax burdens resulting from our relief assistance to our unemployed? The reduction will take place owing to the fact that approximately 187,500 men now unemployed and receiving relief assistance of an average amount of $20 per month per man would receive employment directly due to the passage of this act. It is evident a definite reduction of tax burden for relief assistance will result.

This statement is made on sound premises and partially based upon the fact that the seigniorage emanating from our domestic silver produced subsequent to July 1, 1939, is acquired by the Government without even the levy of a penny tax. This fact does not maintain with the silver acquired by the Government prior to July 1, 1939. When by authorization of Congress there is placed with our monetary system certain volumes of silver coins or silver certificates, the seigniorage emanating is compromised by the fact the Government used taxpayers' money to purchase the silver and retired it for an indeterminable length of time before being authorized into our monetary system. Under the amended Gold Reserve Act, as amended, the source of the funds being sought under provisions of H. R. 8206, the seigniorage created by our domestic silver represents entirely newly created money placed into our currency system without the factor of the silver having been purchased, and a purchase price thereby entering into the seigniorage clearance. It will be readily observed that there is a distinction and difference to the taxpayer between funds created from the seigniorage of purchased silver and the funds created by seigniorage of silver in which there was not a penny invested in its acquisition into our currency system. Reference is here made to newly created money in which the Government has no investment in its metallic foundation.

The enactment of the Small Mining Loan Act, H. R. 8206, would result in employing 187,500 men who are now unemployed and on relief, as seen from a chart based upon an average loan of $3,000, with each loan employing 3 men, and assuming that one-fourth of the 30,000 men directly employed would receive employment for a 1-year additional period owing to the successful results emanating from an annual expenditure of $35,000,000 in the mines, the chart not basing figures on two-,three-, four-, or five-year employment nor permanent employment. The result will be a reduction of the relief-assistance tax burden in the amount of $45,000,000 for the 5-year period.

The small-mine operators of the Nation, whose pioneering efforts have resulted in practically the entire mineral production of the

Nation, are responsible through their initial efforts for the creation of the new monetary wealth of the country which emanated from the mining industry of the Nation.

The security backing class C small-mining loans as a whole will prove satisfactory, as the lien is upon the entire mineral wealth contained within the confines of the area of the mining property upon which a loan is made, the lien is a continuing one that maintains until the loan is liquidated in full, the liquidation under provisions of the act may be made entirely upon the basis of a 15-percent royalty upon the production of any and all minerals extracted from the property or they may be liquidated in any manner desired. The important factor to be considered in connection with these loans—a definitely certain intangible factor—is the employment of unemployed that will result from the expenditure of the $35,000,000 funds annually during the 5-year period of the newly created wealth in form of Government seigniorage that is expended by the mining industry, metallics and nonmetallics. This and other favorable intangible factors, together with the millions of interest at 4 percent on the loans, will result in offset factors to compensate for unpaid loans without seriously affecting the $45,000,000 reduction of tax burden for relief assistance.

The benefits to be derived through the enactment of H. R. 8206 will prove Nation-wide for not only the metallic-mining industry of the West but small-mine operators of the North, South, and East, wherein the major production of nonmetallics occur, will all equally benefit. Enactment of H. R. 8206 during the prosperous conditions that existed in the United States up until some 12 years ago would not and could not possibly have accomplished the beneficial results that will ensue, for it would have created a heavy cost to the taxpayer when our relief burdens were minor affairs. Enactment of this type of legislation is almost imperative under present conditions. H. R. 8206 is a definite avenue to employment of unemployed on relief, a definite avenue to reduction of the tax burden for relief assistance.

Paul V. McNutt

EXTENSION OF REMARKS

OF

HON. WESLEY E. DISNEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

ARTICLE FROM THE CHRISTIAN SCIENCE MONITOR

Mr. DISNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following discussion of the "slow motion political assassination" of Governor McNutt, as contained in an article in the Christian Science Monitor:

[From the Christian Science Monitor of April 18, 1940]

OKLAHOMA CITY, OKLA., *April 17.*

This preconvention campaign is producing some curious phenomena.

We have just crossed Indiana, and before our Hoosier impressions slip too far into the background, there is a brief interim report to be put into the record on one of the more curious incidents of this political year. It is a report not on Republican Presidential Candidate Thomas E. Dewey, with whom we are now traveling, but on Democratic Candidate Paul V. McNutt, about whom every Indianian is interested.

Mr. McNutt, the Federal Security Administrator, former Governor of Indiana, former law-school dean, former head of the American Legion, former United States Governor of the Philippines, is Indiana's "favorite son" and favored politician, and, when I left Washington last week, he was being forced to stand up against what was generally described as "slow-motion political assassination" from the New Deal.

For some 7 months now internal-revenue agents have been scouring the State of Indiana, peering and prying, questioning and cross-questioning, checking and rechecking the income-tax returns of Mr. McNutt and his Hoosier political associates. They have gone back 10, 15, sometimes 20 years and have interviewed hundreds of persons to find out whether Mr. McNutt as citizen, politician, or professor, or any of the subordinates in his State machine, have violated the Federal income-tax regulations.

Now, Mr. McNutt has very likely been a beneficiary of and a participant in that quaint but productive fund-raising device which Indiana Democrats seem to have thought up all by themselves, known as the Two Percent Club.

MORE OF SYSTEM THAN CLUB

The Two Percent Club is more of a system than it is a club, and if there were such a thing as a Hatch pure-politics law applying to the States, the Two Percent Club would be considered more of a racket than a system. Anyway, it operates to lift 2 percent of the salaries of public employees and drop it into the party coffers for election and other political purposes, and to a perhaps naive outsider it does look like a method of using the public pay roll to provide a sort of perpetual motion for a political machine.

The Two Percent Club practice has plenty of Indiana critics, including many Democrats, with whom I talked in Indianapolis, and its ethical propriety is not raised by the 7-month income-tax inquiry of Mr. McNutt and friends. What is strange and unusual about this "secret" investigation is the way it has been "publicly" carried on for more than half a year, all the time harassing Mr. McNutt by permitting suspicions to mount and yet withholding definite charges or a definite report clearing him of indefinite suspicions.

Mr. McNutt, it is known, has cooperated with the revenue agents, and in order to expedite the examination has gone so far as to offer them the key to his safety-deposit box in Indianapolis.

The information in Indiana is that the investigation agents have completed their work on the ground and have packed up and returned to Washington. But Mr. McNutt is still left figuratively suspended in the air, neither charged with an offense nor cleared by an authoritative report.

EVEN FOES DEPRECATE SMEARING

The fact is that many persons, in Washington and in the country, who might not care to see Mr. McNutt the next occupant of the White House, consider him the unfair victim of a harsh and powerful smearing campaign designed to pick off yet another Democratic aspirant for the Presidential nomination.

More than once in recent years the income tax has been used for, shall we say, unusual purposes. It was to force Huey Long and the Louisiana machine to terms, but prosecution was quietly withdrawn when the successors to the Kingfish decided to go along with the New Deal.

It was used to hold up to public ridicule private citizens who were prominent opponents of New Deal policies and who were singled out as "tax avoiders" and criticized as morally delinquent, although the Government agreed there had been no violation of the law.

Paul McNutt is exceedingly popular in Indiana—unquestionably a Presidential favorite in his State. Republicans and Democrats alike told me they were convinced that if the Federal Government ever gets around to report its Indiana investigation it will completely vindicate Mr. McNutt from any income-tax irregularities. Whether other Indiana Democratic politicians who have worked closely with Mr. McNutt at different times will fare as well is uncertain.

Mr. McNutt may be having his troubles, but in Indiana he certainly has his friends, who believe in his honesty, admire his ability, and wish him well.

J. ROSCOE DRUMMOND.

Keep the Civil Aeronautics Authority Independent

EXTENSION OF REMARKS

OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

EDITORIAL FROM THE SAN ANTONIO EXPRESS

Mr. KILDAY. Mr. Speaker, we have heard, with a great deal of regret, that the President's reorganization plan calls for the transfer of the C. A. A. to the Department of Commerce. I sincerely hope that this decision will be reconsidered and that this agency will be continued in its independent status. I wish to include an editorial from the San Antonio Express, leading newspaper of southwest Texas, on this subject:

[From the San Antonio Express of April 17, 1940]

KEEP THE CIVIL AERONAUTICS AUTHORITY INDEPENDENT

Aviation progress is threatened with a sharp setback by President Roosevelt's fourth reorganization plan, which would deprive the Civil Aeronautics Authority of independent-office status and abolish the Air Safety Board. Unless Congress shall reject the scheme within 60 days, the C. A. A. will become a subordinate bureau within the Department of Commerce.

The President's move is ill-advised and entirely uncalled for; it came as a surprise to Commerce Department officials, the C. A. A., and congressional leaders interested in aviation—none of whom was consulted, reputedly. Certainly the Air Safety Board—which shares the credit for commercial air lines' excellent accident-prevention record in 1939–40 and the continuing improvement in private planes—has more than justified its existence.

David Lawrence warrantably asserts that, among the governmental boards created in a decade or more, the C. A. A. is "admittedly the best functioning and the Air Safety Board the most valuable."

The Civil Aeronautics Authority has a job broadly comparable with that of the Interstate Commerce Commission—which is exempt from any reorganization order—and deserves like official status. Its task is the more difficult and exacting because it has to do with regulating a relatively new transport industry that is expanding rapidly. The Civil Aeronautics Authority must pioneer an unfamiliar element and solve problems that are unprecedented in other transportation systems. Thus far it has operated efficiently and has been unhampered by excessive political interference. As Mr. Lawrence points out:

"Few examples are afforded of better cooperation anywhere between Government and business, than that between the aviation industry and the Civil Aeronautics Authority. Few examples are afforded, also, of keener admiration on the part of students of government, even inside the New Deal, than that for the fairness of procedure and efficiency of administration of the Civil Aeronautics Authority."

Then why meddle with a satisfactory governmental agency? No question of economy is involved; nothing would be saved except the well-earned salaries paid the Air Safety Board members.

America's civil aviation needs an independent regulatory agency, and the Civil Aeronautics Authority has guided it to undisputed world leadership. Senator PAT MCCARRAN of Nevada—perhaps aviation's best friend in Congress—has undertaken to line up opposition to the reorganization plan. Representative WOODRUM of Virginia has taken a stand against the order in the House. Protests pouring in from all over the country assure them of public support.

Prosecution and Persecution

EXTENSION OF REMARKS

OF

HON. MARTIN L. SWEENEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 19, 1940

EDITORIAL FROM THE SANDUSKY (OHIO) DAILY NEWS

Mr. SWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Sandusky Daily News, of Ohio, commenting on the recent speech of the Attorney General of the United States, Hon. Robert H. Jackson, delivered recently before the Federal district attorneys of the Nation, in Washington, D. C. Mr. Speaker, some of us lawyers and laymen remember the intolerance and arrogant conduct of certain Federal judges and district attorneys during the 12-year period of our national prohibition law. Some of us recall that horse whipping is still a mode of punishment for misdemeanors in the great State of Delaware, and that civil liberties are abridged daily by superpatriots who are temporarily invested with power over their fellow men. I salute the courageous Attorney General of the United States. The liberties of the humblest of our citizens are safe when such men are entrusted with public office. This speech, which is an insight into the character of Robert H. Jackson, impels me to predict that some day—and I pray soon—another Jackson by name and reputation may occupy the White House.

[From the Sandusky (Ohio) Daily News of April 9, 1940]

PROSECUTION AND PERSECUTION

Robert H. Jackson, Attorney General of the United States, very recently delivered an address in Washington before his Federal district attorneys from throughout the Nation, some 90 in number.

It teemed with common sense, simple justice, and made keen distinction between prosecution and persecution.

It emphasizes the fact that Mr. Jackson is what may be termed a progressive-conservative, with the qualities of both mind and heart, which in these distressful times befits him to a higher place, if not the highest in the administration of our national affairs.

Mr. Jackson opened his address with a review of the fact that in the gathering of Federal prosecutors before him was the most powerful peacetime force known to our country.

That the Federal prosecutor had more control over life, liberty, and reputation than any other person in America.

That his discretion is tremendous.

He can have citizens investigated, and, if he is that kind of a person, he can have this done in tune with public sentiment and as veiled or unveiled intimidation.

Or a prosecutor can adopt a more subtle course of having his friends interviewed.

The prosecutor can order arrests, present cases to a grand jury in secret session, and, on the basis of one-sided presentation of evidence, can cause a citizen to be indicted and held for trial.

He can dismiss the case before trial, without the defendant ever having a chance to be heard.

Or, if the defendant is publicly tried and convicted, the prosecutor can still recommend sentence (probation or suspension); and if he is imprisoned, he can say as to whether he is a fit subject for parole.

Mr. Jackson concludes this section of his address by saying that the prosecutor, at his best, is one of the most beneficent forces in society, but that when he acts from malice or base motives he is one of the worst.

It is indicated by Mr. Jackson's address that he has a very clear understanding of the distinction between law and morals.

Both in the lines and between the lines of his address is the philosophy, and as the French express it, "Morals are a matter of time, geography, and climate."

These United States cover a vast area of varying climates and are peopled by many races and those of different national origin—and differing morals based upon ancestral tradition.

What is regarded as moral in one part of our country may be immoral in another.

What is not permitted by law in one State is protected by law in another.

This variation in tradition, as reflected in public opinion, is provided for in the Constitution of the United States and is known as State rights.

Mr. Jackson's injunction to his district attorneys at this meeting in Washington the other day was that they should select their cases for investigation and prosecution, that they should confine themselves to breaches of the Federal law in the most flagrant violation against the rights of the individual and the public, that violations of State and local statute should be left to State and local authority.

He goes on to say in effect that there are now a profusion of statutes under which any citizen could be investigated and prosecuted, but that if all cases upon which complaint is made were merely investigated, it would require a force twice that which the Government now has at hand, including the Army and Navy.

We think that Mr. Jackson's point has a conspicuous illustration in the fact that where the prohibition laws were confined to definite areas, where the sentiment was definitely against drink, that enforcement to a high degree was possible, but that when these same prohibition laws were made general throughout the Nation, all fell in failure.

It is also our view that a Federal prosecutor, or any prosecutor should not concern himself with a breach of natural law on the part of an individual—say as in the case of negative personal habits.

That a prosecutor should concern himself only with those breaches that affect the rights of other individuals and society in general.

Personal breaches against the law of conduct have their own consequences and do not affect others.

They serve in themselves the natural law of consequences and as a deterrent, by example, to others.

In other words, we are punished by our sins rather than for them.

Robert H. Jackson is to be congratulated upon the splendid spirit he is instilling into his organization of Federal prosecutors.

And the public is to be congratulated on the fact that so wise a man in the law and the general philosophy of life is at the head of so important a branch of government.

He is worthy of higher responsibilities of administration and higher honors.

Good Fences Make Good Neighbors
